No. 791, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The English Church and its Bishops, 1700—1800. By C. J. Abbey. In 2 vols. (Longmans.)

MR. ABBEY'S work has expanded to dimensions which he little contemplated when he first began to collect its materials. It was his original intention to have confined his volumes to a series of sketches from the lives of the prelates of the Established Church during the eighteenth century; but with him, as with many of his predecessors, the journey on which he set out has gradually led him into lands which he never purposed to tread. His review of the lives of Queen Anne's bishops was not unnaturally supplemented by a narrative of the principal characteristics of Church life in her reign; and, for the sake of uniformity in his undertaking, the memoirs of the Georgian prelates were accompanied by a similar summary of ecclesiastical history under the rule of her successors. This is the plain story of the expansion of his subject. His labour has grown upon his hands until it has comprehended within its boundaries a full history of the English Church from the accession of the good Queen Anne to the close of the last century.

Dr. Johnson, with the consuming partiality for Charles II. which he never lost an opportunity of showing, launched out on one occasion in terms of the warmest praise on the excellence of his favourite king's Church patronage, and showed in the selection of his topic his usual sagacity for the strong points of a case. "Charles II.," he said, "knew his people, and rewarded merit. The Church was at no time better filled than in his reign." The merits of the bishops selected by Charles and the inferior character of the episcopal nominees of the Georges have been tersely illustrated by a recent Church historian. His statistics show that during the twenty-five years after the Restoration there were raised to the episcopal bench sixteen divines on whom the epithet of eminent may be conferred, and that the same laudatory expression can only be assigned to twenty-one occupants of the bench during the 123 years that intervened between the arrival on English shores of the first of our Hanoverian rulers and the death of William IV. In a comparison of this kind theological tastes and, perhaps, prejudices may sometimes be brought into play; and other critics might be tempted to enlarge the roll of distinguished prelates under the Georges. When every allowance is made for reasonable differences of doctrinal opinion, the second schedule should certainly include so famous a theological controversialist as Hoadly, such a reasoner as Conybeare has been deemed by the highest

critical authorities, and so acute a critic as Watson. Mr. Abbey, with more moderation, dwells on the strength of Queen Anne's bishops in language which would find agreement in the minds of men of all parties. To his assertion that the list of bishops at that time "is a distinctly stronger one than it was as a whole through many subsequent years" no fair exception can be taken. The reason for this decline in the episcopal character lies on the surface. Under the rule of the Georges the vacancies on the bench were filled by divines of one cast of thought in political and ecclesiastical opinions. They were, with scarcely an exception, Whigs in politics and Low Churchmen in doctrine; and the qualities of character which found favour in the eyes of successive prime ministers were moderation in opinion and in expression. They were all safe men, warranted not to set the Church on fire, and not to press too hardly on those outside its pale. During this period parliamentary government became omnipotent, and with it the influence of borough patronage began to assert itself. The generality of the borough constituencies passed under the sway of patrons in the principal English families; and, if the seats were filled by the friends of the ministry, it was essential that the price of the purchase should be paid. It soon became clear to the ministerial wirepuller that the prizes of the Church afforded the means of conciliating the leading borough-mongers in the peerage; and during the eighteenth century many a younger son found his way through family influence to the episcopal bench.

The sketches of the bishops of this age are drawn by Mr. Abbey with sufficient fullness and with adequate appreciation. Two good instances of his system of portraiture may be found in the delineation of Hurd's mincing conceits and Newton's smug complacency. His enquiries have brought out many amusing traits of character in the episcopal mind. Bishop Compton, as is well known, showed a cheerful alacrity in accepting the position of commandant of the small force which safeguarded the Princess Anne when she deserted her father in 1688; and Mr. Abbey, when drawing his sketch of that prelate's life, remarks on the curious circumstance that the last bishop "who appeared in arms and took the command of troops" should have been succeeded by the last bishop (Robinson) who in our country has held a high diplomatic appointment. This love of martial or diplomatic life was not confined to these two prelates. Mews, who presided over the see of Winchester until 1706, had served under arms as a young man for Charles I.; and Talbot, the Bishop of Durham, appeared on horseback at a review so late as 1722, "in a long habit of purple, with jack-boots, and his hat cocked and black wig tied behind him like a military officer." It is even more strange to note the fondness of the occupants of the episcopal bench, whether high or low, for smoking tobacco. Sancroft's usual breakfast consisted of "two small dishes of coffee and a pipe of tobacco." Burnet, to enjoy his pipe and his pen at the same time, "perforated the broad brim of his large hat, and, putting his long pipe through it, puffed and wrote, and wrote and puffed again." Archbishop Blackburn, the jolly old Primate of York, around whom

many stories gathered, is said to have ordered, while on a visitation tour, "pipes and tobacco and some liquor" to be brought into the vestry of St. Mary's Church at Nottingham for his refreshment; but the offended vicar would not allow them to be fetched. Perhaps the strongest illustration ever pronounced on the bishops of the Georges was that expressed by Macaulay when he defied any well-informed man to state in correct chronological order the names of the Archbishops of Canterbury during the last century. Who now remembers anything about Potter than that he was the father of the disreputable politician who at one time was considered a likely rival to the first Pitt? Even so much fame is denied to Hutton and Herring. Of Archbishop Cornwallis the only incidents impressed on the recollection are that his wife's parties at Lambeth were suppressed by the order of George III.; and that he himself, although deprived by a paralytic stroke of his use of his right hand, showed marvellous dexterity in shuffling and playing his cards. The nepotism of many of these bishops has been unnoticed by Mr. Abbey. Brownlow North's tenure of the see of Winchester was long remembered through his relation's mastership of the hospital of St. Cross, near that city. A Thurlow held until recently a rich sinecure worth many thousands a year, conferred upon him by his ancestor when Bishop of Durham; and a Randolph long enjoyed one of the best endowed prebendal stalls in St. Paul's, the fruit of a Randolph's bishopric of London.

The memoirs of the bishops are the freshest part of Mr. Abbey's labours; and we have preferred to deal in this notice with that division of his work rather than with his remarks on the Church history of the century, but his views on the politics of the Church are conveyed in a commendable spirit of fairness. If we mistake not, the candour with which he approaches the consideration of ecclesiastical questions has not diminished since the appearance of the joint volumes of Abbey and Overton nearly ten years ago. His treatment of the suppression of Convocation after the death of Queen Anne stands out in welcome contrast to the attitude assumed by most Church historians. He does not overlook, and he is justified in laying stress on, the loss occasioned to the Church by the suppression of the sole body which adequately represented the views of the clergy; but he does not affect to ignore the provocation which the Lower House had given to the government of the day. No less fair are his comments on the action of Church politicians under the good Queen towards Dissenters. They were resolutely bent on what "can hardly be called by any milder name than persecution." The Schism Act which they promoted was "a disgraceful bill." On a number of side questions, interesting to students of Church history, Mr. Abbey has collected much novel information, or rearranged the old materials in a more effective system. Witness his summary (pp. 42-44) of the contributions to theological literature during the first fourteen years of the century, and his graphic account of the self-denying labours of Dr. Thomas Bray in the foundation of parochial libraries at home and the spread of missions in the colonies of

North America. A generation later High Church mobs had ceased to rule the chief towns. The various classes of Dissent dwelt kindly together, and Church people ceased to look askance on their rival religionists. The condition of Nonconformity under George II., and the growing tolerance toward all ranks of life, saving the Jews, are illustrated by a skilful selection of quotations from theological writers, and by numerous references to contemporaneous occurrences. The spirit of the age possibly resembled too much the humour of the shrewd man of the world who, during the Gordon riots, saved his house by chalking over the door, "No religion here"; but freedom from oppression came as a welcome relief to the turmoil of the preceding hundred years, and was justly characterised "a redeeming feature of the time." When Methodism presented a novel form of religion, alien to the disposition of both the classes and the masses, the fury of the populace broke out again, and theological odium asserted itself anew. Such works as that of Bishop Lavinton on *The Enthusiasm of Methodists and Papists compared* may be forgiven now; but it was little to the credit of an English clergyman, dwelling in a county where he could not but observe the good effects of the Wesleyan movement, that the bishop's scornful diatribe should have been reprinted under his editorship more than seventy years after its first appearance.

There is much to admire in Mr. Abbey's work; but in justice it must be added that greater attention should have been paid to the spelling of the proper names mentioned in its pages. W. P. COURTNEY.

The Great Silver River. Notes of a Residence in Buenos Ayres in 1880 and 1881, by Sir Horace Rumbold, Bart. (John Murray.)

THE author of this graphic picture of South American life and scenery has done himself great injustice by delaying its issue for six years, and by now publishing it without maps, without index, with so few illustrations, and especially with a title which conveys a most inadequate idea of its varied contents and comprehensive scope. The "Great Silver River," although somewhat hackneyed, may doubtless attract some readers by its glitter; but many more are likely to be repelled by the "Notes of a Residence in Buenos Ayres"—a topic which, if anything, has rather been overdone of late years. Meantime a very large portion of the volume, about a third altogether, is occupied with a very much more interesting—because far less known—subject than either the Plate River or its great emporium. This subject, thus strangely kept in the background, is the little-frequented and rarely described Uruguay River, which the traveller ascended, under favourable conditions for studying its surroundings, as far as the old Jesuit station of Santo Thomé, on the Brazilian and Argentine frontier. The trip was made partly by rail, partly by water, on board a steamer of the American type, built in England, and specially adapted for navigating the upper reaches of this great artery.

At a distance of over 350 miles from its mouth, the Uruguay was found to be still as broad as, but much deeper than, the Thames

above Windsor. As it here leaves the open, treeless pampas, penetrating, as it were, by a backdoor into the sub-tropical woodlands of South Brazil, a comparison was inevitably suggested between the sylvan charms of the two streams.

"Though the woods that cast their purple shade across it, and left but a silver track in its centre, were not to be compared for loftiness or massive leafiness with glorious Cliveden, there was such an infinite variety in their foliage; each tree with its rich drapery of creepers and twisting tendrils and swinging air-plants, formed such a vegetable wonder in itself; beneath there was such an intricate growth of flowering shrubs and underwood, such a wealth of humbler ferns and reeds and grasses, that nature seemed really to have exhausted every form of vegetation in clothing the banks that hemmed us in on either side" (p. 185).

When in London last year, Dr. Schweinfurth, also fresh from sub-tropical lands, unhesitatingly declared English scenery of this class to be the most perfectly beautiful on the surface of the globe. Even these lovely South Brazilian landscapes, though more gorgeous, with greater wealth of colour and variety, have less repose and majesty. Instead of the dreamy haziness that soothes and prepares for the renewed work of life, they diffuse dank vapours, a sickly steaminess suggestive of ague and sapping the energies of mind and body. Even the stout Teutonic settlers in the South Brazilian provinces are unable to resist these subtle influences; and conspicuous among the "dejected inelastic" groups met with along the river-side tracts is the "tall German doctor, with long sandy hair and ragged beard," who appears to have become as inert as the rest of the foreign settlers, and to have lost his self-respect, "to judge by his linen, his tipsy talk in atrocious Spanish, and his general air of beeriness."

It is satisfactory to find that some at all events of our race still hold out, that the Scotch and Irish stockbreeders in Argentina are conspicuous for their intelligence and industry, and that the indomitable British civil engineer is noted here, as all the world over, for his physical energy, his professional skill, and exuberant spirits. It was scarcely, however, in the best of taste to expend some of these exuberant spirits in practical jokes on those half-famished Italian strolling actors lost amid the South-American backwoods, who were brought on board and treated to

"ham sandwiches, with mustard half an inch thick, which they swallowed with watering eyes and beads of perspiration on their foreheads. Perfect internal sinapiisms some of them must have been, all mustard and no ham! Poor wretches! though they may have thought the food peculiar to these *indivolvati Inglesi*, they seemed to appreciate its substantial qualities, and washed it down with so much beer that it at last became somewhat difficult to get rid of their uproarious cordiality" (p. 176).

Nor is this passage penned in quite the best of taste; and, although the author can write good English, he can also at times commit himself to the most startling vulgarisms, as when he speaks of people being "struck all of a heap." He has also an unfortunate weakness for interlarding his sentences with scraps of French, Latin, and other foreign

tongues, mostly without the least necessity. Instances are *minauderie, culte, bénitier, chemin croix*, capped by such tentative efforts at a mixed language as "retrempé'd" and "échelonné'd."

But perhaps these eccentricities are not meant to be taken seriously; and they are in any case amply compensated by the generally healthy tone of the book, which contains many amusing descriptions of the author's personal experiences, as well as much sensible advice to intending emigrants to "The Great Silver River." A. H. KEANE.

A History of the Legislative Union of Great Britain and Ireland. By T. Dunbar Ingram. (Macmillan.)

As one reads Dr. Ingram's defence of the Union, one cannot help recalling the strong words of condemnation used by Mr. Lecky in his *Leaders of Public Opinion in Ireland*. "There are, indeed," he says, "few things more discreditable to English political literature than the tone of palliation or even of eulogy that is usually adopted towards the authors of this transaction." Dr. Ingram has investigated the matter, and has found that the eulogists were right. He has gone to the original sources of information, and has convinced himself that the Union was "free from any taint of corruption." In his opinion the only mistake was that it was not immediately followed up by a general measure of Catholic emancipation; but this was not the fault of Pitt, Cornwallis, or Castlereagh. His verdict is certainly startling. It is all the more startling that, with the exception of one letter from the Cornwallis correspondence, which he has completed from the Public Record Office, his original sources of information are those which have been open to everybody for the last thirty years.

If Dr. Ingram had been more moderate, he would have written a more useful book. It was quite worth while to show, as he has done, that Irishmen were not opposed to a union with England so long as the alternative was a state of dependence, and to argue that the form of partial independence which was attained in 1782 was not a good form or one likely to remain unchanged. It is undeniable that in the last years of the century there were powerful reasons for reforming the constitutional relations between the two countries; though it is by no means so clear as Dr. Ingram evidently thinks it that an incorporating union was the only escape from the difficulty. Union, however, was at any rate a perfectly intelligible and defensible policy; there is nothing unreasonable in the argument that it was a necessary policy. Pitt and Cornwallis, moreover, did seriously desire that it should be accompanied not only by emancipation but by a settlement of the tithe difficulty; and but for the obstinate bigotry of the king they would have endeavoured to satisfy the hopes which they had raised. This defence could fairly have been maintained by Dr. Ingram, and in developing it he would have usefully drawn attention to a side of the controversy which, perhaps, has been unduly neglected. He might have urged that the object was so clearly good that we should not too carefully scrutinise the means. If he had been more anxious to write an impartial history,

he would frankly have admitted that the means were often discreditable. He would have given a faithful picture of the Cornwallis correspondence, warning his readers beforehand, as the editor of the Cornwallis correspondence warns his, that a mass of documents relating to the Union have been purposely destroyed. His picture, drawn from the evidence still remaining, would have shown the English ministers and the Irish executive engaged in a constant and anxious intrigue, discussing with one another how to win over this or that individual, what promises might be made to one class of the people without exciting the opposition of some other class, and often despairing of their ultimate success. There would have been ample opportunity of dealing with the exaggerations which have gathered round the subject, of showing that the grant of compensation to proprietors of disfranchised boroughs did not seem so immoral then as it does now, and of pointing out where the evidence as to the grosser forms of corruption breaks down. But in whatever way he treated the matter, an impartial writer would not have tried to make out, as Dr. Ingram does, that the Union was carried with the hearty assent and concurrence of the vast majority of the Irish people. Nothing is clearer than that the three great religious bodies had to be bought over—Churchmen by linking the Church of Ireland to the Church of England, and thereby guaranteeing the continuance of Protestant ascendancy; Presbyterians by a promise (which was kept) of increasing the Regium Donum; and Catholics by a promise (which was not kept) of removing their disabilities. Even then, with the way thus gilded, the result was uncertain. In December 1799 Lord Cornwallis writes: "I entertain every day more doubt of our success on the great question of the Union." As late as April 1800 he writes: "I believe that half of our majority would be at least as much delighted as any of our opponents if the measure could be defeated." Over and over again one meets with such expressions of doubt; and in face of them one wonders what Dr. Ingram can mean by the hearty assent and concurrence of the people of Ireland.

The book is open to criticism on other points; but, if it thus fails in the chief point, in proving that the Union was freely accepted by Ireland, it fails altogether. There is no need, therefore, to measure the precise depth of corruption which was reached in the course of the negotiations. The only untenable position is that they were "free from any taint of corruption." Why, if they were as pure as Dr. Ingram would have us believe, does Lord Cornwallis so often break out into self-reproaches, and excuse the baseness of the means by the greatness of the object to be attained? "I despise and hate myself every day for engaging in such dirty work, and am supported only by the reflection that without the Union the British empire must be dissolved." Why should he despise and hate himself if no unworthy arts were employed?

No one, it is to be hoped, will take a single page of Dr. Ingram's history on faith. It is not, indeed, actual misstatement, but one-sidedness, that the reader has to guard against. A little independent examination will show, for instance, how incomplete and, therefore, inaccurate is his account of the failure of the

commercial negotiations in 1785, how ludicrously he exaggerates the importance of the local resolutions in favour of the Union, and how totally he misjudges the real strength of the Catholic vote after 1793. Dr. Ingram writes with evident honesty of purpose; but he has attempted to prove too much, and his case has run away with him.

G. P. MACDONNELL.

Buddhism in Christendom. By Arthur Lillie. (Kegan Paul, Trench, & Co.)

CHRISTIANITY seems to act on many minds like a magic mirror in which they find reflected the habitual object of their own thoughts or desires. To the pious athlete it, of all religions in the world, is "muscular" and "manly." To the British Philistine it is something between a mercantile transaction, a legal fiction, and a political compromise. To the dreaming revolutionist it is a system of communism; to the wakeful capitalist, a cheap insurance on property; to the classical scholar touched with agnosticism it is "stoicism plus a legend"; to Hebraists like Ewald, Renan, and Kuenen it is the natural expansion, the ultimate efflorescence, of Judaism; to the rabbinical student it is only explicable through the Talmud; to Mr. Lillie, an old Anglo-Indian officer deeply interested in the religions of Hindustan, it is a rather corrupt form of Buddhism.

The theory that Christianity has its roots in the teaching of Gautama is not now put forward for the first time. *Prima facie* the two religions seem to have many points in common. The founder of each is represented as an incarnation of the Supreme Being, who comes down to earth for the salvation of mankind, is born of a pure virgin, welcomed with rapture by aged prophets, distinguished for learning in boyhood, subjected after a long fast to diabolical temptations which he victoriously repels. Each inaugurates his missionary activity by a "Sermon on the Mount," and gathers round him a band of disciples, among whom there is one traitor and one especially beloved. Both work miracles, are persecuted, and transfigured. It is even maintained that the Gospel parables are derived from those of Gautama; but to judge by the specimens presented in this volume, the resemblance is that of Monmouth to Macedon, or of *She* to the *Epicurean*. The Buddha was not crucified; but as the death of Christ is generally admitted to have been a historical event, Mr. Lillie and those who think with him probably regard it as one of those proverbial exceptions that prove the rule. According to a late legend, only found in Chinese sources, the Buddha revived for a few moments in order to comfort his mother, and this, of course, has to do duty for the Resurrection. Again, Buddhism as an organised religion has its canonical scriptures, its general councils, monastic orders, creed, commandments, confession, absolution, and places of worship resembling Christian churches in their structure and arrangement. In Tibet there is even a hierarchy with something like a pope at its head. And it is argued that, as Buddhism is much the older religion of the two, the debt, if any, must be on the side of its Western rival.

All this, as I have said, is well known, has long been known, yet the inference suggested is rejected by nearly every scholar of note, more especially by experts in Buddhism. Nor is the reason far to seek. However numerous may be the superficial resemblances they are as nothing compared to the differences of doctrine, amounting, if we are to trust the best accredited authorities on both religions, to diametrical opposition between them. To put the matter briefly, Buddhism believes neither in the creative power of God nor in the immortality of man. What Christianity teaches on both points we all know. Moreover, of the five great Buddhist commandments, one forbids the taking of animal life and another forbids the use of alcoholic liquors, whereas both acts are permitted within certain restrictions by Christianity. Mr. Lillie boldly faces these two difficulties, meeting them by a direct denial of the accepted views. According to him the true original Buddhism was a religion of theism and immortality; the true original Christianity a religion of total abstinence from meat and strong drink. It is difficult for one who is not himself an Oriental scholar to form an opinion on the first contention. I must say, however, that the arguments and citations brought together by Mr. Lillie (pp. 215-221) seem to me most inconclusive in themselves and, above all, most inadequate to outweigh the unanimous verdict of such scholars as Profs. Rhys Davids, Oldenberg, and Kern.

As regards Christianity, all educated persons can judge for themselves. Here, where one can check his statements, Mr. Lillie shows an amount of carelessness, rashness, and ignorance that excites no very favourable presumption as to his fitness for dealing with more recondite topics. Speaking of the Mosaic law, he tells us that "slavery, polygamy, and the duty of private murder, as in Corsica, were parts of this eternal covenant" (p. 280). The prophets learned their advanced ideas from the Babylonian priests (*ib.*). How much Mr. Lillie knows about the prophets may be judged from the fact that he refers the description of the women waiting for Tammuz (whom his printer calls "Tummuz") to Isaiah (p. 317). There is a reference to "the execution of Christ by the Sanhedrin" (p. 287)—a fate which it seems he might have avoided by drinking one cup of wine in their presence (p. 267). "The Christians celebrated their Sabbath on Sunday, not Saturday. This was plainly done with Christ's sanction" (p. 275). What is more he "appointed rites" for that day (p. 276). According to Baur, "St. Paul invented Christianity" (p. 283). What Baur said was that St. Paul developed and made explicit the subjective side of Christ's teaching. The Quartodeciman controversy is described as turning on "the question whether Christ was crucified on the day [*sic*] or the day before the Passover" (p. 286)—a most unwarrantable and misleading statement. But there is worse coming. "Pope Victor proposed to change the day for celebrating Christ's death to the day of the Passover. By the change Christ was made the Paschal Lamb" (p. 288). But for certain references elsewhere, one would suppose that Mr. Lillie had never read St. Paul's First Epistle to the Corinthians. The Epistle to the Hebrews, which no critic

places later than the time of Hadrian, is knocked off as "a polemical pamphlet on Pope Victor's side of the Paschal controversy" (p. 302). Irenaeus, against whom the author cherishes a particular animosity, is repeatedly designated as a "monk" (see, *inter alia*, p. 237). As a slight contribution to the history of heresies we are informed that "the Nestorians were Unitarians" (p. 206). Finally, the forms observed in electing a pope are declared to be copied from the analogous institutions of Lamaism (p. 229), in disregard of the fact that they are the result of an independent historical development, every step of which may be distinctly traced. A writer who indulges in such vagaries cannot expect to command much confidence when he is discussing the Great and Little Vehicles, the edicts of King Asoka and the Lalita Vistara.

These, however, are mere details. The great point with Mr. Lillie is to prove that Christ and His immediate disciples abstained on principle from meat and wine; and he would probably admit that were the contrary established his whole case would collapse. He is, of course, aware that all four Gospels as they stand agree in representing Christ and the Apostles as wine-drinkers, while the Synoptics make the sacramental use of wine actually obligatory; but he rejects as an interpolation every passage supporting the accepted view. Indeed, his ordinary canon of criticism is to reject whatever tells against him and to accept whatever tells in his favour, quite irrespective of historical evidence. In one instance his recklessness leads him into a flagrant self-contradiction. The First Epistle to Timothy is quoted as genuine on p. 148 and denounced as spurious on p. 299. Really, Mr. Lillie should make up his mind as to whether the exhortation to "take a little wine for thy stomach's sake" is evidence for or against his thesis. But to return. Mr. Lillie contends that St. Paul in describing the institution of the Eucharist, "says not a single word of the cup containing wine" (p. 149). This is literally, but only literally, true. For St. Paul has previously complained that at the Corinthian love-feasts the richer members brought with them a copious supply of food and drink, off which they made a good meal, thus insulting the destitution of their poorer brethren, who were not similarly provided—"so that one is hungry and another drunken (*μεθύει*)" (1 Cor. xi. 21). Clearly the cup used on these occasions was a cup that inebriated, a cup the contents of which cost money, a cup of which all would gladly have partaken had the chance been given them. Again, Mr. Lillie makes much of the advice given by St. Paul to his disciples in the fourteenth chapter of Romans not to eat meat if it is against their conscience, or if by so doing they cause scandal to their weaker brethren. But on turning to 1 Cor. xii. 23 *sqq.* we find an elucidation which Mr. Lillie altogether ignores. Much of the meat sold in heathen cities came from the victims offered to their gods, and was therefore regarded as impure by the more rigid monotheists. St. Paul respected without sharing their scruples. That there was no general objection to the use of meat as such in the early Church is indirectly shown by the Apocalyptic denunciation of "those who eat things sacrificed to idols" (Rev. ii. 14 and 20), while we look in

vain for any condemnation of animal food as such, and apart from idolatrous associations. The Acts, a comparatively old and good authority, though probably dating from a later period than that traditionally assigned to it, is quite clear on the lawfulness of slaying animals for the purpose of eating them. When weighed against such evidence individual instances of asceticism prove nothing at all.

Mr. Lillie, like others before him, finds in Essenism the missing link between Buddhism and Christianity. It is unfortunate that in this connexion he should draw so largely on the pseudo-Philonian treatise *De Vita Contemplativa*, which scholars now agree in regarding as spurious and its contents as fictitious. If we must bring in foreign influence to explain the peculiar customs of the historical Essenes, Pythagorean ideas are far more likely to have been at work in Palestine than Buddhist missionaries.

It may be mentioned that since the appearance of Mr. Lillie's book the whole subject of this alleged Buddhist propaganda in the West has been reviewed by Prof. Chantepie de la Saussaye of Amsterdam in a very lucid and temperate style (see his *Religionsgeschichte*, pp. 452-6); and that his conclusion is decidedly unfavourable even to the very modest claims put forward by Prof. Seydel on behalf of Eastern influences.

ALFRED W. BENN.

THE ART OF WAR IN THE MIDDLE AGES.

Die Entwicklung des Kriegswesens in der Ritterzeit. Zweiter Band. Von G. Köhler, Generalmajor z. d. (Breslau: Koebner.)

GENERAL KÖHLER is evidently a very rapid writer. It was only last year that we noticed the first of his ponderous volumes, and already the second is upon us. Its eight hundred pages take the art of war into the earlier years of the fifteenth century, Agincourt being the last battle described.

The faults which we noticed in the first volume of the work appear again in the second, though not quite in such a marked degree. The former contained merely a disjointed series of topographical and tactical sketches, without plan or connexion; while in the latter General Köhler has condescended to give at least three dissertations on general subjects—the average strength of fourteenth-century armies, the constituent elements of English and French armies during the Hundred Years' War, and the organisation of the forces of the Teutonic order in Prussia. He perseveres, however, in his old error when he introduces us to the battles of Laupen and Nicopolis without giving any previous account of the growth and merits of the warlike systems of the Swiss or the Ottoman Turks, in default of which the story of those fights loses half its interest and becomes barely intelligible.

In many respects this volume will prove more interesting to the English reader than its predecessor, for it contains General Köhler's views on the four great English battles of Crecy, Poitiers, Navarrete, and Agincourt. On each of these he finds something new to say; but we are bound to state that many of his discoveries seem to us to be grounded on a very insufficient basis of evidence. To take

Crecy as an example, we are glad to see that the general has adopted the right position for the English army, and placed it facing east on the hill to the north of Crecy, not facing south on the hill to the east of Wadicourt, as almost all the English plans have done. He has also something to say for his view that the second division of the English army, that commanded by the earls of Northampton and Arundel, was ranged to the Black Prince's left, not to his direct rear, for Froissart's phrase, "pour reconforter la première bataille," does not necessarily imply the latter position. It is also noticeable that the "battle" of the two earls contained 4,000 archers—more than a third of the troops of that description in the army—who would have been utterly useless if not placed in the firing line; as also that the Prince of Wales's force of 6,200 men was not sufficient by itself to occupy the whole mile of ground between Crecy and Wadicourt in any array which a mediæval army was likely to adopt. But here General Köhler's suggestiveness is at an end, and he atones for it by some terrible blunders. The Welsh Kerne, with their darts and long knives, who stood behind the English first line, become in his account "pikemen stationed in rear to serve as a support to the archers" (p. 365)—*i.e.*, are transformed into heavy infantry, though really the lightest of light troops. Again, in spite of Froissart's direct statement that the French cavalry reached the English men-at-arms "by coasting, as it were, along the archers," it is repeatedly stated that the dismounted knights and squires were stationed in the direct rear of the bowmen. Consequently, says General Köhler, the English archers must have been reached and driven in to allow the French to engage with their men-at-arms. So far is this from the truth that we should not shrink from saying that if the enemy's horse had once penetrated the line of bowmen and rolled it up, the day must have been as fatal to England as were those of Baunockburn and Patay—the only two occasions we can remember when hostile cavalry succeeded in closing with and routing our light troops. The 2,400 dismounted men-at-arms could not possibly have held their own against the 12,000 French horse, if the English battle array had been destroyed and interrupted by charges which had broken up the firing line of bowmen and caused even a temporary stoppage in that hail of missiles which alone could keep back the gallant knights who swarmed around Philip of Valois. This passage, however, is only one among many where General Köhler underrates the English archery. Evidently he has judged of its efficiency from that of its continental rivals, and thereby failed to do it justice. He even goes so far as to give Froissart the lie direct on this point. When the latter says that the bowmen won Crecy, we are told to give no attention to the "unkritischen Darstellung Froissarts, dem jede Einsicht in militärischen Dingen abgeht" (p. 367). The battle, then, has to be rewritten from the general's inner consciousness, and the whole tale rearranged so as to leave the credit entirely to the dismounted men-at-arms.

We have also to protest against the fearful hash of English names with which we are presented all through the chapters on the

Hundred Years' War. It is easy enough to give the forms of Kentfort, Brubbes, Askesoufort, Bercles, Whyby, Cormouaille, Canuse, and so forth, as they appear in the original documents, even if it is not worth while to turn them into their correct shapes as Hertford, Burghersh, Oxford, Berkeley, Willoughby, Cromwell, and Camoys. But it is far worse to combine a Percy of Northumberland and Oliver de Clisson into a single person through the misunderstanding of a line from the poem of the Herald Chandos, and so to produce a "Percy von Clisson, who commanded the English left wing at Navarette" (p. 509).

Of the parts of this book which deal with foreign battles we found the accounts of the Flemish fights of Courtray and Mons-en-Pevéle the most instructive reading. Their meaning is very clearly explained, as also the reason which prevented the Flemings from becoming a really formidable power—their absolute inability to take the offensive. On the other hand, Laupen and Sempach are described in a way which does not in the least solve the problem they suggest—how a force of infantry could defeat another of all arms and of far superior numbers in the open field. A vast amount of space is devoted to the campaigns of the Teutonic knights against the heathen savages of Lithuania, which does not seem to advance us far along the road of military progress, though they may be interesting enough to the German reader. The account of the battle of Tannenberg (1410), on the other hand, is well worth giving. In spite of Sir Edward Creasy's omission of this engagement in his "Fifteen Decisive Battles," it was a fight of world-wide importance, settling as it did the boundary between German and Slav so as to render it impossible for the former to carry out the subjection of the lands east of the Baltic. But for Tannenberg Poland must have ceased to exist 350 years before the date of its actual fall, and would probably have been at this moment a German rather than a Russian province. The interest of its details suggests to us that General Köhler might have done well to give accounts of two other epoch-making battles of Eastern Europe—Liegnitz and Koulikov—for which sufficient material seems to exist.

If we have seemed somewhat harsh in our judgment on this volume, we must do General Köhler the justice of saying that he has collected an enormous amount of material for history, and that his topographical studies are always clear and generally convincing. It is his tactical deductions, and his proneness to go beyond his authorities in drawing conclusions, against which we must protest.

C. OMAN.

NEW NOVELS.

- Caterina.* By the Author of "Lauterdale." In 3 vols. (Hurst & Blackett.)
A Leader of Society. By Mrs. Alexander Fraser. In 3 vols. (White.)
A Choice of Chances. By William Dodson. In 2 vols. (Fisher Unwin.)
Locked up. By Major Arthur Griffiths. (Blackwood.)
Neck or Nothing. By Mrs. H. Lovett-Cameron. (White.)

Wrecked in London. By Walter Fairlie. (Vizetelly.)

Uncle Reuben's Secret. By Kate Wood. (Remington.)

The Two Crosses. By J. W. Nicholas. (Bristol: Arrowsmith.)

A WELL-KNOWN writer once suggested in an apparently serious article that young men and, we suppose, young women also, who displayed a bent towards literature should pass through an apprenticeship, in the course of which they should be initiated by some master or journeyman into all communicable mysteries of the craft. In the case of neophytes intending to devote themselves to fiction, special instruction would, of course, be given in the art of novel-building; and we cannot imagine that such instruction could fail to be followed by most beneficial results. The author of *Caterina*, for example, is in many respects an exceedingly competent workman, but in this special branch of his craft he seems to have everything to learn. In the first volume of his novel he lays down what is apparently an attractive ground-plan, and as his edifice slowly rises it displays a look of comely solidity; but no sooner does it reach the second storey than it suddenly falls to pieces, and though courageous and persevering attempts are made to put things right again, the completed structure has a terribly make-shift appearance. The author does not seem to have made up his mind as to the centre of interest. As he gives to his novel the name of the singer Caterina, the natural inference is that she is intended to be the heroine; but a heroine should at any rate be indispensable to a story, and Caterina, so far from being a necessity, is a positive incumbrance. She is, we should say, meant for a fancy portrait of Catherine Hayes, the once celebrated Irish vocalist, who was such a national pet that Thackeray almost ran the risk of assassination at fervid Irish hands by giving her name to one of his most unpleasant creations. Whether this be so or not she is a very charming person, but she has the grave disadvantage of being very much in the way. Unfortunately, the majority of the far too numerous characters are equally in the way; and the only personages who are really essential to the evolution of an extremely simple story are the irascible old colonel who is bent on ruining himself by amateur engineering, his plucky and altogether delightful niece who resolves to save the silly old man from himself, and the young professional engineer who is lucky enough to be chosen first as her ally and then as her husband. With a little assistance, which could have been rendered by a very few supernumeraries, these three characters would have served all practical purposes; whereas, instead, we are introduced to about thirty people, for whose sake—as they have nothing to do with the main story—endless musical performances and innumerable details of continental politics have to be dragged in, if we may so put it, by the hair of the head. The author is really an able writer, and he has a good grasp of character. Some of the Irish chapters are capital; and, had the tale been compressed into one volume, it might have been a very good one. As a three-volume novel it is—well, not good.

Nothing could well be less difficult than to describe *A Leader of Society* in such a manner as to make the class to which it belongs recognisable by the least experienced novel reader. It is written throughout in the present tense; its chapters are headed by quotations from one or other of those early poems of Mr. Swinburne's in which some woman's physical charms and moral shortcomings are eloquently celebrated; it is written in very shaky English, which is helped out by innumerable tags of French and occasional bits of Latin, the character of which may be judged from the fact that one of the masculine personages is described as a *genus homo*; and it opens with what the author calls "a picture of passion and poetry"—that is, a picture of the embraces of a German prince, who looks like a Viking, but has shifty eyes, and a young English adventurer with "a finely-rounded lissom figure," "big passionate eyes," and "lips that fire men's souls." In the intervals of their embraces the pair swear eternal fidelity; and the shifty-eyed Viking, whose "light blue eyes burn and scintillate almost into the intense velvety purple of hers," gives the young lady to understand that if she breaks her oath he will kill her, but in his excitement omits to state what will happen if he himself becomes a defaulter. After this beginning it seems quite natural—as the way of nature is in novels of this order—that when we next encounter the Viking he should be on the point of marriage with another woman whose "figure" consists of pounds, shillings, and pence; and that the young lady should be deeply in love with a man whom she has encountered in a gambling saloon much in the same way that Gwendolen Harleth encounters Daniel Deronda. Finally Reine Ferrers captures her Deronda, or rather her Capt. Alleyne, and then the trouble begins; for Prince Heinrich, the Viking, is a dog-in-the-mangerish sort of person, who, though he has himself deserted Reine, is determined that her charms shall not become the property of anyone else. Failing to shoot her, and shooting his own betrothed instead, he devotes himself to the amiable task of ruining her reputation, first with her Deronda, and then with the world at large. In this he is successful, for he is better as a scandal-monger than as a shot; and the death of his victim, who has in the meantime married a marquis and become a leader of society, brings to an end a very silly and unwholesome novel.

A Choice of Chances is a book with many merits, and what faults it has are of a much more easily pardonable character than those of *A Leader of Society*. Unfortunately, they are also less amusing, principal among them being a tendency to tiresomeness, arising, we think, from that accumulation of trivial details so often found in novels written in autobiographical form. The plot, too, is rather unduly complex; and when complexity of plot does not add to the interest of a story—as is the case here—it is apt to detract from it, and to worry the reader instead of exciting him. The first chapter warns us of a mystery ahead; but after the hint thus given the story jogs on for so long in a quiet, humdrum, non-mysterious manner that we forget all about it; and when the mine is finally sprung upon us it only startles us in the same un-

comfortable sort of way that we should be startled by an actual explosion in real life. And yet, in spite of all faults, we cannot but feel kindly towards a book written in good, pure English, and containing much that is interesting in both character and incident. Few of the portraits are more than sketches; but as sketches they are very successful. As is often the case, some of the subsidiary characters are by far the best. The medical Mitten is a humorous figure, and Sittie is a very winning little person.

In *Locked Up* we have a story of plot interest, not too long to be got through easily in a couple of hours, and admirably adapted for railway reading, or, indeed, for reading at any time when we are not disposed to make large intellectual demands. During the course of his official experience Major Griffiths must have acquired considerable knowledge of the criminal classes; but Roopy Patch is a little too clever for credibility, and is clearly drawn from the major's imagination rather than from his memory. Still, as he and his accomplice, Mr. Kight, are ingenious and entertaining rascals, the reader is not likely to trouble himself with questions concerning their genesis, but will be content to read without curious inquiry the story of their success in figuratively cutting each other's throats.

If Mrs. Lovett-Cameron had wished to describe the extent of her material she should have made a slight alteration in the title of her story. *Neck or Nothing* is a name that sounds well, but has no special relevance, while *Next to Nothing* would have been equally alliterative and a good deal more appropriate. Never was so little narrative matter spread over nearly 120 pages, and yet in spite of the extreme tenuity of the tale it is really very bright and readable from first to last. There is a little hunting, a little scheming rascality, and a little love-making, in which, for the sake of variety, the hero is perfectly passive, while the heroine and her rival are alert and active; and all these little are made the most of, and mixed together in a pudding which swells in the cooking and proves quite light and digestible.

Mr. Walter Fairlie's somewhat crude story, *Wrecked in London*, seems to be intended mainly as an impeachment of the London police, who are represented as being in the habit of locking up perfectly innocent and respectable girls, and then perjuring themselves by swearing that their helpless victims have been drunk and disorderly. We have no doubt that there are black sheep in the force; but even black sheep do not, like Mr. Fairlie's constables, commit heartless cruelties without any motive supplied either by spite or by hope of possible advantage. The story of Maggie Wilmot's abduction, though perhaps a little more credible, is decidedly unpleasant; and we can find nothing in the manner of the story to atone for the very unattractive nature of much of its matter.

Uncle Reuben's Secret is not properly a novel, but a pleasant wholesome story for young people, whose enjoyment will not be marred by recognition of the fact—obvious enough to their seniors—that Miss Kate Wood is hashing-up again one of the most

familiar of the cold shoulders of fiction. The wealthy uncle who returns from America, or Australia, or India after an absence of many years, and who professes to be quite impecunious in order to test the disinterested affection of his relatives, is a very old friend indeed, and in Miss Wood's pages he retains all his well-known peculiarities. To the readers for whom the book is intended he will, however, be a new acquaintance, and he is surrounded by a very lively and life-like group of young people. The twins are specially good, and the whole story is certain to please.

In utter gruesomeness of revolting detail the wild literary nightmare entitled *The Two Crosses* is, so far as our memory serves us, without a rival. Those who enjoy nightmares will find it abundantly soul-satisfying.

JAMES ASHCROFT NOBLE.

CLASSICAL BOOKS.

Platonis Apologia Socratis. With Introduction, Notes, and Appendices by J. Adam. "Pitt Press Series." (Cambridge.) Even after the late Mr. Riddell's excellent *Apology of Plato* there was room for another edition, and especially for one intended to meet the wants of schoolboys and passmen at the universities. Mr. Riddell's notes, good as their quality was, were too few and far between; and it is probable that his book has been bought rather for the sake of the wonderful Digest of Platonic Idioms which it contains than for its direct assistance in the text. But Mr. Adam's little edition is just what was wanted. His notes are copious and to the point; and it will be the fault of students themselves if, after using his commentary, they do not know their *Apologia* well. The word *ἐμμελῶς* in p. 20b is altogether passed over by Mr. Riddell. Mr. F. J. Church, in his recent translation of the *Apologia* and other dialogues, translates "could teach so cleverly," which seems hardly what the context requires. But Mr. Adam probably gives the right sense, "at a moderate fee," comparing for this meaning of the adverb Plat. *Legg.* 760a. Occasionally Mr. Adam has the better even of Mr. Riddell in the interpretation of a passage. In p. 40e, for instance, the latter explains *αὐτὸν* as a resumption of *ἰδιώτην τινὰ* and *Βασιλέα*, after the intervention of *εὐαριθμήτους ἂν εὐρεῖν*. But no resumptive word is wanted after so short an interruption, and *αὐτὸν* would be much more forcible if, with Mr. Adam, we make it = *ἑαυτὸν*: "even the great king himself" (Church). In p. 41b there is an awkwardness about *ἀντιπαράβαλλοντι*, and the passage is variously punctuated. Göbel has a full stop at *αὐτῶν* and a comma at *τέθνηκεν*. Mr. Adam follows other editors in putting a comma at *αὐτῶν* and a colon at *τέθνηκεν*, although he recognises the asyndeton which is the consequence. Would it not be possible to put a comma (or even a colon) at *Τελαμώνιος*? Then we should require no stop at *τέθνηκεν*, and the sentence would run smoothly without asyndeton. One other question. If "the best MSS." have *μᾶλλον οὐδὲν* in p. 18b, and if that yields a good sense (as rendered by Riddell or Church), why does Mr. Adam read and translate *οὐδὲν μᾶλλον*?

The Cyropaedia of Xenophon. Books I.-II. With Introduction and Notes by H. A. Holden. (Cambridge: The Pitt Press.) What Dr. Holden calls Xenophon's "greatest work" has suffered no small neglect in this country. There is probably no complete edition of the *Cyropaedia* with English notes except that of Mr. Gorham, now many years old; and only fragments of the work have since been edited (Bks. IV.-V., by Dr. Bigg, Bks. VII.-VIII. by

Prof. A. Goodwin). We should be inclined to suggest, if Dr. Holden will pardon the remark, that the *Cyropaedia* is the dullest of Xenophon's writings, and that few editors have had the courage to undertake what Dr. Holden promises us presently—a complete edition. The eagerness with which everybody who writes about this unfortunate work pounces upon the little romance of Pantheia and Abradates, suggests relief rather than admiration. The truth is, it is a moralising book, a book written with an object and without any genius; and the manners and customs which it incidentally describes are not an interesting picture of one nation, but are derived from a clumsy blending of Xenophon's Athenian education, his Asiatic wanderings, and his Spartan tastes. But Dr. Holden has done his part with characteristic thoroughness. His introduction and notes are very full and helpful, and so is his running analysis. Here, however, we dissent once or twice from his account of the course of events. Cyrus had not, we think, "passed the two youthful stages" of the Persian discipline (p. 113) when his mother took him to Media. He was only a boy, not an *ἔφηβος*, as Xenophon clearly tells us in I. v. 1. Nor does he "return to Persia" in I. vi. 1 (p. 169). He was already in Persia. He merely "went home." In I. vi. 12, by the way, Dr. Holden prints the old reading *Ὁὐ μέρμημα*, but the reading with which his commentary deals is that of Hug and G. Jacob, *Ἐδ μέρμημα*.

Homer's Iliad, xxi. By A. Sidgwick. (Rivingtons.) The merits of Mr. Sidgwick's school-books are well known. We only wish he had avoided two mistakes. In the introduction, which is repeated from Book xxi., the account of the Homeridae and of Pisistratus is wrong (p. 11), as any reader of Mr. Monro's *Iliad* knows. And, secondly, Mr. Sidgwick's philology is—alas!—obsolete. The value of "philology" to boys is dubious; but it is at least needless to teach them about "Ja" and "Bhiam" (l. 22) and other things they will only have to unlearn. With these reservations, we can thoroughly recommend the book.

Selections from Martial. By J. R. Morgan. (Rivingtons.) Mr. Morgan has selected seventy-five easy epigrams of Martial "as a stepping-stone to higher things for boys who can do their twenty lines of Vergil at a lesson." The idea is good, and the selection judicious; though the book is not long enough to fill up a term's reading. The scholarship of the notes sometimes requires revising, e.g., the explanations of i. 70.5 and 17, iv. 13.7, vi. 28.7, vi. 43.8, vi. 61.2, and one or two more, are rather doubtful. The translations, too, are sometimes paraphrases. If a boy is saved a lexicon, he should at least be told the literal sense of his word. But, nevertheless, we think that many schoolmasters will find the book serviceable.

Cicero de Senectute. By L. Huxley. (Oxford: Clarendon Press.) We are afraid we cannot speak highly of this book. It has two main faults. First of all, the notes are not very accurate in point of scholarship. The words *ut in gratiam cum voluptate redeamus* (§ 56) are rendered "so that we are restored at last to favour with pleasure to ourselves; prudentia is said to mean "learning" (§ 1); *chiasmus*, the figure of speech, is explained as "gaping" (p. 6, l. 20). And these are only small specimens out of very many. Secondly, the notes are not well put. The *quincunx* is explained "lines set diamondwise," which is just the way the Romans did not describe the pattern. There are far too many cross references, which Mr. Huxley, as a schoolmaster, cannot imagine to be of much use. However much he may like the plan of explaining an author from himself, this is not the way to do it. Some of the philological notes are not

wanted (p. 17.3, *ib.* 17, &c.) The *De Senectute* has been already admirably edited by Dr. Reid, and Mr. Shuckburgh has produced a very useful little book. Mr. Huxley has not imitated them. The Clarendon Press seems unlucky with the *De Senectute*.

Cicero de Senectute. By E. W. Howson. (Rivingtons.) This little edition is intended as a companion volume to Mr. Sidgwick's *de Amicitia*. The notes, on the whole, are scholarly; but there is an extraordinary blunder in the explanation of *emancipata* (§ 38). We are inclined to think that, with the exception of the biographical notes, they are much too short. The *de Senectute* and *de Amicitia* contain a great many difficulties for a fifth-form boy, many more than Mr. Howson's commentary recognises. We are sorry to have to add that the book seems to us to be in many parts nothing more than an abridgment of Dr. Reid's work, and that quite without acknowledgment. Even the note on *emancipata* is only a muddled abstract from Dr. Reid. We venture to think this is a little unworthy of a Fellow of King's.

Notes on Thucydides I. By B. Geare. (Longmans.) Mr. Geare's notes are not bad, but we cannot say we think they were worth publishing in their present shape. They seem to have been thrown together a little after the fashion of a *variorum* edition; and, with much that is good, much that is bad has also crept in. The quotations, in the earlier part of the book, from Curtius's Greek history are very unhappy. The first volume of Curtius is the least valuable and most uncertain of the four—at least, from a schoolmaster's point of view. And the notes are not always worded very carefully. Some might have come out of a boy's note-book.

Anglice Reddenda. Selected by C. S. Jerram. Second Series. (Oxford: Clarendon Press.) The success of his first series has induced Mr. Jerram to make a new collection, recognising that constant use at any school soon exhausts the usefulness of such compilations. Series II. differs from Series I. in several points. It is, as a whole, more advanced. It contains a larger number of extracts from Homer and Herodotus. The pieces are longer, and a useful table of references (pp. 19-24) has been added. The printing appears to be very correct, and the book as a whole is convenient for its purpose, to be used either for written exercises or for oral construing at sight. Now and then the *graduating* seems doubtful or unsound, *e.g.*, 49, though from Caesar, is very hard, while 156, though from Cicero, is comparatively easy. Still, on the whole, the book deserves the success of its predecessor.

THE fourth edition of Madvig's text of *Livy*, XXI.-XXV. (Hauniae: Gyldendal) does not differ materially from that which was issued in 1880, except in greater clearness of typography. In xxii. 38.4, he would read *aptandi* for *petendi*; and in § 9 of the same chapter for the corrupt *quodne* he gladly accepts the conjecture of Zachariae *quid ni*, reading below *diem* for *et diem*—a very neat restoration of a passage which has long been troublesome. In xxiv. 3.2 a slight change of punctuation has greatly improved the sense. It is pleasant to find that the veteran scholar, even though he was dependent upon the eyes of others, continued to keep this edition of his favourite author up to the latest results of scholarship.

Die Quellen der Odyssee. By Otto Seeck. (Berlin: Siemenroth.) Herr Seeck devotes his 420 pages to an attempt to dissect the *Odyssey* in accordance with the methods of Kirchhoff and Wilamowitz-Möllendorf. We fear we cannot recommend his book, but a sketch of his results may be both instructive and amusing.

He discovers three *Urodysséen*, a "Telemachie," a "Transformation," and a "Contest with the Bow"—the first two of late date, the third very old, but all intertwined by Pisisstratus into one whole. Thus, in one book, ll. 1-50, 84-99, 121-327, 444-453, and 627 belong to the Telemachie; ll. 51-80, 100-118, 330-384, 387-443, and 454-626 to the "Transformation"; the "Bow" is unrepresented, and the remaining nine lines are due to the Pisisstratean editor. The proofs given for all this are very weak. As an example, we may quote the argument for the Pisisstratean recension. Briefly, it seems to run as follows (p. 385 foll.). Dieuchidas, a Megarian writer, who lived, possibly, about 350 B.C. (Wilamowitz), mentions Pisisstratus, and a corrupt and ambiguous passage in Diogenes (1.57) may possibly imply that he knew of a Pisisstratean edition of Homer. Now, Dieuchidas sometimes copies Hellanicus. He may possibly have done so here. Moreover, an interest in literature may possibly have existed in the sixth century B.C. "Was wissen wir," exclaims Herr Seeck, "vom sechsten Jahrhundert?" Homer, having been thus edited, was placed in the state archives, and for a while forgotten. A popular Homer, very unlike the official one, was alone current. Hence it comes that the Attic dramatists seldom treat a Homeric subject (Paley). Finally, however, the official text became the usual one, and it is that which we now have. In this string of impossibilities one point only need be noticed. The passage of Diogenes mentioned is corrupt; but, as it stands, it may easily bear another sense than Herr Seeck's. "Diogenes [so it can be rendered] rejects the view that Pisisstratus inserted ll. 2-546, and thinks, like Dieuchidas, that Solon did so." This means only that Dieuchidas gave the usual account of Solon's action in the Salamis quarrel. We have written thus much because the Pisisstratean recension has hitherto been regarded as exploded; and its renovation, whether by Wilamowitz or by some lesser light, is noteworthy. But the reflection with which we really leave Herr Seeck is different. A little while ago there was reviewed in the ACADEMY a treatise on three books of the *Iliad*, filling 1,800 pages. Dr. Seeck has written 400 pages on the *Odyssey*. Who pays—the writer, the publisher, or the customer—for this flood of dissertation?

WE have received *Selections from Caesar*, by the well-known editor of school-books, Mr. G. L. Bennett (Rivingtons), which deserves to be warmly recommended; *Selections from Ovid*, by Messrs. Heatley & Turner (Rivingtons), comprising fifty-five elegiac pieces, with notes, &c., for young boys; *Easy Selections from Ovid*, by H. Wilkinson (Macmillan); and *Easy Latin Passages for Unseen Translation*, by A. M. M. Stedman (Bell).

WE also have on our table *Odyssee Epitome* by Pauley and Wotke, and *Vergilii Carmina selecta* by Eichler, both belonging to the "Schenkl Series" (Freitag & Tempky). Both are "texts" only, but the latter might be of use to schoolmasters wishing to read the best parts of Vergil quickly with a high form. It contains a map of Hell, to illustrate Aeneid VI.

NOTES AND NEWS.

MESSRS. CHAPMAN & HALL will publish immediately in a volume the series of papers on "The Present Position of European Politics" that have recently been appearing in the *Fortnightly Review*. The title page states that they are "by the author of *Greater Britain*."

MESSRS. MACMILLAN announce two volumes of School Sermons—by Mr. Herbert A. James, now dean of St. Asaph, but lately headmaster

of Rossall; and by Mr. E. C. Wickham, headmaster of Wellington college.

MESSRS. MARCUS WARD & Co. will publish early this autumn an important work, in two volumes, on the Canary Islands. The writer, Miss Olivia M. Stone, author of *Norway in June*, visited with her husband all the islands of the group, being the first English people to accomplish the feat. Illustrations from photographs taken during the tour, and eight maps made from the author's personal observations, will accompany the letterpress.

DOM ODILO WOLFF, of the Beuron congregation of Benedictines, has in the press a work on the Temple of Jerusalem and its dimensions, in which several hitherto obscure points concerning its exact position and dimensions will be cleared up. An essay on the principles of the measures used in planning the temple, in which the geometrical fundamental rule of its construction is established, cannot fail to interest antiquaries. The author treats successively the tabernacle, Solomon's temple, Zerubabel's and Herod's temple. The volume will be illustrated with a dozen lithographic plates.

WE are glad to hear that Sleeman's *Rambles and Recollections of an Indian Official*—a work originally written in 1835-6, and now almost unobtainable—is to be reprinted in India, by the Himalayan press at Lahore. It may be remembered that Prof. Max Müller, in his *India: What can it teach us?* expressed a strong desire for a cheap edition of this book, as being an authoritative account of native character by a most accurate and unprejudiced observer.

MESSRS. M. H. GILL & SON, of Dublin, will shortly publish a new novel, entitled *Moy O'Brien: a Tale of Irish Life*, by Miss E. Skeffington Thompson; also, *Handbook of the History of Philosophy*, by Albert Stöckl, part 1, "Pre-Scholastic Philosophy," translated by Prof. T. A. Finlay, of University College, Dublin.

MESSRS. CASSELL & Co., have made arrangements for the issue of a new and revised edition of *The Sea: its Stirring Story of Adventure, Peril and Heroism*. The work, which will be brought down to the present time, will be issued in serial form; and Part I. will be published on July 25.

Child's World Ballads is the title of a new volume of poems by Mrs. Sarah Piatt, announced by Mr. Elliot Stock for immediate publication.

MESSRS. W. H. ALLEN & Co. will shortly publish a new novel by Esmé Stuart, entitled *In His Grasp*; the story is "respectfully dedicated" to the Society for Psychical Research.

MR. BERNARD QUARITCH will have ready for issue this month a new edition of his "General Catalogue" of Books and MSS., in six volumes of about 4,500 pages in all, containing about 40,000 entries. A seventh volume, consisting of the index, will follow next year. A limited number of copies will be printed on large paper. Mr. Quaritch announces that he will issue no more classified catalogues; but that henceforth he will confine himself to "rough lists," of which he has already sent out at various times more than eighty.

MR. CHARLES LELAND—Hans Breitman—will read a paper before the Royal Society of Literature on Wednesday next, July 6, at 8 p.m., upon "The Literary Training of the Memory and of the Eye."

THE Edinburgh Public Library Committee have appointed Mr. Hew Morrison, schoolmaster at Brechin, as principal librarian. There were fifty-two candidates for the office

and these included several practical librarians of recognised ability and long experience in library work.

THE Queen has signified to the Rev. C. T. Wilson her acceptance of a copy of his book, *Russian Lyrics in English Verse*.

Correction.—In the announcement of the forthcoming *History of Berwick*, which appeared in the ACADEMY of last week, it was stated that much useful material would be used from the collections of the late Mr. James Hardy. This should have been "from the collections of the late Mr. Robert Weddell, of Berwick." It is the revision of the MSS. that Mr. James Hardy has kindly undertaken.

UNIVERSITY JOTTINGS.

MR. H. J. MACKINDER, of Christ Church, has been elected to the new readership in geography at Oxford, on the joint nomination of the delegates of the common university fund and the Royal Geographical Society. Mr. Mackinder, it may be recollected, read a paper before the Geographical Society in January last upon "The Scope and Methods of Geography," which attracted considerable attention.

THE little volume in preparation for the bazaar to be held at St. Andrews, towards the end of August, for the Students' Union promises to be of more than ephemeral interest. It has been edited by two of the professors, and will contain contributions by Andrew Lang, R. L. Stevenson, Austin Dobson, F. Anstey, E. Gosse, J. W. Mackail and others, including students now in residence at the university, with illustrations by B. Lemon, H. Rivière, W. Hole, and T. F. Paton.

AMONG those upon whom honorary degrees were conferred by the university of Durham at the midsummer convocation were—Mr. Barclay V. Head, of the British Museum, author of *Historia Numorum*; and the Rev. John C. Atkinson, author of *Cleveland Ancient and Modern*, and many other archaeological and historical works.

MR. HENRY WHITE WALLIS, the Hibbert student of 1884, whose essay on "The Cosmology of the Rig-Veda" has just been published by the Hibbert trustees, has been elected a fellow of Gonville and Caius College, Cambridge.

THE *Cambridge University Reporter* prints the names of all those upon whom the degrees of Doctor in Letters and Doctor in Science have been conferred up to the present time. The number is thirty, of whom the following fourteen are Doctors in Letters—Isaac Taylor, W. W. Skeat, H. Sidgwick, A. W. Ward, J. Peile, R. C. Jebb, H. Jackson, C. A. M. Fennell, J. E. Sandys, Percy Gardner, A. S. Wilkins, J. Gow, J. P. Postgate, and J. S. Reid. Of the total, thirteen are from Trinity, five from St. John's, four from Christ's, three from Caius, and two from Peterhouse.

THE annual report of the library syndicate at Cambridge contains the following paragraph regarding the principal additions recently made to the library:

"The presents made to the library in the year 1886 are of unusual interest and value. They include the splendid library of Chinese books collected and presented by Sir Thomas Wade, Mr. Cecil Bendall's gift of Sanskrit MSS. from Northern India, and the Badger collection of Syriac and Christian Arabic MSS. presented by the Society for the Promotion of Christian Knowledge. The generous gift of Mr. Bradshaw's representatives includes, besides minor items, his MS. note-books and papers, containing the record of many of his bibliographical researches, and an important series of books either printed in Ireland, or connected with that country, which was formed by the late

librarian as a supplement to the Irish collection presented by him to the university in 1870. From Mr. Bradshaw's library the syndicate have also acquired by purchase the great Madden collection of ballads; and to the generosity of the subscribers to the Bradshaw memorial fund they owe the late librarian's *Adversaria*, his choice collection of Civil War newspapers, and a number of early pamphlets and other scarce pieces, which have been presented during the current term."

AMERICAN JOTTINGS.

THE *Open Court*, of Chicago, "a fortnightly journal devoted to the work of establishing ethics and religion upon a scientific basis," has received permission from Prof. Max Müller to print in full the series of lectures upon "The Science of Thought," which he delivered last March before the Royal Institution. One of these lectures has already appeared in the *Fortnightly Review*; but we understand that neither of the other two—on "The Simplicity of Thought" and "The Identity of Thought and Language"—will be published separately in this country. In the number of the *Open Court* for June 9, we also notice contributions from Mr. Moncure D. Conway, Mr. R. A. Proctor, Prof. H. C. Adams, and Mr. John Burroughs, besides a London letter signed "Hypatia Bradlaugh Bonner."

THE Papyrus Club of Boston has contributed 600 dols. (£120) towards the project for building a summer cottage for Walt Whitman, recently noticed in the ACADEMY. The *New York Critic* states that Walt Whitman's income from all sources last year amounted to 1,600 dols. (£320).

AT the suggestion of Prof. Howard Crosby, of New York, the Rev. Dr. W. C. Winslow has begun to form a list of patrons for the Egypt Exploration Fund, each patron being pledged to contribute not less than twenty-five dollars annually. The first patron who has entered his name upon Dr. Winslow's new list is Col. Elliot F. Shepard, of New York.

AT the recent annual meeting of the American Oriental Society in Boston, the executive committee were authorised to transmit to M. Naville the congratulations of the society upon the successful accomplishment of his great labour, the compilation and publication of the variorum edition of *The Book of the Book*.

THE American branch of the firm of Cassell & Co. announce a novel entitled *A Tragic Mystery*, written by Mr. Julian Hawthorne, in collaboration with Inspector Thomas Byrnes, chief of the detective bureau of New York.

MESSRS. GINN & Co., of Boston, announce for publication during the summer a thoroughly revised edition of Dr. Albert S. Cook's translation of Sievers's *Grammar of Old English*; and, later in the year, Zupitza's *Old and Middle-English Reader*, translated by Prof. G. E. MacLean, of the University of Minnesota.

MESSRS. BENJAMIN BROS., of New York, announce for publication, in the autumn, a new periodical, "devoted to the interests of those who collect rare books, prints, and autographs," to be entitled the *Collector*.

THE ninth term of the Concord school of Philosophy will begin on July 13. Twelve morning lectures will be devoted to Aristotle, and ten evening lectures to dramatic poetry.

MR. EDMUND ROBERTSON'S little book on *American Home Rule*, recently published by Messrs. A. & C. Black, of Edinburgh, has received the following commendation from the highest American authority, the *New York Nation* of June 16:

"Within the limits that the author has set himself, he has done his work with singular accuracy. . . . [He has] furnished us with a really

excellent political text-book. We should hardly know where to turn for a clearer and neater account of our complicated system of government within an equal space."

ORIGINAL VERSE.

A GERMAN JUBILEE ODE.*

Zum 50 jährigen Regierung-Jubiläum Ihrer Majestät der Königin Victoria von Gross-Britannien und Irland.

21. JUNI 1887.

Es tön't ein Festgruss durch die Welt in tausend-fachem Wiederhall
Und pflanzt sich fort von Pol zu Pol als froher Kunde Jubelschall.
So weit der Menschen buntes Volk bewohnt das weite Erdenrund,
Ein Name klingt heut' herzensfroh durch Land und Meer von Mund zu Mund.

Victoria! die Fahne flieg't bei schmetterndem Trompetenton,
Victoria! vom hohen Mast jauchzt es des Meeres rauher Sohn.

Victoria! die Trommel dröhnt's von glänzendem Parafeld,
Victoria! es blitzt das Wort mit Donnerschlag durch alle Welt.

Bei Waffenklang, im Pulverdampf, bei Hurrahruf, Commandowort,
Durch Sturm und Braus, Victoria! Aufjauchzend klingt es fort und fort,
Ein tosend Meer von Lieb und Treu umschäumt Alt-England's weiten Strand,
Den Wall von Trotz und Manneemuth, erschütter nie im Weltenbrand.

Victoria! Du Siegerin! so weit des Löwen Zeichen gilt,
War Deines Namens hoher Klang stets Deines Volkes Schutz und Schild;
Wo irgend eine Woge schäumt, da flattert Albion's Panier,
Und in den Kampf für die Cultur zieht seiner Söhne stolze Zier.

Wo Tyrannei und Barbarei das Menschenthum in Fesseln schlägt,
Ist's England's Heldenvolk, das stets den Lorbeer des Befreiers trägt.

Wo irgend ein geknechtet' Volk ringt muthig für sein göttlich' Recht,
Hat noch des Briten starke Hand die rohe Willkür stets geschwächt.

Und wo nur je ein flüchtig Haupt als Schirmstatt England sich erkor,
Vergeblich nie hat es geklopft an dieses Volkes gastlich Thor.

Wo einst das Sklavenschiff das Meer geschändet mit lebend'gem Gut,
Streich heute friedlich, stolz und frei der Segler durch die blaue Flut.

Ein Weltenreich, so gross und kühn, in seinem Bau so meisterhaft,
Dess' Wurzeln trinken aus dem Born von tausend-jähr'ger Heldenkraft,
Das nie gewankt im schwersten Sturm, von Gott und seinem Recht nicht lässt,
Ein Riesentempel steh't es da, geschmückt zu einem Weltfest.

So bring, Victoria, Dein Reich Dir Heute seine Wünsche dar,
Und flicht der Liebe grünes Reis Dir jubelnd in das greise Haar.
Hell schimmert wohl das Diadem, mit dem Dich schmückt des Reiches Macht,
Doch schöner prangt der Liebe Zoll, der Herrschertugend dargebracht.

* This ode, by Prof. Keller, was addressed to the Queen—and accepted by her—in connexion with the jubilee present from Germans resident in England, which consisted of a picture by Prof. von Werner, representing the congratulation scene by all the members of the German Imperial family on the ninetieth birthday of the Emperor William. A sketch of this picture was submitted to the Queen on Wednesday of last week by a deputation consisting of Herr Oscar von Ernsthause, Prof. Max Müller, Baron von Stern, &c.

Victoria! durch fünfzig Jahr' ziert Deine Stirn
des Reiches Glanz,
Durch fünfzig Jahr wand Liebe Dir der Tugend
duft'gen Blütenkranz,
Und Macht mit Anmuth, eng vereint, hält ewig
jung den ält'sten Thron,
In deiner Königin erstrahlt dir ew'ge Jugend,
Albion!

Victoria! durch fünfzig Jahr' stand'at Du getren
zu Deiner Pflicht,
Nicht eine Stunde deckte Nacht in Deinem Reich
der Sonne Licht,
Drum' muss Dein Jubeltag auch heut' ein Volkes-
Jubiläum sein,
Denn seinem Jubel leuchtet ja ein Halbjahr-
hundert Sonnenschein.

So weit des Briten Zunge klingt, so weit die Erde
Menschen trägt,
So weit der Grösse und der Kraft, der Tugend wo
ein Herz nur schlägt:
Stürm' aus der Millionen Brust zum Himmel
donnerndes Hurrah!
Brau's über Land und Meere weit: *Heil, tausend
Heil, Victoria!*

J. B. KELLER.

THE HISTORY OF THE INVENTION OF
PRINTING.

IX.

WHEN we now turn to the four editions of the *Speculum*, and observe that they are all *anopisthographic* (figures and text), and that the text of one of them is partly *xylographic* and partly *typographic*, we meet again with difficulties when we assign them to the period 1471-1474. We must then assume that their printer continued to print, perhaps for a good many years, his books partly from wooden blocks (xylographically) and partly with movable metal types, many years after the former mode of printing had been practically abandoned on account of the perfection to which the latter mode of printing had been brought. It is true that block-books were printed *anopisthographically* even so late as 1475, but not by printers who practised the art of printing with movable metal types. To bibliographers like Dr. Van der Linde the peculiar and primitive condition of the *Specula* is no difficulty. As to their *anopisthographic* condition, they argue that that was natural and necessary, since the mode by which woodcuts were printed rendered the *versos* unfit for further operations. Very well! But the art of printing woodcuts together with text set up in movable metal types on both sides of the paper was already understood in Germany so early as 1461, and it would be very strange indeed if this first Dutch printer (who, if he were not the inventor of printing, must have learned his craft in the perfect schools of Germany) should have been unacquainted with that art. Moreover, the pages of the preface consist, in all the four editions, wholly of *text*, without any woodcut at all; and as this preface required in the Latin editions no more than five pages, it is difficult to see why the printer, if at the time that he printed the *Speculum* he understood the art of printing on both sides, should have printed this preface on three sheets or six leaves (= twelve pages), whereas, if he had printed on both sides two sheets or four leaves (= eight pages) would have been amply sufficient for his purpose. Even then he would have been able to leave (as he has done now) a blank leaf (two pages) at the beginning, and one blank page at the end of the quire to agree with and to meet the blank page with which the next quire would begin. And the way in which the preface of the Dutch editions of the *Speculum* is printed

proves that their printer knew to be economical with his paper, for that preface requiring four pages only, he dispensed with the entire blank leaf at the beginning, which we find in the Latin editions, and simply left one blank page (the first) at the beginning, printing the four pages of text on the second and seventh, third and sixth pages of the quire. I believe we may infer from this peculiarity that the printer of the *Specula* did not understand the art of printing on both sides at the time that he produced the four editions. And as regards the other peculiarity of one of the Latin editions being printed partly from wooden blocks (text and all) and partly with movable types, it does not trouble some bibliographers in the least. They say that either the original printer must have run short of types, or must have had an accident with certain sheets, and so decided to reprint the wanting sheets xylographically rather than go to the trouble of casting new types; or the original printer transferred his stock of printed sheets to another person, with some sheets missing, which the new proprietor supplied by printing them from blocks cut for the occasion. These explanations may do service (for one moment of argumentation) for the mixed Latin edition which has twenty xylographically printed leaves. But they are hardly applicable to the Dutch edition, which has two leaves (49 and 60) printed with types differing a little, but still materially, not only from those of the other leaves of the book and the other editions of the *Speculum*, but from all the other types of the Costeriana. Surely, neither an old, nor a new proprietor, if he did not think it worth his while to cast new types for twenty leaves wanting in one edition (and now supplied by block-printing), would have been so foolish as to undertake such a labour for no more than two leaves in another edition. Moreover, the argument that a new proprietor would have considered it a more simple process to cut blocks (which would be useless for any other purpose) for the text of no less than twenty folio leaves (= forty columns), than to cast a new type (which could be used for a hundred other purposes) for the printing of these pages, might impose very well on persons who are still under the erroneous impression that the early printers required as large a quantity of type as those of the present day; but it will hardly pass muster with those who have realised that the early printers really worked with a very small quantity of type, and only needed a small quantity, as they all printed their books page by page.

All that has been said on these twenty xylographic leaves, and on the relative position in which the edition in which they occur stands to the edition wholly printed from movable types, as well as on the order in which the four editions of the *Speculum* have probably been published, appears to me very unsatisfactory. Unfortunately, the copies of the four editions are so scattered up and down different places of Europe (and America?) that it is well nigh impossible to make an adequate examination of them. Some authors assure us that the Latin edition with twenty xylographic leaves (which I shall call A) is really later than the Latin edition, which is wholly typographically printed (and which I shall call B). Ottley, who took considerable pains in examining the two editions, concluded from the breakages and cracks observable in the impressions of the woodcuts that A is later than B; and he considered his opinion confirmed by the fact that he saw, or thought he saw, that the twenty xylographic leaves of A, were facsimiles of the corresponding (typographic) leaves in B. Ottley's opinion, however, about the breakages and cracks, was declared untenable by Bernard and Berjeau, who both took

as much pains as Ottley to examine the two editions; but it was endorsed and adopted by Sotheby and Holtrop. When we examine the facsimiles of two identical pages of A and B which Mr. Holtrop has given in his *Mon. typogr.* (pl. 17 and 20), it seems clear that either of the two texts served as a model for the other; for in the first line we find *mille* printed as *nulle* in both editions, and in the second column we have in l. 10 *Iupiter* without a contraction for the first *r*, and in l. 21 *mdei* for *tudei*; so that we shall perhaps not be wrong in saying that substantially A followed B, or that the latter followed A, and that the two editions have not been set up from two different MSS. When we further examine the differences between the two texts, it would seem that the compositor of B has endeavoured to produce a more contracted text than the compositor of A, and in one or two cases improved upon the latter, as, for instance, col. 2, l. 1, *daud.* (for *dauid*) against *dad.* in A; and in l. 21 *aquā*, against *aq*, with two contractions in A. Mr. Holtrop (*Mon. typ.* p. 22 and 23) has collected twenty-four variations between the two texts, which prove, according to him, that the differences between them are not faults of the copyist. But it does not seem to have struck Mr. Holtrop that, in col. 2, l. 2, A has: "Angeli occidiss³ (occidisset) derisores Christi . . .," whereas B has correctly, "Angeli occidisset (occidissent)," &c. This correction of B seems to prove that it is later than A; for the compositor of the latter text seems to have been able to read and understand Latin, so that if he had copied B, he would hardly have deliberately altered the contracted but correct "occidisset," into a still more contracted and wrong "occidiss³."

I believe a further comparison of the various readings of the two texts would yield a more trustworthy criterion as to the relative position of the two editions than an examination of the cracks and breakages in the engravings; for the latter, having been printed by a very imperfect process, are liable to show defects where the blocks themselves might have been perfect. But I am unable for the present to make such a comparison myself, as there is only one edition (A) within my reach in the British Museum. And as the question of the priority of the two editions does not effect my view as regards the priority of Haarlem printing, I leave it alone for the present.

Therefore, in dealing with the peculiar conditions of the Costeriana described above, and trying to account for them, we must not forget that if we place them all in a period beginning with 1471, and ending, perhaps, 1480, and consequently decline to accept their printer as the *inventor* of printing, that is to say, as a man who had never learned the art of printing from anybody else, and had no other specimens of printing before him, we must inevitably come to the conclusion that he wandered either from France or from Italy or from Germany into the Netherlands, and that he, a disciple of one of the perfect schools of printing then existing in those countries, would, alone among the numerous other pupils of the same schools, have so badly learned his craft that he alone printed as none other of his fellow pupils. How could we believe, for one moment, in such a state of things? It seems to me that we are driven to the conclusion that the printer of the Costeriana was a *self-taught* printer, who had never learned the art from anybody else, and, consequently, that he was the *inventor* of printing with movable types.

But it will be asked how we can separate the dates 1458 and 1471-1474, afforded us by five of the Costeriana—the works of Pius II., printed in type V.—from the remaining forty Costeriana in such a way as to reconcile the latter group not only with the year 1464,

when printing makes its appearance in a perfect condition at Mentz, but with a still earlier date, so as to establish the priority of those forty Costeriana over Mentz printing. Here I must first remark, what everybody else would remark also, that the five Costeriana which cannot be placed earlier than 1458, on account of their bearing the name of Pope Pius II., need not necessarily be placed so late as 1471-1474; for the fact that one of them was bought during the latter period is no evidence of their being printed during that period. The date of this bought copy, however, is of the utmost value, inasmuch as it shows us that the printing had been accomplished at least before 1474.

My second remark is that these five Costeriana (which we cannot date later than 1474, and may have to date, perhaps, so early as 1471, if not earlier) show a kind of superiority in type and workmanship over the forty other Costeriana, which compels us to place the latter group in an earlier stage than the former. This fact is, I believe, admitted by every bibliographer who has paid any attention to these books. It is true, Dr. Van der Linde is not of this opinion. He even places (p. 299 of his last work) the group of five Costeriana at the head of his list, and so makes the printer of these incunabula begin his career not before 1474. But the mere fact of his placing the various *Donatuses* (among which is one edition fragments of which were used as binder's waste so early as 1474), and *Doctrinales* and *Specula* later than the five works of Pius II., condemns his list as a piece of buffoonery to which we need not pay any attention. Therefore, I believe, I shall not be blamed by any fair-minded opponent of the Haarlem claims, if I say that 1474 is the very latest year that we shall have to consider for five of the Costeriana, and that we are at liberty to date the remaining forty works before that year. Perhaps it is unnecessary to add that the printing of forty different works was not accomplished in a day or two, and that, therefore, we shall be at liberty to work our way back with them a considerable number of years before 1474. CORRESPONDENCE.

"CARFAX."

Cambridge: June 27, 1887.

I have pointed out, in my Dictionary, that the etymology of "Carfax" is solved by the Middle-English *carfoukes*, occurring in the Romans of Partenay as a translation of Old-French *carrefourg* (Latin *quatuor furcas*), a place where roads fork off in four directions.

In Mr. Plummer's *Elizabethan Oxford*, just published for the Oxford Historical Society, we have an additional light upon the word. At p. 119 we find that it was spelt "Carfocks" and "Carfox" in 1566.

Litté points out that the Provençal form of the word is *carreforc*, whereas the usual Old-French form is *carrefor*, though *carrefourg* also occurs; and he adds that the Provençal is the older and truer form. Starting from *carreforc*, the usual Old-French *carrefor* results from this by the loss of *c*, whereas the Middle-English *carfouk* or *carfoke* results from the same form by the loss of *r*. Nothing but the Latin *furca* can possibly produce the *k*-sound which appears so persistently in the Oxford forms of the word.

At the same time it is quite clear, from Mr. Boase's delightful book on *Oxford*, that "Carfax" was also called *Quatervois* (pp. 87, 115, 177); and at p. 251 of Mr. Plummer's book we find that, in 1592, it was called "Carfax or Cator Foyse." This *Cator Foyse* or *Quatervois* represents a Latin *quatuor vias*.

The net result is that the same place had two distinct names. "Carfax," formerly *Carfox*, represents Latin *quatuor furcas*, while the alternative name *Quatervois* represents Latin *quatuor vias*. The latter name is now dead; but the reminiscence of it survives whenever we are told, by a natural mistake, that "Carfax" is "derived from" *quatuor vias*, which is simply impossible. WALTER W. SKEAT.

THE MYTH OF CUPID AND PSYCHE.

Settlington: June 23, 1887.

The exposition of this myth has excited so much interest that I would ask to be allowed to note some further details.

1. Psyche, the new crescent moon, resembles Aphrodite, the old moon, so closely, that on her first appearance a new Aphrodite is reported to have appeared, and she is called and worshipped by that name.

2. The nuptial palace where Cupid comes to Psyche is clearly the star-decked heaven. It was built by divine, and not by human, hands; the crystal river is the milky way; the beasts pictured on the walls are the signs of the zodiac; the figures on the floor are the constellations; the innumerable jewels which give light like the sun are the stars; and the invisible music is the music of the spheres. Psyche floats through the air into this celestial palace from the top of a lofty mountain, and in the morning Cupid flies off through the starry skies.

3. The waxing of the crescent moon is repeatedly described. When the slender Psyche has been embraced by the dark bridegroom she increases rapidly in size. "She marvelled greatly that in so small a time her body should swell so big."

4. In the third quarter the moon begins to wane. Psyche is told how the dark serpent she has wedded will devour her, and that she will be "swallowed up in the gulf of his body."

5. Psyche's tasks are plainly meteorological labours. The stars, represented by grains of corn of various sizes, have to be sorted and arranged according to their order. From the clouds, the great sheep of heaven, she is bidden to gather the shining wool; and this she does when the sun goes down, and the sunset clouds leave their golden fleeces hanging, within her reach, upon the thorns. Lastly, she has to draw water from the black storm-clouds overhead, which are guarded by the fierce and horrible demons of the tempest.

6. In the fourth quarter the moon slumbers, having descended to the under world and received from Persephone a magic box which contains sleep. Cupid finds Psyche sleeping. He wipes the sleep from her face and puts it back into the box, and then brings his bride into the heavenly palace of the sky, where she tastes the cup of immortality, and takes her rightful seat among the celestial beings, while the child she bears, the next succeeding moon, is the image of his parents and of Aphrodite.

The significance of the whole parable is so transparent that it is difficult to believe that Apuleius, who had been initiated into so many of the mysteries, was not aware of the esoteric meaning of the myth; while it is still more difficult to understand how the tale should have hitherto escaped the keen analysis of modern mythological expositors. ISAAC TAYLOR.

London: June 26, 1887.

It is a little difficult to understand why Canon Taylor and Sir George Cox take such exception to Mr. Lang's interpretation of this story. It is quite possible to grant all that Canon Taylor urges—viz., that the tale told by Apuleius is a distorted form of a Babylonian nature-myth—and at the same time to accept Mr. Lang's analysis, and to admit the relevance of the parallel which he draws between the Greek *Märchen* and other tales found mostly among savages. Canon Taylor misses the whole point of Mr. Lang's contention by representing him as claiming that the myth was "invented" by the Greeks; and his own argument is vitiated by the tacit assumption that it was the Babylonians to whom the "invention" is due. Mr. Lang would, I think, say that tales such as that of

"Cupid and Psyche" are the outcome of a special mental and social state through which it is probable every race has at one time passed, and to which the ascertained condition of modern savages offers the nearest parallel. But it is part of his hypothesis, as I understand it, that *Märchen* are not invented by or among any definite race or tribe. Whether a hypothesis which attempts to recover from the mythological systems of the past traces of the mental and social condition of the men among whom those systems were worked out, be "barren," as Sir George Cox asserts, is open to question. The majority of folklorists will not share Sir George's opinion. Admitting, however, the correctness of Canon Taylor's analysis, what follows? Surely that the Babylonians were at one time in a state which led them to explain natural phenomena by analogies derived from their own social surroundings. Canon Taylor does not mean that they would have made up a tale about the dark half of the moon being a bridegroom whom the bride might not see, unless they were familiar with the idea of husbands and wives forbidden to look upon each other. When primitive man pictured the natural forces as sentient beings, he must surely have lent them not only his own ideas, but his own manners and customs. For Mr. Lang, the facts of the story constitute its chief interest, as they seem to him to establish a mental and social community between man at as early a period as we can trace him back and uncultured man of the present day. Canon Taylor, on the other hand, is most interested by the details of the mythological explanation. But there is no necessary antagonism between the two views.

I would, however, point out to Canon Taylor that in basing his analysis solely upon the tale as found in Apuleius—a tale, upon his own showing, late and distorted—he is building upon a very insecure foundation. What does he make of the modern European variants of "Cupid and Psyche"? Take, for instance, the Danish version, collected by Grundtvig (transl. *Folk Lore Record*, vol. iii., pt. ii., p. 225), "Prince Wolf?" Would he regard this as indirectly due to Apuleius? If so, how does he explain the many differences of detail—differences in which the Danish version is borne out by variants collected from all parts of Europe? If "Prince Wolf" is independent of Apuleius, it must still, according to Canon Taylor, be derived from the hypothetical Babylonian myth. But in this case the details upon which so much stress is laid, being different from those in "Cupid and Psyche," the same mythological explanation will not fit both forms of, *ex hypothesi*, the same myth. One of the most marked features in stories of this class is that the heroine bears three children to her mysterious husband, that the latter carries them off immediately after birth, and that, at a later stage of the story, they help their mother in her search for the vanished husband. By what lunar phenomenon does Canon Taylor explain this incident? Another prominent feature, especially in the Teutonic variants, is the presence of special Teutonic mythical conceptions of the other world, such as the *Glassberg*. Does not this imply that the tale was current among German races at a time when such conceptions retained their full force? I cannot but think that if Canon Taylor will review the whole group of stories of which "Cupid and Psyche," though the most famous, is neither the most beautiful, nor, as I believe, the most archaic, he will turn his back upon the interpretation which he now puts forth.

Both Mr. Lang and Canon Taylor would probably agree in attaching importance to the details of stories of the "Cupid and Psyche" class, whether found among the people of

antiquity, or in modern Europe, or among modern savages, however much they differ as to the precise significance of such details. They would regard them, in common with other facts of folklore, as survivals of earlier beliefs and customs, and would make use of them in their attempt to reconstruct these beliefs. But there is a school which treats these facts in an entirely different way. The beliefs, customs, and fictions, roughly grouped together as "folklore," are, in its eyes, no survivals of an archaic past, to be reached through them alone; but are simply such misunderstood fragments of the higher learning of the race as have filtered down to the folk. However interesting they may be, their interest is of a nature diametrically opposed to that which the ordinary folklorist seeks in them. Hitherto, this school has turned its attention chiefly to *Märchen*, and its main thesis has been that of the Indian origin of popular tales. Opponents of this school will consider it not the least among the services which Mr. Lang has rendered to the scientific study of folklore, that he has, in the preface to his *Cupid and Psyche* and elsewhere, so demolished this thesis as to make it henceforth undeserving the slightest notice. But an attempt is now being made, with considerable ingenuity, to prove that the great majority, if not the almost entirety, of modern European folklore has its origin, not in a pre-Christian heathen past, but in popular conceptions of Christian belief, legend, and symbolism. In his Ilchester lectures, the Rev. Dr. Gaster has brought forward many arguments in favour of this view. Nor does he stand alone. In no field of folklore has the believer in the "survival" theory felt on safer ground than in that of customs. Yet it is impossible to deny the force of the onslaught made by M. Fustel de Coulanges on the views which seek to connect certain mediæval practices with hypothetical systems of land-tenure and family organisation among the early Germans. If I am not mistaken, an attack in force upon the orthodox folklorist position will shortly be made all along the line, and the lateness of much that we have been treating as survivals of primitive belief and custom will be boldly proclaimed. Under these circumstances it would seem more advisable to place beyond question the soundness of the views which the great majority of folklorists hold about certain facts, than to discuss which is the most interesting—the anthropological or the mythological—way of interpreting those facts. ALFRED NUTT.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, July 4, 5 p.m. Royal Institution: General Monthly Meeting.
 8.30 p.m. Anglo-Jewish Historical Exhibition: "The Educational Work of the Anglo-Jewish Community," by the Rev. S. Singer.
 WEDNESDAY, July 6, 8 p.m. Society of Literature: "The Literary Training of the Memory and of the Eye," by Mr. Charles Leland.
 THURSDAY, July 7, 8 p.m. Carlyle Society.
 SATURDAY, July 9, 10 a.m. Geologists' Association: Excursion to Sudbury, Suffolk, in association with the Essex Field Club.
 3.45 p.m. Botanic: General Meeting.

SCIENCE.

A Comprehensive Commentary on the Qurán. Comprising Sale's Translation and Preliminary Discourse, with Additional Notes and Emendations. Together with a Complete Index to the Text, Preliminary Discourses, and Notes. By the Rev. E. M. Wherry. Vol. IV. (Trübner.)

THE first three volumes of this work were reviewed in the *ACADEMY* of July 29, 1882, and August 21, 1886, where some elaborate notes will be found on the general make-up of Mr.

Wherry's "Qurán," together with some free criticisms on his "additional Notes and Emendations." The present, which is the concluding portion of the work, does not call for any detailed analysis, inasmuch as, in the main, the compiler has treated its contents on the same system as that adopted in the preceding volumes. Nevertheless, a few supplementary remarks may not be out of place here.

It would have been well had Mr. Wherry restricted himself to giving, as does Sale, whose translation he professes to reprint, the English rendering of the Arabic titles to the *súrah*s, or chapters, of the Kur-án, since in his superadded English spelling of the latter he almost invariably disfigures them, as will be seen from the subjoined examples, culled from the volume under review, to each of which I attach a correction in accordance with Mr. Wherry's own system of transliteration:

EXAMPLES.	CORRECTIONS.
Súrat al Shorí.	Súrat al Shúra.
„ al Zukhráf.	„ al Zukhruf.
„ al Jásiyah.	„ al Játhiyah.
„ al Fatah.	„ al Fath.
„ al Hujrát.	„ al Hujrát.
„ al Wáqia.	„ al Wáqia (or Wá-qiah).
„ al Saf.	„ al Saff.
„ al Taghabún.	„ al Taghábun.
„ al Abas.	„ Abas.
„ al Tatfif.	„ al Mutaffifin.
„ al Ála.	„ al Ála.
„ al Inshiráh.	„ Alam Nashrah.
„ al Baiyana.	„ al Bayyina (or Bayyinah).
„ al Hamza.	„ al Humaza (or Humazah).
„ al Abu Lahab.	„ Abu Lahab.

I notice that Mr. Wherry, like many others, disregards in his transliterations alike the grammatical elision of the *hamsah*, when in construct with the final vowel of a preceding word, and the *euphonic tashdid*, which is always used, in pronunciation, after the article *al*, when followed by a word beginning with a *solar* letter. The late eminent orientalist, E. W. Lane, as also the lamented E. H. Palmer, and the distinguished Arabist, Prof. William Wright, are conspicuous exceptions to this slipshod practice; and even Mr. Wherry himself sometimes follows suit, as when he writes "Dhu'l Hajja" (p. 62), "Abd-ul-Rahmán" (vol. ii., p. 304, note), and "az-Zaqqúm" (vol. iv., p. 35); albeit he also writes "al Zaqqúm" (p. 112), and "Abd al Mutallib" (p. 68) for Abd ul Muttalib. In my opinion, there seems to be no valid reason whatever for the non-observation of the two Arabic rules above referred to; and transliteration made in accordance therewith would undoubtedly be more euphonic as well as more correct, and the English reader would certainly be as well able to read *Sáratu'sh-Shúra*, *Sáratu's-Zukhruf*, *Sáratu't-Túr*, *Sáratu's-Saff*, *Sáratu'n-Nabá*, *Sáratu'n-Nás*, *Sáratu'l-Hú-mazah*, *Sáratu Abi-Láhab*, as the distorted forms given to those titles in the examples adduced in the foregoing list. The reader will moreover notice that in these transliterations I have introduced the circumflex (ˆ) to denote a long vowel, in lieu of the acute accent (´), which many Arabists, who are copied by Mr. Wherry, adopt for that purpose. Nevertheless, I do not hesitate to denounce such use of that accent, not only as antagonistic to the meaning involved in its

designation, but as opposed also to the general practice of our own lexicographers, who invariably mark a syllable on which the emphasis should fall with that accent. The French, in like manner, write *égalité*, *effrayé*, *Condé*, *décoré*, *armé*, &c. But, further, this misuse of the acute accent deprives us of a familiar and most valuable aid for conveying the right pronunciation of transliterated Arabic words. Eighty out of a hundred ordinary English readers, *pace* Burton, would probably pronounce the word *Maskat* (Muscat) *Maskút*, whereas if written *Máskat*, with the acute accent on the first syllable, they would read it correctly; and so of *Sánah*, *Súnnah*, *Bálad*, *Kátáb*, *Sádakah*, and endless other cognate words, which an English reader unacquainted with Arabic grammar would be at a loss, without such accentuation, to enunciate accurately. I observe that Prof. Wright adopts the grave accent (`) as a substitute for the acute (´) in the accentuation of transliterated syllables. Thus he writes "hè'mza," "fè'tha," "Kè'sra," which I should severally render "hámzah," "fáthah," "Ká'srah," albeit I am only referring here to the professor's adoption of the grave for the acute accent, which I deem a novel and unauthorised use of the former. But as regards the use of the circumflex to denote a long vowel, my contention is supported by Sale, Pocock, Palmer, Rodwell, and Muir, and is, moreover, familiar to us through the French language in such words as *même*, *crème*, *pré'ter*, *mê'lar*, *géné'r*, &c. Hence its use to that end by Caussin de Perceval, Perron, Fresnel, and other French Arabists. Prof. Wright, I see, and Dr. Redhouse, use a horizontal mark over the vowels for the same purpose. To that substitute I have no objection to urge.

Another noticeable default in the same category is that, like Sale, Mr. Wherry frequently omits the terminal *h* in his transliteration of Arabic. Thus he writes *Sura*, *Amína*, *Fátima*, *Madína*, *Taháma*; yet, inconsistently enough, he gives the *h* in Allah, Khadíjah, Kaabah, Makkah, and many other words. This point deserves special notice, owing to Dr. Redhouse's letter, published in the ACADEMY of November 22 last, in which he denounces as "a very common European error" the addition of the *h*, or "final aspirate," in the English transliteration of many Arabic words. Hence, as I read the eminent Orientalist's criticism, when that aspirate is not sounded in pronunciation he omits it, writing "Fátima," not Fátimah, lest, as I presume, the unwary reader may aspirate the *h*. But in our Bibles we find such names as *Sarah*, *Hannah*, *Judah*, *Beulah*, *Moriah*, *Jehovah*, in the enunciation of which no one thinks of sounding the last letter as an aspirate. I quite agree with Dr. Redhouse that in the construct case the final *h* assumes the sound of *t*, as in *Fátimatu bint-Muhammad*; yet that does not strike me as a valid reason for eliding the final *h*, which, among other uses, is indicative of the feminine gender, as in *Fátimah*, *Khadíjah*, *Aminah*, &c.; also of the *nomina vicia*, of many abstract nouns, nouns of multitude and of quality, as well as of adjectives of intensiveness, all which important indications would be lost by dropping the final *h*. And, further, unless the vowel *a*, left after the elision of that letter,

be furnished with some etymological mark of distinction, there would be great risk of its being confounded with the *á*, formative of the singular of many verbal nouns, such as *bindá*, *safá*, *jalá*; with the masculine plurals ending in the same letter, such as *hukamá*, *aghniyá*, *kúfará*; and with the feminine plurals of many adjectives, such as *kúbra*, *súghra*, *hú'sna*, &c. Dr. Redhouse says that "many eminent Arabists avoid such errors"—a remark which rather surprises me, since Pocock, Lane and Palmer, and Fresnel and Perron among French Orientalists, as also Burton, all retain the final aspirate *h*, the latter taking special care to distinguish, by some adequate diacritical sign, those substantive and adjective forms with which words ending in the final aspirate *h* might otherwise be confounded.

In connection with this subject, I cannot help referring to a solecism on the part of no less an authority than the present Arabic lecturer at University College, London, a Syrian by birth, who signs himself "Habib Anthony Salmoné." The surname, so written, cannot be a correct transliteration of the Arabic, which is unequal to expressing it in that form, "Salmona," "Salmoneh," or "Salmonai," being the nearest approach thereto of which it is capable. If, on the other hand, the word is a patronymic or a gentile adjective derived, as is alleged, from the "Salmone" (Σαλμών) of Acts xxvii. 7, then the name should be written, as all Syrians write it, and as we find it in the latest and best Arabic translation of the New Testament, "Salmúny." As regards the two prefixed Christian names, "Habib," is unquestionably Arabic; but why the very familiar Arabic "Antún," which was doubtless given to the lecturer at his baptism, should be transformed into the much less common English "Anthony" is beyond my comprehension.

There is one other feature in Mr. Wherry's "Qurán" which calls for remark. His English version is an accurate reprint of Sale's translation, throughout which, however, he has changed into italics an immense number of sentences which in his exemplar are printed in Roman letters. His object was doubtless similar to that of the translators of the authorised version of our Bible, namely, to distinguish between the verbal or precise rendering of the original and the words or phrases deemed necessary to convey the meaning of the idiomatic Arabic, or to supplement by glosses what may have been judged obscure in its diction. There can be no doubt that Sale—whose copious references to al-Baidhâwy, Jalálu'd-Din, Zamákhshary, Ash-Sháhrastány, and other famous Muslim commentators and jurists attest the depth of his researches into their writings—took infinite pains that his scholia on the text should be based on the best authorities. The same meed of praise may fairly be bestowed on the translators of the authorised version of our Bible; nevertheless, in my judgment, they often foist in italicised words and sentences where they are not only uncalled for, but where they even detract from the terseness of the original. To adduce one instance in point from Eccles. xii. 13: "Let us hear the conclusion of the whole matter; Fear God and keep His commandments, for this is the

whole *duty* of man," where the intercalated "duty" serves only to weaken the pithiness of the latter clause of the passage. But Sale, as shown by Mr. Wherry's italics, goes far beyond such slight glosses, as will be seen from the following rendering of Súrah cii., an example taken at random from a thousand others which might be adduced:

"IN THE NAME OF THE MOST MERCIFUL GOD.

"(1) The emulous desire of multiplying riches and children employeth you, (2) until ye visit the graves. (3) By no means should ye thus employ your time: hereafter shall ye know your folly. (4) Again, by no means: hereafter shall ye know your folly. (5) By no means: if ye knew the consequence hereof with certainty of knowledge, ye would not act thus. (6) Verily, ye shall see hell: (7) again, ye shall surely see it with the eye of certainty. (8) There shall ye be examined, on that day, concerning the pleasures with which ye have amused yourselves in this life."

Palmer renders the passage thus:

"In the name of the merciful and compassionate God.

"The contention about numbers deludes you until ye visit the tombs!

"Not so! In the end ye shall know! And again not so! In the end ye shall know!

"[5] Not so! Did ye but know with certain knowledge!

"Ye shall surely see hell! And again ye shall see it with an eye of certainty.

"Then ye shall surely be asked about pleasure."

I do not indorse the latter version as wholly satisfactory. Nevertheless, it suffices to show the needless and inexpedient of multiplying paraphrases on the Arabic original, and inserting them in an English translation of the Kur-án. Some glosses, owing to the different genius of the two languages, are indispensable, and may fitly be incorporated, in italics, or within brackets, into the text; but beyond these it is preferable that they should be relegated to foot-notes.

In conclusion, I venture to submit for serious consideration two suggestions deducible from the criticisms on Mr. Wherry's "Qurán" which have appeared in the ACADEMY:

1. The great want of a standard alphabet, or system, for transliterating Arabic into English. Unaided or isolated individual effort would be powerless to overcome the difficulties with which such an attempt is beset, mainly owing to the *sum cuius* rife among existing partisans. But surely the combined energy, influence, and resources of the Royal Asiatic Society, the Royal Geographical Society, the Biblical Archaeological Society, and some of the leading missionary societies whose agents are employed in India and the East, and who have possibly at their command a few scholars like the Rev. T. P. Hughes, would suffice to supply the much-needed authorised standard for the use of English Orientalists and students generally.

2. The still greater desideratum of an authorised English version of the Kur-án. Sale's translation was a prodigy of Oriental linguistic knowledge and research when it first appeared, now upwards of a century and a half ago; but the attempts which have since been made to improve upon it attest the wide-spread conviction that it required emendation. In our day it has been followed

by "The Koran," translated from the Arabic by Rodwell; "The Kur'an," translated by the late E. H. Palmer; and by some "Selections from the Kur'an" by the late E. W. Lane. But as far as my knowledge extends, neither of these versions has secured the entire approval of English Arabists generally. In some respects one is preferred to the other; but as a whole the result has been to make confusion worse confounded. Such is the unquestionable fact, albeit it is deeply to be regretted that it should be so; for when we take into consideration the broad extent of British interests in India and the East, the millions of Muslims who are our fellow-subjects, and the praiseworthy zeal which English scholars have manifested in mastering the religious systems of those countries, it seems passing strange that, thus far, we do not possess a standard English version of that book which is regarded by a third of the human race with the same veneration as Christians regard the Holy Bible. Surely it is high time that we should rid ourselves of this reproach; and if haply the learned societies above-named would consent to undertake that task also, its execution would redound to their imperishable credit and renown; and I would fain add that any support given by the ACADEMY to this suggestion will certainly be hailed with delight and acknowledged with gratitude by every British Orientalist.

GEORGE PERCY BADGER.

SCIENCE NOTES.

THE Geologists' Association is about to visit Cornwall during its long excursion, which will commence on August 8. Arrangements will be made for examining the structure of the country between St. Austell and the Land's End, and of gaining an acquaintance with the mineral industries of the county. At the last meeting of the association, a valuable microscope was presented to Dr. Foulerton, in recognition of his services for ten years as hon. secretary.

MEETINGS OF SOCIETIES.

THE ENGLISH GOETHE SOCIETY.—(Wednesday, June 15.)

SCHUTZ-WILSON, Esq., in the chair.—Mr. William Heinemann read a paper on "Goethe on the English Stage." After defending Goethe's morality and philosophic views against the many serious attacks which have at different times been made on him, and dwelling at some length on Goethe's celebrated theory of "Gott-Natur," he urged upon his listeners the desirability of a worthy English representation of Goethe's plays. By means of such a representation Goethe's titanic mind would become intelligible to those who at present saw in his views and doctrines the gospel of self-indulgence and immorality exemplified by a licentious life. The beauty, and truth, and loftiness of Goethe's "Man exists for culture; not for what he can accomplish, but for what can be accomplished in him" would then become evident and undeniable. He gave a sketch of the history of the several performances of "Faust" which had at different times taken place at various London theatres. As a curious fact, he mentioned that a version of "Faust" had actually been performed in England during Goethe's life-time, and four years previous to the first Brunswick performance under Klingemann's management. George Soane's curious spectacular play, "The Devil and Dr. Faustus," founded upon the first part of Goethe's "Faust," was acted at Drury Lane in 1825. In 1842, Grattan's "Faust; or, The Demon of the

Drachenfels," was produced at Sadler's Well; and an English version of Carré's play, by Charles Kean, at the Princess's, in 1859. In 1866 the two Phelps distinguished themselves in a stage adaptation, by Bayle Bernard, produced by Chatterton at Drury Lane; and in 1874, Mr. W. S. Gilbert signally failed in attempting to turn the "Gretchen" incident into a sentimental play of his own. Mr. Irving's Lyceum "Faust," which has been assailed so furiously by many admirers of Goethe, was described by Mr. Heinemann as having had the undeniable merit of popularising Goethe among the large and indifferent public. Mr. Irving, he said, had aroused a phenomenal interest for Goethe in all who had been to the Lyceum. The lecturer characterised the present moment as peculiarly auspicious for producing to English audiences other of Goethe's plays—such as "Egmont" or "Goetz von Berlichingen." He denounced the melodrama as trivial and commonplace, the French social drama as immoral, and expressed his conviction that the production of Goethe's plays on the English stage would be a distinct advantage for audience and actors. On the other hand, he had every hope that a worthy performance of Goethe on the English stage would soon make the German poet as much a favourite with the English public as Shakspeare is with every educated German.

ROYAL ASIATIC SOCIETY.—(Monday, June 20.)

SIR THOMAS WADE, president, in the chair.—Mr. E. S. W. Senathi Raja, of Ceylon, read a paper on "The Pre-Sanskrit Element in Ancient Tamil Literature." This literature, it was argued, seemed to have no definite origin. Unlike the languages and writings of other peoples, which pass through various stages of natural development before arriving at maturity, the high dialect of the Tamil had apparently sprung up into full growth from the instant of its birth. Like the fabled Rishis, it had not traversed the intermediate states of infancy and youth. To the orthodox Hindus believer the solution was simple—the language was obtained by miracle. Different sects vied, one with the other, in claiming its inventions for their own particular divinities; all, however, accepting Agastya as the mouthpiece of revelation. According to the Arhatas, Tamil is one of the eighteen languages revealed by the omniscient Jina. There was again another theory, which made this poetic dialect only the miraculously revealed language. The lecturer was not content with any of these explanations, and proceeded to give his views by applying the comparative method, so frequently employed with successful results. One of his more important conclusions was that the ancient Tamils were in possession of an alphabetical system, and a certain amount of literature independent of Sanskrit. The age of Agastya, the historical predecessor of Tolkaappiyar, was in reality a new era in the history of Tamil literature. Then Sanskrit influence first began to be felt; Northern religions and institutions were introduced; the Brahmanical priesthood, bearing in its train 'Buddhists, Ajmakas, and other sects, poured down upon the South; literature, before exclusively Dravidian, became modified by the introduction of new heroes and new names gathered from the Brahmanical pantheism. This process of gradual change was completed before the second century A. D., for in Ptolemy and the Periplus of the Red Sea the most northern point of India was known by its Sanskrit name of Kumari.—After a few words from Prof. Terrien de Lacouperie, the president tendered the thanks of the meeting to Mr. Senathi Raja—whose paper will appear at length in the October number of the *Journal*—and the proceedings of the session were declared closed.

FINE ART.

EGYPT EXPLORATION FUND.

THE GREAT TEMPLE OF BUBASTIS.

IN the admirable paper on Excavations in Egypt which Mariette published in 1879, the eminent explorer says that, after all the interesting mounds of Egypt shall have been exhausted, then, in order to be quite certain that nothing has been passed over, "par

surcroît de précautions," one might attempt the mounds of Bubastis with the faint hope of finding some few monuments of later times.

It is certain that, despite their great extent, Egyptologists have never given much attention to the mounds of Tell Basta. They have been abandoned to the dealers in antiquities, who have thoroughly rifled the large necropolis of cats, from which they get the numerous bronze figures of that sacred animal which fill the shops of Cairo. It was one special point that directed my attention to Bubastis—the Pi Beseth of Scripture. In all the excavations which the Egypt Exploration Fund has made in the Delta, there is one remarkable fact to be noticed. Absolutely no monuments of the XVIIIth Dynasty have been found. At San, Khataaneh, Pithom, Nebesheh, Saff-el-Henneh, &c., there are monuments of the XIXth Dynasty, and sometimes much older ones of the XIIth and XIIIth Dynasties; but in that case the gap between the Middle Empire and the XIXth Dynasty is complete. We are thus led to the conclusion that under the Thothmes and the Amenhoteps a great part of the Delta was still in the possession of foreigners, and not under the dominion of the Pharaohs. How far did the XVIIIth Dynasty reign over the Delta? This is a most important historical question, which our latest excavations have raised, and which must be kept in view in the future excavations in the Delta.

During the winter I heard that some interesting tombs containing scarabs of Amenhotep III. had been found at Tell Basta under ruined houses. Besides, in previous visits which I made to Bubastis, I had seen others with the name of his queen. Perhaps there might be some monuments of the XVIIIth Dynasty more conclusive than scarabs. I settled there with Mr. Griffith in the month of April. We pitched our tents close to the mounds in the necropolis of cats, and we began working both under the houses and in the area of the temple. The result was to show that in the place where Mariette thought there was nothing left, there are the ruins of a considerable temple, which, on a smaller scale, bears some likeness to the temple of San, with which it may be compared.

On the north-western side of the mounds—that side, namely, which is visible from the station of Zagazig, there is a large depression surrounded on all sides by ruins of houses. This is clearly the site of the temple described by Herodotus as one of the finest in Egypt. A few weathered blocks of granite, unearthed in an unsuccessful attempt of Mariette's, showed that there had been an edifice of some importance. The entrance was on the east, as stated by Herodotus. We began trenching with numerous workmen, in order to get an idea of the plan of the temple. As far as we can judge now, it consisted of three different parts: on the east a large building, which, from the inscriptions it contains, I shall call the Festive Hall; in the middle the Hypostyle Hall; and, towards the west, an edifice of later date, which, though it shows the name of Nekhtorheb, I will call Ptolemaic. We worked in the three parts at once; but we soon gave up the Ptolemaic temple, and devoted all our time and efforts to the two other parts. A great deal has been done; but in order to complete the excavation, it will require another campaign of two or three months. In that place where, a short time ago, a few blocks of granite only were visible, one sees now a field of ruins, which, as I said before, reminds one of San. Enormous granite blocks are piled above one another, intermingled with colossal columns and architraves, and gigantic statues broken into many pieces. I believe that, when the whole place shall have been cleared, it will be very interesting for tourists to visit who cannot go to Upper Egypt.

On the eastern side is the greatest amount

of blocks. There stood what I have called the Festive Hall—a large building without columns, but peopled by a crowd of statues in red and black granite. All bear the name of Rameses II., but many of them were probably usurped by the great Pharaoh of the XIXth Dynasty. A colossal head was the first we discovered. It was very soon followed by another, and by the remains of several colossal groups. Besides the cartouche of Rameses II., the name which occurred first was that of Osorkon II. of the XXIInd Dynasty. A few blocks only had been unearthed when we saw that they bore inscriptions of that king, which increased in number the more stones we laid bare. They all belong to a single tableau, representing a great festival given by the king, very likely on the day of his coronation. Long processions of gods are represented, priests bringing offerings, carrying sacred boats, or executing religious dances. Osorkon, either alone, or with his queen Karoama, is often represented in a sanctuary, face to face with the goddess Bast. It is curious that, although the XXIInd Dynasty is said to be Bubastite, we found no name of any other king belonging to it; especially nothing of Shishak. Judging from what he has done there, Osorkon II. must have been a powerful king. However, he may not have built the Festive Hall. He may have enlarged it, and he certainly usurped some of the monuments on which Rameses had inscribed his name. Of this, there are some curious instances.

Besides the colossal monuments, there were others on a smaller scale, some of which have been sent to the museum of Boolak; as, for instance, a fine head in red granite wearing the *atef* crown, quite intact, which is, I believe, the only specimen of the kind. Others, such as a crouching statue of a son of Rameses II., will be soon seen in England. When we had uncovered a large space filled with blocks, we began turning them and looking for the inscriptions that might be underneath; a most exciting work which we could only begin, and which will have to be completed next winter. Under one of them we found a most valuable stone, now at Boolak. It bears the cartouche of Pepi of the VIth Dynasty—a king whose name is also found at Sān, and who is said to be the founder of Denderah. The name of Pepi carries us to a very early period, and reminds us that Bubastis is spoken of by Manetho in connexion with the IInd Dynasty. The cartouche of Pepi is a long one, like that at Sān, and he is said to be "Lord of On and Ant." Another important name for history is Usertesen III. The XIIth Dynasty has, therefore, worked at Bubastis, and extensively too; for it is to those kings that we must refer the magnificent columns of the Hypostyle Hall. In that part of the temple there was a colonnade which justifies the judgment of Herodotus, when he says that the temple of Bubastis was one of the finest in Egypt. It consisted of magnificent monolithic columns in red granite, with capitals in the form of lotus buds, or palm leaves, or the head of Hathor, with two long locks. That they are older than Rameses II. is proved by the fact that on one of them the name of that king is cut across the ornaments of the column. One of the lotus capitals is particularly beautiful, the cutting and polish being still perfect. The column, which was originally monolithic, is now in several pieces; but under the capital, where it is narrowest, it is still twelve feet round. Though Rameses II. and Osorkon II. have inscribed their names everywhere, it is very possible that we must attribute this fine edifice to the XIIth Dynasty. The style of the work is decidedly too good for the XIXth Dynasty. If this opinion is confirmed by further excavations, it will furnish another instance of a temple in

Lower Egypt having been respected by the Hyksos. Near the colonnade there were also several statues. One, of life-size, sitting, bears the cartouche of Rameses VI.—a very rare name in the Delta.

The season was near its close, and Ramadan was approaching; we were, therefore, obliged to cease working, and we parted reluctantly from a place where we went with small hope, but which turned out to be one of the most interesting in Lower Egypt. The Egypt Exploration Fund has its work traced out for next winter; and I believe we may expect important results from a complete excavation of the temple of Bubastis, of which we have cleared only about one-third.

EDWARD NAVILLE.

NOTES ON ART AND ARCHAEOLOGY.

THE new rooms lately added to the National Gallery will be opened to the public on Monday next, July 4. Advantage has been taken of the increased space to rearrange also the pictures in the old rooms.

MR. HAYNES WILLIAMS—who has returned to England after a year's sojourn in Fontainebleau—has been occupied, and indeed is still occupied, with a series of Renaissance interiors which, wherever they come to be exhibited, will engage, we should suppose, a considerable share of attention from the artistic world.

MR. VAN HAANEN—who, when he is at his best, is so much the strongest of all the recent painters of Venetian life—has but just finished a perfectly masterly picture which was for a day or two, and may, perhaps, still be, in the hands of Mr. Maclean. The Royal Academy has never treated Mr. Van Haanen particularly well, and it is not surprising that he should never have destined this work for its show. Besides, this is a picture quite devoid of popular story. Nothing whatever happens in it, though a good deal may be happening outside of it; for it represents a vigorous Venetian brunette—the harmonies of whose dark hair and warm brown flesh tints are splendidly expressed—leaning over a temporary wooden partition in eager curiosity to witness a show. The girl has a domino, and is arrayed in dress of the eighteenth century. The vivacity of her outlook on the world—a true bit of characterisation, indeed—is yet not more striking to the student of the picture than is the unsurpassed artistry with which Mr. Van Haanen has put upon canvas her form, her colours, her gesture. The work is an admirable instance of the finer sort of realism. It is a pity that this picture, which makes no popular appeal by reason of its theme, but is painted for pure delight and as an exercise of the palette, should not be destined to be known more widely than will now probably be the case.

THERE are now on view, in the premises of the East India Art Manufacturing Company, at 13 King Street, St. James's, some interesting examples of Burmese carving from the palace at Mandalay.

MR. HENRY DOYLE'S two most recent acquisitions for the National Gallery of Ireland are valuable examples of Dutch masters. One of them is a Wouvermans—a charming picture of moderate dimensions, representing a halt in camp, in summer weather. In the distance are the tents raised for the night. In the foreground riders and horses alike refresh themselves; and these—together with the covered haystack, which is likewise prominent in the foreground—are built into that harmonious composition of which Wouvermans was so conspicuous a master. The second and much larger picture is a dark landscape by Ruysdael,

with figures by De Keyser. The scene is the skirts or the more open places of a thin woodland—very likely, it is believed, near the famous "House in the Wood," at the Hague; and in front a carriage with two illustrious occupants wends its way towards the residence. The gentleman's sons ride behind the stately but somewhat funereal conveyance in which the father and a lady make for the house. Several questions of interest connect themselves with this picture.

THE Rev. E. L. Barnwell, of Melksham House, Wilts, has presented to the Shrewsbury Library and Museum 240 water-colour drawings of Welsh antiquities. The drawings are to scale, and chiefly represent prehistoric objects, as cromlechs, maenhirs, &c.; but they include many Romano-British inscribed stones and some mediæval antiquities. The drawings were all made on the spot (with camera-lucida) by Mr. Worthington G. Smith, of Dunstable, during the eleven years from 1875 to 1885.

THE STAGE.

"CONSTANCE FRÈRE."

ON Monday afternoon there was produced at the Vaudeville—at a special *matinée* given by Miss Alice Yorke—a new play, in a prologue and three acts, by two writers not heretofore known to the stage. "Constance Frère" was the name of the piece. It was seen and listened to with much attention by an assemblage consisting in great measure of theatrical people. Of critics proper there were few; but, then, no one is so keen a critic as your player—so keen a critic of opportunities of effect, that is to say—the literary sense is as a rule denied him, and he never thinks of asking "Is that like life?" but only "Will that tell? Is that fetching?" And the theatrical people possessed their souls, we are bound to report, with a certain amount of patience through a good deal that was not "telling" in the prologue and the three acts—through a good deal, too, of what was somewhat ordinary talker-talkee, such as does not specially commend itself to the student of literature—the somewhat too commonplace discussion of ethical and social questions. More than once, for instance, plainly accepted facts as to the inequalities of life and its hardships were stated as if they had been discoveries; more than once the current moralities of the day were expressed in what only *appeared* to be epigram and satire; nor were the authors wholly free from a suspicion of giving undue prominence to a fad of fussy women and of such men as abet them. So that the piece needs a certain pruning, and a certain bracing, to put it briefly; and the question is, when it has received these, will it have that in it which can obtain long life? Well, we think it possible it may; and, if it is not a performance, it is certainly a promise. We are a little cool as to the actual success the piece can hope for, because the material of its intrigue is not new, nor are the character sketches particularly vivid or fresh. But, yet we say, at the very least, the piece has promise; for the material, if old, is used often with distinct adroitness, and generally with a knowledge of stage effect. And, moreover, there are several passages of crisp dialogue—certain witty sayings, and here and there a touch of grace. Another good thing to note—the authors have not told their story

too soon; the third act (which is the fourth, if one must count the prologue) is not an idle act, a merely obvious reconciliation of what had got to be reconciled. There is yet some story in it. We are not sure but that the conduct of that story is the best piece of construction which the play affords; and we are certain that the closing words, with their reticence and right suggestiveness, have about them a trace, though it may be but a trace, of literary feeling, of the sense of style, which the mere playwright goes without, to the day of his death.

"Constance Frere" does not, on the play-bill, make any claim to be wholly original. It does not sound like an adaptation from the French, since, out of a company of several people, adultery is suggested by only one. Perhaps if we were better read in everyday English novels, we might be able to "spot" the particular romance which gave the dramatists their motive. Or, it may be only that, remembering how often the word "original" is used for dramatic work which has nothing whatever of real freshness, the authors have scorned to claim "originality" for their effort. The story we shall but briefly indicate. It is that of a heroine whose essential and continuous, or at all events repeated, weakness the writers of the piece do not seem to have understood. One may pity this young woman a good deal; one may even like her; but one cannot respect her very much, and the reader shall shortly see the grounds for this statement. Constance Frere is, in the prologue, very much in love with a man who proposes to quit her. He quits her because he is practically tired of her. He has seduced her with unreasonable facility when she thought she was going to be married to him. Her nature is of the kind in which love, disappointed or betrayed, turns only to hate. And Constance Frere proposes to hate very soundly, for the remainder of her days, the polished ruffian who has availed himself of her feebleness. A devoted person, thoroughly in love with her, she refuses, not because she has been seduced by another, but because she is not attached to the devoted person. Then, in the first act, there comes a lord, very honest, very warm-hearted, very Radical—very much a man of the moment and of a *mésalliance*; and he, over head and ears in love with the young woman, in his turn proposes to her. She is a governess, and the bait is a tempting one. Instead of refusing, she accepts—accepts with liking, instead of with love, and accepts, in the main, because she will be a woman of title. Weakness the first was the being seduced, weakness the second was loving the title, weakness the third was never thinking of making a clean breast of weakness the first.

And while the heroine is so repeatedly feeble, the villain is so outrageously villainous. Is anybody really quite so bad as that, always threatening, as well as always deceiving, the woman over whom he has gained an advantage? The polite villain was tired of Constance Frere until she married finely; then he again became enamoured of her; this time she was fairly strong—really there was no manner of room for weakness the fourth, if she was meant for a heroine—and so he exposes the first of her secrets to her husband before the

guests in her drawing-room. And this reminds us of an improbability—of a point in which (since we may now leave the villain) we may take leave to suggest that the husband was wanting. The wife has summoned him, along with his friends, and denounces the man who has insulted her. The husband declares that the insulter shall be shot. Then the insulter calls out to all the room that the wife had been his mistress before marriage. The wife does not deny it, and the husband lets the man alone. Now, if the question were put in proper form, in *Vanity Fair*, whether this should have been, surely the only answer "adjudged correct" would be that he should have horsewhipped the offender, even if, still in a rage, he had not carried out his earlier threat of shooting him? How did the fact that the young woman had been the mistress of the brute before she had married the nobleman in any way affect the question then at issue? Was the insult inflicted after her marriage less an insult on account of it? And, if it did not warrant the insult, did it warrant the disclosure?

But we have analysed enough. The piece was mounted, in some respects, rather ridiculously; but, for a single performance, for the moment, that mattered little. It was acted excellently by representatives of husband, villain, and devoted friend—Mr. Bassett Roe, Mr. Frank Cooper, and Mr. Cecil Ward; and with a certain measure of sympathy and skill—but with far too much gesticulation, and that gesticulation too little varied—by Miss Alice Yorke.

FREDERICK WEDMORE.

STAGE NOTES.

To the Vaudeville this evening there will be transferred Mr. Gillette's highly successful drama, "Held by the Enemy." Many of the original performers will, we believe, hold their parts; but Miss Kate Rorke, attached to the Vaudeville Theatre, will assume the part which has been played at the Princess's with such grace and distinction by Miss Alma Murray.

MR. WILLIAM POEL gives his *matinée* next Tuesday. That, too, will be at the Vaudeville. He will appear in a one-act romantic piece, dramatising an incident in the life of Beethoven; and so will Miss Mary Rorke, who made so picturesque and free a figure in Mr. Poel's own adaptation of "Mehalah" last year.

MUSIC.

ITALIAN OPERA.

THE performance of "Faust" at Drury Lane was exceptionally fine, so far as cast was concerned, and exceptionally interesting, as it included part of the "Walpurgis" act, never given before in this country, though the music has often been performed in the concert-room. When "Faust" was produced at Paris at the Théâtre Lyrique in 1859, the "Walpurgis" revel formed part of the fifth act, and it included an apparition of Margaret which was not included in the Drury Lane show. We do not know how far this portion of the opera was modified when the work was produced as a grand opera in—if we are not mistaken—1870. One is so accustomed to see the work without this striking and (as exhibited by Mr. Harris) gorgeous spectacle that it is difficult to say how far it adds to the merit of the work. It certainly comes as a bright piece of colour between the death scene of

Valentine and the gloomy dungeon scene; but for all that it appears to us too large for the frame. M. Jean de Reszke's Faust was in all respects admirable—splendid singing, finished acting. His brother Edouard's Mephistopheles was also full of *finesse* and power. M. Maurel distinguished himself greatly as Valentine. Miss Nordica was charming as Marguerite; and, probably, through being so well supported, acted and sang with more than usual animation. The house was crowded.

"Lucia" was given on Monday evening, and Mdlle. Gambogi appeared as the heroine. Her voice is not of particularly pleasing quality; but she sang the mad scene fairly well, and was much applauded.

The performance of Weber's romantic opera, "Der Freischütz," by the pupils of the Royal College of Music at the Savoy Theatre on Monday afternoon was in its way as successful as the "Deux Journées" given last year. Weber's music, however, is more exacting, and the singers were not always equal to their task. But the afternoon's proceedings must not be criticised as an ordinary public performance. The professors of the college merely wished to give to the pupils a most valuable practical stage lesson, and to their friends and to any of the public who took an interest in the matter an opportunity of seeing what work was being done, what progress made, at the college; and, viewed in this light, there was cause for great satisfaction. The fresh voices, excellent singing, and clear enunciation of the chorus deserves, perhaps, first mention, and, next to these, the careful playing of the band—composed for the greater part of students—under the direction of Dr. Stanford. Miss Russell found the part of Agnes very trying. Miss Roberts interpreted with much spirit the "Annie" music. Mr. Kilby and Mr. D. Price sang in a commendable manner; the former had plenty of hard work, and got through it very creditably. Mrs. Arthur Stirling, Prof. Visetti, and Mr. B. Soutten assisted in the preparation of the opera; and everything was managed carefully and conscientiously. The "wild hunt" in the wolf's glen was wisely omitted; even at its best it fails to make one shudder. The Prince and Princess of Wales were present at the performance. J. S. SHEDLOCK.

RECENT CONCERTS.

LITTLE Josef Hofmann played Beethoven's Pianoforte Concerto in C (Op. 15) at the eighth and concluding Philharmonic concert last Saturday afternoon. It was a wonderful performance. So far as the mere playing of the notes was concerned, there was no special cause for surprise after the lad's exhibitions of skill at his recitals; but the intelligence and feeling which he displayed made a deep impression. A cadenza by Moscheles introduced into the first movement was given with remarkable vigour and *aplomb*; but, in our opinion, the most striking feature of the afternoon was the lovely tone and tender gracefulness with which the slow movement was interpreted. And next to this the boy's coolness. With royalty and a crammed house in front of him, surrounded by an orchestra of experienced players, with Sir A. Sullivan at their head, the boy seemed as quiet and comfortable as if he were merely surrounded by playmates. He has the knowledge and, apparently, the feelings of a man, though in stature and behaviour he is a mere child. We still have grave doubts as to the advisability of making such a "lion" of him; and cannot but think that a few more years in the schoolroom would better fit him for the exciting career which is in store for him, should he be spared. His nerves may be strained rather than strengthened. We "have doubts" because it must really be perplexing to know what to do

with little Josef. It would be interesting to know whether some eminent pianist, such as Mdme. Schumann or Herr Rubinstein, has been consulted as to the best mode of developing his wonderful gifts. Concerning the rest of the concert little need be said. Mendelssohn's "Italian" symphony was admirably given, and Mdme. Albani, Mdme. Nevada, and Mr. Lloyd helped to make the vocal portion of the programme unusually brilliant.

On Monday evening Herr Richter gave his eighth concert, and for the third time this season a new English symphony was included in the programme. Dr. Stanford's "Irish" Symphony is a work which will undoubtedly add to the composer's reputation. Haydn, and especially Schubert, made use of "folk" music in their writings, and Dr. Stanford shows great wisdom in turning to the interesting old tunes of his native country. The second movement opens with a theme in the form of a hop-jig; in the Andante scraps of Irish airs are used or imitated, while in the Finale the principal subjects are the stirring tunes "Remember the glories of Brian the Brave" and "Let Erin remember the days of old." After a first hearing, we are disposed to think that the first and second movements might with advantage have been shortened, seeing that the work takes in performance no less than three quarters of an hour; but for the rest we can only speak in terms of high praise of the design of the work and the way in which that design has been carried out. The applause at the close of the slow movement, and the numerous recalls after the performance, showed in a very decided manner how pleased the audience were with the work. It was admirably rendered under Herr Richter's direction, and the eminent conductor was evidently delighted with the enthusiastic reception given to the composer. The programme included some "Wagner" excerpts, Schumann's "Manfred" Overture, and Mozart's "Parisian" Symphony.

The London branch of the Wagner Society gave a *Conversazione* at St. George's Hall on Tuesday evening. The members of the German *Liederkrantz* sang the chorus of sailors from the "Flying Dutchman"; and the ladies of Mrs. Trickett's Academy, under the direction of Mr. H. F. Frost, the "Spinning" chorus from the same work. Mr. Walter Bache contributed a Liszt paraphrase on Walther's song from the "Meistersinger." Besides these pieces, the first scene from "Das Rheingold" and the second scene from "Götterdämmerung" were given. The vocalists were Miss P. Cramer, Miss Friedländer, Miss Little, Messrs. Grove and Nicholl. The Wagner Society not being in a sufficiently flourishing condition to engage a full orchestra, were fortunate in securing the able services of Mr. C. Armbruster, a skilful pianist, who knows every note of the scores. A small orchestra, however, was engaged to play the "Siegfried" idyll. Mr. Armbruster conducted. There was a large gathering, and the performances were much applauded.

Space prevents us noticing in detail many other concerts. Mr. A. Napoleon, a Portuguese pianist, gave a recital at Prince's Hall on Thursday week. He has great command of the keyboard, and as a player was heard to advantage in a pianoforte concerto of his own composition. Mr. Thorndike, the well-known vocalist, gave two interesting vocal recitals at Prince's Hall on June 20 and 27, the programmes consisting entirely of works by English composers. Mdme. M. Remmert, who enjoys a high reputation on the Continent, gave a pianoforte recital at St. James's Hall on Tuesday evening, and Miss Cantelo one at Prince's Hall on the following day. Mdme. Frickenhaus and Herr Ludwig gave the last of their excellent chamber concerts at Prince's Hall on Saturday evening, June 25.

LITERATURE.

Reminiscences. By Thomas Carlyle. In 2 vols. Edited by Charles Eliot Norton. (Macmillan.)

Carlyle as seen in his Works. By James Kerr. (W. H. Allen.)

THERE is no doubt whatever either as to the good intentions of Prof. Norton in publishing a second edition of Carlyle's *Reminiscences*, or as to the care with which he has discharged—from his own point of view—his editorial duties. He has made these charges against Mr. Froude, that the first edition of the *Reminiscences* "was so carelessly printed as frequently to do grave wrong to the sense," and that "the punctuation, the use of capitals and italics, in the manuscript—characteristic of Carlyle's method of expression in print—were entirely disregarded." Whoever compares any one page in the first edition of the *Reminiscences* with what ought to be the corresponding page in the second, will find both charges made good. There is no longer any question that Mr. Froude sent the *Reminiscences* to the press with inexcusable haste; that he revised his proofs with inexcusable carelessness; and that his treatment of Carlyle's capitals, italics, and other peculiar modes of expression, taken in connexion with his own *nuda veritas* or "warts and all" theory of portraiture, was altogether inexcusable. It is impossible to take but one view of Mr. Froude's memorial to Carlyle. He led his readers to believe that it was as solid a piece of masonry as anything ever erected by James Carlyle. This belief, and this belief only, could be urged in defence of its ruggedness and its angularities. But *The Reminiscences* now stand revealed as a piece of jerry-building. The remainder of the Carlyle biographical literature, being of Mr. Froude's handiwork to a far greater extent than *The Reminiscences*, is now suspect. For if Mr. Froude's eyes and judgment have failed him in regard to Carlyle's modes of expression, they are much more likely to have failed him when he came to deal with Carlyle's treatment of his wife, and to look at various actions through the coloured spectacles of his own views of what Carlyle "ought" to have done.

Prof. Norton says that—

"In the first pages of the printed text there were more than a hundred and thirty corrections to be made, of words, punctuation, capitals, quotation marks, and such like; and these pages are not exceptional."

This is quite true, as the following parallel passages from the two editions of *The Reminiscences*, which, though not taken quite at random, are essentially typical, will suffice

to prove. Here is Carlyle's portrait of Jeffrey, according to Mr. Froude:—

"I seem to remember that I dimly rather felt there was something trivial, doubtful, and not quite of the highest type in our Edinburgh admiration for our great lights and law sages, and poor Jeffrey among the rest; but I honestly admired him in a loose way as my neighbours were doing, was always glad to notice him when I strolled into the courts and eagerly enough stepped up to hear if I found him pleading; a delicate, attractive, dainty little figure, as he merely walked about, much more if he were speaking; uncommonly bright black eyes instinct with vivacity, intelligence and kindly fire; roundish brow, delicate oval face full of rapid expression; figure light, nimble, pretty, though so small, perhaps hardly five feet in height. He had his gown, almost never any wig, wore his black hair rather closely cropt; I have seen the back part of it jerk suddenly out in some of the rapid expressions of his face," &c.

Here now is Jeffrey according to Prof. Norton—

"I seem to remember that I dimly rather felt there was something trivial, doubtful and not quite of the highest type, in our Edinburgh admiration for our great Lights and Law Sages and for Jeffrey among the rest; but I honestly admired him in a loose way, as my neighbours were doing; was glad to notice him when I strolled into the Courts; and eagerly enough stepped up to hear, if I found him pleading. A delicate, attractive, dainty little figure, as he merely walked about, much more if he were speaking; uncommonly bright black eyes, instinct with vivacity, intelligence and kindly fire; roundish brow, delicate oval face full of rapid expression; figure light, nimble, pretty, though small, perhaps hardly five feet four in height; he had his gown, almost never any wig, wore his black hair rather closely cropt—I have seen the back part of it jerk suddenly out," &c.

Mr. Froude has thus in a few lines contrived to take four inches off Jeffrey's stature—to convert him, in fact, from a little man into a dwarf—and to make Carlyle pity him as "poor," when he had no excuse for doing anything of the kind. Further, Mr. Froude takes the Carlylian significance out of this passage by suppressing the Carlylian capitals, one of which—in "Courts"—is, in any case, absolutely necessary. The substitution of a semicolon for a dash in the final sentence spoils its picturesqueness entirely. In the same sketch of Jeffrey, Carlyle, referring to the uncles of a Dumfriesshire murderess, said that they "were maternal, and come of a very honest kin." Mr. Froude substitutes "were" for "come," and spoils the sentence. Again, speaking of Craigenputtock, Carlyle talks of "our cosy little Drawing-room, bright shining, hidden in the lonely wildernesses." Mr. Froude renders this "our cosy little drawing-room, bright-shining, hidden in the lowly wilderness." Imagine Carlyle using such a Pecksniffism as "lowly"—especially of his wife's property! *Jam satis.*

It is in omission, not in commission, that Prof. Norton fails as an editor of the *Reminiscences*. He says that,

"in the present edition some trifling passages referring to private persons, calculated to give pain, and likely to be of no interest to the reader, are omitted, as they ought to have been at first."

Whether these passages "ought" to have been omitted at first, it is too late to omit them now. They have been published, and readers of Mr. Norton will simply turn to Mr. Froude for the passages omitted, more especially as they are all indicated in the new edition. Then on what principle does Mr. Norton decide that certain passages are calculated to give pain, and that others are not so calculated? Why, for instance, should he refrain from giving sentences relating to Mrs. Irving's relatives, and yet let it go forth that Badams, Carlyle's Birmingham friend, took to "drinking brandy instead of water," and "died miserably"? If pain has been given by the publication of Carlyle's *Reminiscences*, the mischief cannot be undone by "omissions" at this time of day. Prof. Norton admits that he cannot give effect to all Carlyle's injunctions to Mr. Froude; thus he prints the bulk of the paper on Mrs. Carlyle, in spite of Carlyle's very peremptory injunction against publication, which he quotes. What Prof. Norton might have done, and what perhaps he ought to have done, was to have printed the *Reminiscences* precisely as Carlyle wrote them; with, where necessary, footnotes showing that Carlyle was wrong in his estimates of certain persons, or, as in the case of the late Mr. Darwin, had repented and recanted what he had written in haste or with too few facts before him. The excellence and amplitude of Prof. Norton's footnotes—they are ever so much fuller and better than Mr. Froude's—justifies a belief that he would have performed this very important task in a thoroughly satisfactory manner. As things stand, however, the curious will go to Prof. Norton for Carlylian accuracy, and to Mr. Froude for Carlylian fulness and mischievousness.

Mr. Kerr's volume on *Carlyle as seen in his Works* is a thin, honest, commonplace piece of criticism, fit to be read before a Young Men's Society, and unimpeachable as regards tone. But was it worth Mr. Kerr's while to print such a paragraph as this:

"There is often a strain of cynicism in Carlyle's humour. It is a caustic humour, and is more after the manner of Swift than of any other writer in our language. We miss in it the light, graceful, and amiable humour, entirely without gall, of Addison and Goldsmith. We miss in it the genial humour of Scott. As for the delicate and subtle humour of Charles Lamb, not only could Carlyle not imitate it, he could not even see it."

How very pupil-teacherish is all this, especially "the genial humour of Scott"! Discussing the question as to whether Carlyle will take his place among the immortals, Mr. Kerr mentions him in the same breath with Brougham. Nothing could more conclusively show that Mr. Kerr does not know the difference between literature proper and journalism. Brougham, parliamentary orator, essayist, popular lecturer, or, as Mr. Kerr would say, "writer of surpassing merit," was, alike in his energy and in his "slovenly omniscience," merely a daily journalist of imposing intellectual presence. Mr. Kerr's volume will be found useful chiefly as a judicious selection of Carlylian "beauties."

WILLIAM WALLACE.

Leaves from my Chinese Scrapbook. By Frederick Henry Balfour. (Trübner.)

MR. BALFOUR is not a novice in writing on Chinese subjects. In 1876 there appeared his *Waifs and Strays from the Far East*, containing twenty essays on topics connected with China, with which his position as a journalist in Shanghai had made him familiar. In 1881 he published his version of "The Works of Chwang Tsge, Taoist Philosopher," the hardest nut to crack in all Chinese literature, in commencing with which his labours as a translator he was perhaps more adventurous than wise. Having made Taoism his special theme, Chwang Tsge was followed in 1884 by a translation of Láo Tsge's Tào Teh King and other Taoist texts; and now we have from him the present work, *Leaves from my Chinese Scrapbook*, containing, like his *Waifs and Strays*, twenty different articles, the chief of which are, more or less, of a Taoist character, though the author's own views as to the nature of the system do not come into prominence. The other articles are all interesting. The writer of this notice might differ from him somewhat in his estimate of filial piety in China, and on some other minor points; but the whole book will well repay a careful perusal of it.

The three chief subjects are in the first, tenth, and twentieth chapters, under the titles of "The First Emperor of China," "A Philosopher who never lived," and "The Flower Fairies: a Taoist Fairy Tale." The first of these must have our principal attention.

"The First Emperor" was the title assumed by Ch'ang, the King of To'in, in 221 B.C., the twenty-sixth year of his reign over his native state, or kingdom, when he had abolished the feudal dynasty of Ch'ân, and reduced all the states which had been contending for centuries for the supremacy under his sway. His ministers and partizans felt that a new title must be taken to signalise the new epoch, and proposed that their sovereign should thenceforth be styled Thâi Hwang ("The Great Augustus"); but he said to them, "Away with your Great, but let the 'Hwang' remain. I shall be styled Hwang Tî (= *Augustus Imperator*, or, perhaps rather, *Augustus Divus*). I shall be Shih Hwang Tî, *Augustus Imperator I*, my son *Augustus Imperator II*, and so on in one line down to the ten thousandth generation."

We are glad that Mr. Balfour has given to Shih Hwang Tî the foremost place in his book, for he has hitherto received but little attention from students of history. There are three men who stand out on the Chinese field conspicuous above all others by their grand proportions and distinct personality—"Yü the Great," who has been called "the Chinese Noah," the founder of the feudal monarchy in the twenty-third century B.C.; Confucius "the Sage," "the Teacher and Pattern of ten thousand ages," in the fourth and fifth centuries B.C.; and Ts'in Shih Hwang Tî, "the Chinese Napoleon," the builder of the Great Wall, the destroyer of the Confucian books and scholars, with whom the feudal monarchy ended and the imperial system which still prevails began, and whose own meteoric career terminated in 210 B.C.

In Mr. Balfour's monograph we have the longest and most discriminating account that

has yet appeared in English of this remarkable personage. It might have been fuller, and critical decisions may be come to that will modify in some degree our estimate of the man. It is unfortunate that nearly everything about him has been transmitted to us by "the scholars" of China, the representatives of the class between which and himself there was an irreconcilable feud. The reproach of bastardy will be wiped away from his birth, and the foul stories of his mother's profligate sensuality after his accession to the throne of Ts'in may be cleared off. In general, however, the delineation of the man and his doings will remain much as we have them from our author.

New light is thrown by Mr. Balfour on one interesting passage in the history of his subject from the Japanese work *Rok Shî Riak*. Certain Taoistic views were, probably, one of the inheritances of Shih Hwang Tî en Ts'in; and in 219 B.C., on a progress in the eastern parts of his empire, he heard much of the existence of "Three Isles of Fairyland," some days' voyage off in the "North Sea," peopled by "Immortals," and where was to be found "the Herb [or medicine] of Immortality." Fired with a desire to obtain the herb the emperor despatched an expedition, consisting of "several" thousand young men and women, under Hsü Shih (or Hsü Fû), a celebrated mystic, to find the immortals and bring back to him the precious medicine. The quest, of course, was unsuccessful; nor have we any account in Chinese histories that the voyage of discovery was renewed. But what could those "fairy isles" be but the islands of Japan? And Mr. Balfour says, we now know for a fact (?) that Hsü Fû did arrive there. According to the *Kok Shî Riak*,

"In the seventy-second year of Koré Tenno a man named Hsü Fû arrived in Japan from the state of Ts'in, accompanied by a thousand persons, consisting of men, women, and children. He also brought with him a certain book, and the object of his visit was to find the elixir of immortality. In this he was unsuccessful, and therefore he never went back. He took up his abode at Fusi-yama, and his memorial temple is still to be found at Kumanosan."

We need not say how, if this account be accepted, it confirms the conjecture mentioned by Mr. Mayers (under Hsü Shih) that the whole legend about the Fairy Isles has some reference to attempts made to colonise the Japanese islands. Was the first emperor, dissatisfied with the realm which he had conquered and enlarged, looking out for new lands in the vast ocean which he might add to his dominions? But his own death was not far distant from the date assigned to this attempt to obtain the herb of immortality. The years 215 and 214 B.C. were marked by his measures to repress the encroachments of the barbarians of the north, by a great extension of the limits of the empire in the south, and by the commencement of the "Great Wall"; 213 saw his edict for the burning of the Confucian books; 212 his extravagance in building the famous O-bang palace; his massacre of nearly 500 of the Confucian literati; and the banishment of his eldest son Fû Sû, who had remonstrated with him on such a deed, to superintend the labours of the general M'ang Thien on the wall. On his return from a progress in the south and east in 210, he

fell ill at a place called Sha-ch'ü in the present department of Shun-teh in Peh-chih-li. He hated, we are told, to speak of death, and none of his attendants dared to mention the word to him. As his end approached, his resentment against his eldest son passed away, and he told a eunuch to write a short message as from himself telling Fû Sû to meet him at the capital with a coffin and bury him. Before this message could be sent off, however, the emperor had died. The eunuch kept it back, and the premier weakly yielded to his counsels. They kept the death a secret, and the corpse was conveyed to the capital, where it was interred in the ninth month by the second son, whom, they said, he had appointed to succeed him. The interment took place in the mausoleum which the emperor had prepared for himself in mount Li, with nameless horrors, which Mr. Balfour does not relate.

Our author does not try to whitewash the first emperor, which would be a vain attempt. The moral which he draws from the sketch he has given is that the epoch is, perhaps, the saddest in the whole of China's history, and that the mischief which it wrought is well-nigh irreparable, "having inspired in the Chinese mind a rooted and consummate horror of change, and made the very word reform hateful to the Chinese people." To the present writer it seems that the impression left by the first emperor on the Chinese mind is not so much the dislike of change and reform, as the fear of tyranny and hatred of violence. More than thirty years ago, when the Thai Phing rebellion was running its course, many Chinese gentlemen used to call on me to ask, what intelligence I could give them of its progress; and all of them were confident of its speedy suppression. "You know the history of the Tsin dynasty," said one of them one day. "Thai Phing Wang is as ruthless as Shih Hwang Tî was. Fire and blood never built up a permanent rule in the world and never will."

We have said so much on Mr. Balfour's first chapter that we can add but a few words on the tenth, which is occupied with the works of Lieh Tseze. Mr. Balfour calls him "a philosopher who never lived," but it seems to us there can be no doubt of his existence at no long time after the death of Confucius. The collection of essays which bears his name, however, does not profess to have been written by himself, but to be the compilation of a disciple. Still, as Mr. Balfour says, our possession of the book is a fact, and we have it with a commentary of the fourth century A.D. Our author commences his account of it by telling us that a nephew of Marquis Ts'ang once said to a friend of his that the works of Lieh Tseze bore a close resemblance to our Bible. He does not endorse the young Chinese gentleman's opinion, but says that in reading the book he found much that interested him, and much that deserved recording. We have accordingly in this volume a fairly full digest of the contents, avoiding for the most part what is metaphysical and difficult to understand, but giving all or nearly all the stories, by which the speculations and teachings of Taoism are illustrated, very carefully translated, and many of them pleasant reading, entertaining and ingenious—often, where Confucius is introduced, captious and cynical. As a specimen of them we quote one of the

shortest, called "Confucius on Sageship," which both Buddhists and Christians have foolishly tried to press into their service :

"The premier Shang, during an interview with Confucius, asked him whether he was a sage. 'A sage!' replied Confucius. 'How could I dare to claim to be a sage? And yet my learning is wide, and my memory is richly stored.' 'Well, were the Three Princes sages?' 'The Three Princes were virtuous, tolerant, wise, and brave; but whether they were sages I do not know.' 'How about the Five Rulers?' 'The Five Rulers were virtuous, tolerant, benevolent, and just; but whether they were sages I do not know.' 'The Three Emperors then?' 'The Three Emperors were virtuous and tolerant, and always acted in accordance with the times; but whether they were sages I do not know.'

"Then the premier, greatly astonished, exclaimed, 'If so, then, where is a sage to be found?' Confucius, with a change of countenance, replied, 'In the West there is a sage. He governs not, yet there is no disorder; he speaks not, yet he is naturally trusted; he attempts no reforms, yet his influence has free course. Vast and far-reaching are his aims. The people can find no name for it. I suspect that he is a sage; yet I cannot be sure whether even he is or no.'

"The Premier relapsed into silence, and pondered in his heart whether Confucius were not chaffing him."

JAMES LEGGE.

Shamrocks. By Katharine Tynan. (Kegan Paul, Trench, & Co.)

THE most ambitious poem in Miss Tynan's new volume is her version of the old Celtic romance, "The Pursuit of Diarmuid and Grainnè." Portions of this poem, which is composed in a series of separate idylls, have already appeared in different Irish periodicals; but we now for the first time see the whole in its proper completion and sequence of parts. The result, it must be confessed, is somewhat disappointing. There is much of power and grace, though little pathos, in the telling of the story; but as a whole the material does not seem to have lain long enough in the heat of the poet's imagination—it has not been sufficiently fused to enable it to be struck out into a new and harmonious shape. Some such recasting seems necessary. The truth is that these old Celtic tales do not bear retelling in the form in which they have reached us. In prose, indeed, one reads them with a mixture of artistic and scientific interest. But a poet has no business to tell any story he does not believe in, either as fact or symbol; and unquestionably Miss Tynan cannot in any sense believe that Diarmuid slew a giant whose heels scooped out valleys in his death agony, or that he leaped unseen over the army that encircled his lair, or that he slew single-handed 1,500 of the 2,000 men sent by Fionn to seize him. This turgidity is a blot in the ancient Irish mythic poetry, and it is neither wise nor patriotic to reproduce it. We want the Irish spirit, certainly, in Irish literature; but we want its gold, not its dross; its spirituality, not its superstition; its daring fancy, not its too frequent recourse to mechanical exaggeration.

But with all drawbacks Miss Tynan has unquestionably made an impressive work of her "Diarmuid and Grainnè." What can be better for her whole dramatic purpose than

her conception of Fionn? He is thus introduced :

"This was the bridegroom, Fionn, the king of Eirè,
Gnarled like an oak, his face like liened stone,
Sullen and fierce, his red eyes sunk and weary,
Towered o'er all men that giant frame alone.

"Like an old tiger that hath lonely lasted
Years after all his kin be turned to clay;
Like a huge tree the thunderbolt hath blasted,
Black and accursed it stains the face of day.

"Yet a great hero—famed in many a story,
Victor on many a bloody field of fight,
But fierce and drunk with blood and blind with glory,
And, as men deemed, too old for love's delight."

After this description of Fionn (who, by the way, was not, and should by no means be called "King of Eirè"), Diarmuid seems little more than a lay figure, a type of chivalry and devotion; while Grainnè, with her white robes, and long neck, and "great stormy eyes," is a rather conventional heroine, as heroines go nowadays. But their story is told in strong and melodious verse, with many touches of natural beauty and fine feeling.

Altogether better as a specimen of Miss Tynan's powers is her "Story of Aibhric," embodying the legend of the singing swans, the transformed daughters of Lir. The young prince, Aibhric, has chased a mighty stag all day, and is seeking his home alone in the evening, when he hears the marvellous singing of the swans, to follow which becomes thenceforth the passion-madness of his life. The sense of mystery and approaching doom could hardly be better rendered than in Miss Tynan's description of the place where he first hears this fatal music :

"But now, at the eve, none answered my bugle's call;
Lord and lady were gone

Back to the lighted board in the palace hall—
I was riding alone:

The stag had vanished; a long gold gleam in the west

The grey pools mirrored all chill,
And the shrieking water-fowl flew up from the nest,

The wind in the reeds sobbed shrill.

"Dreary, dreary seemed the place and strange,

The moon was barred with the drifts,
And great cloud mountains rose stormily, range after range,

And broke into rifts;
An eagle sailed overhead with a flapping wing
And a wild, long cry;

I stayed my horse, and I mused with much questioning,
In what strange country was I.

"The hounds looked up in my face and shivered with dread,

Then cowered and were still;
Only the moon's wild face, like the face of the dead,

Looked up from each marsh-pool chill;
And the reeds and rushes shook and the wind wailed by,

The flat land stretched on each side
Down to the grey, sad line of the boding sky,
The gold gleam flickered and died."

One misses to a certain extent the note of pathos in Miss Tynan's "Diarmuid and Grainnè." But that she has the power to sound this string is amply proved by her rendering of the old popular legend, "The Dead Mother." This is certainly the finest of the shorter poems in this volume. It is written with a simplicity, tenderness, and intensity of feeling which must place it

among the best of the renderings of this touching legend. It is unfortunate, however, that the simplicity of this poem does not always prevail in Miss Tynan's writings. Its absence is most conspicuous in her religious poetry. Religious poetry need not, indeed, always be simple; but if not simple it should be subtle; and Miss Tynan's is generally neither one nor the other, but merely ornate. It is wanting, moreover, in one cardinal quality of sacred poetry—it treats of awful things without the smallest apparent sense of awe. The author is on just as familiar terms with the "Angel of the Annunciation" (not to speak of even higher themes) as with Diarmuid or Feargus or Mr. A. M. Sullivan :

"Oh, the marvellous eyes!
All strange with a rapt surprise,
They mused and dreamed as he went;
The great lids, drooping and white,
Screened the glory from sight;
His lips were most innocent."

Unless Miss Tynan will give up writing sacred poetry, or can learn to write it differently, the final estimate of the value of her contributions to literature—an estimate which it is to be hoped may be deferred by a long life of work and growth—will be much lower than her power in dealing with secular themes gives her a right to expect.

T. W. ROLLESTON.

"Popular County Histories."—*A History of Berkshire.* By Lieut. Col. Cooper King. (Elliot Stock.)

THE plan on which this series of county histories is made renders it impossible for the several writers to be seen at their best. The counties of England vary much not only in size, but also in historic interest. Some are crowded with memorable sites, others have done little towards the making of England. And yet, so far as the series has gone, it would seem that each is considered worthy of about the same number of pages. Col. Cooper King has done well, considering he had less than three hundred pages at his disposal. We should have had much fault to find had his space been less severely limited. As he has worked in fetters we are bound to say that he has made the best of his opportunity. His book reads like a highly condensed history, not, as at least one in the series does, like a guide-book, from which maps and engravings have been omitted. Our most serious grievance is that few references to authorities are given, and those few often appear in such a form as to render consultation well-nigh impossible. "Tanner MSS." for instance, is a most provoking entry, considering the bulk and varied nature of that great collection. It is, however, not quite so bad as the simple reference, "Blackwood," which occurs on p. 25. Is it possible that the author can be aware of the vast number of volumes of which *Blackwood's Magazine* consists? Neither of these are, however, so irritating as the reference "Hearne" (p. 78). We should be the last person to disparage the labours of that illustrious Jacobite antiquary, who devoted the greater part of his life to editing and printing chronicles and historic evidences when few other persons cared for them, and many could see in our mediæval historians nothing but monastic rubbish. Hearne, however, had not the gift of order,

to use a phrase of Carlyle's which, if we remember right, he applied to Rushworth's *Historical Collections*. Hearne's works are a complete "rag fair." Everything that he printed was well worth preserving; but there is no sort of arrangement which any except the compiler can understand. We must beg that, if this book ever reaches a second edition, which its intrinsic merits render probable, the author will remove this great drawback to its usefulness.

There is one feature in Col. Cooper King's volume which renders it very valuable. He is aware of a fact of which most historians seem to be profoundly ignorant—that the geology of a district must be studied ere we can rightly understand its history. Before man arrived there, the hills and valleys of Berkshire were being moulded by the slow processes of nature. The river channels were being formed, and a place prepared where palaeolithic man could dwell. That this remote predecessor of ours dwelt by the side of the rivers and fished in their waters is proven; but the finds of the earlier forms of flint implements have not been numerous. The author is careful not to give any opinion as to whether the present race of Englishmen inherit the blood of their remote predecessors. Indeed, he carefully avoids all through that vainest of human pursuits—speculative archaeology. We are glad to find that he is sound on one matter where so many have gone astray. He is fully aware that there were Teutons in Britain before the invasions which are recorded in history.

The account of the Roman conquest and settlement in Berkshire is exceedingly good. It is quite true that the Romans occupied Britain as we do India. They were conquerors, not settlers, but the racial differences were not so marked as those between the Englishman and the Hindu. We think that evidence might be found to prove that there was some blending between the conquerors and the conquered. The great number of Roman houses that have been discovered from the Isle of Wight to the Roman Wall proves that there must have been a very large number of wealthy settlers, or that many of the native inhabitants had fully adapted the outward forms of Roman civilisation.

The accounts of the Saxon, Dane, and Norman conquests are far too concise, but it is easy to see that they would have been valuable had they not been so terribly compressed. We have no desire to enter into the thorny by-paths of theological controversy, but for the sake of historic accuracy we must protest against one of the effects attributed to the Norman conquest. "The power of the Saxon Church was crushed, its independence of Rome taken away." It would be easy to demonstrate that the relations between the Roman pontiffs and the English episcopate were easier and more intimate before the son of Arletta of Falaise became king than they ever were at any subsequent time until the severance occurred in the sixteenth century.

The military history occupies two long chapters. It is all good; the latter part extremely so. The author's sympathies are evidently with Charles I. in the great struggle of the seventeenth century so memorable for England and the world, but he shows no

bitterness towards the other side. In the chapter devoted to monastic and ecclesiastical affairs we do not find the same thoroughness. We have not noticed any mistakes of fact, but it is evident that ecclesiastical history does not appeal to Col. Cooper King so strongly as those secular events which seem to many people to act so much more directly in furthering human progress. We are sorry for this, for Berkshire was a great ecclesiastical centre. A history of its churches and abbeys would, if well done, be an important addition to our knowledge.

EDWARD PEACOCK.

TWO TOURISTS IN PRAIRIELAND.

Cow Boys and Colonels. By Baron E. de Mondat-Grancey. (Griffith, Farran & Co.)

Saddle and Moccasin. By Francis Francis, Jun. (Chapman & Hall.)

A DISTINGUISHED statesman not long ago informed the world (and somewhat astonished those who were better informed) that since De Tocqueville wrote on democracy in the New World we have learned very little about the United States. As a matter of fact, *De la Democratie en Amerique*, never more than theoretically right, has, for all practical purposes, been obsolete these twenty years. At best, it is one of those books which everybody quotes, and those who have never read it praise; but with the exception of Mr. John Stuart Mill, the unappreciative reviewer has never yet met anybody who was prepared to pass an examination in its contents. Most of its admirers prefer to regard the book as one "without which no gentleman's library is complete"; and, on the whole, a generation that has enough to do with democracy in the concrete without wasting much oil over it in the abstract, will, by so doing, adequately perform their duty by the amiable author whom the world respects so much and reads so little. At all events, we have learned a good deal about America since Alexis de Tocqueville made a flying visit to a few of the Eastern States of the then youthful Union.

Here, for example, are two volumes on parts of the country which were absolutely unknown and unsettled, and to a large extent not even within the bounds of the great Republic fifty years ago, and which describe manners and modes of thought, industries and amusements, of which the men of 1831 had not even conceived the possibilities. The people who penetrated the Western Prairies at this period were explorers, and wrote with the ponderous dignity befitting "2 vols., 4to, with engravings on wood and steel." To-day they are tourists, and produce their impressions in the modest fashion befitting the hasty notes of a run-and-write trip. These two books are fair specimens of the literature that has been called into existence by the extension of railways, and the destruction of the Indian by civilisation.

The chief objection to *Cow Boys and Colonels* is its title. This senseless bit of alliteration, chosen apparently to catch the patrons of an American circus at present witching the London world with noble horsemanship, has really little to do with the subject of the volume, which contains not

much about "cowboys," and no more about "colonels" than must any volume on a country where almost every other man has this military title. Nor do we see why Mr. William Conn, who is merely the translator, occupies so prominent a place on the title-page, and appears on the cover—where there is a variant of the title—as the author of the book. In reality the writer is Baron de Mandat-Grancey; and the original designation of the work—which has received high commendation from the Academy—is "Dans les Montagnes-Rocheuses," facts which are acknowledged only in a line of small type. Otherwise, the book is an admirable one, and Mr. Conn has performed his task with praiseworthy accuracy, and, in addition, furnished a few explanatory notes which materially add to the value of the volume. The book itself does not contain anything absolutely new. M. de Mandat-Grancey does not posture as an explorer. He is merely a tourist, but an extremely intelligent one; and, in his journey to the Black Hills of Dakota and back again, allows very little to escape his keen eye, or the play of his acute, though generally bantering, criticism. He deplores the astounding ignorance of his countrymen regarding every region outside of France, and hence he thinks proper to note facts and enlarge on customs which an English author would regard as too well known to deserve a place in his pages. But this constitutes the great charm—we might almost say the value—of his volume. It is the impressions of a cultured Frenchman, who has mingled in the best society of the most polished cities of Europe, on men and their ways in the least civilised portions of the United States. He is generally fair, but rarely flattering. It is clear that M. le Baron was not taken by the life he saw, and that American immigration has not a great deal to gain by the latest narrative of the "European tenderfoot." Still, we have met few books of the kind better worth reading, or with more graphic pen-and-ink sketches of the scenes witnessed and the adventures experienced.

Mr. Francis sees the West from another point of view. He is not an "Alpinist," knows nothing about "climbing circles," and, if he cared anything about democracy and its lack of manners, does not possess the incisive touch of the gay good natured Frenchman. Mr. Francis, as becomes the son of his father, is a sportsman; and, whenever he goes to the Yellowstone Park, to the Sierras, to Sonora, to the Pend d'Oreille Lake, to the Animas Valley, or to Northern Mexico, he sees the world mainly from its fishing and shooting aspects. He also imparts local colour to his pages; but we scarcely think the endless dialect conversations—some of which would scarcely pass muster with local critics—add much to the intelligibility of his pages. Most of the chapters have either appeared in not very recent magazine contributions, or have done duty in some other shape; and, though not always of high literary value, they are worthy of preservation for the information they convey regarding sport in spots which, like the Pend d'Oreille Lake country, are very little known to the world at large. The "Winchester Water Meads" (p. 87) is, however, a little out of place, even in the way of padding, for it describes a fishing excursion

in Hampshire. Mr. Francis ought to be a trifle more careful about his facts. For instance (p. 10), it seems to us like speaking at random to describe the Yellowstone National Park as "100 miles square," and containing over "10,000 active geysers, hot springs, fumaroles, solfataras, saeas, and boiling pools." As a matter of fact, the park is fifty-five miles by sixty-five miles, and includes, therefore, 3,575 square miles, or 2,288,000 acres; and, in Dr. Peale's official report to the Geological Survey, only 3,000 hot springs, &c., are noted, 71 of these being geysers. We may also take this opportunity of saying that the Grotto Geyser (p. 15) spouts as well as "simply churns and makes an uproar." However, in spite of these little slips of the pen, Mr. Francis writes in a lively style, and is evidently in love with his subject.

ROBERT BROWN.

NEW NOVELS.

The Son of his Father. By Mrs. Oliphant. In 3 vols. (Hurst & Blackett.)

Demetrius. By Stephen Coleridge. (Kegan Paul, Trench & Co.)

Anchorage. By Mrs. Horace Field. In 2 vols. (Sampson Low.)

The Bride of the Nile: a Romance. By Georg Ebers. From the German by Clara Bell. In 2 vols. (Trübner.)

'Tween Heaven and Earth: a Novel of our Day. By Emilie L. Lancaster. (Remington.)

The O'Donnells of Inchfawn: a Novel. By L. T. Meade. (Hatchards.)

A Millionaire of Rough and Ready. By Bret Harte. (White.)

ONE is always certain of being amused and interested on taking up a story by Mrs. Oliphant, though there may be some of us who cannot help looking back to the days of *Salem Chapel* or *Merkland*. Her latest novel is, taken altogether, as good as anything that she has produced in recent years; but the ending is tantalising. We must confess to sympathising with the excellent Miss Martha Buskbody, and feel inclined to resent being put off with an assurance of Susie's happiness when we wanted to hear about Jack and Elly. But the book is a very good one, and no part is better than the account of the hero's childhood with which it opens. Most pleasant, too, are the studies of the old Sandfords in their quiet village life; and against these stands out in all the higher relief the figure of their hard, unsympathetic daughter, who, with her everlasting coldness and habit of prophesying the worst of her son, certainly did her very best to goad him into evil courses, worthy woman as she may possibly have been. The episode of the convict father's return with its sequences is clever, and not wanting in pathos; but it strikes one that John must have been the dullest of mortals not to have guessed the truth years before, considering the many scraps of incidental evidence in his possession. There seems to have been some faint notion of introducing a purpose into the novel—viz., the temperance question—but it is not obtruded.

A very good historical romance, though not without its drawbacks, is that which Mr. Coleridge has founded upon the story of the false Demetrius, the supposititious son of Ivan the Terrible, and his brief triumph and reign. In such a tale there is not, of course, much scope for imagination, as the author is necessarily fettered, to a certain extent, by recognised facts. But there is something so essentially dramatic in the details of the actual record that it would have been next to impossible not to turn them to some good end; and, on the whole, *Demetrius* may be praised as an exciting romance, likely to be read through at a sitting. There is not much attempt at character drawing, for which Mr. Coleridge possibly felt himself unfitted; still, the figure of the innocent adventurer is not without the heroic element, and there is some dramatic power shown in the last desperate struggle, which ends in the murder of Demetrius in the palace. There is subtlety, also, in the scene where he challenges his supposed mother's recognition in the tent. But the one fatal flaw in conception that strikes the reader is this: the true prince is supposed to have been ten years old when burned in the castle of Ouglitch, the youth of gentle blood put in his place by Leo must have been of the same age, and, consequently, old enough to be, at least, capable of grasping the facts of the fraud. Is it conceivable that, as is here represented, he should, in the course of adolescence, so utterly have forgotten all about it as honestly to believe himself the murdered prince? We doubt it much, and think that Mr. Coleridge has made an artistic mistake in so far idealising the character of his hero. Again, it is difficult to understand, in the light of after occurrences, why Leo effected the substitution. Still the book is worth reading, especially as dealing with an unhackneyed subject, as well as being a practical protest against the wearisome pseudo-psychology to which the readers of modern novels are too often condemned. It is just a good, exciting story, and claims to be no more. The style is not always to our taste. We distinctly object to this passage, put into the mouth of Sister Marfa at a moment of almost tragic intensity—"Or is he the mad one who would dare command a mother tell the world there was no boggle when he burnt her son?"

Mrs. Field has not attempted too high a flight; and the result is that her story is distinctly readable, though there are passages here and there, chiefly when Theodore Watson is on the war-path, which make one just a little inclined to follow the example of the doctor's big dog, as recorded at p. 33 of the second volume. But when the author is content to let religion and metaphysics alone, and simply occupy herself with pretty Olga Vincent's life-history, she is very agreeable, if not wildly exciting, company. There is some novelty in the conception of the ignorant Georgian heiress thrown upon London life—as innocent of wrong as Eve in Paradise—with no better advisers than a true-hearted quadroon nurse, as guileless as herself, and a fraudulent London solicitor. No wonder that she fell a willing prey to the first man with a handsome face and taking manner who came across her. Olga is, in fact, very charming; but Gustave De Launay is

not so satisfactory—as Andrew Fairservice said of Rob Roy, he is "ower good for bann-ing, and ower bad for blessing," and leaves a sense of unreality on the mind. Readers who are in search of excitement may be advised to pass *Anchorage* by; but those who can enjoy a pretty and rather pathetic story, quietly told, will like it. Of course, the living in the "slums" is an idea that could never be carried out successfully, but it merits the noblest praise that can be given to any noble conceit, viz., it is Quixotic. Dr. Watson seems to have had queer ethnological views. Why should it have been any harm to Bertie Searle to have had "a touch of gipsy blood somewhere" forsooth? As if the Romany were not as good as any other of the Oriental tribes, and a great deal older than most of them! Perhaps the author confused gipsies with tramps.

The first thing that occurs to one on laying down Dr. Ebers's latest romance is that had it been half the length it would have been twice as good; and the curtailment might so easily have been made! It would only have been a question of omitting all those long and dreary conversations which are, possibly, dear to the hearts of the German public, but in the case of British readers have but one result, viz., to foster the highly reprehensible practice of skipping. Phillipus, the Greek, was doubtless a most learned and estimable man, but he was, as undoubtedly, a fearful bore. One does not want to be tricked, under the guise of a romance, into the study of questions which would be excellently in place in a philosophical treatise; and the dialogues to which we refer do not further the action in the least. Beyond this the novel is a good one, and increases in interest as it draws to a close. It is no slight praise to say that the author has the power to engage his readers' sympathies as fully for the old-world characters of his drama as if they had been people of our own race and time. Because it is indisputable that, however archaeologically interesting Memphis and its inhabitants in the seventh century may be, there is a certain difficulty in feeling oneself quite in touch with the whole; added to which few but antiquarian readers can care much about the ancient heresies, based upon metaphysical definitions of which most people are ignorant, and which they would not understand if they knew them—any more than did ninety-nine per cent. of those who were always ready to shed their own or, preferably, other folks' blood for the sake of some crack-brained leader's last new crochet. But, notwithstanding all drawbacks, the story is a good one, and exciting to the verge of melodrama, while Paula, Orion, Katharina, and the others are intensely human. The contrast between the fair Melchite's saintliness and the almost preternatural fiendishness of her Jacobite rival is, perhaps, a trifle too strongly marked; one feels a want of shade in the picture. A good many people would think that Paula would have been rather a terrible person to live with, notwithstanding her beauty, and that Katharine, under good strong guidance, would have been the more eligible companion for this work-a-day world. She is very cleverly drawn as a study of an intense, ill-regulated nature. Dr. Ebers might have intended the story of her treacheries and

crimes for a sermon upon Congreve's old saw about "a woman scorned." The scene in which she tries to infect Heliodora with the plague, and unconsciously gives it to Susannah, is positively tremendous in its intensity; and the crowning act of self-sacrifice is quite in keeping with the character of such a woman. Considering the name of the author, we need not comment upon the accuracy of antiquarian detail which distinguishes the romance, nor upon its picturesqueness. Dr. Ebers has made the country and the epoch with which he deals especially his own. But particular attention may be drawn to such scenes as the death of the Mukaukas George, the sack of his palace by the Arabs, and the flight and pursuit of the Melchite nuns. The book as a whole is well worth reading, even in a translation.

If it be true that dreams are the outcome of our waking thoughts, it would appear that Miss Margaret Kingsdown entertained no very high opinion of her two suitors, Col. Frapply and Mr. Gilbert Jervoise, either morally or intellectually. Having, on singularly insufficient premises, arrived at the conclusion that the latter was faithless, she accepted the former, developed a talent for somnambulism, got into trouble on the rocks between Torquay and Paignton, and evolved from her internal consciousness a highly horrifying life drama for all concerned. It will be a relief to tender-hearted readers to learn that, just as Mrs. Frapply was about to drown herself from the Thames Embankment, Margaret woke up, had brain fever, jilted the colonel, married Gilbert, and lived happy ever after. The style of the book is as peculiar as was the gallant officer's logic, of which the following is a specimen:

"He has served in Zululand, exchanged into the Guards, and was with Wolsley in Egypt. Consequently, he credits women as ambitious, and not insensible to the superior charms of such an one as Col. Frapply. Therefore, Margaret Kingsdown, girl as she is, isolated as she is, must likewise have a vein of like reasoning with her, or she can be no woman."

Mrs. Lancaster seems to have been a little uncertain at times whether she should use the historic present or the past tense, and to have compromised matters by mixing the two. Her power of metaphor, also, is surprising. We must really give one passage, which is almost worthy of Lord Castlereagh himself:

"Now this sudden awakening to her dreams, this cup of saddened gloom overshadowing all, sinks as a knell of warning into her soul, and censures her through the voice of conscience to her own utter misery."

Still, *'Tween Heaven and Earth* is not without its value as a source of original information. It is, for instance, interesting to learn that in Torquay society at the present day people commonly use such phrases as "Oh, think not" and "I pray you." Also that "barquee, &c.," can navigate the Thames between Cleopatra's Needle and Westminster Bridge. We do not know what "&c." represents—ironclads, possibly, or Atlantic liners; and we should dearly like to know, *inter alia*, how they all got under Waterloo Bridge!

It may be open to some question whether it is wise at the present juncture to publish

stories dealing with the Irish difficulty; granting the expediency, it may be allowed that it could hardly have been better treated than in *The O'Donnells of Inchfaun*. The author is apparently not a Celt, but has much sympathy with the people of that race—more than it is common to find among Teutons; and the story is a very pretty and sympathetic one. It treats of the downfall of a grand old family, and the results thereof, with some details of secret societies, and an element of natural and wholesome sensation which brightens up the narrative. Ellen O'Donnell is a charming creation, but we cannot profess to care for her husband. The gem of the book is the character of poor young Brownlow—the lowborn lad who yet was a grand, true gentleman. His death is thoroughly and nobly pathetic—laying down his life not even "for his friend." What knight of Arthur's court could have done more for the love of his lady? It is strange how impossible it seems to be for Saxons to understand the love of mother-country which militates against enforced emigration. And the comedy occasionally trenches on burlesque. Miss Macnaughton, however provincial, was a gentlewoman, and it is absurd to represent her as not knowing that the world was round. Did it occur to the author that it is, also, slightly ridiculous to make a Catholic peasant devote the soul of his enemy to *purgatory* "for ever"? Of course, one knows what he really said.

In *A Millionaire of Rough and Ready*, Mr. Bret Harte once more takes us to California, but with a difference; and the story is one of the best that he has written of late years. The complication originally arising out of Alvin Mulrady's discovery of the gold-vein, and Slinn's conviction that he himself had the prior right, is good, and the *dénouement* as dramatic as anything the author ever conceived. The chivalrous little Spaniard, Don Caesar, is a well-drawn figure, and contrasts well with his rough, though worthy neighbours. One feels that he was too good to be thrown away on Vashti Slinn.

B. MONTGOMERIE RANKING.

RECENT GERMAN THEOLOGY.

Die Apostel-Lehre und Die Jüdischen Beiden Wege. Von Adolf Harnack. (Leipzig: Hinrichs.) This pamphlet is an enlarged reprint of an article which appeared in the *Realencyclopädie für Protestantische Theologie und Kirche*. It contains a succinct account of the present state of inquiry into the "Apostles' Teaching." Little more than three years have passed since Bryennius brought the manuscript of the *Didache* to light. Barely a year has passed since Dr. Harnack published, in the second volume of "Texte und Untersuchungen zur Geschichte der altchristlichen Literatur," a full historical and critical commentary on that book. But since then scholars have been very busy in Germany, England and America. Quite a literature has sprung up on the *Didache*. The books, treatises and articles dealing with it amount to upwards of 200. The aim of Dr. Harnack's last publication is to bring the whole subject of investigation, with all its side issues, under a clear and comprehensive survey, and thus to mark exactly the point at which historical inquiry has at this time arrived. No more competent pen could have been found to perform such a task than Dr. Harnack's. He shows in this last book all the qualities which we

have learned to expect from him—wide reading, a perfect mastery of subject, subtlety and *finesse* of research, and fairness of judgment. There are two questions on which he takes up a position entirely different from most English scholars. The first question refers to the relationship of the *Didache* to the *Ep. of Barnabas*. Dr. Harnack maintains that the *Ep. Barn.* was written before the *Didache*, and that the author of the *Didache* drew upon *Ep. Barn.* His argument, in short, runs as follows: *Did.* cp. i., 1-2; ii., 2-7; iii., 7-vi., 2, correspond to *Barn.* xviii.-xx. Not only the subjects, but the wording are in certain passages the same. The treatment, however, of the subject is very different in the two books. In *Ep. Barn.* we find confusion, in the *Did.* we see perfect order. The author of the *Did.* has, moreover, inserted into the text, which he has in common with the *Ep. Barn.*, passages either taken from Scripture i., 3-6, or modelled upon its pattern, iii., 2-6. If then the *Ep. Barn.* is later than, and dependent upon, the *Did.*, its author would have gone out of his way to turn the fine order which he found in the *Did.* into confusion, and to eliminate carefully all the Scripture passages, *quod absurdum est*. Again *Did.*, Cp. xvi., which is compiled from the Gospel and Sach. 14, 5, contains only one verse, which appears to be original, and this verse is also found in *Ep. Barn.*, iv., 10 g. Now, is it more likely that the *Ep. Barn.* should have seized upon this one verse, which is the real property of the *Did.*, and should have omitted all the Scripture verses, than that the *Did.*, which is nothing but a compilation, should have taken this verse from *Ep. Barn.*, as it took the others from Scripture? These arguments, we must confess, appear to us conclusive. Equally strong are those which Dr. Harnack adduces in favour of a comparatively late date for the *Did.* English and American scholars date its composition A.D. 80-100, Dr. Harnack A.D. 120-163. The order of things, he argues, which is depicted in the *Did.*, and which is more ancient than that given in Clemens Romanus, Polycarp and Hermas—not to mention Ignatius—may have maintained itself in some provinces to a later time, and may then have suddenly given way. The reference to a generation of prophets which had passed away, the manifest signs of decay in the ranks of the prophets then living, the toning down of moral precepts (Cp. vi.) and of eschatological prophecies (xvi.) point to a later age. Dr. Harnack fully accepts Dr. C. Taylor's view, viz., that the original of the *Did.*, at least of the first part (Cp. i.-vi.), was a Jewish manual called *The Two Ways*, which was introduced at a very early time into the Christian Church for the use of catechumens; and he traces in an instructive manner the different steps by which the original made its way to *Ep. Barn.*, the *Did.* and to the *Apostolic Constitutions*. There are two points on which we venture to differ from the author (p. 3). The passage (*Did.* i., 3-6) *προσεύχεσθε ὑπὲρ τῶν ἐχθρῶν ὑμῶν*, &c., does not refer to the love of God, but to the love for our fellow-men and the duties we owe them; again (p. 22), it cannot be inferred from *Did.* xv. i. that the prophets and teachers play the principal part in the congregations, but that the "bishops and deacons" are the original order of teachers, and for that very reason no detailed instruction regarding them need be given to the Church.

Urchristliches Andachtsbuch. Die Lehre der Zwölf Apostel an die Völker. Deutsch herausgegeben und in Kürze erklärt von Gustav Volkmar. (Zürich: Schröter & Meyer.) Prof. Volkmar reminds us by this work what should have been done in England long ago. He has made the *Didache*, the earliest Christian manual of devotion as he calls it, accessible to the general public by an excellent and idiomatic

translation. The sixteen chapters of the original are arranged under ten heads; the notes, though sparingly introduced, are most appropriate. Paper, type, and execution are in keeping with the general work. And the fact that the edition has gone through three editions shows that the public in Switzerland and Germany have appreciated the gift offered them. The only exceptions we venture to take are to the conventional view (p. 11), that cp. i. 3-6 is a comment on ἀγαπήσεις τὸν θεὸν τὸν πληρώσαντά σε i. 2, whereas it refers to the second great commandment, ἀγαπήσεις τὸν πληρώσαντά σου. The difficulty of the conventional view is illustrated by the long and somewhat laboured note (p. 13). The references to Bar Cochba, the composition of the *Did.* exactly in A.D. 134, and at Pella (p. 38 sq.) are very doubtful. The *Did.* (comp. xvi. with its prototype *Matth.* xxiv.) does not leave the impression of having been written in troubled times. Again, it cannot exactly be called a manual of devotion: it contains too much "teaching" for that. But the prayers which it enjoins to be offered at the Holy Communion (ix. 2, 3, 4, x. 2-6) evidently date from the apostolic age. In ancientness, in grandeur and beauty, they are second only to the Lord's Prayer (viii. 2). There seems no reason why the "Apostles' Teaching" should not be similarly made accessible to the English public, and its collects introduced into our liturgies.

Das hohepriesterliche Gebet Jesu Christi. Von F. L. Steinmeyer. (Berlin: Wiegandt & Grieben.) This book seems to us a model of what a monograph should be. It possesses the merits, which we expect in a German commentary, of minuteness and comprehensiveness of research; it possesses, moreover, the merits, which we do not always find in such works, of grace and clearness of style. In his treatise of St. John xvii., the author follows steadily the development of the main thought which runs through that chapter. It is only occasionally that he diverges into a side question, and then he invariably makes his way back skilfully into the main current. It is not possible to say anything new about a chapter on which so much has already been written. But it is quite possible to bring the results of modern investigation into the right point of view. This, we believe, the author has done. He maintains first, that the high-priestly prayer has the essential character of a prayer, against Chrysostom (p. 2), "non ἐχὴν hoc caput continere, sed λαλῶν, informatorium concionem sermonem, ad discipulos," to which Calvin adds, "ut certam haberet fidem apud discipulos." His second point is, that in this prayer "Christ renders account of His work here on earth. He has been faithful unto death. He prays for, nay He claims, His reward, namely the glory which He had had from the beginning." We accept this point of view. It is only in the division which he makes of the chapter, and occasionally in his exegesis, that we differ from the author. Verse 20 does begin a new series of petitions, which are offered up for the outer and more distant circle of disciples. The point of departure is clearly marked by the οὐ μόνον—ἀλλὰ καὶ in the Οὐ περὶ τούτων δὲ ἐρωτῶ μόνον, ἀλλὰ καὶ περὶ, &c. (p. 35). Again, to seek the explanation of verse 13, "they (the disciples) may have their joy fulfilled," in Matthew xxvi. 22, "they were exceeding sorrowful," seems far-fetched (p. 63). On the whole this is an excellent book, and deserves a careful study.

Die Lehre vom Gebet nach dem Neuen Testament. Von Paul Christ. (Leiden: Brill.) The author does not show any lack of candour in defining his standpoint. He relies mainly on Baur and Volkmar. He accepts as genuine sources of the beginnings of Christianity only

St. Mark's Gospel and four Pauline epistles. In the Gospel, moreover, interpolations have been made, and the only criteria by which a genuine saying of Jesus may be known are the stamp of religious genius and freedom from all Pauline or Jewish influences. Such is the brief which the author holds (p. 9), and from this brief he tries to work out his case in a logical and consistent manner. If he fails in this attempt it is not from want of exegetical acumen or dialectical ability, but because the case cannot be possibly established upon such grounds. Thus his first proposition, upon which all the others rest, is that the New Testament never speaks of prayer to Christ as a divine being. In Rom. x., 12, 13, and 1 Cor. i. 2, he maintains that ἐπικαλεῖσθαι τὸ ὄνομα Ἰησοῦ Χριστοῦ may possibly mean not to invoke but to praise the name of Christ (Isaiah xiv. 5). In 2 Cor. xii. 8-9 he pleads that κύριος signifies θεὸς and not Χριστός. But this interpretation is rendered impossible by the immediately following ἵνα ἐπισκενηώσῃ ἐπ' ἐμὲ ἡ δύναμις τοῦ Χριστοῦ. Rom. xiv. 6, which he cites, speaks, we think, against his arguments, for here, too, κύριος means Christ, as is evident from v. 9. Granted that his argument has succeeded, it proves no more than that possibly Christ may not have been the object of the Apostle's prayer. This is a slender foundation upon which to build the conclusion that "the oldest books of the New Testament do not mention, in fact do not allow, an invocation of Christ," and to rest the demand "that all prayers addressed to Christ should be expunged from our liturgies and prayer-books" (p. 40). A theory like the one proposed by the author can have only one virtue, to wit, self-consistency. And this virtue, we fear, is here wanting. For the author, after exhausting every art of exegetical science, is obliged to confess (p. 192) that there does exist a discrepancy between the "supernaturalistic New Testament view of prayer as a power, which may interfere with the course of nature and change the fate of men," and the modern view which he himself maintains. Taken merely as a piece of dialectic this book is worthy of the theological school from which it issues. And the remarks on those passages which the author allows to be genuine—the Lord's Prayer, for instance, p. 52 sq., and on St. John xvii., p. 73 sq., are excellent. His historical sense has, moreover, kept him here from weakening, in any way, the force of the original.

Paulus von Damascus bis zum Galaterbrief. Von Gustav Volkmar. (Zürich: Meyer.) This volume consists of two essays which originally appeared in the *Theologische Zeitschrift aus der Schweiz* for 1884 and 1885, now out of print. Among the staunch adherents of the Tübingen School, Prof. Volkmar is one of the very few of any note who still survive. In the present volume the learned author endeavours, according to the principles of this school, to determine the chronology of St. Paul's life, from the time of the Apostle's visit to Damascus to the year in which he wrote the Epistle to the Galatians. Prof. Volkmar compares the rival accounts of the Apostle's life, contained, on the one hand, in Acts ix. 19-30, xi. 25-30, xii. 25, xiii.-xxi., xxiv. 17; and, on the other, in Gal. i. 15, ii. 15, 1 Cor. xvi. 1-9, 2 Cor. viii.-ix. The Apostle's own statements are regarded as the primary source according to which the account given in the Acts is corrected and modified. The ecclesiastical author of the Acts, who wrote in the beginning of the second century, tried to project into the apostolic age the amalgamation of the two churches—of the Jews and the Gentiles—which was taking place in his own time. He wrote with a distinct tendency; he had original sources of information at his command; but he deliberately effaced all those marks which might have

betrayed the division that had existed between the heads of the two churches. Such, in short, are the outlines of the position which Volkmar holds. And the task which he has set himself in this remarkable book is to remove the un-historical elements added by Luke, and to restore as far as possible the original account of the Acts. It is unnecessary to enter fully into the question, and to repeat the well-worn arguments which have been urged for and against the conclusions of the Tübingen School. Later research, as represented, for instance, by Wieseler and Meyer, has pointed out a far simpler and more natural explanation of the chronological discrepancies between the Acts and the Epistles than the elaborate hypothesis of Baur and Volkmar. What are we to say to the theory which maintains that Luke associated Saul with Barnabas when the latter brought the alms of Antioch to Jerusalem (xi. 30, xii. 25) A.D. 44, because it seemed so "pleasing an idea" to connect the two friends on an errand of love (p. 13, 14), or that he made Paul visit Jerusalem four times (xi., xv., xviii., xxiv.), to show the more forcibly that the Apostle of the Gentiles was in harmony with, nay dependent upon, the Church in Jerusalem? But in his zeal the ecclesiastical unionist quite forgot that Paul distinctly said he had visited Jerusalem only twice (Gal. ii. 1, 10), the first time A.D. 53 (p. 62). According to Volkmar the passages in Acts ix., xi., xv., ought to be entirely expunged, or, so far as they are historical, placed after Acts xviii. 22. It is possible thus to bring the different accounts into harmony. But the cure wrought by such surgical operations is worse than the evil. Among minor errors we note (p. 61) Gal. ii. 10 does not necessarily point to a journey distinct from 1 Cor. xvi. 1-9. Again Acts xxiv. 17, refers to xxi., 1 Cor. i. 10 should be i. 12 (p. 4), Gal. ii. 5. should be ii. 8 (p. 26), ii. 3-6 should be ii. 6, 9 (p. 31).

NOTES AND NEWS.

We are glad to hear that the Johns Hopkins University of Baltimore has in preparation a complete facsimile edition of *The Teaching of the Twelve Apostles*. The text will be accompanied by critical notes by Prof. J. Rendel Harris, and its issue may be expected in October.

SIR ALLEN YOUNG, not Baron Nordenskjöld as has been reported, will probably be the commander of the expedition to the South Pole, which the Australian colonies are preparing to send out.

It is feared that, owing to the pressure of his professional duties, Mr. Oscar Lenz may not be able to fulfil his promise to visit England in the course of the present year and read papers on his recent African travels. No definite news, however, had up to the end of last week been received in London from him.

MESSRS. MACMILLAN announce *Industrial Peace*; its Advantages, Methods, and Difficulties, being the report of an inquiry made for the Toynebe Trustees by Mr. L. L. F. Price, with a preface by Prof. Alfred Marshall, of Cambridge.

UNDER the title of *An Anthology of the Novels of the Century*, Mr. H. T. Mackenzie Bell has edited a little volume containing a collection of choice reading from the best novels of the last eighty years, with critical and biographical notes. It will be published by Messrs. Chatto & Windus.

A NOVEL by a member of the Browning Society will shortly be published by Messrs. Swan Sonnenschein & Co. The plot is based on Browning's "Waring." The book will be entitled *St. Bernardo: the Romance of a Medical Student*. The author takes the pseudonym of

"Aesculapius Scalpel"; but it is understood that his name is not unknown in the literary world.

A POPULAR Hindu story, by K. Viresalingam, Pandit, entitled *Rajasekhara*, which has become a classic in South India, is being translated for English readers by Mr. J. R. Hutchinson. It is announced for immediate publication by Mr. Elliot Stock, and will have an introduction by General Macdonald.

MESSRS. F. V. WHITE & Co. will publish during the present month a two-volume novel by Bret Harte, entitled *The Crusade of the Excelsior*; a three-volume novel by J. Sale Lloyd, entitled *Scamp*; a new edition of *Garrison Gossip*, by John Strange Winter; and also a cheaper edition of the novel, *In a Grass Country*, by Mrs. H. Lovett Cameron.

Digia: her Love and Troubles, is the title of a story of Venetian life to be published immediately by Messrs. Frederick W. Wilson & Brother, of Glasgow.

MR. JOHN HEYWOOD has in the press *Manchester a Hundred Years Ago*, being a reprint of a description of Manchester by a native of the town, James Ogden, published in 1783, edited, with an introduction, by Mr. William E. A. Axon.

AMONG the articles in the forthcoming number of *The Scottish Review* will be "The Modern Cremation Movement," by Dr. Charles Cameron; "The Burning of Freudraught," by Sheriff Rampini; and "The Coronation of Charles II. at Scone."

The *Red Dragon* having ceased to exist, the "Notes and Queries" section is being continued in the *Cardiff Weekly Mail*.

THE Delegates of the Clarendon Press are about to issue the sixteenth thousand of Prof. Buchheim's large edition of Schiller's *Wilhelm Tell*. It is a remarkable fact that that edition is far more popular than the "school edition" of the same editor, although the latter contains all the necessary information, and costs little more than half the price of the former.

MESSRS. SOEBEY will sell during next week several interesting books. On Monday and Tuesday, a portion of Mr. G. W. Smalley's collection, which is chiefly noteworthy for its first editions—such as those of Ruskin, Rossetti (in large paper), Wordsworth and Coleridge's *Lyrical Ballads* (Bristol, 1798), and Walt Whitman's *Leaves of Grass* (Brooklyn, 1855)—as well as for the handsome binding and good condition of the volumes. On Wednesday, Thursday, and Friday, a portion of "the library of a nobleman"—whom it would not be very difficult to identify—which includes Caxton's *Boecius*, several early Bibles, Ben Jonson's copy of *Daniel*, Henry VIII.'s copy of Ptolemy's *Geographia*, the first edition of *Don Quixote* (Madrid, 1605), and many curious MSS. On Saturday, the concluding portion of the library of the late R. P. Roupell.

THE Senatus Academicus of Griswold College and Theological Seminary, Davenport, Iowa, has conferred the degree of Doctor of Divinity upon the Rev. Isaac Brock, President of the University of King's College, Windsor, Nova Scotia; and upon the Rev. W. C. Winslow, of Boston, Vice-President of the Egypt Exploration Fund. This is the fourth academic degree which has been conferred upon Mr. Winslow within the last twelve months.

THE seventy-seventh annual meeting of the Swedenborg Society was held on Tuesday June 28. Col. Bevington presided. The committee's report states that there has been an increase in the delivery of the society's publications for the past year of 491 volumes, the total number being 3,787, of which 54 were in

Welsh, 98 in Latin, 7 in French, 40 in Russian, and 7 philosophical. Presentations have been made to six free libraries, and some other institutions have received considerable grants. Ministers and theological students have received 365 volumes gratis, of which 80 volumes have gone to Ireland. In addition to the annual subscriptions, a donation of £1,000 has been received from a friend, and a jubilee gift from the chairman of £50. The committee further state that during the Queen's reign the large total of 157,511 volumes have been sold or presented. For ten years ending in 1847 the numbers were 17,576 volumes; during the last ten years these figures have been more than doubled, being 35,814. The prices of the volumes for the same period show a large reduction—in some cases 50 per cent. and in some others a still larger percentage.

ORIGINAL VERSE.

SUGGESTED BY TWO PICTURES OF MR. G. F. WATTS
NOW ON EXHIBITION AT MANCHESTER.

Love and Death.

Love filled each chamber with "his purple light,"
And wreathed the porch with many a flow'ret gay
Smiling to see his dove beside him play;
While gracious guests passed in with presence bright,
Making the house "a palace of delight"—
Blue-vested Hope, and Faith chanting a lay
Of joys unseen and glories far away,
Pure Mirth, and Innocence in lily white.
And then, a stately shrouded form drew nigh,
That up the stair with stride majestic pressed.
Love marked him come with speechless agony,
And stemmed with wing and palm his mighty breast;
But he, whose face "men only see who die,"
Strode on, unbidden, yet a kindly guest.

*Hope.**

Her fair head bowed upon her broken lyre,
Touching with wasted hand its one last string,
She strains her ear to catch its murmuring;
Alone, bright-haired, but clad in mean attire,
Sweetest and saddest daughter of Desire.
Blindfolded she beholds not anything;
Her slung senses tardy service bring,
Yet nought can move her high resolve or tire
Her steadfast patience. Sorrows but enhance
The gentle loveliness they cannot mar.
Beneath her lies this sphere of circumstance
Where all things false and evanescent are,
And o'er her lovingly heaven's pure expanse
Bends, blue and limitless, with one white star.

W. TAYLOR SMITH.

MAGAZINES AND REVIEWS.

In taking up a number of *Blackwood* we usually turn first to "The Old Saloon"—this being, for some reason that we have long ago forgotten, the heading given in that magazine to the very ably written reviews of books. This month the "Saloon" is of even more than usual interest. The books noticed include the biographies of Charles Reade, Mrs. Gilchrist, Lady Lytton, and the Margravine of Baireuth, the correspondence between Goethe and Carlyle, and Mr. William Canton's poems. An anonymous paper on "The Hittites" is remarkable for omitting all mention of Capt. Conder's name, while it speaks of that gentleman's ingenious speculations as if they were established facts. A story "from the Chinese of Wu-Ming" is amusing; and "A Sketch from Ilfracombe," by Mr. A. Innes Shand, may be read with interest, though its attraction is rather in the subject than in the style. The papers on "Secondary Education in Scotland," "The War Office," and "The Balance of

* See the ACADEMY of May 15, 1886.

Military Power in Europe," are possibly valuable and certainly tedious, though the first of them is by Prof. G. G. Ramsay.

THE current number of the *Political Science Quarterly Review* contains articles on "The Interstate Commerce Law," by Dr. Seligman; "Trades Union Benefit Features," by Dr. E. W. Bemis; "The 'Cultur-conflict' in Prussia," by Prof. J. W. Burgess.

THE HISTORY OF THE INVENTION OF PRINTING.

X.

Now, as there is no direct evidence (if the testimony of Zell and Junius is not accepted) as to the Costeriana being printed earlier than 1474, an argument as to their really being printed earlier would, practically, be impossible if we had no books whatever to compare them with. But we have such books in the early products of Mentz printing, and these, therefore, shall be our guide in determining the approximate date of the Costeriana. Remembering then how, in the case of Strassburg printing, books, said to have been printed circa 1471 to 1474, may just as well be placed eleven, twelve, or thirteen years earlier, we may begin by repeating that, in the case of the earliest incunabula, 1471 or even 1474 does not mean more than 1460, when we consider that the condition under which printing was carried on during that period made it wholly stagnant, and does not afford us any sure criterion as to dates. And, certainly, when we place the forty Costeriana (leaving the five works of Pius II. out of the question) in point of workmanship side by side with the *Catholicon* printed in 1460 at Mentz, the latter work shows progress compared with the Costeriana. But again, the year 1460, round which we may group forty of the Costeriana, as certainly as the *Catholicon* and other works printed at Mentz, does not mean more than 1454, when we look at the wholly stagnant condition under which printing is carried on during that period. And certainly, when we place the forty Costeriana in point of workmanship side by side with the Letters of Indulgence printed in 1454, the latter show progress compared with some of the Costeriana. I therefore do not hesitate to remove the Costeriana still further back than 1454. But before I do so I wish to warn the reader that I am not speculating in the least. We have fragments of at least three editions of the *Donatus* printed in the well-known thirty-six line Bible type, which no worshipper of Gutenberg would hesitate for a single moment to put down to him as early as 1450 to 1454. I myself have described these editions in my work on Gutenberg (pp. 158 and 159) from fragments preserved in the British Museum (press mark C. 18, e. Nos. 2 and 5) and in the Town Library at Mentz; and I have no objection to their being attributed to the year 1450-1454, or even to 1448, as Dr. Van der Linde feels inclined to do. But when we allow Dr. Van der Linde and all other Gutenberg enthusiasts to place these *Donatuses* as Gutenberg's experiments and products about or before the year 1454, I do not see how they could possibly argue that the twenty editions of the *Donatus* printed in Holland should be dated one single year later, for a comparison between the Gutenberg *Donatuses*, preserved in the British Museum and at Mentz, with (some at least of) the Dutch *Donatuses* preserved in the British Museum, at the Hague, Haarlem, and elsewhere, makes it clear that, in point of workmanship, both sets of *Donatuses* stand on the very same stage, and that, if there be any difference between them, the Dutch *Donatuses* are the more primitive. We have also at least four editions of the *Donatus* printed by Peter Schoeffer in the forty-two line Bible type. I have described them in my work on Gutenberg

(pp. 168-171) from fragments preserved at Mentz, Hanover, and Paris, and explained that, on bibliographical grounds, we should ascribe them to about the same time as the forty-two line Bible, that is to say, about 1456. But when we allow Gutenberg enthusiasts to regard these *Donatuses* as printed before 1456, I do not see how they could possibly argue that the twenty editions of the *Donatus* printed in Holland should be dated one single year later; for a comparison between the two kinds of *Donatus* makes it clear that in point of workmanship the Schoeffer *Donatuses* stand on the very same stage as (some at least of) the Dutch *Donatuses*, but that, if there be any difference between them, the Dutch *Donatuses* are the more primitive. And when once we see that there is no difference in point of time between the Gutenberg and the Schoeffer *Donatuses* and those printed in Holland, and that we may group the latter round the years 1450 to 1456 as certainly as the former, we could not possibly violate any bibliographical conscience in taking some of the Dutch *Donatuses*, together with some of the *Doctrinales*, &c., back to the year 1446, if we look at the almost wholly stagnant condition under which printing was carried on during the period of its greatest glory (1454-1480), and especially when we consider that this stagnant condition is due not to the inability of the printers or their inferior tools, but to a fixed method and plan which they all followed, and from which they only began to deviate, slowly and almost imperceptibly, a quarter of a century after the divine nature of their art had been publicly and loudly proclaimed to the whole earth.

And when, by comparing the Dutch *Donatuses* and *Doctrinales* with the early Mentz *Donatuses* (of 1450-1456), we realise that the Dutch *Donatuses* and *Doctrinales* may be placed as early as 1451 and 1446, we are reminded, in the first place, of the entries in the Diary of the Abbat of Cambay, who says that in 1451 and 1446 he had bought for him, at Bruges and Valenciennes, two copies of the *Doctrinale* of Alexander Gallus which were "jeté en molle"—a term which can only mean (printed with types) cast in a mould, if we have regard to the way in which that very term was, in several instances (not two, as Dr. Van der Linde loves to tell us), applied to printed books for many years afterwards. And, in the second place, we are reminded of the testimony of the Cologne Chronicle which (in 1499) tells us (on the authority of Ulrich Zell, a printer of Cologne, and a pupil of the early Mentz school) that "the art of printing was first found at Mentz, but [so it adds] in the manner as it was then [in 1499] practised: the first prefiguration, however, being found in Holland [not from one *Donatus*, or some *Donatuses*, but] from the *Donatuses*, which had been printed in that country before." And—seeing that we can actually point to several editions of typographically printed *Doctrinales* and *Donatuses*, which (by comparison with Mentz *Donatuses* of 1450-1456) may be presumed to have been printed so early as 1446, and, beyond the shadow of a doubt, by a printer in Holland, who printed, at least some of them, in a manner which was not customary in Zell's time, and which had never been customary in Germany since the year (1454) when printing made its appearance in a perfect state at Mentz—we should be going out of our way if we discarded these *Doctrinales* and *Donatuses*, and, moreover, distorted plain language and historical testimony by arguing that the Abbat of Cambay and Ulrich Zell referred to *xylographically* printed *Doctrinales* and *Donatuses*. Zell could hardly have referred to *Donatuses* printed xylographically, as it would have been worse than childish for a man of Zell's ex-

perience and knowledge of printing with metal types and, no doubt, of block-printing, to represent an inhabitant of Mentz as being inspired by a xylographic *Donatus* printed in Holland, rather than by German xylographic products, which he must have had at his elbow every day of his life. Or why should Zell have referred to *Donatuses* in particular, when he could have made everything more clear by saying that the art of printing, as done in his time, originated simply from printing from wooden blocks?

And when once we see that there is truth in Zell's account, and inquire in what town of Holland the *Donatuses* might have been printed, we could hardly avoid, I think, directing our eyes to Haarlem. The assertion that the invention took place there was made by Junius, more than three centuries ago, at a time when he had only one book to refer to as a proof for his assertion. This assertion, therefore, rested almost entirely on hearsay and on tradition. We know, moreover, that Junius did not profess to be a bibliographer, and that his account is wholly independent of all other traditions, and is not based on any bibliographical considerations or investigations. It has no connexion whatever with Ulrich Zell's account, and it is based on two books not mentioned by Ulrich Zell in any way whatever, one of which Junius himself seems to have known by tradition only. Junius's account, therefore, if it had been based on a fiction, or on a falsehood, was peculiarly liable to be upset by the subsequent investigations of bibliographers, or still more by the subsequent discovery of books that did not harmonise with his narrative. But the tradition of that Haarlem invention, as narrated by Junius, has lived on for more than three centuries; and during that period book after book, fragment after fragment, has gradually and unexpectedly come to light, all printed in the very same types as the *Speculum* and *Doctrinale* mentioned by Junius, and none of them showing either by their type or their workmanship that they could not have been produced by that same primitive printing office from which Junius asserted that the art of printing had gone forth. And as those books and fragments discovered since Junius's time include no less than six editions of the *Donatus*, which are all printed in the same types as the *Speculum* and *Doctrinale* mentioned by Junius, and which may, with the utmost propriety, be said to be the *Donatuses* referred to by Zell, the accounts of Junius and Zell have been linked together in no casual way, but by an identity of types which proves that the *Donatuses* which, according to Zell, were the models of the Mentz printing were printed by the same printer who printed the *Speculum*, and who, according to Junius, was the Haarlem inventor of printing.

We know, moreover, that no other town in Holland has ever put forth any claim in opposition to that of Haarlem. It is only owing to the suggestions of a great bibliographer (whom circumstances have prevented from testing the strict and general application of his own method), and the fanciful, but wholly untutored, writings of such authors as M. Madden and Dr. Van der Linde that, within the last sixteen years, public opinion has gone astray, and Utrecht has been placed before our eyes as the town where the Costeriana might have been printed. But it never seems to have occurred to those who suggested Utrecht to examine Utrecht handwritings, to see whether the types of the incunabula which they wished to ascribe to that town were imitations of them. Of course, we have always been labouring more or less under the idea that printers set up business with types wholly or partly imitated from their masters' types. We

still see that Dr. Van der Linde continually argues, from a resemblance of types, that such and such a printer must have learned his craft in such and such a town from such and such a master—that Ulrich Zell must have been a pupil of Peter Schoeffer, as the former's types resemble those of the latter; and that the types of Ketelaar and De Leempt. of Utrecht, remind us of those of Cologne and Louvain. He even asserts that Gutenberg must have cut the types of the 1457 Psalter, because he finds on leaf 142 a capital N and a crossed Z which resemble the same characters in the thirty-six line Bible. As if this resemblance were not found in the MSS. also! J. H. HESSELS.

CORRESPONDENCE.

THE MYTH OF CUPID AND PSYCHE.

Scarvingham: July 4, 1887.

Mr. Nutt has, I think, misunderstood me. When I spoke of Mr. Lang as maintaining a barren hypothesis, the proposition to which I was referring was the assertion that customs suggest myths generally, and that the present state of certain savages may be or must be taken as an index of the early state of all races. If Mr. Lang does not maintain these propositions, then I have done him wrong, and I withdraw the charge with a hearty expression of regret for having made it. But I have always

understood him to mean this; and if this be his meaning, then he seems to me to start with assumptions—a barren method.

For myself, I do not mean to say, and I do not remember having said, that some customs may not have given rise to or shaped some myths. What I deny is the general proposition; and I deny it, first because there is, so far as I can see, no valid evidence adducible for it, and next, because it involves some gratuitously horrible conclusions. Of the Cupid and Psyche story Mr. Nutt says:

“Canon Taylor does not mean that they would have made up a tale about the dark half of the moon being a bridegroom whom the bride might not see, unless they were familiar with the idea of husbands and wives forbidden to look upon each other.”

I will not take upon myself to say what Canon Taylor may, or may not, mean; I only ask, why should they do so, and whence the need of it? I do not believe that there was any, and I am not to be dragged into believing it by dint of mere words. Oenone burns herself on the funeral pyre of Paris. Am I to believe that this tale could not have sprung up except among people whose women were in the habit of burning themselves on the pyres of their husbands or their lovers? I refuse absolutely to do so; and I further urge that the origin of the custom from the mythical incidents seen in the heavens is immeasurably more likely. What we do know for a certainty is that in India the rite was enforced on an unwilling and resisting people and that it was enforced by a deliberate forgery. On any other supposition the story of Oedipus and Jocasta is unintelligible. The ethics of Assyrians and Egyptians may have been none of the strictest; but why in their kingly families should mothers have been married to sons and brothers to sisters, and why should the custom, so far as it was one, have been confined to those families? I must demur, further, to Mr. Nutt's assertion that “when primitive man pictured the natural forces as sentient beings, he must surely have lent them not only his own ideas but his own manners and customs.” I may be here misunderstanding Mr. Nutt; but, if I construe his sentence rightly, I should say that it was not only with forces that primitive man had to deal in his words; and that in his talk about the things of sense he received ideas instead of lending them. The borrowing was all, or almost all, on his own side.

I have no axiom or dogma to lay down. I only say that, while some customs may have suggested some myths or given to them a local colouring, other customs may have been suggested by mythical incidents; and that in the instances which I have cited, this is the only explanation for which we have even the faintest likelihood. I must repeat that the story of the marriages of Krishna is fatal to the opposite theory; and it is, perhaps, on this account that no notice is taken of it.

GEORGE W. COX.

THE STOWE MISSAL.

London: June 27, 1887.

On returning to town, after a fortnight's work in the Ambrosiana and the Bibliothèque Royale, I find the ACADEMY of June 25 with a long and angry letter from Dr. MacCarthy in reply to my remarks on his edition of the Stowe Missal. I hasten to express my regret for having unwittingly caused him annoyance. How any one who loves his science more than himself can feel anything but pleasure and gratitude at having his errors corrected, or (to use the picturesque expression of an Irish schoolmaster) his ignorance scraped off, I cannot, and never could, understand.

The matter stands thus. In the ACADEMY of April 2 I pointed out sixty-eight mistakes in Dr. MacCarthy's essay, classifying them under four heads: (1) misquotations of Latin words; (2) misreadings of Irish words; (3) mistranslations of Irish words; and (4) other errors; and in the ACADEMY of April 23 Mr. Warren (whom Dr. MacCarthy politely calls one of my “gaping admirers”) exposed the fallacy of Dr. MacCarthy's arguments as to the date of the missal, (1) from the absence of a calendar, and (2) from the absence of a *proprium sanctorum*. Dr. MacCarthy now grudgingly admits my corrections of his “*irgnigde* (sic),” “*indalated* the other half,” “*thuisen* of incarnation,” “*ho shuidiu* from that”; *includide* (the Jew) = *tuididin* (deductorium); and by his silence he must be taken to admit the justice of the large majority of my other criticisms, as well as the sufficiency of Mr. Warren's answers. But he tries to maintain his position in the following ten cases, as to which (since most of them involve questions of some philological interest) I beg leave to lay my views before the readers of the ACADEMY:

1. *Lelachaich* “postulant.” The MS. and Dr. MacCarthy's photograph have *lelacit*. The *i* of it resembles the tall *i* of the preceding *ind*; the horizontal part of the *t* is long and slightly curved. Similarly shaped *t*'s are frequent in Old-Irish MSS., and the first *t* of *antirist* is so shaped in Harl. 1802, fol. 49, a MS. as late as the twelfth century. As to the correctness of my reading of *lelacit*, I confidently appeal to Mr. Maunde Thompson, Mr. Hennessy, Mr. Standish H. O'Grady, or any other experienced palaeographer. As to Dr. MacCarthy's attempt to connect his imaginary *lelachaich* with *do-ro-thlachset*, and his explanation of this verb as “*do-ro-od-lachset*, root *lach*,” one can only sigh to think how little the ignorance of the Irish Celts of the phonetics and the older forms of their language has been “scraped off” by Zeuss, Ebel, Windisch, and Thurneysen. The following forms clearly point to a root *tluc*: *to-thluchur*, Corm. s.v. arco; *d-a-thluchethar*, MI. 30 a. 10; *do-n-tlucham*, Wb. 21 d. 9; *do-tluchetar*, Broc. h. 47; *to-thlugud*, Trip. Life, 10; where it is compounded with the prep. *tu* (pretonic *do*); *do-s-fo-thlaig*, LL. p. 142 a. 46, where it is compounded with *tu* and *fu*, and the posttonic *u* has become *a*; and *ad-tlugud*, Wb. 28 c. 18, where it is compounded with *ad*.

2. Dr. MacCarthy persists in reading “*intrat*,” though this makes no sense, and though the MS. has *inturtur* (the turtledove), the compendium for *ur* being written over each of the *t*'s. According to Dr. MacCarthy's account, the MSS. has *intt*, with the compendium for *ra* over each of the *t*'s. But this would yield, not “*intrat*,” but *intratra*. *Omne minus continet in se minus*. The bisector of a saint may well be the amputator of a syllable.

3. Dr. MacCarthy persists in reading *immabred*, and in translating this by “that was inflicted,” though the MS. has *immaber* (with the common compendium for *er*); and “that was inflicted” would, in Old-Irish, be *immambered*, with the infixed relative (cf. *ar-am-bera*, *ar-am-berar*, G. C. 344, 345). In *imm-a-ber* (“afflicts them”) the *a* is the infixed pron. of the 3d pl., as in *d-a-beir*, *d-a-berid* (G. C. 332). The corresponding passage in the Lebar Brecc, p. 251 a, shows that this *a* (them) refers to the persecuted Christians.

4. Rather than give up his argument in favour of the existence of choral service in the ancient Irish church, he sticks to his mistranslation of *occo* as “by them,” and tells me that I shall be “glad to hear” that *occu* occurs in the Würzburg Codex Paulinus, 13 c. Γλαῦν Ἀθήναζε. Of this *occu* I was well aware, having printed the word in my edition of that codex (p. 79), and translated it, *ibid.* p. 281. But *occu* is not *occo*, and, if it

were, it could not possibly mean “by them,” using “by,” as Dr. MacCarthy here uses it, to express the agent. The prep. *oc* (= Gr. ἀπὸς?) corresponds in meaning and use with the Latin *apud*, *prope*. In the Würzburg codex, 13 c., *occu* means “apud eos.”

5. As to “*Psalm digrad*,” Dr. MacCarthy seems to cling to his rendering—“bigradual psalm,” suggesting that *di* is a scribal error for *da* (he doubtless means *dá*). This could only signify “a psalm of two steps.” The expression in the Book of Armagh, 21, b. 2—xii. *psalmi graduum*—which I have lately noticed, leads me to revert to my former version, “psalm of degrees” (i.e. one of the fifteen psalms, from *cxv* to *cxviii*, inclusive), and to regard *digrad* as the gen. pl. of an Irish loan from the Low Latin *degradus*, whence the French *degré*. As to *gradum*, misled by a quotation in Smith's *Dictionary of Christian Antiquities*, I supposed it to be an instance of the Low Latin change from the fourth to the second declension,* just as Dr. MacCarthy, misled by Bishop Reeves, supposed *sacrificale* to have been written by Adamnan for *sacrificale*. Such mistakes are pardonable so long as our glossaries of the Latin written in and from the sixth century are so deplorably inadequate.

6. Dr. MacCarthy seems also to cling to his explanation of *trindóit* “Trinity,” as an instance of *nd* for *nn*. Where is the *nn* in *trinitas*, from which he supposes *trindóit* to be borrowed? The Old-Welsh *trintaut* points to a Low-Latin *trintas*, gen. *trintātis*; and from this, not from *trinitas*, the Irish *trindóit* regularly comes.

7. *Atnopuir* (= *ad-dn-opuir*) Dr. MacCarthy persists in rendering by “he offers them.” Grammar and the context show that the true translation is “he offers it,” i.e. *panem*, whose gender accounts for the use of the masc. infixed pronoun (G. C. 360). I have now read every word of Irish in every MS. older than the eleventh century, and I can say with confidence that in Old-Irish *n* never means “them.” In *hore arin-chrinat* (quia deficiunt), to which Dr. MacCarthy refers, and which Zeuss quotes with a “*fortasse*,” the infixed *n* is a relic of a relative pronoun, which occurs also in the gloss *amal arind-chrin dá 7 asind-bail* (ut fumus evanescit et perit), MI. 57 b. 10.

8. As to *immarmus*, I was well aware that it sometimes glosses *scandalum*. I was also aware that *scandalum* means, not “scandal,” as Dr. MacCarthy supposes, but “stumbling-block,” “inducement to sin,” “cause of offence,” and that Irish glosses are often far from being literal renderings of the words over which they are written. But the question is, whether the phrase *immarmus Iudae* should be rendered, as Dr. MacCarthy renders it, by “scandal of Judas”? I maintain that it means “sin of Judas.” The point is not one of much importance; and perhaps Dr. MacCarthy uses the English word “scandal,” as he uses “beseems,” in a sense peculiar to himself.

9. Dr. MacCarthy's explanation of the Latin *stellae* as a proper name he now seems to give up. But he clings to his connexion of *stellae* with *stíall*, which he asserts O'Donovan rendered by “fragment.” O'Donovan was, indeed, a great scholar; but even he was not infallible. It is, however, tolerably certain that he never made such a blunder. He was the author of the translation of the Rule of the Culdees to which Dr. MacCarthy refers; and therein he correctly renders *notlaic stéill* (not *stéill*) by “Epiphany”—*stell*, m. (whence *Stellán*), being a loan from *stella*, with the same change of gender that we have in *penn*, m., from *penna*. But the “Christmas of the Fragment,” on

* Of this change we have traces in the Italian plurals *fructi* (fructus) and *mani* (manus).

which Dr. MacCarthy rashly relies, is in a *note*, which internal evidence shows to be from the pen of the editor, Dr. Reeves.

10. As to *Maile Ruen*, the gen. of *Mael Ruen* ("Calvus Ruani? Ruenis?"), Dr. MacCarthy says that *Maile* and *Ruen* are written one under the other. This I believe. But when he goes on to assert, "The charge of having bisected them [*i.e.*, the elements of the saint's name] thus disappears," I can only say that I never made such a charge. I charged, and do charge, Dr. MacCarthy with having, in order to maintain an untenable theory, split a single saint's name in two, attributed one part to one saint (*Mel*) and another part to another (*Ruadán*), and, in making this attribution, disregarded the laws of Irish phonetics and grammar, and made assertions which a little care would have shown him to be groundless. He now alleges that in Old-Irish nomenclature *Mael* and *Mel* are graphic variants. This is not the case. I challenge him to produce a single instance from any respectable MS. of *Mael* being written for *Mel*. He says that the first bishop of "Lothra" (he means Lothra) was called *Ruan*. This is not so: the bishop's name was *Ruadán*. If Dr. MacCarthy can produce from any Irish MS. older than the fifteenth century a single instance of *Ruen* as the genitive of *Ruadán* let him do so. If not, it would be well for him to hold his peace and try to learn Old-Irish. I will only add that his inaccurate quotation from my *Calendar of Oengus*, as to the ignorance and carelessness of one of the many scribes of Rawl. B. 512, refers only to the three folios which contain the epilogue and part of the prologue to that poem. The older part of the codex, which contains the Tripartite Life and which I cited in the ACADEMY, was written in the fourteenth century by a different scribe, who was, as will be seen from the Rolls edition of this work, a careful and learned person. When this scribe gives *Mél* (not *Maile*) as the gen. and *Mél* as the dat. and acc. sg. of the name of the first bishop of Ardagh, he may therefore be trusted. I may add that *Melus* (not *Mailus* or *Maelus*) is the Latinised form in the Book of Armagh. *Mél* was a Strathclyde Briton, a son of one of St. Patrick's sisters. His name is Kymric, and is therefore undeclined.

WHITLEY STOKES.

P.S.—I accidentally omitted to mention in my former letter that for Dr. MacCarthy's *inhabite* (p. 189, l. 2) the MS. has "inhabita"; that in his brief quotations (p. 189) from the Egerton copy of the Tripartite Life he has made eleven mistakes, one of which is the omission of eight words without notice; and that when he gives *aedocht* (p. 173) from the Book of Armagh, 17 a 2, as an example of *ae* for the umlaut *ai*, he proves that he does not know that here *a* is the possessive pronoun of the 3d sg. masc., written, as usual, as a proclitic before *edocht* "bequest" (also spelt *aiducht* and *audacht*)—a word of great interest, as tending to show that the Celts had, without aid from the Romans, evolved the notion of a Will.

Frenohay Rectory, Bristol: June 28, 1887.

There are many points in Dr. MacCarthy's letter calling for reply. Let me touch upon one of them.

In the "Commemoratio pro defunctis" within the canon in the Stowe Missal thirty-six bishops are commemorated by name. These names are all in the genitive case, either in the Latin or the Irish form of it. The twentieth name has been erased, except its two concluding letters, probably being an accidental duplicate. All these names are the names of Irish bishops, except the first four, which are the names of Gallican bishops, and the twenty-fourth, twenty-fifth, and twenty-

sixth, which are the names of the second, third, and fourth Archbishops of Canterbury, who are curiously sandwiched in between Irish surroundings. The names are written in columns. Four perpendicular columns occupy a MS. page. Each proper name occupies a separate line of a column, except the sixteenth, which is written thus—*maic nissae'* and the thirty sixth and last, which is written thus—*maile ruen*. Now, if this last name be that of *Maelruain*, founder of Tallaght, who died in 792, the whole of Dr. MacCarthy's theory about the date of the Stowe Missal, and his proposed identification of *Moel Caich*, the writer of the later part of the MS., vanish into air. It is, therefore, of the utmost importance to him to combat such a view. He accordingly treats "maile" and "ruen" as two separate proper names, reading the first as the gen. sing. of "mail" or "mel," the contemporary and supposed nephew of St. Patrick, and first Bishop of Ardagh, who died in 488, and "ruen" as a phonetic or abbreviated form of "ruadain," the gen. sing. of *Ruadan*, Bishop of Lothra, who died in 584, with whose church the Stowe Missal has been associated. But the association is conjectural, and incapable of anything in the shape of proof.

Mr. Whitley Stokes has asserted that the name of the first Bishop of Ardagh was indeclinable, giving some late Irish evidence for his assertion. Dr. MacCarthy now states that he has found this name in the genitive form "Maile" several times in the Book of Armagh. As the Book of Armagh exists only in MS., it is impossible, without a visit to Dublin, to verify Dr. MacCarthy's references to it. However, one is bound in courtesy to accept the veracity of his statement until it has been disproved, and one looks to Dr. Whitley Stokes to substantiate or abandon his position on this point.

"Ruen" for "Ruadain" seems improbable, with the Irish genitive "Carthain" immediately preceding it, and with "Sancta ruadani" invoked in the Missal Litany a few pages before.

But there are two general considerations to which I could call attention as weighing heavily against Dr. MacCarthy.

Firstly, the scribe who on the previous page had written *Melchisedech*, *Machabeorum*, *Bartholomaei*, thus:

melch	macha	bartha
sedech	beorum	lomae

would naturally select for graphic bisection those two names of some length among the names of the Irish bishops which, having a naturally separable prefix, most readily lent themselves to such treatment, viz., "maic-nissae'" and "maileruen."

Secondly, there is, roughly speaking, a chronological order observed in the list. St. Patrick with his immediate disciples and contemporaries is named first. [Why has Dr. MacCarthy no note of identification for the first "patrici" on p. 217?]. Then follow bishops of the "sixth" and seventh centuries, with the single possible exception of *Ciannanus* (if of *Duleek*). If *St. Maelruain* appeared anywhere on the list, as the latest in date he would naturally be placed, as he is placed, last in order; while, on the other hand, it is improbable that a contemporary of St. Patrick (*Mel*) should be named last but one, and that a bishop of the sixth century (*Ruadain*)—especially if he was, as Dr. MacCarthy supposes, the Patron Saint—should be placed last of all, and without any use of capitals or of ornamentation to specially mark his name.

Again, what does Dr. MacCarthy mean by scornfully denying that *St. Maelruain* was a

bishop? He is called a bishop in the *Annals of Ulster*, A.D. 791, and in the *Leabhar Breac* (*W. Stokes's Calendar of Oengus*, p. cxvii.).

Palaeographically speaking, there seems to me to be no objection to including a bishop who died in 792 in this list. But on this point the further opinion of Irish experts is much to be desired. Dr. MacCarthy's palaeographical nomenclature and arguments (pp. 143-148) are unintelligible to me, and reduce me to the attitude of "a gaping admirer." Without being an *oculis laudator*, I cannot deny the truth of the impeachment that I am *non mente cognitor*.

Let me repeat that all Dr. MacCarthy's arguments for the extreme antiquity of this missal based upon its small size, with no *Kalendar*, no *Proprium Sanctorum*, a single *Epistle* and *Gospel*, &c., are fallacious.

Is not the true explanation of these phenomena contained in the words with which M. Delisle opens his account of a very small eleventh-century sacramentary at Rouen?

"Il a cependant dû exister, à toutes les époques du moyen âge, de petits livres ou même des simples cahiers dans lesquels les prêtres pouvaient trouver les prières des messes les plus usuelles. On s'en servait dans les voyages et probablement aussi dans les églises trop pauvres pour se procurer des recueils plus complets"—(*Mémoire sur d'anciens Sacramentaires*, Paris, 1886, p. 292).

APPOINTMENTS FOR NEXT WEEK.

WEDNESDAY, July 13, 8 p.m. Athenaeum Society: "Mesmerism: Its Use and Abuse," with Demonstrations, by Mr. W. R. Price.
SATURDAY, July 16, 2 p.m. Geologists' Association: Excursion to Plumstead and Bostal Heath.

SCIENCE.

MATHEMATICAL BOOKS.

American Journal of Mathematics. Vol. IX. Nos. 2 and 3. (Baltimore.) Number 3 opens with the concluding portion of Mr. Greenhill's memoir on "Wave Motion in Hydrodynamics," and a further instalment of Prof. Sylvester's "Lectures on the Theory of Reciprocants." There is no need to dilate on their merits. The class of readers addressed know what to expect, and also that they must study these contributions by masters in their respective lines of research. Mr. A. S. Hathaway contributes a good paper, entitled "A Memoir in the Theory of Numbers," which begins with an interesting introduction recounting what has been done in this direction by previous workers. The remaining brief articles are "A Theorem respecting the Singularities of Curves of Multiple Curvature," by H. B. Fine—a generalised extension of a previous paper; "A Note on Pencils of Conics," by H. D. Thompson; and "Observations on the Generating Functions of the Theory of Invariants," by Captain P. A. Macmahon. Number 4 is of a highly technical character. For instance, "Symmetric Functions of the 14th," by W. P. Durfee, consists of some eighteen pages of tables, and nothing more. Prof. Cayley's memoir on "The Transformation of Elliptic Functions" occupies thirty-two pages, and Mr. G. P. Young's "Forms, Necessary and Sufficient, of the Roots of Pure Uniserial Abelian Equations" (fifty-four pages) fills the remaining space. As before noticed, the large-sized page is admirably suited for these high-class papers with their long formulae.

A Treatise on Algebra. By Profs. Oliver, Wait, and Jones, of Cornell University. (Ithaca, New York: Finch.) This is the first instance we can call to mind of more than two authors being concerned in the production of a text-

book in algebra. A dual combination is a rarity. If a triple arrangement would always result in as good a book as this we should certainly vote for it. The writers of the ordinary school text-books need not be under any apprehension of losing their hold upon boys; for this is not a book for such, though it deals with the elementary as well as the more recondite branches of the subject. It deals with them in a similar fashion to that recently put before us in Prof. Chrystal's work, which is the only one we know on the same lines.

"Many new things have been introduced, not indeed, because they were new, but necessarily, either as definitions in giving larger meanings to old words, or as axioms and theorems in stating and proving the elementary principles, or as problems and notes in showing new uses of principles already proved—e.g., many fundamental principles were found to be omitted by elementary writers because too difficult for a beginner, and by subsequent writers as already known. A typical case is that of logarithms: 'that the product of two powers of any same base is a power of that base, whose exponent is the sum of the exponents of the factors' is generally proved for commensurable powers, but assumed, without proof, for incommensurable powers; and the whole theory of logarithms, so important, and their use, so common, are thus left to rest on faith."

This extract will give some idea of the authors' scope; and throughout we may say there is no shirking—indeed, the proofs strike us as being thoroughly sound. Besides treatment of the ordinary elementary parts, there is full discussion of permutations and combinations, continued fractions, logarithms, first principles of the calculus, and of complex numbers and of finite differences, interpolation, and the computation of logarithms. A good and full collection of examples accompanies each chapter. A higher work is in preparation: this is to treat of theory of equations, symbolic methods, determinants, probabilities, and insurance. This text-book, admirably turned out (we have detected but one arithmetical error—other errors, if they occur, are, we should think, easily corrected) can be recommended to teachers and advanced students who are revising their algebra and want explanations of principles. For school use it is not suited, as the major part would be quite over the heads of the boys.

Practical and Theoretical Trigonometry for general use. By H. Evers. (Walter Scott.) Our title-page goes on further to say that the book is "intended as an Introduction to that Study, with numerous Examples taken from Examination Papers, with a very large number of Hints for Solution, especially to the more difficult Problems." It will be seen from this long statement that the author's intentions are admirable; the execution, we regret to say, falls far short of this high ideal. The work is further dedicated to Sir William Armstrong, and encompassed with a very attractive cover, i.e. for a mathematical book; indeed, the get-up raises feelings which are doomed to disappointment. An inspection of our copy, of which we believe we have read and tested every word, would soon convince the author that he has not quite fulfilled the intentions he aimed at. A main source of complaint is due to the erratic punctuation. The "stops" are at high jinks. They play at hide-and-seek, and turn up in all sorts of unexpected places. Our usual sober full stop (.) does not terminate a sentence, but appears anywhere. This fact supplies the key to much of the blame we have to charge the author with. In the preparation of the text and in the correction of the "proofs," he has done very frequently what old Homer did but occasionally, i.e., gone a-napping. Dr. Evers has, like ourselves we suppose, been applied to for solutions. At the

end of his preface, "as a guarantee for good faith and to cover expenses," he states the terms on which he will supply worked-out answers to his questions. We ask him to turn to p. 203 and say if his charge is a fair one for what is printed there as a solution of question 84. We do not care to dwell longer on this theme, the more so as the book is at bottom a good one; but its utility is utterly marred by these faults, which are the results of carelessness, not of the want of ability. We expect that a second edition, with corrections of false punctuation, re-adjustment of letters indicating angles, amendment of construction of sentences, pruning of a few expressions (to wit, "tops and bottoms" for numerator and denominator), and a few similar alterations, would be a valuable work. As the work stands, we cannot recommend it to anyone who is not of adult experience in trigonometrical matters.

My First Trigonometry. By M. H. Senior. (Sonnenschein.) The author's intentions are excellent, but we do not think that they are fulfilled. "Any boy who has done elementary algebra, as far as equations, and two books of Euclid, will be easily able to master the whole subject of trigonometry to the end of the solution of plane triangles." We do not agree with this statement; and in the text many statements are made which involve an acquaintance with proportion and six books of Euclid. In several places a slight alteration of the wording would remove many of our objections, especially in Chapter II. (Ratios in the First Quadrant), which the author looks upon as a speciality of the book. No reference is made to extended definitions of the ratios, but properties of first quadrants are quietly assumed for the other quadrants. In a second edition, which the work deserves, the author, with the insertion of a few statements here and there, and modifications of others, may considerably improve the book, and make it serve as an introduction to the subject. Of absolute errors we note the following:—p. 64 (5) is wrong; p. 83, l. 7, interchange 9 and 10; p. 88, > is not explained; pp. 98, 99, insert "log" before area; p. 106, 3 up, " $\frac{1}{2}$ " should multiply and not be an exponent. The arrangement of the matter could be improved, and we do not like *points* to be indicated by P^2 , P^3 , &c., in figures. A novelty in terminology is the proposed use of "Radiangle" for "Radian."

A Manual of Practical Solid Geometry. Compiled by W. G. Ross. (Cassell.) We have read this book, "adapted to the requirements of military students and draughtsmen," with some interest. The compiler, from his experience at Woolwich, has made a good selection of matter and arranged it in lucid order. The figures have been carefully drawn, and had they been printed on better paper would have been more effective than they are even at present. The work in the main follows the lines of the Geometrical Drawing Course, as studied at Woolwich, and especial attention has been paid to the "Modification of Orthographic Projection, known as the 'System of Vertical Indices.'" Another feature is the extended account given of Defflade. In an Appendix are hints and suggestions for draughtsmen, and problems.

Hints for the Solution of Problems in the Third Edition of Solid Geometry. By P. Frost. (Macmillan.) This is a fulfilment of the author's promise, made when the third edition of the text was published. We should like to see such companions to text-books freely issued. It will be noted that this is not a book of solutions, so that there is plenty of scope for the student, after he has got his hint of how Dr. Frost would attack the problem, to exercise his genius in getting out

the answer. These hints should certainly accompany the text.

An Arithmetical Class-Book. Part I. Containing over 3,000 Examples in the Elementary Rules. By Rev. T. Mitcheson. (Bemrose.) This book can be used with any text-book. There is but little explanation, as the book is intended for pupils working under the eye of the master. The exercises are interesting and varied, and confined to branches of the subject which are of practical importance.

Test Papers in Algebra for the Army, Navy, and Matriculation Examinations. By W. M. Lupton. (Longmans.) These test papers are likely to be very serviceable to other candidates besides those for whom they have been specially drawn up. The answers are given at the end.

THE MOABITE STONE.

OUR Correspondent writes: "The number of the *Revue des Etudes Juives*, which has just appeared contains a lengthy article upon Mr. Löwy's essay on the Moabite stone, by M. Joseph Halévy. This author does not belong to the "group of scholars who have long ago pledged their literary reputation to vindicating the authenticity of Mesha's monument," as Mr. Löwy states in the *ACADEMY* of June 25, for, so far as my knowledge goes, he has never before written on the Moabite inscription. Perhaps it would be as well to state that M. Duval and Prof. Euting are in the same position. M. Halévy, as is well known, is rather conservative in Biblical matters; and I am sure that he would rather prefer that Mesha's victories over Israel should be apocryphal. But he cannot help recognising from palaeographic evidence the genuineness of the monument. After having complimented Mr. Löwy on his linguistic exposition of the Moabite lines—praise which is well deserved—he says:

'Or, la paléographie a été tout à fait oubliée par M. Löwy; il ne se donne même pas la peine de nous dire à quel monument phénicien le faussaire aurait emprunté le caractère archaïque dans lequel il a gravé l'inscription, sans doute dans le but de rehausser la valeur de son factum. Ce n'est certainement ni l'inscription d'Eschmounazar, ni celles de Marseille, de Carthage et de Chypre, seules connues avant 1870, qui aurait pu lui révéler les formes antiques qu'aucun orientaliste ne connaissait alors.'

This has been said by nearly all critics in English papers; but Mr. Löwy never tried even to touch the palaeographic details. M. Halévy then refutes point by point Mr. Löwy's linguistic and mythological arguments against the authenticity of the inscription, and concludes with the following sentence:

'En un mot, l'authenticité de la célèbre inscription de Dibon n'est pas ébranlée par la critique de M. Löwy, mais le savant hébraïsant a, par ses observations incisives, servi la cause de l'interprétation.'

"With all respect for the late Dr. Zunz, his opinion has no weight whatever against palaeographic evidence. Prof. Kautzsch has given up his doubts on this account. So has M. Oppert, since he tried to explain doubtful words and passages, which he would certainly not have done for a forged inscription. As for Prof. Graetz, he certainly believed in the genuineness of the Mesha stèle as far back as 1875, when he wrote the second note to part I. of the second volume of his excellent *History of the Jews*. But should he be now convinced by Mr. Löwy's "results of the analysis of the Mesha inscription," it would have no effect against palaeographic evidence. Supposing Prof. Th. Mommsen to declare a Latin inscription genuine, no grammatical or idiomatic anomalies could reverse palaeographic evi-

dence, even for languages and dialects well known, much less for the Moabite dialect, of which we know nothing except what we find on this monument.

"I have no hope of convincing Mr. Löwy against his hobby, and, therefore, I shall not give myself any more trouble about it."

Tübingen: July 4, 1887.

Will you kindly permit me to insert the following declaration in your valued paper?

In the ACADEMY of June 25, p. 454, Dr. A. Löwy quotes an old publication of mine, dating from the year 1876, in which I held the view that the genuineness of the Mesa stone was not yet absolutely established beyond all doubts. How one at that time, in the middle of the ardent disputes about the well-known Moabite forgeries, could have been induced to express such an opinion, everyone who retains a remembrance of these disputes will easily understand. Dr. Löwy, however, in quoting me, has overlooked the fact that I soon after expressly retracted my doubts when I had seen a fragment of the stone at Dr. Niemeyer's in Jerusalem (see *Wissenschaftliche Beilage zur Augsburger Allgem. Zeitung*, 1876, No. 193). Besides that, I have repeatedly stated my present views about this question in the several editions of Gesenius's Hebrew Grammar published by me (22nd-24th editions). Prof. Socin therefore was quite right in pointing out our agreement on this question. To me, also, it appears perfectly unnecessary once more to enter, even with a single word, into a renewed discussion of the question of the authenticity of the stone.

E. KAUTZSCH.

CORRESPONDENCE.

THE INSCRIPTIONS FROM NAUKRATIS.

Königsberg: June 16, 1887.

I chanced but a few days ago to see the note of Mr. Ernest A. Gardner (in the ACADEMY of May 14), in which he has criticised the treatment of the Naukratis inscriptions by Kirchoff and by myself.* Now, in my opinion, the epigraphic evidence against the existence of the Greek town of Naukratis before Amasis is so overwhelmingly strong that I do not think the most passionate or prejudiced opposition can do any serious harm in the long run, and I am afraid that many of those who know something about such matters will hardly think it worth while to reopen the discussion. Nevertheless, I beg to address to you a few lines, partly because of my esteem for Mr. E. A. Gardner as a zealous and successful explorer, and partly because his note is by no means calculated to give an adequate idea of my own and Kirchoff's views.

And, first of all, it is a question of quite secondary importance whether any, and (if so) what, kind of establishment existed at Naukratis before Amasis; on this point we may patiently await more light from subsequent publications. But, after what Herodotus says, there cannot be any doubt that neither a Greek city nor Greek temples had been founded at the place before that king. The fact of the Milesians, Samians, and Aeginetans possessing each their own sanctuary at Naukratis, I have endeavoured to explain by assuming that these three transferred former establishments of theirs in Egypt to the new city; and tradition seems to tell in my favour (*cf. Rhein. Mus.* xlii. p. 219 foll.). Mr. Gardner is quite mistaken in supposing me to have overlooked the remarkable isolation of those three corporations. His own suggestion is, in fact, only another version of my own. But I do not desire to

trouble your readers any further with remarks already set forth in my paper, to which I would beg to refer them. I wish at this time merely to add several new details.

Mr. Gardner has recently drawn out a list of those forms of letters which have led him to his present palaeographical views (*Journal for Hell. Studies*, 1886, p. 221). If more closely examined, they turn out to be taken from seven, or at most eight, inscriptions—viz., *Naukratis* I., No. 1b, 3, 305; 4 (?), 68, 81, 135, 254. Those which contain the most curious forms—the ϵ turned round, the μ in shape of ν , the σ lying down—are taken from Nos. 1b, 3, 305. And what does Mr. Gardner himself tell us about one of these inscriptions (*l.c.* p. 224)? "The third form [of μ] given in the table closely resembles the Phoenician type; but as it, as well as the last form given under σ , occurs on a vase of somewhat later fabric, its importance must not be too highly estimated." The inscription referred to is 1b.* Consistently with this caution, I think it safer also not to lay too much stress upon either No. 3 or 305 (*cp.* the note). In No. 4, the form of μ does not seem to me quite certain; the other four inscriptions contain nothing peculiar but the upright form of ν . And it is out of these scanty and slight materials that Mr. Gardner proposes to construct a new history of the Ionian alphabet! I think I have only to state that these four inscriptions occur in an aggregate of 700 to make even Mr. Gardner himself perceive that his manner of dealing with them is wholly unjustifiable.

In spite of all that he tells us, Mr. Gardner does not really seem to have a due appreciation of epigraphic evidence. As long as the fact remains that in the Milesian alphabet the closed form of η gave way to the open form in the first half of the sixth century B.C. (*cf.* my paper, p. 215 foll.), so long we are bound in consistency to maintain that Amasis founded Naukratis, and that Herodotus is right in every detail of his narrative. The reason why the closed form of η became rapidly obsolete in those countries which exhibit any originality in their development of epigraphic forms (*viz.*, especially Asia Minor and Attica) is obvious. It is, as in the case of θ , a technical one. The numerous corners of the letter were just so many risks to the letter-cutter of splintering the surface of his stone or his terra-cotta. So that wherever people had once decided that the open simpler form of η would do equally well, they left the more complicated form to fall into rapid disuse. I can but hint here at the importance of technical considerations like this in determining the changes of letter-forms.

Mr. Gardner may be sure that it was not the "revolutionary character" of his theory that made me write my paper. On the contrary, it may, perhaps, interest him to hear that at first I was rather captivated by his views. But after doing so, upon repeated consideration of the whole question, I became convinced that his conclusion was erroneous and impossible, being based upon far too scanty arguments, and incapable of being reconciled with the general course of epigraphic development. Finding myself, therefore, on the right track again, I wrote my paper, intending it as an acknowledgment of my warm thanks to the zealous explorers of Naukratis, and as my contribution to their work. My endeavour was, to bring together the various items of evidence that helped to fix (so far as possible) the date of the town's

* The third form of μ and the last form of σ do not occur in the same inscription; but the former in No. 1b, the latter in No. 305. So if the author has not committed a blunder, both of them would be equally unreliable.

foundation—an important point which had been but slightly touched by the excavators; and I felt that by publishing their results in so reliable a form they had fulfilled their duty most admirably.

It matters little who is right in such questions; but it matters very much indeed that the truth should be made out and acknowledged as such. Therefore, I am anxious that Mr. Gardner should free himself from this theory of his as soon as possible; for it is a pity that so gifted a scholar should waste his time and power on ill-grounded speculations. And for this reason I will not add the usual assurance that I will not enter into any further discussion; on the contrary, I am quite willing to discuss the matter until Mr. Gardner is convinced; for it is important that both as to the elements of epigraphy and the weight of epigraphic evidence there should be no discrepancy of view among epigraphists.

For the technical evidence—viz., of the pottery—I may refer to my paper, p. 214 foll. Lastly, I must add, that my experience as an excavator has taught me to prefer epigraphic evidence to any observation of levels, at least in the case of all articles which are easily and naturally scattered about.

G. HIRSCHFELD.

SCIENCE NOTES.

WE understand that Mr. Francis Galton, as President of the Anthropological Institute, will deliver a course of three lectures on "Heredity," some time in the early part of next session. By permission of the Lords of Committee of Council on Education, the lectures will be given in the theatre of the South Kensington Museum.

MR. LUDWIG MOND has given £100 to the fund for the promotion of experimental research at the Royal Institution; and the Drapers' Company have given £105 to the research fund of the Chemical Society.

PROF. AYRTON'S *Practical Electricity* is now being translated into both German and Spanish.

PHILOLOGY NOTES.

PROF. TERRIEN DE LACOUERIE has just corrected the last proof-sheets of his work on "The Languages of China before the Chinese," which forms part of the President's address to the London Philological Society for 1886. A *résumé* in French had been presented to the International Congress of Orientalists at Vienna last year, and met with a very favourable reception. At the last meeting of the Philological Society, Prof. T. de Lacouerie condensed into an address the subject matter of the work, and the important results obtained therefrom. It will be published separately, in a volume of about 150 pages, by Mr. David Nutt.

THE forthcoming number of the *Babylonian and Oriental Record* (David Nutt) will contain the following articles: "The Various Names of Sumer and Akkad" (concluded), by M. Arthur Amiaud; "The Borsippa Inscription of Nebuchadnezzar," by Mr. S. Alder Smith; "Glimpses of Babylonian Life," II., "A Babylonian Wedding," by Mr. Theo. G. Pinches; "Pehlevi Notes," II., "A Parallel to the Pehlevi Jargon," by Dr. L. C. Casartelli; "Some Euphratean Astronomical Names in the Lexicon of Hesychios," by Mr. Robert Brown, jun.

THE *Philologische Wochenschrift* for July 2 contains a very favourable review of Mr. Bywater's *Prisciani Lydi Metaphrasis in Theophrastum*, one of the new volumes of the Berlin edition of Aristotelian literature.

* Recently Bechtel has pronounced his opinion to be similar to ours (*Die Inschriften des Ionischen Dialekts*, p. 153).

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromes, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REEKS, 115, Strand, near Waterloo-bridge.

Kugler's Handbook of Painting.—"The Italian Schools." Fifth Edition. Thoroughly revised, and in part rewritten, by Sir Austin Henry Layard. (John Murray.)

Kugler's Handbook of the History of Painting is, in the original German edition (Berlin, 1837), nearly forgotten, while in England several revised editions have preserved for it the position of a standard work. In Germany it is looked upon as antiquated, because the results of the latest researches are wanting; whereas later compilers of handbooks on art have taken these results largely into account. Yet all these new compilations do not equal Kugler's work, which, both for form and contents, may be called a classic—more especially with regard to the Italian schools of painting. Neither Lübke nor Woermann have had the courage to give up entirely obsolete theories and opinions, being guided, perhaps, rather by personal prejudices than by the result of their own studies. In the fifth English edition of Kugler, now before us, we find that the shortcomings of the original have been amended by a thorough revision; and—what to us appears to be of the greatest importance—that the work has been entirely remodelled on the basis of the latest researches.

Sir Henry Layard has introduced a new arrangement of the subjects. The first two chapters treat of Early Christian and Byzantine art with more conciseness than in the previous editions. The local schools of Italy are discussed in as many separate chapters: first, the Florentines, from Cimabue to Ghirlandajo and Signorelli; then the Siennese school, from Duccio down to Girolamo del Pacchia; the Umbrian school, from Oderisi to Perugino and his scholars. After some short remarks on "the so-called Neapolitan school," there follow comprehensive chapters on the Veronese school, from Aldichiero da Zevio to Paolo Farinato; the Paduan school, from Justus to Montagna and his pupils; and, finally, the Venetian school, from Semitecolo to Jacopo de' Barberj. So ends the first volume.

In order to effect these apparently rational divisions, Sir Henry Layard had to make an entirely new arrangement of the whole matter. In former editions, the principle of the aesthetic school had prevailed, which viewed art mainly from an abstract philosophical standpoint. The present edition has been remodelled on the theory of the new scientific school, initiated by Morelli-Lermolieff—a theory which takes its start from the fact that in Italy local schools of painting not only existed independently of each other, but that also they made progress until they reached the summit according to the law of natural growth or evolution. Sir Henry Layard, in treating of the several Italian schools of painting from this point of view, has the merit of being the first who has succeeded in carrying out this theory in all its details. The solution of the problem has not been an easy one, considering that until now very few writers have made it

their task to investigate the development of the several schools of painting, and that therefore the present editor had very few literary sources at his command to draw upon. It is possible that by such researches more light may be thrown in future on the separate schools; but we may assert already that the broad outlines, such as we find them set forth in the present handbook, will continue to be considered as fundamental.

The second volume begins with the history of the development of the schools of Bologna and Ferrara, and of the Lombard school. With the latter the history of the life and works of Leonardo da Vinci has been connected, on account of the fact that his art had a far greater influence in Lombardy than in his native country of Tuscany. Then follow separate chapters on the art of Michelangelo, Fra Bartolomeo, Andrea del Sarto, and Raphael; and after these a chapter on Sodoma and Peruzzi, the Siennese school attaining its culminating point with these masters. The later Venetian school, which alone among the Italian schools continued to keep, during its course until the end, on the high level attained at the beginning of the sixteenth century, has been treated, on that account, in greater detail. To Correggio is devoted the last chapter of the golden times of Italian painting. This is followed by chapters on the Mannerists, the Eclectic school and the Naturalisti, down to Tiepolo and Canaletto, the masters whose work was the last glory of Venetian art, and with it of Italian art in general.

From this survey of the arrangement of the whole work the reader may form an idea of the comprehensiveness of this handbook, which is, we believe, by far the most reliable, and at the same time the most handy, among all the works lately published on the same subject. It is profusely illustrated, and has at the end carefully compiled and well-arranged indices. These will be specially welcome to those who may like to use this book as a guide to the galleries on the continent, above all in Italy, and also to those who desire to become acquainted with the latest investigations on the Italian pictures in the National Gallery and elsewhere in England. We have no doubt that Sir Henry Layard's Handbook will prove to be well adapted for such purposes, much better perhaps than the guide edited by Prof. Bruckhardt and Dr. Bode, which, even in its latest edition, continues to propound antiquated opinions as indisputable facts.

In his preface Sir Henry Layard avows himself a follower of the principles of criticism which have been inaugurated by Morelli-Lermolieff. We may here mention that the lately published German handbooks by Woermann, Bode, and others show less inclination to give weight to this new method of study. The occasional violent opposition of the latter writer against Morelli is, we believe, best explained by the fact that Morelli, in expounding his system, has ventured to combine it with criticisms on the pictures in the Berlin Museum. Sir Henry Layard, who is a trustee of the National Gallery, has not hesitated to submit the pictures of that collection to the trial of the new method. The result is, in not a few cases, contradictory to the traditional naming of the pictures, but

it is certainly not detrimental to the reputation of the gallery.

The peculiar merits of this excellent handbook will secure it a wide circulation. No doubt it will also be instrumental in making the new method of study better known, and in winning for it more students of art history. J. PAUL RICHTER.

NOTES ON ART AND ARCHAEOLOGY.

By the election of Mr. Alfred Stevens, the eminent painter of Paris—whose writing, by the by, is almost as skilful as his brush-work—the Society of British Artists has followed up, we are glad to say, its recent steps of energetic advance. Rarely in the history of any artistic corporation have the changes wrought in a short time been so beneficial and distinct as those which have been accomplished under the newer régime in Suffolk Street. It is not very long ago, our readers will remember, when Suffolk Street hardly counted as one of the serious exhibitions. Then were delivered at the door, in shoals, on sending-in day, not works of art performed for the artist and the artistic man, but canvases painted for Highbury and Clapham. At last someone had the energy to initiate the habit of refusing most of these pictures. Habit becomes second nature, and it is not unnatural that the refusal of commonplace pictures should have been followed by the refusal of commonplace candidates. Then came the election of Mr. Waldo Story, the sculptor—a young man of much promise and some performance. Then the inrolling, among the ranks of honorary members, of Mr. Charles Keene, whom, as a draughtsman in black and white—an artist who worked finely within limited inches and never by the square yard—it had not occurred to a more popular society to honour, notwithstanding—or was it, indeed, because?—of the subtlety and originality of his humour. And now the election of Mr. Alfred Stevens—a producer of graceful genre pictures—comes as the latest step, for the present, in the path of advance; this artist's "frank willingness" to ally himself with the society being, moreover, as we take it, a gratifying testimony to the position which Suffolk Street is acquiring on the Continent in the eyes of artistic men.

THE annual exhibition of ecclesiastical art will take place as usual during the forthcoming Church congress at Wolverhampton, in the Art Schools. The loans will embrace goldsmiths' and silversmiths' work, ancient and modern, and ecclesiastical metal work in general, embroidery, needlework, tapestry, wood and ivory carving, ecclesiastical furniture, paintings, drawings, architectural designs for churches and schools, photographs, books, and MSS., and other objects of archaeological interest belonging to the churches of the diocese. The collection of disused communion plate is always a special feature of the exhibition.

Two Roman sarcophagi have recently been discovered at Laibach, the Roman Emona. Their date is said to be the second century B.C. If this be so, the find is of considerable interest.

THE STAGE

"MONTE CRISTO" AT ISLINGTON.

ON Thursday night in last week we undertook a pilgrimage. The fates had been altogether against us in the matter of seeing "Monte Cristo, Junior" at the Gaiety. It had gone into the provinces already—we overtook it at Islington. The neighbourhood of "the Angel"

—all that quarter of Upper Street and Pentonville Hill and Barnsbury—is very much more provincial than are Liverpool and Cardiff; and it was an excellent test of how “Monte Cristo, Junior” would be received in the provinces to play it at the Grand Theatre. The Grand Theatre is not unaccustomed to receive professional visits from people in the centre of things. A week before the advent of Mr. Leslie, Miss Farren, and all the pretty ladies who dance and sing through three long acts, it had received the visit of Mrs. Brown Potter. A year before, Islington had turned out on to the pavement one hot afternoon to see Miss Alma Murray and the Shelleyites, and Mr. Lowell and Mr. Robert Browning who were going to the play. Yet the Grand is, on the whole, a too much neglected play-house. It is not a whit more remote than is the Court; and its prices are about a third of those demanded in suburban Chelsea. And it has quite the best companies, and its “bill” is changed once a week or once a fortnight. We paid three shillings for a very comfortable stall, and thought with deep regret of what prices used to be before Mr. Bancroft and Mr. Hollingshead became the costly benefactors of the London playgoer. And Islington and Barnsbury were as enthusiastic as it is possible to be. Miss Farren, with her cheerful nasal twang, was entirely appreciated; and there was no end of the *encores* for Mr. Leslie, for Miss Marion Hood, and for Miss Sylvia Grey. When the dancing came on—and it came on very early, and went off very late—we wished only one thing, and that was to enjoy the companionship of that very learned gentleman who writes in the *Pull Mall* about ballets every time a fresh effort of the genius of Jacobi and of Dewinne—we are not quite sure whether it is Dewinne—is made at the Alhambra. He would have initiated us into so many mysteries of the measure and the step. But his presence was wanting. Let us then, in our own grossly ignorant way, describe what happened in this matter. Of the ordinary ballet there was next to nothing at all. But Miss Sylvia Grey—who is so kind as to carry to completion what Miss Kate Vaughan deigned, of old time, only to gracefully begin—danced with a peculiar union of energy and grace; in flowing robes, countless, yet perfectly manageable; with the *frou-frou* of innumerable pretty “chiffons.” An artist like Mr. Whistler was wanted to record that grace—its vivacity, its intense modernness. Yes, certainly Miss Sylvia Grey is a dancer whom the gravest may behold with pleasure. Miss Marion Hood had her pleasant voice; Miss Farren—in whom the sedate discover a real talent in these matters—has a telling one, and the art to use it. She cannot exactly get younger every ten years, but certainly every decade she gathers about her a more unconquerable array of animal spirits. Her presence is a tonic to jaded youth. Mr. Leslie is an entirely remarkable and versatile artist. He imitates Mr. Toole about as well as Mr. Toole imitates anybody else. He knows all the resources of make-up and of stage business. He is such a linguist that he chatters, and always with precisely the right intonation, German, French, English, and broken English. An excellent comedian, he is capable of sentiment—though, to know that, one has to remember his *Rip*, for there is not a trace of it in the immense burlesque which Mr. “Richard Henry” has founded upon Dumas’s yet more immense novel. We have got to the weak point of the business now. The whole affair is just an hour too long. Three hours and a half of jest and dance and song and spectacle ought to be too much for even the most robust and best preserved provincial who lives between Highbury and the Angel end of the City Road.

STAGE NOTES.

NEXT Tuesday is appointed for the performance of Mr. Haddon Chambers’s and Mr. Stanley Little’s adaptation of a novel by Mr. Rider Haggard.

It is likely, we are glad to hear, that the part of the heroine in the melodrama which is forthcoming at the Princess’s will be sustained by Miss Mary Rorke.

WE were present on Tuesday night at what was in reality the first performance—it was given entirely for the Benchers and their friends—of “The Masque of Flowers,” in Gray’s Inn Hall. We believe that we are right in saying that nothing of the sort has happened there since the days of Elizabeth or James. Lord Bacon, writing his dedications, if not actually his essays, “from my chambers in Gray’s Inn,” had much to say on fêtes and ceremonies and pageants, and his soul would have been rejoiced by the perfect order and good taste of this week’s Masque. Mr. Arthur à Beckett was Master of the Revels, and he discharged his functions excellently. He and Mr. Dundas Gardiner, Lady Cadogan, Mrs. Charles Thynne, Miss Evelyn Spring Rice, Miss Manisty, and many other ladies and gentlemen of gracious bearing and excellent gifts, took active parts in the festival; and Lord Bacon, who rated the beauty of “decent and gracious motion” as above the other beauties which he chose to enumerate, would have smiled approval—or expressed it in stately sentences—as to the efforts of Mr. D’Auban, the ballet-master. Many measures we had; many a dance and catch—

“Most dulcet giga, dreamiest saraband.”

And the Morris dance—of course for men only—though making no pretence to grace, was perhaps the quaintest thing of all. The stage was necessarily very limited, and it is wonderful how successful were the evolutions of the dancers upon it. The dresses were brilliant and delightful. There was much interesting, because singular, music, from a well-trained amateur orchestra; and their twang of the harpsichord—which used to send into dreamful ecstasies the heroines of the pictures by De Hooch, and Metsu, and Van der Meer of Delft—was heard effectively. The whole entertainment in all its details—from the overture which greeted us, even to the champagne cup which saw us depart—was a complete success, and it will be a long time indeed before there is another quite like it.

WE had been on Tuesday afternoon at Mr. Poel’s *matinée* at the Vaudeville. The afternoon was devoted to three short pieces and a performance by the Neapolitan Quartett. The middle piece was a little duologue of Sir Charles Young’s, smartly enough written, but not essentially fresh either in subject or treatment. More acceptable, we should think, to the audience was “Mrs. Weakly’s Difficulty,” in which Miss Haydon—and, indeed, all the players concerned—were distinctly funny. This is supposed to be from a German piece, with the action compressed, greatly to its improvement. We were ourselves more really interested in the slender but tasteful serious drama, or serious dramatic episode, with which the entertainments began. This, too, was a piece from the German; and it dealt with the love of Beethoven and Adelaida, formerly betrothed to him. The scene passed soon after his incurable deafness had declared itself. This was about the time of the C Minor Symphony. Adelaida, now a countess, more or less separated from her husband, met Beethoven, in his difficulty and trouble, only to succour and to part from him. We shall not be more explicit than this. It must suffice to say that, notwithstanding a little abruptness at the very end, the piece afforded occasion for

the display of genuine and restrained pathetic acting. Mr. Poel had adapted skilfully, and played his part well—certainly, with feeling, understanding, and good taste. If Miss Mary Rorke had not at one or two moments spoken her lines a little too low to be heard all through the theatre, it might have been said with absolute accuracy that her performance was faultless. As it was, with its momentary drawbacks, it was one of singular beauty and refinement, plaintive and poetic—within its unavoidable limits—to the last degree. No one could have played the part more effectively. Let us not forget to say, by way of postscript, that in supplying the dialogue Mr. Poel has not drawn wholly upon his imagination. Many of Beethoven’s recorded sayings—grave and significant ones, indeed—have been skilfully worked into the dialogue. Some of them are to be found in Sir George Grove’s famous article on Beethoven in his *Musical Dictionary*.

MUSIC.

RECENT CONCERTS.

JOSEF HOFMANN gave his fourth pianoforte recital at Prince’s Hall, on Monday afternoon. We have nothing new to say about the boy’s playing: the more we hear him the more do his wonderful gifts astonish us. To play, as he did at the Philharmonic Society, Beethoven’s First Concerto was an extraordinary feat; to play, as he did on this occasion, the Third Concerto in C minor, by the same composer, was still more extraordinary; for the music is much more difficult. But, while fully acknowledging the child’s powers of execution, of interpretation, and of memory, we still hold to our opinion that he ought not to be giving pianoforte recitals, and playing long and fatiguing programmes. The performance of Beethoven’s Concerto in C minor showed, perhaps, better than anything Hofmann has yet attempted, how wise it would be, not to force him—not to give him work beyond his powers. The concerto is at present too much for him; for, owing to the smallness of his hands, which cannot yet strike the octave, he was obliged to have recourse to many an artifice to get through passages in which octaves actually occur, or of which the octave stretch forms the basis. He could not, therefore, do full justice either to himself or to the composer. A long and fatiguing *cadenza* in the first movement was given with immense dash and sureness of finger. Pianists are in the habit of playing after a concerto one or two short solos, and that, too, in the second part of a programme; but little Hofmann, after the long Beethoven concerto, which he performed without book, proceeded at once to play pieces by Rameau, Rubinstein, &c. Too much for a man—far too much for a boy. We forgot to mention that the orchestral parts of the concerto were rendered on a second piano by the boy’s father; an orchestra of course is absolutely necessary to give colour and contrast to such a work. The hall was crowded, and the applause most liberal.

Mdme. Hermann gave a pianoforte recital at Prince’s Hall on Friday, July 1. A long programme of pieces by masters of various schools served to show diligent study and catholic taste. Mdme. Hermann has a considerable power of execution and strong fingers, but she seems more occupied with the letter than with the spirit of the music she interprets. This of course was less felt in some pieces by Paradies, Boëly, and Handel, than in Beethoven’s romantic Sonata in C sharp minor, and in Schumann’s fanciful tone-pictures. The Beethoven sonata suffered indeed in other respects, for the notes were not always correct, the middle movement was much too fast, and the finale was blurred. The latter part of the

programme contained pieces by modern composers, and in these we think Mdme. Hermann would probably be heard to more advantage.

Herr Richter brought his series of concerts to a successful close on Monday evening. The weather was extremely hot, but a splendid programme drew a large audience. After the "Tannhäuser" overture, played as usual with immense spirit, came Bach's Magnificat in D, one of the composer's finest works belonging to the Leipzig period. While full of contrapuntal learning, there is freshness about the music; and it contains passages both of pathos and grandeur which show that Bach was not, as many imagine, a sort of fugue-machine, turning out specimens of the best kind, and in any quantity. Bach, in his way, was as much of a poet as Beethoven. The performance was a good one. The solo vocalists were Miss Marriott, Miss Little, Mr. B. Lane, and Mr. Watkin Mills. The concert concluded with Beethoven's Choral Symphony. Everybody knows how admirable a performance of this great work is generally given by Herr Richter; but we never remember a finer rendering of the three instrumental movements than that of Monday evening. The conductor's engagements in Vienna will prevent him coming over as usual for a short autumn series, but the nine concerts will be given next summer. The season just concluded has been noteworthy in two respects: first, in the improvement of the band; secondly, in the prominence given to English music in the programmes. J. S. SHEDLOCK.

MUSIC NOTES.

THE performances at Drury Lane during the last week or ten days have consisted entirely of repetitions of operas already noticed. With regard to "Faust," it may be noticed that the appearance of Marguerite in the Walpurgis scene has been effected, though scarcely in so visionary manner as might be desired. On the first night this episode, owing possibly to some hitch in the machinery, was omitted. One cannot pass away from this opera without again mentioning the general excellence of the performance, the very fine Faust of M. J. de Reske, and the equally satisfactory, though quite in a different way, Mephistofeles of his brother M. E. de Reske. Mdme. Sigrid Arnoldson appeared as Zerlina in "Don Giovanni" on Friday week for the first time. That she would look well in the part, and also play it prettily, were, of course, foregone conclusions. So far as singing was concerned, the young lady had not the same opportunity as in Rossini's light opera of displaying her skill as a vocalist. She sang well, but was heavily handicapped by the severe simplicity of the music. However, the public were perfectly satisfied with everything she did, and applauded and encored with the utmost diligence. Last Saturday "Carmen" was substituted at the last moment for "Lohengrin." With Mdme. Minnie Hauk in the title-*role* the opera is sure to succeed; but there were one or two things in the performance—as for example, the "Habane-*ra*" and the "Toreador" songs—not quite up to the usual standard of excellence. Mdme. Marie Engle, in the part of Michaela, sang with much taste, and her acting was quiet and sympathetic.

A CONCERT was given at the Steinway Hall on Thursday afternoon, by the pupils of the Hyde Park Academy of Music. The programme was, as usual, of a miscellaneous character, the first part concluding with Reinecke's graceful cantata, "Rose Bud." Miss Mary Willis and Miss F. New, pupil of the late Mdme. Dolby contributed songs. Mr. H. F. Frost, conductor and trainer of the choir, showed his customary vigour and ability.

THREE per CENT. INTEREST allowed on DEPOSITS, repayable on demand.

TWO per CENT. INTEREST on CURRENT ACCOUNTS calculated on the minimum monthly balances, when not drawn below £100.

The Bank undertakes for its Customers, free of Charge, the Custody of Deeds, Writings, and other Securities and Valuable; the collection of Bills of Exchange, Dividends, and Coupons; and the purchase and sale of Stocks, Shares and Annuities. Letters of Credit and Circular Notes issued.

THE BIRKBECK ALMANACK, with full particulars, post-free, on application.

FRANCIS RAVENSCROFT, Manager.

SATURDAY, JULY 16, 1887.

No. 793, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

History of the Papacy during the Reformation.
By Mandell Creighton. Vols. III. and IV.
(Longmans.)

THE two previous volumes of Prof. Creighton's *History of the Papacy* covered the period between the beginning of the Western schism—the point which the author chose for departure on his long inquiry into Reformation history—and the publication of the Bull "Execrabilis" by Pope Pius II. in 1460, twenty-three years before Luther was born.

Prof. Creighton's brilliant and vigorous narrative showed us the rise of the conciliar principle, and contemporaneously with the conciliar principle the growth of the national idea, the support given to the conciliar principle by France, the establishment of the pragmatic sanction, and, in general, the compulsive and binding power which this principle exercised upon the papacy, forming its policy and giving unity and cohesion to the action of the popes. The failure of the Councils of Constance and Basel to reform the Church, the withdrawal of Sigismund from Basel after the settlement of Bohemia, and the consequent collapse of that council, led to the restoration of the papal prestige under Eugenius. A seal was set to this triumph when Pius II. published his bull "Execrabilis," declaring appeal to a future council to bear, *ipso facto*, excommunication. Although the publication of "Execrabilis" was a death-blow to the value of councils as weapons against the papacy, the conciliar idea did not immediately expire. We find Heimbürg still arguing that, as the body of the Apostles was above St. Peter, so a council is above a pope; and that if appeal can lie to a future pope, *sedes vacante*, it can also lie to a council not yet summoned. George Podiebrad, of Bohemia, adopted and urged these arguments in his struggle with Paul II.; Florentine canonists framed an appeal to a future council against Sixtus IV., after the Pazzi conspiracy and the papal interdict which followed it; Andrew, Archbishop of Krain, held a general council all by himself in Basel—an event which is chiefly remarkable as showing that the pope could be seriously alarmed by such a farce; and, finally, we have the ineffectual council of Pisa-Milan-Lyons summoned against the pope, and answered sufficiently by the Lateran Council summoned by the pope. But the fact remains that the power of councils against the pope was virtually destroyed by national separation, jealousy, and selfishness, which resulted in the triumph of papal prestige, whose monument is the bull "Execrabilis."

The two volumes which are now before us

cover the years 1464 to 1518, and take us through the papacies of Paul II., Innocent VIII., Sixtus IV., Alexander VI., Pius III., Julius II., and Leo X. They bring us down to the close of the Lateran Council and the abolition of the pragmatic sanction in France. The pragmatic sanction was a result of the conciliar movement, and its abolition looked like the final triumph of the papacy over the hostile conciliar principle; but, as a matter of fact, it was the King of France, and not the pope, who reaped the solid advantages of that act. The period of fifty-four years dealt with in these volumes brings the reader to the threshold of the Reformation. The papacy has not yet come into collision with Luther—is in fact ignorant of the storm that is brewing beyond the Alps; and so these volumes belong to what may properly be called the introduction to Prof. Creighton's great undertaking.

The main thread upon which the history of these seven pontiffs is strung is described by Prof. Creighton himself. The triumph of the papacy over the conciliar principle, and the restoration of papal prestige, left the popes with no binding and unifying policy—no policy which was the policy of the Church they ruled as distinguished from the policy of the individual men who ruled it. The questions now were these—What attitude should the papacy assume, first towards the politics of the age; and, secondly, towards the new learning, the revival of the arts, the intellectual and spiritual movement of the age? The answer to these questions is the subject of the volumes before us. The period is a difficult one. There is confusion present everywhere. Confusion wrought in Italian politics by the selfishness of Italian princes, and by the substitution of cleverness for principle. Confusion wrought in Europe by the birth and growth of the national idea, and by the influx of the ancient, highly organised, and sceptical spirit of Italy upon Northern Europe, when invasion had broken the flask and liberated the perfume. Confusion wrought in the minds of men by the attack on the foundations of dogma and of ethics which resulted from the discovery and spread of pagan philosophy. In the political region the obvious tendency of the papacy during this period was towards secularisation. The popes sought to become Italian princes as well as heads of the Church, and used their spiritual position to forward their worldly aims. The whole of this process is admirably set forth by Canon Creighton. Indeed, nothing seems to us better in these two volumes than the author's calm and clear grasp of external political movement. The kernel of the political situation is given to the reader briefly, lucidly, and with a pungency of diction which impresses it upon the mind. This secularising tendency made itself felt first in Sixtus IV. His predecessor, Paul II., was a strong though not a constructive pope. But Sixtus seems to have felt that the perpetual incapacity of the papacy to organise and carry out a crusade was the result of its lack of a temporal arm. He accordingly determined to create for the papacy a sovereign state. To simony in his election he added nepotism as a political principle. He did not hesitate to corrupt the college and to create a principality for his

nephews. But Sixtus was merely tentative in his policy. He did not carry out his principle to its due conclusion. The states he created were created for his own family—for his nephews, not for the Church. Alexander followed the same lines in even bolder guise. His schemes for Cesare Borgia were far more ambitious than anything Sixtus proposed. But the greatness of Cesare awakened alarm. It showed the dangerous tendency of the Sixtine or family policy in the head of the Church; for Cesare inspired the belief that he contemplated making the pope dependent on the holder of the principality he was creating, not the principality dependent on the pope as head of the Church. The alarm which this policy aroused among the cardinals led to the election of the gentle and short-lived Pius III. When Julius II. ascended the throne the Sixtine or family idea of nepotism was abandoned; and the secularising tendency was directed to the creation of states for the Church, not states for the nephews or family of a pope.

The result of Sixtus's policy was threefold. It induced, inside the Church, indifference to spiritual things. Churchmen became too busy with the affairs of this world to be able to give much thought to those of the next. This indifference inside the Church induced and justified cynicism outside the Church—laid the Church open to attack, to criticism of its spiritual claims, and frequently to scorn for its temporal attitude. Thirdly, Sixtus's personal and family policy, pursued so eagerly by Alexander, tended to rob papal politics of continuity. The popes were mortal; and it was inevitable that a nepotising pope's achievements should be undone by his nepotising successor. This want of sequence makes itself felt in the disjointed history of the time. Julius corrected the defect of excessive individualism which marked the policy of Sixtus and Alexander. Julius created the states of the Church; and it is probable that, had the Reformation not come to interrupt them, subsequent popes would have devoted their lives and their energies to the extension of those states. Prof. Creighton argues that the creation of the states of the Church was not an unmixed evil, "was by no means an unworthy or unnecessary work"; that a papacy corrupt in itself and without the prestige of temporal power and dominion might have been swept away in the storm of the Reformation, or reduced to the "primitive condition of an Italian bishoprick"; that the states of the Church were a rock to which the Church might cling until the tempest was overpast, by which it might steady itself until it was ready to undertake the counter reformation. The fact does not admit of dispute, but the necessity of it rests on fatalism. "The Reformation would have taken place in some way or another, even if the popes had stood aloof from Italian politics." Very likely; but the way in which the Reformation took place could not fail to be of paramount importance to the Church; and we think that the way in which it actually did take place was largely determined by the secularising policy of the popes. It seems to us probable that but for the states of the Church, but for the mundane attitude of the papacy, the Church

would never have been exposed to the losses of a schismatic reformation. If the popes had addressed themselves to the purification of the Church—and there was not wanting a party in the college ready to support them in such a policy—instead of devoting their attention to the acquisition of the Marches, Forli, Imola, Mirandola, Ferrara, Piacenza, the Reformation might have taken an Italian and not a foreign complexion, and that would have made an incalculable difference to its general results. For when the popes adopted a secular policy and became Italian princes, their universal and world-wide position as heads of the Church did much to call the attention of foreign princes to the politics of the peninsula. Foreign invasion took place, and our author has admirably summed up the general results of such invasion: (1) lowering the sanctity of the papacy; (2) proving Italy feeble, corrupt, and therefore an easy prey; (3) spreading the doctrines of balance of power and statecraft beyond the borders of Italy; (4) diffusing the Renaissance spirit of scepticism, free thought and enjoyment of life among the nations of Northern Europe—each and all of these results preparing the way for the Reformation, and determining the complexion it should assume. Prof. Creighton might answer no doubt that events did not happen so, and we must not go beyond the events. The fatalist always has the enormous advantage of the facts on his side; but we are not convinced that speculation must be entirely forbidden to the historian. The creation of the states of the Church may have been no unworthy or unnecessary work judged from the standpoint of the moment; but it seems to us to have been a mistaken work. We have followed the general thread of history which runs through these two volumes; and the story is told by Prof. Creighton with such vigour, such brilliancy, such fullness of detail, and such mastery of material, that we read it with a deep, and sometimes with a breathless, interest.

The other question for the papacy, newly restored by "Execrabilis," was its attitude towards the intellectual and artistic movement of the time. Both branches of the subject are dealt with by our author. We prefer his treatment of the philosophers to his treatment of the artists; but we must remember that in a work of this nature it was not necessary to do more than indicate the artists in their proper places. The reader can always and easily supplement his knowledge on that point from the copious histories of Renaissance art. Prof. Creighton justly points out that the root difficulty of the Church face to face with the Renaissance lay in the fact that the Renaissance had no dogmas, was not a creed, was an attitude of mind, and nothing more. This point is, of course, most apparent in the intellectual region. And on this subject we get an admirable account of Paul II. and his quarrel with the literary fraternity, which has helped to rob his character of that high appreciation which was its due. We are also given the story of Pomponius Laetus and the Roman Academy; an excellent summary of the Platonists earlier and later, Gemistos Plethon and Ficino; and, finally, an analysis of Pomponazzo's position, in the course of which the

attitude of the Church towards philosophic scepticism is thus condensed:

"Provided that he [Pomponazzo] recognised the right of the Church to decide upon the true contents of Christian doctrine, he was at liberty to speculate freely upon the philosophic questions which those doctrines contained."

The criticism on this attitude given in the two following sections is admirable, as showing how the Church's position cut at the root of enthusiasm on either side; and, separating faith from its demonstration and justification in acts, made the "pyrrhoniste accompli chretien soumis" a possible attitude for the Christian mind.

It is not possible for us to criticise Prof. Creighton's work in detail that would require an erudition as profound and an acquaintance with authorities as extensive as that of the writer himself. Canon Creighton's choice and use of authorities is admirable and critical to a high degree. He is far above any emotional bias, equally far removed from party prepossessions. One of the most valuable lessons to be learned from the study of his work is the judicial method he adopts towards original authorities. He cites them to the bar and requires evidence in their favour. He will not accept *in toto* Platina against Paul II., or Burckhard or Infessura against Paul's successors. The consequence is that such popes as Sixtus IV. and Alexander VI. appear in a more favourable light than they have ever done before in history. All that can possibly be said for them—and, perhaps, a little more—is urged in their favour. There is, however, a danger and a drawback in this criticism of contemporary, and frequently sole, authorities. If criticism destroys the weight of these authorities upon one point, that tends to weaken their weight upon all points. It leaves the historian open to eclecticism. He may pick and choose the information that suits him. This is a special temptation when the characters of actors in history, and not the facts of history themselves, are under discussion. We do not mean to say that Prof. Creighton has yielded to this temptation; on the contrary, his judgments seem to us to carry conviction, to be unusually fair, balanced, and impartial in most cases. But one of the most remarkable features of his work is the restoration of character to so many of these popes, though we cannot help feeling, at times, a slight doubt as to the validity of such large rejections and such extensive rehabilitation. On the treatment of diplomatic documents the author lays down in the preface an admirable canon of criticism: "Really," he says, "an ambassador requires as much criticism as a chronicler. The political intelligence of the man himself, the source of his information in each case, the object which he and his government had in view, the interest which others had in deceiving him—these and other considerations have to be carefully weighed."

That is quite true. There is danger of a sort of idolatry of diplomatic documents springing up. Current popular opinion as expressed in a chronicle or a news-letter frequently takes a juster, because a wider, view of a situation than the view which presented itself to the diplomatist, who was subject to prepossessions and liable to be purposely misinformed.

It has been urged against Prof. Creighton's general method, against his attitude towards his subject, that he "cleaves to the outer husk of fact," and, "abiding by things apparent, fears to insist on dim germs, or undercurrents and elements in solution, which are only visible to the discerning eye." We hardly think that criticism is merited. Prof. Creighton is not writing a philosophical history of the spiritual movement which led up to the Reformation. But we feel that in the calm impartial narrative of events which he lays before the reader, the undercurrent, of which those events are the evidence, is sufficiently made clear. It is quite true that the author seldom stops to reflect, to moralise, to draw philosophic deductions, but he makes his reader understand the moral and draw the conclusion all the same. Whether he has taken into account all the antecedents of the Reformation is another question. Perhaps it is too early to decide; but, under any circumstances, the events which he has chosen to narrate tell their own tale and prove their sequent connexion with each other as the story moves along. In fact, Canon Creighton has fulfilled the desideratum expressed by the brilliant author of *Obiter Dicta*:

"The true historian, seeking to compose a true picture of the thing acted, must collect facts, select facts, and combine facts . . . ; and as for a moral, if he tell his story well, it will need none."

This is just what Prof. Creighton has done. He has told his story well, and the moral is there for those who read. Doubtless there is another kind of history; but this is the kind which Prof. Creighton has adopted, and we cannot quarrel with him for not being what he distinctly never aimed at being.

The literary charm of this work is very great. There is a freshness and frankness in the style, a directness and vigour of diction, together with touches of dry humour every now and then, which delight the reader and carry him over the interminable ins and outs of papal and Italian intrigue. The book is as fascinating as a romance; and yet there is never for a moment a suspicion that strict and rigid accuracy has been sacrificed to picturesque effect. Prof. Creighton claims sobriety for his work. He has proved that sobriety is to the full as delightful as intoxication. The brilliant character-sketches which are scattered through these pages form not the smallest attraction in the work. We have not forgotten the engaging personality of Cesarini, or the fascinating portrait of Aeneas Silvius, given to us in the previous volumes; and the power of portraiture is not less remarkable in the volumes now before us. The true and vigorous nature of Paul II.; the frank impetuosity, the eager zest, the capacious enjoyment of Alexander VI.; the headlong fierceness of Julius II.; the smooth suppleness of Leo X.—the smiling pope—all stand before us in strong outlines and vivid colour.

Prof. Creighton has now reached the threshold of his main subject. We eagerly wait the continuation of his history of the papacy. As far as it has gone his book is a model of method, and a work of which English scholarship and English literature may be proud.

H. F. BROWN.

Final Memorials of Henry Wadsworth Longfellow. Edited by Samuel Longfellow. (Kegan Paul, Trench & Co.)

MR. SAMUEL LONGFELLOW has supplemented with this volume of "final memorials" the valuable biography of his brother which he gave to the world last year. These memorials consist chiefly of journals and correspondence relating to the last fifteen years of the poet's life—a period, the story of which, the editor explains, was not given in the biography with the same fullness of detail as the earlier portions "through fear of unduly increasing the size of the work." Letters and reminiscences of earlier date, for which there was not room in the biography, are also given, together with other interesting items—fragments of verse, table-talk, and so forth. Several portraits of Longfellow and pictures of his house and library add to the value of the work. These miscellaneous records will be welcome to Longfellow's friends. They show him in all sorts of pleasant aspects, and in some ways give a truer idea, even than the biography itself, of the man as he really was: they seem to bring us nearer to him.

Had ever any man so many friends as Longfellow—friends who knew him personally, and numberless others who never saw or spoke with him, yet knew and loved him almost as well through his books as if they had been accustomed to meet him face to face? Soon after Carlyle's death an intelligent reading man, who knew Chesterfield's Letters and Pope's *Essay on Man* almost by heart, met me and asked for some information about "that Scotch philosopher" who had lately died, he could not remember the name. The story may be true of the bookseller in California who wrote to a London publishing house to know if they had heard of some poems by a Mr. Milton that, he understood, had been lately published. It is even possible to suppose that there are persons somewhere who know nothing about Shakspeare. But who has not heard of Longfellow, and not only heard of him but read at least some of his verses? One instance of his popularity may be given from the memorials, as a type of many others recorded here and elsewhere:

"A lady relates that, passing one day a jeweller's window in New York, her attention was arrested by hearing from a crowd gathered before it a voice in unmistakable brogue 'Shure and that's for 'Hiawatha.'" The speaker was a ragged Irish labourer, unshaven and unshorn. She looked and saw a silver boat with the figure of an Indian standing in the prow. 'That must be,' said the speaker, 'for a prisintation to the poet Longfellow; thim two lines cut on the side of the boat is from his poethry.' 'That is fame,' said the friend to whom she told the story."

Sometimes the evidences of Longfellow's fame were less gratifying. He met in the street an Irish mason who said, "I am glad to speak to a poet. I have meself a brother in the port who is a drunkard and a poet." He must have been overburdened sometimes with visitors who came to see the object of their worship, or oftener, perhaps, to exhibit their own literary wares or to enable themselves to boast that they had spoken with him. Yet he was very tolerant. "His simple and beautiful courtesy," writes Mr. F. H. Underwood, "made every caller think himself a friend."

Then there was the autograph nuisance, an annoyance for which Longfellow had himself to blame to a great extent, by his too ready acquiescence. He seems to have been always willing to comply with such requests, saying, on one occasion, "If so little a thing will give pleasure, how can one refuse?" One gentleman wrote for "your autograph in your own handwriting." A lady sent him a hundred blank cards with the request that he would write his name on each, as she wished to distribute them among her guests at a party she was giving on his birthday. Whether or not he complied with this wholesale demand is not recorded. The iron pen, the chair made from the "spreading chesnut tree," and other public tokens of his popularity are well known. Numerous other signs of regard reached him, in his later years, on every birthday from correspondents young and old, known and unknown. The very last letter he ever wrote was to a young lady to thank her for some verses she had written on one such occasion.

Interesting glimpses of Longfellow's literary tastes are to be had, here and there, in passages from his journals, such as—

"Read Mrs. Radcliffe's novel *The Romance of the Forest*. Was this the sensation novel of the last generation? How feeble it seems!"

This was in 1867. A few days later he records:

"Read Erckmann-Chatrain's pretty novel *Le Blocus*. There is a great charm about the style; very simple and sweet in tone. Always, even in depicting war, preaches the gospel of peace."

Another day he had been reading Rabelais, "which, I confess, wearies me"; and after reading the "Frogs" of Aristophanes he "was struck with the thought that it was a good introduction for the second part of 'Faust.'" He notes about Hawthorne's *The Marble Faun* that "it is a wonderful book, but with the old dull pain in it that runs through all Hawthorne's writings." Readers of his beautiful memorial poem of the great novelist will recall the lines in which he gives utterance to the same feeling:

"I only see—a dream within a dream—
The hill-top hearsed with pines.

"I only hear above his place of rest
The tender undertone,
The infinite longings of a troubled breast,
The voice so like his own."

Longfellow had one or two sharp things to say about critics:

"Many critics are like woodpeckers, who, instead of enjoying the fruit and shadow of a tree, hop incessantly around the trunk, pecking holes in the bark to discover some little worm or other."

Yet even critics, he found, had their good points. "Hiawatha" when it appeared was attacked by them pretty severely; and Fields, his publisher, after reading something more than ordinarily savage, went in some excitement to see the poet. "By the way," said Longfellow, "how is the book selling?" "Enormously; we are running presses night and day to fill the orders," was the reply. "Then," responded Longfellow, "don't you think we had better let these critics go on advertising it?"

The letters here given include a few from Emerson, Clough, Hawthorne, Dickens, and

Dean Stanley; and many to and from Sumner, Fields, and Longfellow's life-long friend, G. W. Greene. There is an extract from one written by Sir E. J. Reed giving the eminent shipbuilder's opinion of the poem "The Building of the Ship." It is interesting to know that the practical man considered it "the finest poem on shipbuilding that ever was or probably ever will be written." Incidentally we learn that Hawthorne regarded Thoreau as

"a man of thought and originality, with a certain iron-pokerishness, an uncompromising stiffness in his mental character which is interesting, though it grows rather wearisome on close and frequent acquaintance."

In another letter, written in England in 1854, Hawthorne says: "A man of individuality and refinement can certainly live far more comfortably here—provided he has the means to live at all—than in New England;" to which the editor appends a note—"It must be remembered that this letter speaks of England thirty years ago"; but he does not make it clear whether he means that England has since declined in this respect or that New England has advanced.

The book, it will be seen, is very interesting. The only unsatisfactory part of it is the Index, which, being incomplete, is misleading.

WALTER LEWIN.

Scientific Theism. By Francis Ellingwood Abbot. (Macmillan.)

So many of our current systems of philosophy are deliberately negative or destructive that one which aims at being positive and constructive ought, if only for that reason, to be hailed with satisfaction. So many, moreover, of our thinkers are Idealists and recognise no knowledge outside their consciousness that one which starts with the assumption of an external universe existing *per se* must be welcomed as, at least, a novelty. On both these grounds Dr. Abbot's scheme of thought has a decided claim to recognition as a striking contribution to current philosophy. It is a protest against the extremes of Idealism, on the one hand, and a purely materialistic Realism, on the other. So far, it is compromise between antagonistic schools—a kind of *via media* in philosophy, aptly styled Scientific Theism. It attempts to take from contemporary science much that it values, especially its blind, mindless, mechanical theories, and it gives to science, what philosophy will certainly grudge it, objective reality independent of the thinking subject. Similarly, it gives back to theism the teleology and monistic character of which modern science has robbed it; but it takes from theism a personal Deity in any commonly received sense of personality. From this brief sketch of its purport, the reader conversant with philosophy will at once perceive that whatever other qualities may be lacking to Dr. Abbot's scheme courage is not among them. His aim is nothing less than an entire reversal of commonly received conclusions in science and philosophy. Happily his task is facilitated by its opportune character. The world of thought it seems has long been in labour with his new doctrine, and awaiting Dr. Abbot's

intervention as a skilful "man-midwife." He says:

"These principles will found a philosophy of science embracing not only a radically new theory of knowledge, but also a radically new theory of being. The rapid disintegration of old philosophies, the wide-spread and growing confusion of religious ideas, and the universal mental restlessness which characterises our age, are but the birth-throes of this new philosophy of science" (p. 65).

I cannot help fearing, however, that, in his zealous discharge of his maieutic function, Dr. Abbot has forgotten the alternative contingency as to its issue propounded by the greatest master of his craft—viz., *πότερον εἶδωλον καὶ ψεῦδος ἀποτίκτει . . . ἢ διάνοια, ἢ γόνιμὸν τε καὶ ἀληθές*. I suspect most of his fellow thinkers, after a close inspection of "the little stranger," will be inclined to place him in the former of these categories.

The first great drawback of Dr. Abbot's book is its needlessly severe form and its pedantic terminology. The semblance of a rigid mathematical problem, when, as in philosophy, every term employed is capable of more than one rendering, is an elaborate fiction, which may deter the unwary, but has no persuasive power on the veteran thinker. When a reader, coming to the study of a new work, finds himself confronted by such passages as this—

"The Ground Principle of the Philosophised Scientific method is the Infinite Intelligibility of the Universe *per se*. . . Intelligibility is the possession of an Immanent Relational Constitution"—

he is naturally not a little alarmed. He may at once close the book as either beyond his comprehension or as rendering an interesting question needlessly obscure. The pity of it is in this case the greater because Dr. Abbot, spite of his harsh mannerisms and verbal jugglery, by which I mean his presentation of old ideas under new verbal symbols, is a genuine thinker, and has something worth saying on many moot points of science and philosophy.

Another drawback is the hasty supercilious dogmatism which takes small account of opposing theories. Thus, as to the main basis of his system, Dr. Abbot declares:

"An external universe exists *per se*—that is in complete independence of human consciousness so far as its existence is concerned, and man is merely a part of it, and a very subordinate part at that [*sic*]."

Surely it is worse than futile to assert as an unquestionable axiom a proposition which every thinker knows to be one bristling with inconceivabilities. No doubt he will carry the non-thinker along with him. Indeed, his aim often seems to be to propound the conclusions of the unidea'd vulgar as principles of philosophy. All unthinking persons believe that the world—*i.e.*, the world of their consciousness, they can know no other—exists independently of them, and would continue to exist though they ceased to be; but as soon as thinkers try to project this thought-object outside of their consciousness they find the attempt as impossible as trying to discover its reflection behind the looking-glass.

From this unproved and unprovable starting-point—the objective reality of his thought—

Dr. Abbot proceeds to include within the same process of objectivisation the whole external universe. In the final result the thinker and his thought become a part of the objective organism, self-originated, self-evolving, which he terms the universe. The theistic aspect of this universe he formulates in these terms:

"Because as an infinite organism it thus manifests Infinite Wisdom, Power, and Goodness, or thought, feeling, and will, in their infinite fullness, and because these three constitute the essential manifestations of personality, it must be conceived as Infinite Person, Absolute Spirit, Creative Source, and Eternal Home of the derivative finite personalities which depend upon it, but are no less real than itself."

Not without reason Dr. Abbot deprecates the accusation of Pantheism for this scheme. He is not likely to meet with much success in this endeavour. If not Pantheism pure and simple, it is that allied form of it which avoids the deification of matter by insisting on the supremacy of mind, reason, vital energies, &c., and which has been termed Pan-en-theism. In truth, however, Dr. Abbot's scheme abounds with incongruities and self-contradictions of the most palpable kind. To take a single instance: he does not seem to have discerned that the objectivisation of the universe is, *ipso facto*, a materialising process, while the older theory of the subjectivity of human knowledge favours a rational and spiritual origin of the creation. A universe knowable solely by and in mind presupposes mind as its creative and sustaining basis. An universe existing apart from human consciousness may, *so far as we know*, exist apart from all consciousness, and, so far, may be wholly material, and governed solely by those mechanical agencies which Dr. Abbot very properly deprecates. This is by no means the sole objection that besets his scheme of philosophy. Other discrepancies will readily occur to the thoughtful reader, who, however, will find matter for meditation in Dr. Abbot's *Scientific Theism*, provided he is not deterred from perusing it by its too technical form and its airily dogmatic spirit.

JOHN OWEN.

The Poems of K. F. Releiaeff. Translated from the Russian by T. Hart-Davies. (Remington.)

THE author who ventures to publish a translation into English of the poems of Releiaeff—or, as we prefer to write the name, Riléyev—is, in many respects, a bold man. To begin with, Russian poetry has never commanded much attention in England, and the writings of Riléyev are unfortunately not much read even by his own countrymen. He is now put on the back shelves with Batiushkov and others. And yet the story of the man's life is so sad and interesting that it ought to draw attention to his poetry, even if it lacked merit, whereas it is far from being of the sort which neither gods nor men nor booksellers' shops tolerate. In 1825—when only in the thirty-fourth year of his age, a little older than our own Shelley—he was hanged as a *dekabrist*, a name given, as most of our readers will know, to the conspirators of December, who attempted a revolution in Russia when the Emperor Nicholas came to the throne. Riléyev belonged to the category

of political visionaries and enthusiasts. He paid with his life for the folly of this wild and fruitless outbreak, and caused the deaths of many others. The horrors of the scene in St. Isaac's Square at St. Petersburg are not likely to be forgotten.

As a poet he belongs clearly to the Byronic school, once predominant through Europe. The longest of his pieces is on Voinarovski, the follower of the rebel Mazeppa, who was captured by Peter and condemned to death, but had his sentence commuted into banishment to Siberia, at the intercession of the Empress Catherine. There he lived many years, lapsing—as Mr. Hart-Davies reminds us in his notes—into a complete man of the woods and forgetting the elegant arts which, at one time, had made him the fashionable dandy of Vienna. It was in Siberia that he was visited by the German *savant* Gerard Müller, then making a tour in that country, in the pay of the Russian Government, to study its ethnology and geography. The poet introduces Voinarovski narrating the events of his past life to Müller, and thus gives us some vigorous Cossack pictures. The exile tells how his young wife made her way out to him, and was accidentally recognised by him, but came only to die from the severity of the climate on the shores of the gloomy Lake Baikal.

"Peace came again, while by my side
Abode my faithful, darling bride;
My fate seemed milder, sorrow's smart
More rarely tore my suffering heart.
But, ah! not long this joy could last,
But like a dream it came and past."

But to us the most touching of the poems of Riléyev is the fragment entitled "Nalevaiko," telling the fate of the Cossack of that name who headed a revolt against the Poles, and was cruelly put to death by them in 1596. Mr. Hart-Davies has rendered with much feeling the words of Nalevaiko to the priest:

"I know full well the direful fate
Which must upon the patriot wait,
Who first dare rise against the foe
And at the tyrant aim the blow.
This is my destined fate—but say
When, when has freedom won her way
Without the blood of martyrs shed,
When none for liberty have bled?
My coming doom I feel and know,
And bless the stroke which lays me low,
And, further, now with joy I meet
My death: to me such end is sweet."

The lines in the original are deeply pathetic, and have as funereal an echo as one of Webster's dirges. It is not a little curious that Riléyev published this fragment in the *Poliarnaia-Zvezda* ("Polar Star")—an annual of poetry and prose which he edited—in 1825, the very year of the unfortunate outbreak. He seemed to have a presentiment of his own fate, just as Pushkin had when he described the duel of Oniégin and Lenski.

Mr. Hart-Davies has accomplished his task with spirit and fidelity; and he deserves the thanks of the English public for introducing to them a Russian author, who, although not in the front rank of poets, yet always writes with elegance and taste, and attaches a weird interest to his compositions by his strange visionary life and terrible fate. Many of the *dumí*—a term borrowed from the legendary poems of the Malo-Russians—are good. Some of these Mr. Hart-Davies has translated; among others, the tale of Ivan Susánin, who

is said to have saved the life of the Tzar Michael, by a noble act of self-sacrifice, when he was on the point of being killed by the Poles. This pretty story, however, which has also formed the subject of a well-known opera by Glinka, is considered by the historian Kostomarov to be fabulous. If so, a graceful tradition is lost to Russian history; but Kostomarov was a sad iconoclast. We have had men of the sort among ourselves, and many of the grey morning legends of our history have disappeared in the full light of criticism. We observe, by the way, that the translator puts the accent in the name Susánin on the wrong syllable. We do not know why, for he is obviously a finished Russian scholar.

W. R. MORFILL.

NEW NOVELS.

Love the Conqueror. By Sydney Carstone. In 3 vols. (Ward & Downey.)

An Ugly Duckling. By Henry Erroll. In 3 vols. (Bentley.)

Allegra. By Mary West. In 2 vols. (Fisher Unwin.)

Isa. By the Editor of the *North-Eastern Daily Gazette.* In 2 vols. (Remington.)

Radna: or, the Great Conspiracy of 1881. By Princess Olga. (Chatto & Windus.)

Miss Lavinia's Trust. By Vin Vincent. (Griffith, Farran & Co.)

Condemned to Death. By A. Wall. (Sonnen-schein.)

THE tropical weather seems to have exercised an enervating influence in the sphere of fiction, for some of our novels this week are extremely limp and uninteresting. One or two, however, quite make up for the rest on the score of excitement, if not as regards ability. Mr. Carstone, a writer entirely new to us, endeavours to infuse some brightness and elasticity into *Love the Conqueror*; but it is, on the whole, an *olla podrida* of incidents, with little attempt at cohesion or unity. There is a fiendish grandmother in the story, and there are also several male characters who, to put it mildly, are not a credit to the human race. One of these commits a murder; and as three persons are successively associated with the crime, there is some interest in waiting for the revelation of the real culprit, which does not take place till the close of the narrative. Edith Leng, the sole survivor of a family which passes through many and marvellous vicissitudes, is, perhaps, the best character in the book, and manages to awaken a genuine sympathy in the reader; but most of the other *dramatis personae* are little better than lay figures. The men are either evil or idiotic, and the women are continually scheming to entrap the men. Our author regards falling in love as something like sickening for the measles, or any other infantile ailment; and if we do not get the attack in youth we suffer virulently for it at a mature age. There is a kind of Mrs. Ramsbotham, who enlivens the story by her constant lingual errors, speaking of the *cataracts* (catacombs) of Rome, and who has a daughter who plays the piano "with very good *excretion*." It would be well for Mr. Carstone to eschew politics, which should not

be introduced into a novel intended presumably to be read by persons of different political complexions. There are some signs of ability in this book, and its writer could evidently do much better.

An Ugly Duckling is very readable, and if the promise of the first volume had been sustained it would undoubtedly have been a most successful work. The earliest glimpses we have of the ugly duckling—an unconventional, and apparently unattractive, girl, who develops into a superior woman—are excellent; and there are true and natural touches in the delineation of the forlorn heroine as she appears at the outset; but the whole thing ends somewhat disappointingly and with manifest weakness. Nevertheless, the author shows so much talent that he should be unquestionably heard from again.

Those who like semi-historical novels will find one of the average type in Miss West's *Allegra*. It opens with the Austrians in Lombardy in 1848; and, after describing the memorable events of that great year of revolution, closes with the deliverance of Italy from the Austrian yoke and the entry of Louis Napoleon and Victor Emmanuel into Milan. History, however, is not the motive, but only the pivot of the story. Miss West reveals a strong grasp of the Italian character, and her portraits of Signor Morelli and the Count di Villari are sketched with vigour and evident fidelity to life. The same may be said of two very different personages—the sister-heroines, Allegra and Cecilia Winton—whose characteristics are well differentiated. The story is not without its passages illustrative of

"the infinite passion and the pain
Of finite hearts that yearn."

It is so extremely difficult for any but the greatest writers to blend judiciously the historical and the romantic elements that it is a pleasure to be able to compliment our author from this point of view for the no small measure of success she has attained.

The morbid psychological school founded by the late "Hugh Conway" finds its latest exponent in the author of *Isa*. But the new writer out-herods Herod. Isa Cleveland, the heroine—who is described as all that is beautiful physically—goes mad at the sight of blood; and as it is here a case of "blood, blood, blood" all through the narrative, it may be imagined that she has not many lucid moments. It is a terrible awakening for her poor husband, soon after his marriage. Isa's birthday, the 8th of June, is the special day when all the fearful events happen; and space would fail us to tell of the many tragedies which occur on that ill-fated day. Suffice it to state that they culminate in the haughty Isa's attempt to slice off her husband's head with a razor. Whenever the 8th of June arrived Isa Cleveland had such pleasant thoughts as these—"I wonder what to-day has brought forth," in the way of crime. "Perhaps at this moment some life is being taken; some deed of murder being enacted; some death-gurgle sounding." If Mdme. Tussaud's establishment were suddenly to be deprived of one of its chief attractions—the "Chamber of Horrors"—it needs only to represent a few of the episodes in this novel in wax, and the chamber might be started

again in all its pristine glory and sombre attractiveness. Seriously, no good or useful end could possibly be answered by such a work as this. It is sensationalism run riot; and if it is intended to be a parody upon the ghastly psychological school of fiction, the joke is a very poor one. Some explanation is furnished of the heroine's madness; but the whole story is too unrelieved to be good reading from any point of view, while it might completely unhinge the minds of young impressionable people. The author is an able man, and we are sorry that his first essay in fiction should be of this unpleasant character.

Princess Olga furnishes a very graphic picture of the terrible system of Russian bureaucracy in *Radna*; or the Great Conspiracy of 1881. She shows how it separates the emperor from his people and, beginning at St. Petersburg, extends its evil ramifications to the most distant bounds of the Czar's dominions. It is more powerful than the sovereign himself, and is the cause of Nihilism and all the other conspiring elements against which the best forces in Russia have striven in vain. The late emperor had a noble heart, yet for the oppression of the weak and the lowly, for the suspicion and punishment of the innocent, for the want of education and the darkness of the Russian mind, for the seal placed on the lips of freedom, the chains which bind liberty, and for every misfortune resulting from bad government, he was held responsible by the masses. And maddened by their wrongs, in their blindness they at last assassinated him. Russia will never be free and happy until the class which intervenes between Czar and people is crushed out or deprived of its power. This story has some charming lighter aspects in addition to its more serious purpose. But every one should read it, if only for the flood of light it sheds upon the dark and secret life of the Russian capital.

A girl's faithful love, a hard-hearted father's curse, and the death of a gallant young officer in the Crimean War, form the staple incidents in *Miss Lavinia's Trust*. The grave brings reconciliations, though we do not quite see the necessity for such a high death-rate as prevails in this little volume. At any rate, the stern parent and the fond lovers might, as it seems to us, have been amicably reunited in this world without waiting for the next. The tone of the sketch is good.

The scene of Mr. Wall's *Condemned to Death* alternates between Egypt and England. The Egyptian portion of the story, with its papyri and its strange discoveries, treads very closely upon the romances of Mr. Rider Haggard. There is even the being who lives twice, with ages between.

"When Chu shall have shaken off the power of the Soul, then shall I know all things, the Present, the Past, and the Future; and when the Soul shall once more encase Chu, my spirit shall animate the second body, and I will again instruct the children of men."

Again,

"I am all that was; that is; that will be; no mortal can raise my veil."

If this Egyptian mine is worked by too many writers, it will soon "give out." There are

many improbabilities in this story; but then the probable has become very commonplace nowadays. By the way, it may be a small matter, but when the aristocracy are brought into a novel they might as well be designated correctly. The same lady could not be both "Lady Lucy Cartley" and "Lady Cartley."
G. BARNETT SMITH.

BOOKS OF TRAVEL.

Letters from a Mourning City. By Axel Munthe. Translated by Maude Valérie White. (John Murray.) A dainty volume, daintily printed, with a charming frontispiece, these *Letters from a Mourning City* contain the experiences, adventures, impressions, and reflections of a Swedish doctor in Naples during the great cholera epidemic of 1884. The letters were contributed to a Stockholm newspaper, and are written lightly, gracefully, naturally, with a running pen. In the course of the letters we get a fascinating picture of this speculative, courageous, warm-hearted doctor. He is passionately devoted to Naples; he feels for the city as only those of Northern blood can feel for their soul's city in this siren land of Italy; he loves Naples too well to desert her in her distress; he is filled with unbounded scorn for those fair-weather lovers who fly before the first breath of storm. Dr. Munthe knew Naples well, and he came to help as far as he could her cholera-stricken poor. He attached himself to no society, he wore no ambulance cross, he went about independently, quietly and bravely doing what in him lay. His sole companions were his ragged little foundling Peppino, his big dog Puck, and, above all, his donkey Rosina, with whom he shares his speculations, his mental peregrinations around the insoluble enigma of life. They exchange passages from Dante, Leopardi, Heine, and Goethe; and the tendency of their speculations—as was natural under such gloomy surroundings—is pessimistic or rather stoic; but neither is a sentimental philosopher. The doctor is intensely sympathetic, human, and practical; he likes the *popolo*; he has a good word for the monks; he can pardon the mad belief—a belief most deeply rooted in the minds of the Italian poor—that all doctors are virtually the hired assassins of the Municipio; indeed, the only class for whom he shows no sympathy is the governing class and the organising committees. Here he seems to us less than just; but perhaps he would have been more than human if he could have lived with and sympathised with the poor, and yet have given its due to the class whom the poor regard as their deadliest enemies. But he is manifestly unfair when he says that "Italy of to-day has done no more for the people of Naples than Italy of the past." Northern Italy, at all events, knows what a heavy burden of taxes she pays for the benefit of her southern sister. The speculations of the doctor and his donkey are not always very profound. They were not meant to be so. They took place usually at night, down by the seashore, when the moonlight streamed across the bay; and they served rather as a rest, a relief from the strain of activity, the oppression of misery that daylight and the doctor's service of the sick brought with them. For the doctor's courageous devotion led him into many terrible places; and his letters are full of pictures of human degradation, woe, and wickedness, as appalling as any in Signor Villari's *Lettere Meridionali*, which did so much to call public attention to those hot-beds of disease and vice, the *fondaci* and *sotterrani* of Naples. The style of the book is, as we have said, most admirable—fresh, natural, sweet; and the translation is remarkably good. We do not remember having ever read a better translation—we mean one which bore about it fewer marks of the process

of transition from one language to another. If the style of the original be as finished as would appear from the translation, the author is undoubtedly a fine artist in words; and Miss White is the fortunate possessor of the greatest gift a translator can have—the power to preserve the flavour of the original. Or if, as is possible, the excellence of this volume is due to Miss White alone, we welcome her as a writer of very considerable stylistic gifts, and anticipate pleasure from her next volume, which we trust may not be long in appearing.

From the Pyrenees to the Channel in a Dogcart. By C. E. Acland-Troyte. (Sonnenschein.) This narrative of a drive from St. Jean de Luz to Cherbourg via the Pyrenees and Central France was well worth publishing, if only to show how easy of accomplishment such a trip is, and how much of interest in Central France awaits the tourist, especially if he have a taste for archaeology and architecture. The route taken was to Bagnères de Luchon, keeping as close to the mountains as the roads would permit; thence to Toulouse, by Montauban to Cahors, onwards to Rocamadour, the wonderful little nest of pilgrimage-churches around which Carolingian legends still linger; thence by the better-known towns of Limoges and Poitiers to Fontevault, so closely connected with the history of our Angevin kings; thence by Angers, Craon, Avranches, and Coutances, to the final goal at Cherbourg. The time occupied was a little over ten weeks; of this only forty-four days were spent in actual travelling, the drives averaging twenty-two miles a day the whole distance traversed being 956 miles. The rest-days were devoted to sight-seeing in the larger towns, or to making short excursions in hired vehicles to spots of interest in the neighbourhood. The expenses averaged 18s. 6d. a day for two people, with horse and dog; but experience brought about a reduction to 14s. 6d. on the return journey. Comparatively few of those who hurry past it by train are aware how beautiful in the softer kinds of beauty the middle of France is. The road here taken by no means exhausts its attractions. One, if not two, drives quite as desirable might be made from Toulouse through Albi, Rodez, Aurillac, Massiac (nearly all the old towns in *ac* in this part of France are worth a visit), Mont Dore, through the Auvergne country, by Montargis and Fontainebleau and so past Paris. There is only one drawback to such a journey. It is absolutely necessary that the driver should look after the horse himself, and see that he eats, not merely is presented with, his oats, &c., and is made comfortable for the night. Now, to some men of delicate digestion, the odours of the stable after a long day's drive will take away all appetite for dinner; and to these, we write from experience, such an excursion cannot be recommended. We fully agree with Mrs. Troyte in her preference for the first-rate village inn to either the cosmopolitan or the commercial hotel on such a trip; only the company should not exceed three. These little inns have seldom more than two best bedrooms, and if these are occupied the other accommodation is often very indifferent. As to the company one may meet, we have never feared sitting down with ladies among French peasants, and have always found their presence respected. The only class we shrink from when with ladies in France—and the experience of friends agrees with our own—are the *commis-voyageurs*; these sometimes will talk coarsely. If a peasant by chance offends, a hint to landlord or landlady would procure his speedy removal outside, or to the back premises; but a commercial traveller is too important a customer to be thus treated, and unless he is shamed by disgusted silence, there is nothing to be done. French military men of all ranks and services

are delightful company at an inn. They are not afraid of talking shop, and with a little encouragement give vivid narratives of their military life. The best time of the year for such a journey is that here chosen—from April to the middle of June; or from the middle of August to October going southwards, avoiding the great heats of summer.

Shooting and Yachting in the Mediterranean. By A. G. Bagot. (W. H. Allen.) The best part of this little book consists of the chapters on fitting out and provisioning yachts for a lengthy cruise, together with the hints as to the best hotels, the chief game, and the like, to be found at the ports in the Mediterranean where yachtsmen usually land. The account of the author's adventures is written in a wretched style, with many poor jokes, much slang, and not a few thinly-veiled oaths interspersed, recalling the rowdy books of sport which it was the fashion to admire fifty years ago. The author and his friends sailed to Corfu, Levitatta, Naples, Syracuse, and home by Corsica, Monte Carlo, Malaga, and Cadiz. They seem to have endured a good deal of discomfort both by sea and land in their search for sport, and by no means to have been rewarded for their trouble. Even in Albania, the head quarters, as it may be called, of woodcock, their bags were poor. One day four guns killed seventeen couple; another day twenty-two ducks were shot; in the marshes at the back of Syracuse six ducks with twelve and a half dozen of snipe satisfied the sportsmen after much annoyance from the prickly reeds and many immersions. Game may have become scarcer; but in 1845 Colonel Parker, we find, killed at Butrinto (where Mr. Bagot's party shot thirteen and a half couple of woodcock, a hare, a quail, and a couple of snipe, with some lost birds), in two days, with seemingly three guns, 196 woodcocks one day, and 188 the next. Adding those procured by two days' shooting on the Acheron River, and two more on the Achelous, the colonel's total was 1,026 woodcocks. The savage Albanian dogs do not remind Mr. Bagot of the ancient Molossian mastiffs. Even at Corcyra he never names, or apparently thinks of, the revolution and massacre which called forth the eloquence of the great historian. So, too, at Syracuse, Mr. Bagot sees nothing but "cocks." There are a good many records of manful eating and drinking (although the "Nix Mangiare" stairs at Malta become *Mangare*), and much boisterous shooting and merriment in this book. We trust that the actual trip was more pleasurable to the actors than its recital is likely to prove to most readers.

Cathedral Days: a Tour through Southern England. By Anna Bowman Dodd. Illustrated from sketches and photographs by E. Eldon Deane. (Ward & Downey.) The author—an American lady—and her husband drove in a chaise from Arundel to Exeter, passing through Chichester, Winchester, Romsey, Salisbury, Bath, Wells, and Glastonbury. They reached their journey's end in safety, after some adventures indicating that the natural history of the horse was a branch of science which they had not previously had occasion to study. The result is a charming book, full of happy description and abundant high spirits, the contagion of which the dullest reader will hardly be able to escape. A critic sworn to be rigorously just would have to say that Mrs. Dodd is careless of her grammar, uses words in unheard-of senses, and is now and then at fault in her history. But even the faults of the book lean to virtue's side, inasmuch as they are amusing and not exasperating. We do not know whether Mrs. Dodd has written anything else, but we shall certainly make it our business to read the next book of hers that comes in our way. The volume contains about a score of extremely pretty woodcuts.

Three Years of a Wanderer's Life. By John F. Keane. In 2 vols. (Ward & Downey.) If Mr. Keane has seen more of the world than most people, he has also taken an unusual number of volumes to tell us about it. His *Six Months at Mecca* deservedly won attention alike by the novelty and the audacity of its story. His second book—*My Journey to Medina*—suffered from the disadvantages that attend all sequels. Then came *In Blue Water* (if we have got the title right), which threw some strong light upon the hardships of a sailor's life. And now he has found a publisher for the recital of incidents before omitted. We cannot recommend the book to all and sundry, for Mr. Keane's plain speaking does not always tend to edification. But there are passages in it—notably the tramp from Liverpool to London—which are as realistic as anything in fiction.

MR. EDWARD STANFORD has augmented his series of "Tourists' Guides" by three new volumes, not to speak of new editions. Two of them are written by old acquaintances—*Wiltshire*, by Mr. R. N. Worth; and *The Wye*, by Mr. G. P. Bevan. The third—*Suffolk*—was entrusted to Dr. J. E. Taylor, of the Ipswich Museum, who has evidently taken for his model the *Norfolk* of Mr. Walter Rye. The result is a stronger smack of local flavour than in most of these volumes, which have no rival for portability and cheapness.

FROM Dulau & Co. comes a new edition of Messrs. Baddeley and Ward's *North Wales*, Part I., in the "Thorough Guide" series. For the walking-tourist these are indispensable, though we regret that their bulk should be increased by impertinent advertisements.

MESSRS. JOHN WALKER & Co. have issued, in very neat form, "Pocket Atlases" of England, Scotland, and Ireland, each containing some sixteen maps by Mr. John Bartholomew, which have already been praised in the ACADEMY.

NOTES AND NEWS.

WE are glad to learn that the Bodleian authorities intend to publish facsimiles of some of their MSS. Our readers will remember that such a work was suggested by Mr. Haverfield in the ACADEMY of May 6, 1887.

WE hear that Messrs. Macmillan have in preparation a little volume of selections from Tennyson, edited with notes for use in schools by the Rev. Alfred Ainger.

MR. FRANK D. MILLET, the American artist, has translated from the Russian Count Leo Tolstol's *Scenes from the Siege of Sebastopol*. The book will have a portrait of the author, and also an introductory chapter written by Mr. W. D. Howells.

UNDER the title of *Pagan Pearls*, Mr. Elliot Stock announces a collection of precepts concerning the conduct of life taken from the writings of non-Christian teachers.

A NEW volume of verse, entitled *The Lyric of a Hopeless Love*, by Mr. A. Stephen Wilson, will be issued shortly by Mr. Walter Scott.

MESSRS. BEMROSE & SONS will shortly publish a sixpenny edition of the life of *Catherine of Aragon*, by the author of "De Nova Villa." The profits of this edition will be devoted to the "Catherine Window" which is to be erected in Peterborough Cathedral to the memory of Catherine of Aragon, by subscriptions from ladies of the name of Catherine resident in all parts of the world.

Lucifer is the title of a new monthly devoted to occultism or theosophy, the first number of which will appear on September 15. The "Lucifer" of theosophy, it may be advisable to explain, is not the Lucifer apostrophised by

Isaiah, nor Milton's "demon of pride." It is, say the promoters, "the Latin 'Luciferus,' the light bringer, the morning star"; and the magazine is published with the avowed purpose of bringing "to light the hidden things of darkness" on both the physical and psychic planes of life. It will be under the joint editorship of Mdme. Blavatsky and Miss Mabel Collins, the latter of whom will give in the opening number the first chapters of "The Blossom and the Fruit: a Tale of Love and Magic."

AMONG the publications which the New Spalding Club, of Aberdeen, has undertaken are (1) a monograph on the emblazoned ceiling of St. Machar's Cathedral, with coloured reproductions of the escutcheons and other illustrations, edited by Principal Geddes and Mr. Peter Duguid; (2) *The Place-Names and Folklore of North-Eastern Scotland*, by the Rev. Dr. Walter Gregor, of Pitsligo; (3) a history of the ancient baronial family of Burnett of Leys, by Dr. George Burnett, Lyon King-of-Arms; (4) *The Register of the Scots College at Rome*, by Monsignor Campbell; (5) a Calendar of the letters in the Aberdeen town-house, with a selection of the most important, by Mr. A. M. Munro; and (6) a bibliography of all publications relating to the north-eastern counties of Scotland, by Mr. A. W. Robertson, of the public library, Aberdeen.

THE annual meeting of the Victoria Institute will be held at the Society of Arts on Tuesday next, July 19, at 8 p.m., when an address will be given by Prof. W. Stokes, President of the Royal Society.

THE Royal Historical Society will hold a conference in the Hall of the Society of Arts, Adelphi, on Saturday, October 22, to consider the question of historical teaching in schools. Prof. Mandell Creighton will preside, and an address will be delivered by Mr. Oscar Browning, which will be followed by a discussion. Promises of co-operation have been received from the headmasters of Harrow, Haileybury, Marlborough, Rugby, Repton, Rossall, Shrewsbury, Westminster, Winchester, the City of London School, King's and University College Schools, and Dulwich College. The attendance of all persons interested is invited.

AMONG the papers to be read at the meetings of the Historical Society in the course of next session are: "Nootka Sound and Reichenbach" by Oscar Browning; "Passages from the Unpublished Records of the Napoleonic Period," by C. A. Fyffe; "Frederick the Great and the First Silesian War," by A. R. Ropes; "Henry Hudson, the English Navigator," by Gen. Meredith Read; "Prince Henry of Monmouth's Despatches during the War in Wales, 1402-1405, and the Treaty of Surrender by the Welsh Chieftains," by F. Solly Flood; "The Commercial Policy of Edward III.," by the Rev. W. Cunningham; "Historical Genealogy," by H. E. Malden; "The Historical Value of Traders' Tokens and the Minor Currency," by George Williamson; "A Genealogical Table of the Mughal Emperors of India, with Notes on their Birth, Accession to the Throne, and Death," by Kavi Raj Shyamal Das.

A NOVEL educational experiment is to be tried next winter in London. A number of short popular courses, of three lectures each, on literary, historical, scientific, and artistic subjects, will be given under the joint auspices of the London Society for the Extension of University Teaching and the Gilchrist Trustees. The courses will be quite distinct from the ordinary work of the former society. Steps are being taken to secure the services of distinguished lecturers, and the lectures will be given in the largest halls available in certain selected working-class districts. In some cases the

admission will be free, and in other cases the charge will probably be one penny for each lecture. The whole expense will be defrayed out of a special fund, to which the Gilchrist Trustees have largely contributed.

MESSRS. SOTHEY'S sales next week comprise the following:—On Monday, a selection from the library of M. Eug. P * * *, of Paris—it is not very difficult to fill up the asterisks—consisting mainly of early Italian books and MSS., including the only block-book known to have been printed in Italy. On Tuesday the books, MSS., &c. of the late Joseph Mayer, of Liverpool, among which we may mention several of W. H. Ireland's collections relating to his Shakspeare forgeries, and the original MS. of the Old English songs and carols, edited by T. Wright for the Percy Society in 1847. On Wednesday and Thursday the large collection of autograph letters, belonging to the same indefatigable curiosity hunter, of which the most notable seem to be those of Nelson, Burns, and Garrick. There is also a set of the catalogues of the Royal Academy from the beginning (1769) to 1844.

MM. FORZANI, printers to the Senate at Rome, have issued the prospectus of a grand *Bibliografia di Roma*, the life-work of the late Francesco Cerrotti, librarian for thirty years of the Corsini library, who died last February at the age of eighty. The work will be in four volumes, handsomely printed in large quarto form, and will be issued to subscribers at 20 lire a volume. The following is the classification adopted: (1) topography and views; (2) ecclesiastical history, with special reference to each pope and to the conclaves; (3) literature, including the libraries and academies; (4) art, including the churches, catacombs, obelisks, inscriptions, &c.; (5) civil history, including that of the municipalities and of the great Roman families; (6) physical, with special mention of the Tiber and the Campagna.

ORIGINAL VERSE.

PEGLI.

Quae nunc abibis in loca?

MORNING after morning, in the bright Italian spring,
I heard the steady hammers of the busy shipwrights ring,
And plank to plank was added till ribs no longer gaped,
And slowly grew the marvel—a ship was being shaped,
Morning after morning, till there came at last a day
When waves were softly plashing, but the ship was far away.
'Twas in the early twilight the ropes were cut, and swift
Her strange new life she entered, and buoyant waves uplift
And carry her afar on old Columbus' track.
Ah! who are we to hinder, or wish to call her back?
We cling to earth so blindly, but she sees lands unknown,
Her sails are wings to bear her; but we are left alone,
Morning after morning, on that fair Italian shore,
To watch the shipwrights working, and wonder evermore.

B. L. TOLLEMACHE.

MAGAZINES AND REVIEWS.

THE *Expositor* for July continues several interesting series. There is first the biography of eminent theologians. This time Dr. Maclaren, of Manchester, is the subject; and the editor is the biographer. There is next the discussion of the origin of the Christian ministry. Whether or no Prof. Salmon can be said to have contri-

buted much to the discussion, the statement of his personal views, opinions, and here and there "guesses" will command attention. There is lastly the survey of the Revised Version of the Old Testament. Prof. Cheyne's second paper on the Book of Psalms contains an examination of Ps. cxxxix., after which it is mainly occupied with an exposition of the marginal renderings and readings. Dean Church contributes his fine sermon on "The Idolatry of Civilised Men," Mr. G. A. Simcox a poem on "The Latter Rain," Dr. Dods a reproductive study on part of Ezra, and—last, not least—Prof. Driver a valuable review of Dr. Cheyne's work on the Wisdom-literature of the Old Testament. Years ago, when English Biblical criticism was more fettered than it is now, the reviewer expressed a strong conviction of the linguistic necessity of a very late date for Ecclesiastes. It is gratifying that we are now favoured with full and interesting specimens of his exegetical results.

THE HISTORY OF THE INVENTION OF PRINTING.

XI.

It is admitted by every one that the Costeriana are the work of a Dutch printer, more particularly of a printer who was settled in Holland proper.

I have pointed out before, and it is moreover very well known, that the peculiarity of the eight types of the Costeriana consists in a perpendicular stroke attached to the horizontal cross-stroke through the *t*, and an upward curl or a down stroke attached to the *r*. I am aware that the same peculiarities are noticed more or less in German block-books, and in German and Italian writings. But as two editions of the *Speculum* (Spiegel) are in the Dutch language, this fact alone proves the Dutch nationality of the Costeriana beyond the shadow of a doubt. Now, among all the facsimiles of Dutch typography (including the whole of the Netherlands, or, as we should say now, Holland and Belgium), published in Holtrop's *Monuments typogr.*, and ranging (if we exclude the Costeriana) from circa 1470 (or say 1473) to 1500, no trace whatever of these peculiarities is found, except in three cases only, namely, on Holtrop's plates 57, 58, and 111, where they appear in three woodcuts, and are clearly intended as imitations of antique models, as a kind of fancy, just as we see now-a-days Caxton's types imitated. But the peculiarities of which I speak are found (not as imitations, but in a very natural way) in the Dutch block-books, and in Dutch manuscripts—a circumstance which shows, I think, that the eight types of the Costeriana stand next to the time of the block-books and manuscripts. Indeed, the resemblance between the eight types of the Costeriana (which we must regard as having belonged to one and the same office, until evidence to the contrary is forthcoming) and the character figured in the texts of those block-books, of which we know that they are unquestionably Dutch, is very striking. If we compare the inscriptions of the Dutch Mary engraving, preserved in the Berlin Museum, and figured in Holtrop's *Monuments* (first plate), and the texts of the two Dutch editions of the *Ars moriendi* (British Museum, pressmarks C. 48. 1, and C. 17. b. 21), and that of the Dutch editions of the *Biblia Pauperum*, and that of the Dutch *Cantica Canticorum*, one feels almost inclined to say that the man who cast the types of the Costeriana engraved also the blocks for those block-books.

I have already pointed out before that those who suggested Utrecht as the place where the Costeriana might have been printed never thought of examining Utrecht MSS. to see whether the types of the Costeriana, which

have such a peculiarly national form, and could not very well have been imported from Germany, nor from France or Italy, resembled in any way Utrecht MSS. I have made some enquiries on this point myself, and I have been (provisionally) informed that the MSS. written at Utrecht do not bear any resemblance to the types of the Costeriana. But I do not wish to lay any stress on this information, as I do not know whether my informant quite understood what I had in view. But this kind of negative is not without some importance in connexion with one or two facts which I have accidentally found myself, and which, most decidedly, point to *Haarlem* as the place where the Costeriana may have been printed. Namely, in the binding of a MS. Register (of strange to say) 1446, preserved in the Haarlem Archives, I found last January a vellum fragment, the writing of which made me think for a moment that I had one of the Costerian printed *Donatuses* before me. I would also recommend the inspection of the writing of slips bound in the MS. Register of 1440, and that in the Register for 1444. A comparison of the writings found on these slips will not, I think, be favourable to the Utrecht theory.

There is, as far as we know at present, a total absence of *colophons* (if we except such words as *explicit*) in the Costeriana. This circumstance also tends to show that the printer of these works must be placed next to the period of the manuscripts and early block-books, and not after, or during the time when *colophons* (in verse and in prose) may be said to have become customary. I will, however, not dwell upon this absence, in confirmation of my opinion that the printer of the Costeriana was the *first* printer, because of most of the Costeriana we possess fragments only, and there are besides a good many other works, printed by other printers, without place, name of printer, and date. But I wish to point out that we have ten complete Costeriana, besides the last leaves of some others; and I do not know that there exists, after 1471, any other group of so many books issued by one and the same printer, without having in one of them either a place, or the printer's name, or a date. And even in the *late* block-books, published (in Germany) after 1470, we do find initials of the printer, or his full name, or a date.

There is another circumstance to which I must call attention in particular. Of the forty-five Costeriana which have been preserved to us, no less than thirty-three (counting among this number the edition of *Saliceto*, of which only vellum fragments are found) are printed on *vellum*. And, from the fact that hitherto no paper copies or fragments of these works have come to light, it is, I think, not unreasonable to conclude that no paper copies were ever printed. Of the remaining Costeriana, five (namely, the four editions of the *Speculum*, and, the two leaves of one of the Dutch editions of the *Speculum*, which have been printed in a different type, counting them as one work) are partly or wholly *blockprinting*, and were, therefore, necessarily, or as usual, printed on paper. And only seven of them are printed on paper in the ordinary way, as we see it done say from 1455 to 1470. Among the latter happen to be just those works which, as I have said before, cannot be placed earlier than 1458. When we now look at the printing in Germany from 1454 to 1475, we see that the first two dates (1454 and 1455) appear in two editions of *Indulgences*, of which no paper copies have ever been found, and probably were never printed. Besides these two *Indulgences* (one of which I will put down to Gutenberg, the other to Schoeffer), we have also three editions, on vellum, of the *Donatus* in the thirty-six-line Bible type (which I will

ascribe to Gutenberg); four editions of the *Donatus* in the forty-two-line Bible type; and an edition of the *Psalter* of 1457 (all done by Schoeffer). But in the year 1454 we find, already, printing done in Germany on paper, and, with the exceptions just mentioned, I do not think that any more early printers issued entire editions on vellum after 1457. If, therefore, we tabulate the early printers according to the entire vellum editions known to have been issued by them, we are compelled to assign the *first* place to the printer of the Costeriana, with thirty-three works out of forty-five published by him; the *second* place to Peter Schoeffer, with only six (or seven, including the forty-two-line *Cantica*) works out of I don't know how many; while Gutenberg comes in the *third* place with four entire editions on vellum out of eight printed by him, or at least ascribed to him. I know of no printer to be put fourth, as I know of no other early printer ever having printed entire editions of any of his works on vellum, though nearly every printer of any significance printed a few vellum copies of his more important works by the side of his paper copies.

I have further to point out that the thirty-three vellum editions of the printer of the Costeriana include twenty editions of the *Donatus*, seven editions of the *Alexander Gallus*, two of *Cato*, one *Abecedarium*, one liturgical work, one Dutch edition of the Penitential Psalms, and one edition of *Guil. de Saliceto*. Leaving the latter work out of account, it is precisely of these school books and books of devotion that other and later printers issued also apparently entire vellum editions, as no paper copies have as yet been found by the side of the vellum copies. For instance, Dr. Campbell, after having described the Costerian *Donatuses*, enumerates in his *Annales* (under numbers 642, 643, 648, 649, 650, 651, 652) seven other editions of the *Donatus* printed by various printers on vellum, close upon 1500. And of the *Doctrinale* of Alexander Gallus he mentions two editions (No. 110 and 111) besides those which concern us. Mr. Holtrop (*Monuments*, p. 18) says that there exists an edition of the liturgical work also printed on vellum at Leiden about 1500. So it is possible that there was, as is alleged, an idea among printers and the public in general that books of this kind required to be printed on strong material. But just about the period 1471-1474, when the printer of the Costeriana is said to begin, or to be printing, paper editions of the *Donatus* had already appeared, for which reason this entire vellum printing at that date looks strange.

But if we assume that the printer of the Costeriana commenced his work before 1454—that is to say, if we assume him to be the inventor of printing, then he was a man who had hardly any other except MS. *vellum* books before him, and his position at the head of the vellum printers becomes a natural one. We can then understand that he printed, and continued to print, on vellum because, except for block printing, he hardly knew of any other material for the production of books, and also because he started with the idea of imitating, as closely as possible, his MSS. We can then also see that, after printing was brought to Mentz, nothing but vellum was used for a little while. But there, under fresh eyes, who see that another mode of printing could be devised, the printing on less expensive paper gradually, though slowly, took the place of that on vellum, the latter material being only reserved as a kind of luxury for the production of a few copies of certain works of importance, and perhaps also, by way of tradition, for the *Donatuses* and a few other school-books.

As to the question that the manner in which the engravings of the *Speculum* have been executed, and the dresses, hats, &c., figured on

them, all point, as some say, to a period after 1471, I believe it may be met by the opinion of others who think that everything points to a much earlier period. The subject is too extensive for me to feel competent to deal with it at this moment and in this series of articles. Suffice it to say, that so far as I have investigated the matter, I see certainly nothing in the style of the engravings of the *Speculum* which is incompatible with a much earlier period, in which the four editions of the *Speculum* must, in my opinion, be placed, on account of the primitive manner in which they were printed.

CORRESPONDENCE.

THE LATE MASTER OF TRINITY'S COPY OF THE PISA "ADONAI8."

Trinity College, Cambridge: July 9, 1887.

A few weeks since it was stated in the ACADEMY that the copy of Shelley's *Adonais* (Pisa, 1821), which belonged to the late Master of Trinity, had disappeared, and was not included in the catalogue of his library which was to be sold by Messrs. Sotheby, Wilkinson, & Hodge.

It is due to these gentlemen, who made every effort to discover the missing rarity, to announce that it has been found in the College Library, among a mass of miscellaneous pamphlets, which were removed from the Lodge after the Master's death, and until recently had not been examined.

W. ALDIS WRIGHT.

"COLLATION OF FOUR IMPORTANT MANUSCRIPTS."

Dublin: July 11, 1887.

I have just learned that M. l'Abbé Martin, in his brochure, *Quatre Manuscrits Importants*, &c., has brought a serious charge against me. On p. 11, referring to the *Collation of Four Important Manuscripts*, &c. (edited by me after the death of Prof. Ferrar), he says:

"Quant au Manuscrit de Milan, au cursif 346, il est certain qu'il a été examiné seulement dans quelques passages: nous tenons le fait de la bouche même de celui qui aurait dû faire la collation, au dire des éditeurs Anglais."

As this directly contradicts what I have stated in my Introduction, it involves a charge of the grossest falsehood. One feels some degree of humiliation in taking notice of such an accusation. Nevertheless, when it is made by a scholar like the Abbé Martin, it cannot be allowed to remain unnoticed. I, therefore, repeat (1) that for three of the Gospels Prof. Ferrar and myself had, not a collation merely, but a complete copy made under the direction of Dr. Ceriani; (2) that for the first Gospel the MS. was collated for Prof. Ferrar throughout; (3) that neither the copy nor the collation was trusted implicitly, but wherever any possible question could arise the MS. was again specially consulted; and (4) since the death of Prof. Ferrar the copy and collation, as well as the replies to subsequent inquiries, have been in my possession.

T. K. ABBOTT.

THE STOWE MISSAL.

London: July 9, 1887.

In the ACADEMY for June 25, 1887, p. 451, col. 2, Dr. MacCarthy writes thus:

"In Old-Irish nomenclature, *Mail* (*moel*, *mael*, *mel*, are graphic variants), the name of the first Bishop of Ardagh, is of frequent recurrence. The nom., the Latin equivalent *calvus*, and the gen. *maile*, are found in the Book of Armagh (5 a 1; 11 b 1, 12 b 1, 17 b 1 respectively)."

In the ACADEMY for July 9, 1887, the Rev. F. G. Warren, referring to the above quotation, writes as follows:

"Mr. Whitley Stokes has asserted that the name of the first Bishop of Ardagh was indeclinable, giving some late Irish evidence for his assertion. Dr. MacCarthy now states that he has found this name in the genitive form, 'Maile,' several times in the Book of Armagh. As the Book of Armagh exists only in MS., it is impossible, without a visit to Dublin, to verify Dr. MacCarthy's references to it. However, one is bound in courtesy to accept the veracity of his statement until it has been disproved, and one looks to Mr. Whitley Stokes to substantiate or abandon his position on this point."

In compliance with Mr. Warren's suggestion, I beg leave to say, very reluctantly, that Dr. MacCarthy's assertions (1) that *Mail* is of "frequent recurrence" as the name of the first Bishop of Ardagh, and (2) that *Mail* and *Mel* are "graphic variants," are both wholly groundless. I will add that *Mail* or *Mael*, gen. *Maile*, is not found in the Book of Armagh as the name of any bishop.†

The five passages referred to by Dr. MacCarthy are as follows:

"Fol. 5 a 1. ille magus Lucet mail † qui fuerat in nocturna conficiendo, etc.

Fol. 11 b 1. Audientes autem magi Loiguirii filii Neill omnia quae facta fuerant, Calvus et Capitolaum, duo fratres qui nutrierant duas filias Loiguirii, etc.

* I gave a fourteenth-century copy of an eleventh-century work.

† *Mael* is found as the name of a bishop in the Martyrology of Donegal, December 26; but he was a bishop of Tuam.

‡ This is spelt *Lucetmael*, fol. 2 a 2; 4 a 1.

Fol. 12 b 1. Et frater illius uenit Mael, et ipse dixit: 'Frater meus creditur Patricio, et non erit ita; sed reuertam eum in gentilitatem.'

Fol. 12 b 1. Similis est Calvus contra Caplit.

Fol. 17 b 1. Do[r]igéni Cummen cétaig ritha fri Eladach mac Maile Odrae tigrerne Oremthianne ar each ndonn."

It will be seen that, in four out of the five passages referred to by Dr. MacCarthy, *Lucet mael*, *Mael*, and *Calvus* are the names, not of a bishop, but of wizards said to have opposed S. Patrick, and that in the fifth passage the person referred to is a layman, *Mael-odrae*, the father of one *Eladach*, who bartered a brown horse for a mantle made by Cummen.

I fear that Mr. Warren, and perhaps other readers of the ACADEMY, will consider Dr. MacCarthy's statement about the Book of Armagh to be an example of what the late Archbishop Whately, in the following passage, calls the fallacy of references:

"One of the many contrivances employed for this purpose is what may be called the 'Fallacy of references,' which is particularly common in popular theological [philological and palaeographical] works. It is of course a circumstance which adds great weight to any assertion that it shall seem to be supported by many passages of Scripture or of the Fathers, and other ancient writers [such as the authors of the Book of Armagh] whose works are not in many people's hands. Now when a writer can find few or none of these that distinctly and decidedly favour his opinion, he may at least find many which may be conceived capable of being so understood, or which, in some way or other, remotely relate to the subject; but if these texts were inserted at length, it would be at once perceived how little they bear on the question. The usual artifice therefore is, to give merely references to them, trusting that nineteen out of twenty readers will never take the trouble of turning to the passages, but, taking for granted that they afford each some degree of confirmation to what is maintained, will be overawed by seeing every assertion supported, as they suppose, by five or six Scripture texts, as many from the Fathers [as many from the Book of Armagh], &c." (*Logic*, 8th ed., p. 208).

For myself, my faith in Dr. MacCarthy's veracity is so perfect that I believe, or strive to believe, that he merely meant to say that the Book of Armagh contained, in the passages to which he referred, examples of the word *Mail* or *mael* (*Calvus*), gen. *maile*. But what has this to do with the controversy whether the words *maile ruen* in the Stowe Missal refer to one saint or to two? And why did such a master of English as Dr. MacCarthy express himself so as to mislead an intelligent and scholarly reader like Mr. Warren?

I will conclude this letter (and with it my share in this controversy) by stating that the real name of the first Bishop of Ardagh occurs, in its Latinised form, twice in the Book of Armagh—once in the nom. *Melus*, fo. 9 b 1, and once in the acc., *Melum*, fo. 10 b 2, and that the same name occurs in its Celtic form, *Mel* or *Mél*, in the Trinity College copy of the *Liber Hymnorum* (a MS. of the end of the eleventh or beginning of the twelfth century), fo. 17 a, and in the Franciscan copy of the same collection (a MS. of the twelfth century), p. 40. In this latter codex (which Dr. MacCarthy can easily see in the convent, Merchant's Quay, Dublin) the name occurs nine times in the nom., once in the gen. (*isin Ardachud epscoip Mel ata*), and once in the dat. (*dorala do epscoip Mel*)—always, it will be seen, undeclined. The name borne by the Bishop of Lothra occurs in a Latinised form in the Book of Armagh, fo. 11 b 2, gen. *Rodani*, acc. *Rodanum*:

"In quo reliquit uiros sanctos Macet et Cetgen et Rodanum prespiterum": . . . "filia . . . quae tenuit pallium apud Patricium et Rodanum,"

... "ipsa fecit amicitiam ad reliquias sancti Rodani."

As to Ruadán of Lothra, the Calendar of Oengus has, at April 15, "Ruadan locharn Lothra." In the Book of Leinster (about 1250) I find "Ruadan apstal Lothra," p. 350 f, col. 6; and in the same MS., p. 358, col. 7, the Latinised genitive "Ruadani Lothra." Nowhere in any respectable MS. is there the slightest ground for Dr. MacCarthy's assertions that the first Bishop of Lothra was called Ruan, and that Ruain is "the phonetic form of Ruadain."

WHITLEY STOKES.

P.S.—In my letter in the ACADEMY of last week (p. 26, col. 2, l. 59), for "MSS." read "MS."

Mitchelstown: June 30, 1887.

Having dealt with Mr. Stokes's communication, I come to that of Mr. Warren in the ACADEMY of April 23. He begins by saying that he has no means of knowing whether I saw his *Liturgy and Ritual of the Celtic Church*. I have seen that compilation. The extent to which I have been aided thereby in the study of the Missal (I pass over the Sacramentary for the present) will appear from the following.

In the structure and contents I failed to find the sixty-six folios and the Gospel of St. John which Mr. Warren informs us the MS. contains.

In the transcript of the liturgical part, passing over some thirty minor misreadings, a text as plain as print is corrupted to this extent:

MR. WARREN.	MS.
P. 226, sanctorum et nostrum intende christe cyrie elezion	Fol. 12 a, sanctorum confessorum, et meum-[et] reliqua 12 b, christe, audi nos; christe, audi nos. cyrie elezion
238-9, Sancte	28 b, Sancta, prefixed to the names of the five Irish virgins
239, peccatori	29 b, peccatorum
226, Oratio Augustini—Profeta, etc.	13 a, Oratio Augustini is the title of Rogo, etc.
domine christe	13 a, ihesu christe qui non vis castitatis
226-7, deus non vis 227, caritatis	14 a, Deus, qui culpa misere [i.e., misere].
228, dicitur qui culpa misericordiae	14 b, aut
vel	15 a, laudatio mea
229, laudatio catholicaque a	15 b, catholica, qu[al]e est a
280, et poenitentibus nostris actibus	16 a, pro poenitentibus 16 b, nolle nostris actibus
231, Incipit lectio gregoriana	17 b, incipit is last word of Gospel heading Fragment of fol. 17, gregorii
232, misericorer	19 a, misericor [diam tuam,] et da [no]bis
dabis	24 b, petri et pauli
236, petri, pauli thomae, iacobi	25 a, thomae et iacobi
diesque ad te	25 b, dies quoque 26 a, et ad te
238, quoque	27 b, [quo]que
240, non nominavit	31 a, nomina nominavit
241, iohanne estimatir	31 b, cum iohanne estimatis
243, Presta ut quos	35 b, Quos, etc.; presta ut follow satiasti, the fifth word

(Cf. Plate, No. 9)

(Cf. Pl. No. 3)

MR. WARREN.	MS.
enudemur	35 b, emundemur
244, et gloriosa quique	36 a, per gloriosa 37 a, quasi (three times)
spiritu sancti	37 b, spiritus sancti
245, et omnipotentem	38 b, Te omnipotentem
246, S[anctus]	39 b, Per (a scribe's oversight for S[anctus])
247, conscientius iniquitate omnem	42 a, conscientias iniquitates 42 b, omnium
248, plenus manifestandus	43 a, plenas manifestandas

Even now, with the correct form under his hand in my edition, he persists in Melch[i]sedech. In the MS., the i, as happens not unfrequently, is subjoined to the second stroke of h.

The practised eye appears in the remark that the headings of the Missae are in later hand-writings (p. 201).

In the redaction, the displacement of folios 28-9 is not detected; "quorum ut dixit," the concluding words of fol. 29 b, being consequently given up as unintelligible (p. 262). The following arrangement has probably been rarely matched (fol. 29 a):

"Propitius esto. Parce nobis Domine. Propitius libera nos, Domine, ab omni malo. Libera nos, Domine, per crucem tuam. Libera nos, Domine, peccatores." (P. 239.)

In the textual notes we are told, for instance, that many of the names in the Litany (fol. 28 a. b.) are "in the genitive case—a common occurrence in ancient martyrologies—the word festum being understood. The writer appears to have copied out the names, forgetting always to change the genitive into a vocative case" (p. 261). Moelcaich, that is, was so ignorant as to see no incongruity in Sancte Patricii, ora pro nobis.

Upon heremi sciti (fol. 30 b.) there is a query: "Did the scribe mean to write 'tarum'?" (p. 263). Mr. Warren, namely, would change the *desert of Scete* into *hermits*.

In original research, the "Order of the Gallican Service" (p. 99), and an extract respecting the Benedicite (p. 111) purport to be taken from the *Expositio brevis* of Germanus Parisiensis. Neither of them (as far as I can discover) is found therein. The consecration formula quoted (p. 109) from the pseudo-Ambrose de *Sacramentis* (l. iv. c. 5) varies in five places from the text of the Paris edition (1661, t. iv. col. 367). Two clauses given as Martene's (p. 129), with "Conf. Amalarius" appended, are the words of Amalarius himself.

Direptio organorum, a blundering version of the Irish *orgain* "destruction" (Ann. Ulst., A.D. 814), is accepted as proof that "Irish annals speak of the destruction of church organs" (p. 126).

In Liturgy we have noteworthy equations: Cursus Scottorum = Liturgy (p. 77); frangere panem = Christi corpus conficere (pp. 95-6); periculosa oratio = Pater noster (p. 98); consueta deprecatio of Iona (presumably) = diptycha mortuorum of Arles (p. 106); Gospel of St. John, i. 29 = Agnus Dei of Pope Sergius (pp. 200-66); simul panem frangere = joint consecration (p. 129); Stellae (fol. 24 a.) = Epiphany (p. 259).

We learn, moreover, that there was a proper preface for St. Patrick in Tirechan's time (p. 100); and that priests were allowed to celebrate twice on the same day in Iona, in the seventh century (p. 143).

In hagiography, Bede's Daganus episcopus (H. E. ii. 4) is made bishop of Ennereilly, which is changed from Wicklow to Wexford (pp. 41, 264). Cummian, compiler of the Penitential, is said to have been abbot of Iona (p.

98); Ciaran of Seir Keiran, older than St. Patrick (p. 261); Finian of Moville, a bishop (p. 264); and Fergal of Aghaboe, Virgilius of Salzburg (p. 45).

As the Delegates of the Clarendon Press "will be thankful for hints," the foregoing are at their service, to show to what uses their funds are sometimes applied.

Let us now see how my theory respecting the antiquity of B is "untenable and demonstrably false." Because I say that the B-Recension was written in a character which may well be deemed older than the sixth century, the sapient conclusion is drawn that I assign the copying to the fifth century. By Mr. Warren's logic, if I say a writer employs Miltonian diction, I assign his work to the seventeenth century!

While proving that B was transcribed in the second quarter of the seventh century, I produced three criteria to show the composition of the a portion could be referred to the fourth century. One of these sufficed for Mone and every liturgist down to Mr. Hammond, to establish that the Reichenau Fragments belonged to "a distinctly earlier stage" than the other published Gallican monuments. To this rigid logician, however, my conclusion is "demonstrably false," because the Corpus and Rosslyn Missals have, he imagines, no Calendar, and the Drummond possesses no Proper of Saints.

But herein he shall perform the happy despatch upon himself:

"All these Missals [Corpus, Rosslyn, and Drummond] are mainly Roman or Sarum in their structure and contents, and throw no light on the liturgical use of the early Celtic Church" (*Liturgy, &c.*, p. 269). "It is obvious that the date at which a Missal was written in no way limits the earliness (only the possible lateness) of the date at which this or that portion of it was originally composed" (Warren: *Corpus Missal*, p. 46).

After this it is perhaps superfluous to note that the assertion respecting the absence of a Calendar from the Corpus and Rosslyn is based on the elementary error of restricting Calendar to signify a synopsis of saints' days.

With reference to the abbot of Tallaght, I need only say for the present that Mr. Stokes, when dealing with the subject, will feel duly grateful for any reliable evidence Mr. Warren can produce towards proving Maclruain a bishop.

Mr. Warren has one notable proof. The letter N, which occurs in the Stowe denoting an unnamed person, he is certain is never found earlier than the tenth century. Well, the Book of Dimma and the Book of Mulling and the Oratio super agonizantem in the St. Gall Fragment, 1395, are all three confessedly earlier than the tenth century. The letter N is found in each of them.

Finally, rather than "retire backwards" (*sic*) with me to the seventh and eighth centuries, Mr. Warren would now follow "such a master" as Mr. Stokes in saying the Irish cannot have been composed before the tenth century, and would assign the whole MS. to the eleventh. But, *littera scripta manet*; Mr. Warren says the scribes of the older Latin part and the scribes of the Irish were contemporary, while Mr. Stokes thinks this Latin portion belongs to the eighth century. The master and the disciple thus force each other to follow me nearly all the way.

Those conversant with the subject can now judge how far Mr. Warren is entitled to intervene in the present discussion.

B. MACCARTHY.

"THE BLUE VASE" AND "THE PRUSSIAN VASE."

Cambridge: July 12, 1887.

As a matter of curiosity one would like to know where Mr. Baring Gould got the materials

for his story, "The Blue Vase," in *Belgravia* for June, 1887 (p. 421). The plot of the tale and many of its leading incidents are identical with those of Miss Edgeworth's story, "The Prussian Vase," in her *Moral Tales*, vol. i., p. 167 (edit. 1832). Miss Edgeworth in her preface clearly claims this, as well as the other tales in the collection, as her own invention.

WM. WRIGHT.

APPOINTMENTS FOR NEXT WEEK.

TUESDAY, July 19, 8 p.m. Victoria Institute: Annual Meeting. Address by Prof. Stokes.
SATURDAY, July 23, 10 a.m. Geologists' Association: Excursion to Sheppey.
8.45 p.m. Botanic: General Meeting.

SCIENCE.

OBITUARY.

AUGUST FRIEDRICH POTT.

THE last of the triumvirs who founded the study of comparative philology—Bopp, Grimm, and Pott—has departed. Prof. Pott, as the papers inform us, died at Halle on July 5, in his eighty-fifth year. I have at present no books of reference at hand, and cannot tell where he was born, how he was educated, when he became professor, and what were his titles and orders and other distinctions. Though I believe I have read or consulted every one of his books, I cannot undertake to give even their titles. And yet I feel anxious to pay my tribute of gratitude and respect to one to whom we all owe so much, who has fought his battle so bravely, and whose whole life was consecrated to what was to him a sacred cause—the conquest of new and accurate knowledge in the wide realm of human speech. I believe he never left the University of Halle, in which he first began his career. He knew no ambition but that of being in the first rank of hard and honest workers. His salary was small; but it was sufficient to make him independent, and that was all he cared for. Others were appointed over his head to more lucrative posts, but he never grumbled. Others received orders and titles: he knew that there was one order only that he ought to have had long ago—the *Ordre pour le Mérite*, which he received only last year, fortunately before it was too late. He never kept any private trumpeters, nor did he surround himself with what is called a school, so often a misnomer for a clique. His works, he knew, would remain his best monuments, long after the cheap applause of his friends and pupils, or the angry abuse of his envious rivals, had died away. What he cared for was work, work, work. His industry was indefatigable to the end of his life; and to the very last he was pouring out of his note-books streams of curious information which he had gathered during his long life.

A man cannot live to the age of eighty-five, particularly if he be engaged in so new and progressive a science as comparative philology, without having some of his earlier works called antiquated. But we ought to distinguish between books that become antiquated, and books that become historical. Pott's *Etymologische Forschungen*, in their first edition, contain, no doubt, many statements which the merest beginner now knows to be erroneous. But what these beginners are apt to forget is that Pott's mistakes were often inevitable, nay, even creditable. We do not blame the early decipherers of the hieroglyphic inscriptions, because in some of their first interpretations they guessed wrongly. We admire them for what they guessed rightly, and we often find even their mistakes extremely ingenious and instructive. I should advise all those who have been taught to look upon Pott's early works as obsolete to read his *Etymologische Forschungen*, even the

first edition; and I promise them they will gain a truer insight into the original purposes of comparative philology than they can gain from any of the more recent manuals, and that they will be surprised at the numberless discoveries which are due to Pott, though they have been made again and again, quite innocently, by later comers. In Pott's time the most necessary work consisted in the collection of materials. Overwhelming proofs were wanted to establish what seems to us a simple fact, but what was then regarded as a most pestilent heresy, namely, that Greek, Latin, Teutonic, Celtic, Slavonic, and Sanskrit are cognate tongues. It was Pott who brought these overwhelming proofs together, and thus crushed once and for all the opposition of narrow-minded sceptics. It is quite true that his work was always rather massive, but massive work was wanted for laying the foundation of the new science. It is true, also, that his style was very imperfect, was, in fact, no style at all. He simply poured out his knowledge, without any attempt at order and perspicuity. I believe it was Ascoli who once compared his books to what the plain of Shinar might have looked like after the Tower of Babel had come to grief. But, after all, the foundation which he laid has lasted; and, after the rubbish has been cleared away by himself and others, enough remains that will last for ever. Nor should it be forgotten that Pott was really the first who taught respect for phonetic rules. We have almost forgotten the discussions which preceded the establishment of such simple rules as that Sanskrit *g* may be represented by Greek *β*, that Sanskrit *gāus* may be *βoūs*, and Sanskrit *gam* *βalw*. We can hardly imagine now that scholars could ever have been incredulous as to Sanskrit *kāh* being represented by Greek *κτ*, as to an initial *s* being liable to elision, and certain initial consonants liable to prosthetic vowels. The rules, however, according to which *d* might or might not be changed into *l* had to be established by exactly the same careful arguments as those according to which the vowel *a* is liable to palatal or labial colouring (*e* and *o*). And when we look at the second edition of Pott's *Etymologische Forschungen*, we find it a complete storehouse which will supply all our wants, though, no doubt, every student has himself to test the wares which are offered him. The same remark applies to his works on the Gipsies, on Personal Names, and on Numerals; to his numerous essays on Mythology, on African Languages, and on General Grammar. Everywhere there is the same *embarras de richesse*; but, nevertheless, there is *richesse*, and the collection of it implies an amount of devoted labour such as but few scholars have been capable of.

In his earlier years, Prof. Pott was very "fond of fechtung"; and when we look at the language which he sometimes allowed himself to use in his controversies with Curtius and others, we cannot help feeling that it was not quite worthy of him. But we must remember what the general tone of scientific wrangling was at that time. Strong language was mistaken for strong argument, and coarseness of expression for honest conviction. In the days of Lachmann and Haupt, no one was considered a real scholar who could not be *grob*. Pott caught the infection; but, with all that, though he dealt hard blows, he never dealt foul blows. He never became the slave of a clique, and never wrote what he did not believe to be true. He must often have felt, like Goethe, that he stumbled over the roots of the trees which he himself had planted; but he remained on pleasant terms with most of the rising generation, and, to the end of his life, was ready to learn from all who had anything to teach. He cared for the science of language with all the devotion of a lover; and he never forgot its highest aims,

even when immersed in a perfect whirlpool of details. He had, in his younger days, felt the influence of William von Humboldt; and no one who has ever felt that influence could easily bring himself to believe that language had nothing to teach us but phonetic rules. Pott's name will remain for ever one of the most glorious in the heroic age of comparative philology. Let those who care to know the almost forgotten achievements of that age of heroes study them in Benfey's classical work—*The History of Comparative Philology*. F. M. M.

CORRESPONDENCE.

THE INSCRIPTIONS FROM NAUKRATIS.

Gonville and Caius College, Cambridge:
July 9, 1887.

I owe many thanks to Prof. Hirschfeld for his care in criticising my theory in detail, and especially for his offer to continue the discussion till I am convinced. I accordingly venture to express once more the difficulties I still feel, and I should be very glad if he could finally dispel them.

I much regret that I have in one small matter, as he suggests, committed a blunder that has complicated the discussion. On p. 224 of my paper (*Journal of Hell. Stud.*, 1886) I meant that the fourth and last form of μ was not to be insisted on. Inscr. No. 305 in *Naukratis*, I. is the only one I mistrust; No. 1b is as good and clear as any.

Concerning the date of the foundation of the city, I cannot complain if I have been assumed to hold the same views as Mr. Petrie, since I had not expressed any difference of opinion. My view is in some respects intermediate between Prof. Hirschfeld's and Mr. Petrie's. But I must still hold that the Milesians were, as Strabo implies, at Naukratis before the time of Amasis. Now Prof. Hirschfeld makes the following statement: "After what Herodotus says, there cannot be any doubt that neither a Greek city nor Greek temples had been founded at the place before that king." I would only ask him one question. How then does he explain the fact that the scarabs, which belong, as he himself acknowledges (*Rh. Mus.*, 1886, p. 219), to the time before the accession of Amasis, are not of Egyptian make, and were found mixed with fragments of early Greek pottery? Unless some other explanation of this fact can be found, we must suppose that it points to a Greek settlement before Amasis. The evidence of Mr. Petrie's extremely accurate and careful excavation is explicit on this point, and cannot be lightly set aside.

I may as well say at once that I have no more materials in reserve to throw light on the time before Amasis. This is as might be expected if none but Milesians were at Naukratis during that period.

I come next to the purely epigraphic side of the question; for, though the presence of Greeks at Naukratis makes possible the occurrence of inscriptions earlier than Amasis, it does not of course prove that any of the inscriptions we possess are really so.

In the first place, I do not "perceive that my manner of dealing with them is wholly unjustifiable," because the inscriptions I regard as most ancient are very few, while 700 later ones have been found upon the same site. The earliest Attic inscription (also on a vase, *Mittheil.*, 1881, p. 106 sqq.) is completely isolated, while many hundreds of Attic inscriptions are known of the sixth and fifth centuries; yet its authority for the earliest Attic alphabet is not generally disputed. The most characteristic of the earliest Naukratite inscriptions are distinguished

from the rest both by the fabric of the pottery on which they are incised, and by the position where they were found; Nos. 2 and 4 are from the bottom of an early well, and are on a ware more primitive in character than any other found at Naukratis, except an amphora from the charred stratum, which is certainly much older than Amasis, since it is at some depth beneath the scarabs; No. 1b and the thick drab bowls were found near the bottom of the undisturbed trench in the temenos of Apollo, and are also of very early ware, No. 1b resembling the pottery found at Daphnae, where no Greek inscriptions were discovered. None of the inscriptions for which I now claim a date earlier than Amasis contain any form, such as open H, which is usually later; and so I do not see that I can be in this matter charged with failing to appreciate epigraphic evidence.

I cannot close without once more acknowledging how much I am indebted to Prof. Hirschfeld and others for their valuable criticism. I yield to it so far as to acknowledge that the connected series of inscriptions, beginning probably with that of Polemarchus, may perhaps not be earlier than the reign of Amasis and the foundation of the Hellenion. I only claim exemption for some examples earlier in style and form; and this claim hardly seems unreasonable, since the testimony of excavation, as clearly observed and stated by Mr. Petrie, shows that Greeks lived in Naukratis before Amasis. The assumption that those Greeks were Milesians is no more than is justified by history and tradition; and, if so, their presence offers the easiest explanation for the abnormal forms of letters that are found.

I do not wish to enter on a general discussion as to the value of epigraphic evidence, as compared with the observation of levels. But it should be noticed that the latter method has exceptional advantages upon a smooth and perfectly level surface of hard mud, while on rocky or hilly ground it is comparatively valueless. On a site like Naukratis there is no reason to expect that a thing once buried should ever change its position: and similar strata are found at the same level throughout the city. Mr. Petrie's observations, as recorded in *Naukratis, I.*, have been fully borne out in every detail by the results of the work that I conducted on the same site in the following season.

ERNEST A. GARDNER.

Bromley, Kent: July 8, 1887.

I trust Prof. Hirschfeld will not put me down as necessarily "passionate or prejudiced" when I object to his statement about Naukratis, that, "after what Herodotus says there cannot be any doubt that neither a Greek city nor Greek temples had been founded at the place before" Amasis; and to his declaration that "the epigraphic evidence against the existence of the Greek town before Amasis is so overwhelmingly strong," &c. What the epigraphic evidence is I may well leave to Mr. Ernest Gardner; but, as being most familiar with the archaeological evidence, I must decidedly say that the Greek foundation of Naukratis, long before Amasis, is so clearly shown by the remains found that epigraphists would do well to pause and consider whether they have as good evidence from any other place to authenticate a different view.

To take one point of the simplest kind: the scarab factory in Naukratis was clearly in Greek hands, for the Greek export trade to Rhodes; the hieroglyphic inscriptions are continually blundered, and many of the designs are such as no Egyptian could have made. We are asked then—under pain of being "passionate or prejudiced"—to believe that Greeks in a town supposed to have been founded by Amasis continually made scarabs bearing the names of his predecessors, but never commemorated the

king who was most important in their view. If Amasis first settled the Greeks there, we should not expect to find the names of deceased kings of the previous line, whereas their names often occur; and we should expect to find his name, but it has never yet turned up. There is no question in this about levels, which Prof. Hirschfeld demurs to, but of the occurrence and non-occurrence of names in exact contrariety to his view.

But this scarab factory is not the oldest thing in the town. Two feet beneath it—and two feet take half a century to accumulate, on an average—there is a burnt stratum which underlies all the south half of the town. Everything out of this stratum is distinctively Greek, and not Egyptian, and there is not a trace of Egyptian remains in the earlier parts in general.

So much without regard to levels; but I must observe that levels at Naukratis are worth more than in almost any other site. The town was founded on a perfectly level mud-plain, and was added to very uniformly by waste of the mud-brick houses, so that its levels are remarkably regular. To anyone who has stood in the excavated heart of the town, and seen in section the long white lines of road-mending stretching across it without a foot of rise or fall, the regularity is surprising. Of course, certain quarters accumulated (e.g., with potters' burnt rubbish) at a different rate to others; but this I have been careful to notice, and no conclusions as to age have been drawn from comparing different districts.

It is difficult to see how "articles which are easily and naturally scattered about" can have been scattered in ancient times far down in level layers under the surface, or up into unformed strata. If modern scattering is hinted at, I must say that levels were always carefully verified and measured at once, and no case in which any doubt existed was recorded. I must also lay to rest the fable about things sinking through Delta soil. To anyone who has chopped flake by flake through the hard, tough, old clays of the Delta, with their smooth polished fracture, and seen fragments light and heavy lying just as they were deposited, such a notion seems to need no refutation.

The evidence from Daphnae as to ages of pottery is strikingly in agreement with that of Naukratis; but as that is still, after eight months, in the printer's hands, I will not yet adduce it. W. M. FLINDERS PETRIE.

SCIENCE NOTES.

IN view of the meeting of the International Congress of Geologists, to be held in London next year, a certain number of American geologists have undertaken to prepare reports on the various formations as developed in their own country. The Nomenclature Committee of the Congress will assemble at Manchester during the forthcoming meeting of the British Association. Sir J. W. Dawson has recently suggested a scheme of federation among English-speaking geologists, whereby uniformity might be secured on questions of nomenclature and classification.

THE Yorkshire Naturalists' Union, which has its headquarters at Leeds, will have ready for issue next month *The Flora of West Yorkshire*, by Dr. Frederic Arnold Lee. Prefixed to the catalogue of plants, which enumerates more than 3,000 species (including ferns, mosses, lichens, fungi, and freshwater algae), will be three preliminary chapters, dealing with climatology, lithology, and bibliography. There will also be a map, coloured to show the natural divisions adopted. The book consists altogether of about 800 pages, and will be issued to subscribers at fifteen shillings.

MEETINGS OF SOCIETIES.

THE PIPE-ROLL SOCIETY.—(Annual General Meeting, Friday, July 1.)

H. C. MAXWELL LYTE, Esq., vice-president, Deputy Keeper of the Public Records, in the chair.—Mr. H. S. Milman, Director of the Society of Antiquaries, Mr. F. C. Bayard, Mr. W. J. Hardy, Mr. G. C. Miall, Mr. William Page, and other members of the society were present. At the request of the chairman, Mr. James Greenstreet (the hon. secretary) read the report of the council for the financial year, 1885-6. The account of the hon. treasurer (Mr. Walford D. Selby) showed that after paying for three volumes, the Pipe Rolls for the eighth, ninth, and tenth years of Henry II., a balance of £10 remained to be carried forward to the next year. The report and accounts were then unanimously adopted.—In moving the adoption of these reports, Mr. Lyte commented upon the comparatively large number of libraries announced in the report to have become subscribers to the society. He observed that such accessions to the members of a society were always peculiarly welcome, because the support of private individuals was of necessity more or less fluctuating in its character, while, on the other hand, the co-operation of such institutions as All Souls' College, Oxford, and the Athenaeum Club—to quote the two first names on the list of twenty-five accessions—once obtained, it was pretty certain that so long as the publications of the society gave satisfaction their support would not be withdrawn.—Mr. H. S. Milman, in seconding the adoption, spoke at some length upon the value of the evidence recorded on the Pipe Rolls, as illustrated in a paper read the previous evening before the Society of Antiquaries by Mr. Page, a member of the Pipe-Roll Society. The speaker also enlarged upon the benefits likely to accrue to the society by the decision of the council to bring out, not only a volume of our earliest and most valuable unpublished charters, but also another to include a large number of the Final Concords or Feet of Fines belonging to the reign of King Richard I. This would give, he said, variety to the publications, and be likely to furnish matter of interest to a wider circle. The hon. secretary stated that the University of Upsala had that morning applied to be enrolled among the subscribers to the society.—A vote of thanks to the Deputy Keeper, proposed by Mr. W. J. Hardy, and seconded by Mr. Miall, closed the proceedings.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, July 6.)

SIR PATRICK COLQUHOUN, president, in the chair.—A paper was read by Mr. C. Leland, on "The Literary Training of the Memory and the Eye." Mr. Leland said, firstly, that the memory of any child could, by a process of exercise and reviewing, be developed to an incredible extent; secondly, that this would be balanced and aided by training the mind to quickness of perception. With this he included eye memory or visual perception, in which Mr. Francis Galton has made extensive researches. Finally, he explained the system of developing the constructive faculties and of industrial art education, which he originally introduced into the public schools of Philadelphia, and which has since been extended to those of New York, Austria, and Hungary, and which is followed in the classes of the British Home Arts Association. This system includes the preparation of boys for all pursuits, commercial, agricultural, or technical, and of girls for domestic duties.—The president, in commenting upon Mr. Leland's elaborate paper, instanced several persons of remarkable memory who had fallen within his own knowledge.—Mr. Whitehouse confirmed the reader's remarks as they referred to the teaching in Oriental schools.—Sir James Crichton Browne pointed out the results which had been attained by modern physiology in the investigation of the brain centres and their control of the various faculties.—Mr. P. H. Newman contended that high art cultivation might be unattended by any extraordinary development of memory.—Dr. Douglas Lithgow desiderated the differentiation of individuality in Mr. Leland's paper.—Dr. Zerff maintained

that the general development of the intellectual faculties ought to precede any technical instruction; and Mr. E. Gilbert Highton, the secretary, after expressing a cordial acquiescence in the educational methods expounded by the reader, intimated some doubt touching the precise character of the end sought to be obtained, since memory ought always to be controlled by judgment and experience, and as to art, general cultivation was only possible up to a certain standard without the possession of special gifts.—Mr. Leland, in his reply, said that he had never meant to state that the summit of excellence could be reached without the possession of genius.

FINE ART.

THE STARK EXHIBITION AT NORWICH.

THE Norwich Art Circle have a very proper sense of their responsibilities as guardians of the traditions of a town so celebrated in the annals of English art. This is their sixth exhibition. The previous ones have been devoted generally to the works of living painters of the neighbourhood; but last year they had a gathering of the drawings of J. Thirtle, a water-colour painter whose name is not known so well as it should be outside of Norwich. He was a contemporary of Crome and Cotman, and deserves a place among the circle of painters of the great time of the Norwich School. This year it is James Stark who is honoured; next year, it is to be John Sell Cotman.

One of the best of recent purchases for the National Gallery is a Stark; and judging it by the light of the Starks at Norwich, it is not only a good but a very good Stark, with an unusually fine sky, and a breadth of treatment and a sense of space he did not often manifest. Indeed, Stark at his best is good, and he is generally at his best when most closely following his master Crome. At his worst, nay even at his second best, Stark is not strong, somewhat niggling in touch, opaque in shadow, dry in colour and hard in definition, especially in his figures. Taken all round, he is a second-rate painter, whose present fame may be said to be due to his alliance with his master Crome and his fellow pupil Vincent, to both of whom he was inferior.

The finest pictures at Norwich are the "Sheep-Washing—Morning," lent by the Rev. H. H. Carlisle, and the Duke of Sutherland's "Penning the Flock." The latter is Crome-like, the sky luminous, though uninteresting, the sheep well massed and lighted, the figures well placed but awkward; the former is richer in subject, with its well massed carefully drawn trees, its pool of water and its men, its sheep and its dog. Both these seem pure untouched examples of Stark at his best, and are worthy of a place in any collection of masters old or new. Richer in colour and effect are two pictures lent by Mr. A. Andrews, "Near Stratton—Strawless Common," and "The Grove"; but their depth and brilliancy seem suspicious as we glance at their neighbours.

The Norwich Art Circle issue very pretty catalogues illustrated with lithographs cleverly drawn by the members, which preserve an interesting record of the exhibitions. The examples of Stark are well chosen, which is not always the case with illustrated catalogues. The lithographs include two portraits of Stark: one as a good-looking young man with dark eyes, by J. Clover, seated in a landscape painted by Stark himself; another as a kind-looking old man, after a drawing by R. Hollingdale. Among the best pictures illustrated are a "Landscape with Cattle" belonging to Mr. George Holmes; Mr. Thomas Wells's "The Keeper's Cottage"; and Mr. Harvard's "Road Scene with Ford," besides the two pictures already noted as the finest.

The catalogue would be interesting if it were only for the copy of one of the very rare letters of "Old" Crome, in which he gives some excellent advice to his former pupil about skies and breadth and the importance of "giving dignity to everything you paint."

Not the least attractive part of the exhibition is a number of water-colour sketches lent by Mr. A. J. Stark. These are free, unconventional, dexterous, frequently fine in colour, and happy in their seizure of transient effect. They seem on the whole the work of a more original observer and a freer draughtsman than the painter in oils, and enlarge our conception of Stark's natural gifts. Some interesting etchings by Stark are also shown by Mr. James Reeve.

COSMO MONKHOUSE.

THE NEW ROOMS AT THE NATIONAL GALLERY.

THE opening of the half a dozen new rooms, great and small, in the National Gallery—with all the re-arrangement of the pictures this has involved, with all the better display it has permitted—is by far the most important event of the later part of the art season. And the result is assuredly one on which the director, Sir F. Burton, and the keeper, Mr. Eastlake, are to be congratulated warmly. The architectural effect too of that which has just been added—whether by way of splendid chamber, or of staircase aglow with the reds of African marble—is immensely more to be commended than the somewhat pretentious effect of the alterations of nine years ago. It is fitting that these changes should have been made; but, as the unique object of a National Gallery is the display of the national pictures, it is still more satisfactory to be able to record that what has been done assists this first and last of worthy aims.

Our National Gallery is rich—almost superfluously rich indeed—in that early Italian art of which Mr. Monkhouse has lately discoursed with so un-academic, with so human, a touch in a little handbook at this moment beside us; and the gallery's riches in this art of the primitive—the babe and suckling of painting—have never been so convincingly set forth as under the present system. Again, our representation of the Venetian school—of that full maturity of art, in which men uttered what has still its whole original meaning for us, and uttered it with mastery of means, with perfection of style—our representation of that school, we say, has never until now seemed so dignified and so satisfying. But it is unnecessary to go through department after department. Suffice it to say, on this head, that whatever changes have been made in the arrangement of the pictures are, in almost every case, improvements. The classification is as convenient for the real student as for the most unlearned or least sympathetic visitor.

Two things—as has been pointed out elsewhere—and, it may be, two things only, now require to be done in order that the gallery may be yet more worthily representative of the different schools, and of the England that has made it. One is the enlargement, upon every conceivable opportunity, of the representation of English pictorial art, which is rising daily in the estimation of the wise, and which the future will rate so much higher yet. And English water-colour ought to be represented, as well as English oil-painting, or how narrow a view will hereafter be said to have been taken of what were the real achievements of English art. The other thing is the bold and generous addition, to what the gallery at present contains, of some fitting representation of French eighteenth-century work. This thing, like the other, is now generally admitted—nay, has been

repeatedly urged—by those whose knowledge and whose sympathies give them claim to be listened to.

NOTES ON ART AND ARCHAEOLOGY.

MR. MORTIMER MENPES, whose artistic taste has always, like that of his master Whistler, had a Japanese turn, is now at Yokohama studying and sketching. From a letter recently received from him, he appears to have met with a very cordial reception from the Japanese in general, and Japanese artists in particular. Special entertainments have been arranged for him; and on one occasion thirty Japanese painters were invited to meet him, all of whom made sketches in his presence, and presented them to him. He, with the aid of an interpreter, gave the artists a little lecture concerning his views on art, and met with a very sympathetic hearing. As might have been expected, Mr. Menpes is charmed with the people, their costume, and their art, which they carry into every detail of life. Unusual interest will attach to Mr. Menpes's pictorial records of his stay in Japan, some of which will be exhibited at Messrs. Dowdeswells next season.

WE have received Mr. Frederick Keppel's daintily issued translation of M. Lebrun's catalogue of "The Etchings and other Prints of Jean François Millet" (New York: Keppel.) Only two hundred and fifty copies are printed. There are some significant memoranda by way of illustration; and the literary interest of the little book—an interest which, in the ideal *catalogue raisonné* is never quite neglected—gains by the presence of Mr. Keppel's introductory notice, biographical and critical, founded, of course, a good deal on Sensier's biographical volume, but likewise a good deal on Mr. Keppel's own close observations and enquiries. Millet appears to have wrought only about thirty pieces, and these include a few lithographs and woodcuts. It should not therefore be difficult—were it not for the extreme rarity of a very few of these things—for the collector to possess himself of the whole engraved or printed work of the artist. Méryon's important work—that which is accepted as the "art work of Méryon"—does not, it is true, include a greater number of pieces; but then there is his "minor work," which has to be taken account of also, perhaps even to be collected by the very industrious or the very devoted. Mr. Haden and Mr. Whistler, who are not only "still with us"—which is more than can be said for poor Millet—but in the fullest conceivable vigour to boot, have each produced about six or seven times the number of prints, Sir William Drake's *The Etched Work of Francis Seymour Haden* containing a hundred and eighty entries, and Mr. Wedmore's *Whistler's Etchings* chronicling something like two hundred and fifteen prints from the hand of the great American. On the other hand, Bracquemond and Jacquemart, among great masters of the needle, have done decidedly less; and Millet's contributions are not so scanty but that what is called "immortality" may yet be secured for him. The publication of this pretty little catalogue by Mr. Keppel occurs opportunely to the collector, but at a moment much too late for it to be necessary for the critic to discourse upon the characteristics of Millet's manly and sincere art. Let us, on the other hand, occupy ourselves amiably in noticing the inevitable blunder. In print 14, "Les Bœchers" ("Two Men Digging"), the one can hardly fairly be described as standing "nearly erect." He is a little less bent than his comrade, it is true; but that is nearly all. Let us add that M. Lebrun's own collection of Millet's prints—the only quite complete one in

existence—is now in America. It is the property of Mr. Keppel, it would seem, to whom we tender our acknowledgments for the pretty translation of the catalogue and for his own contribution as well.

THE new number of the *Century Guild Hobby Horse* (Kegan Paul, Trench & Co.) does—what so many merely popular magazines entirely fail to do—justify its existence, and promises a yet more excellent performance in the future. Mr. Matthew Arnold's early poem, "Horatian Echo," here appears of course for the first time. Mr. Selwyn Image writes on design, and Mr. Herbert Horne has some penetrating notes on Rossetti—things well said, both of them. Mr. Burne Jones is an exquisite ornamentist, with as sure an instinct as that of a Japanese for the proper patterning of any given space; and his frontispiece, in illustration of a passage from the "Song of Songs," which is Solomon's, is as restful a piece of work as we have gazed on for a long while. The reproduction of a pen-and-ink drawing of Rossetti's—which shows Miss Siddal making a portrait of the artist—is welcome as a bit of literary or art history, and is done, evidently, by an excellent process. The *Hobby Horse* will not be in great demand at the suburban railway station, but those who buy it will value and keep it, and they will, perhaps, prove to be among the wise.

MESSRS. BELLMAN & IVEY, of 37 Piccadilly, have on view a collection of replicas from some of the principal works of sculpture now or recently exhibited in Paris and London.

THE STAGE.

STAGE NOTES.

WE shall next week be able to give some account of the play by Mr. Stanley Little and Mr. Haddon Chambers produced, with great success, at a *matinée* of Mr. Charrington's at the Vaudeville on Tuesday.

TO-NIGHT Mr. Henry Irving bids adieu to the Lyceum audience until the spring of next year, as he goes into the provinces and then to America. The piece selected for performance is "The Merchant of Venice," in which the actor has always been seen to great advantage: indeed, he has made Shylock quite one of the most impressive of his parts. Again, Miss Ellen Terry's great reputation may almost be said to date from her personation of Portia at the old Prince of Wales's. Thus the choice of play for a farewell performance could not possibly be improved upon. And the audience will wish to hear what Mr. Irving has to say to them when the play is over. What is to be the next thing done on his return? Is it to be "Coriolanus" at last, or a revival of "Macbeth," or some wholly new play?

THE old tradition that one weekly newspaper has always to behave as if no other existed having, we suppose, died out, it may be permitted to us to refer with cordiality to a series of articles on the safety or dangers of the London theatres now appearing in the *Saturday Review*. They will please no manager, unless, indeed, the manager of the Adelphi or of the Grand Theatre at Islington. But they will be, we trust, of immense service to the public, both in strengthening the hands of the authorities and in administering to the playgoer a timely caution. They are very bold—very alarming, if the truth must be told; but, we doubt not, they are entirely accurate. And how soon—we shall proceed to enquire—will the authorities begin to act upon the information which journalistic enterprise and courage alone have successfully gathered and set forth? After the publication of these articles, it will,

indeed, be the very gravest and shamefullest of public scandals if the matter which they discuss goes unremedied.

MUSIC.

ITALIAN OPERA.

DRURY LANE was crowded on Monday evening. "Les Huguenots" was given with a strong cast, and with the fifth act partially restored. Of course numerous cuts were made in the work, which, if given in its entirety, would last to an unreasonable hour. Meyerbeer's opera requires to be effectively mounted; and Mr. Harris certainly put forth his whole strength. There were new dresses and newly-painted scenes. In the matter of artists the manager made wise use of the excellent material at his command. Mme. Nordica played and sang the part of Valentine with much skill and considerable dramatic power. She is not, however, fully equal to the rôle, though she was evidently stimulated to do her very best by the admirable singing and acting of M. Jean de Reske as Raoul. Miss Maria Engle, as the Queen, made up in looks and pretty singing for what her voice lacked in power. Signorina Fabbri was the Page, but the *tremolo* spoilt some otherwise good efforts. The male portion of the cast was uncommonly strong. There were the two De Reskes, the one as Raoul, the other as St. Bris. M. Victor Maurel was admirable as Nevers, and Signor Foli looked well as Marcel. The minor parts, too, were creditably sustained. The chorus singing was admirable. The "Rataplan" chorus in the third act was rendered with much vigour, though the Huguenot soldiers would have done well to imitate the movement of their leader's hands. The orchestra was at times too loud, and once or twice a little ragged; but, on the whole, Signor Mancinelli deserves great praise for the orchestral accompaniments. "Les Huguenots," as performed at Drury Lane, is likely to prove as great an attraction as either "Don Giovanni" or "Faust."

Miss Arnoldson was unable to appear, as announced, in "Traviata" on the following night. "Rigoletto" was substituted, with Mlle. Groll in the rôle of Gilda; and she met with much success.

Glinka's opera "La Vita per lo Czar" was given for the first time in England at Covent Garden on Tuesday evening. It is more than half a century since the work was first produced at St. Petersburg. It has enjoyed considerable popularity in Russia, to which the plot, founded on an incident in the life of one of the Czars, and the music with its strong national flavour, have undoubtedly materially contributed. Considering the time at which it was written, it is certainly highly interesting. The composer, born in 1804, visited Italy in 1830, and made himself acquainted with the Italian school of singing; and the influence of Italian composers is shown on many a page of his score. Then he was for some time a pupil of the famous contrapuntist Dehn at Berlin, and studied hard at counterpoint and fugue. He turned the knowledge thus acquired to good account; for, in some of the choruses and concerted pieces of his opera, there is fugal and canonic writing which is clever and interesting. It is not of a dry, pedantic kind, but fresh, and therefore pleasing. Glinka's music is not remarkable for originality, and it is more or less patchy; but one cannot but admire the honest way in which he expresses his thoughts, the earnestness with which he aims at producing dramatic effects, the skill with which he employs national melodies or successfully imitates them, and the boldness of his attempts at characterisation. In the first act we specially note the opening fugal chorus, and the concerted and choral music at the close.

In the second act a "Cracovienne" and "Mazurka" served to introduce some genuine Polish dancers. The third act commences with a charmingly plaintive song, sung with much effect by Mme. Scalchi. This act contains some of the best and most dramatic music. Certain Polish soldiers form a plot to carry off the Czar but this is defeated by the self-sacrificing loyalty of the Russian peasant, Ivan Susanin. The interview between the peasant and the soldier is one of the most exciting parts of the opera. We must not forget to mention a short and quaint bridal chorus in 5-4 time. The fourth act is, on the whole, dull. The fifth act, considerably curtailed, concludes with a vigorous chorus. We have not described the plot of the opera, for it does not possess any special interest; and we doubt whether the work, in spite of much merit, will ever become popular in this country. Musicians will, however, be glad of the opportunity given to them of hearing it. The performance was, with some few exceptions, very good. Mme. Albani took the part of Antonida, and sang throughout the evening with brilliancy and fervour. Signor Gayarre, as the lover Sobinin, was much applauded. Signor Devoyod (Ivan) sang excellently the bass music, but was not quite at home in his part. Of Mme. Scalchi we have already spoken. Signor Bevignani proved a skilful conductor. The house was well filled.

J. S. SHEDLOCK.

RECENT CONCERTS.

MISS PAULINE ELLICE, eleven years of age, gave a concert at St. James's Hall on Thursday, July 7. By playing Beethoven's Concerto in C minor she forced comparison between herself and the youthful pianist, Josef Hofmann, who performed that work quite recently. It is, perhaps, a pity that she—or rather those having charge of her—did this in such a marked manner; for, although a remarkable child for her age, she cannot, even with the advantage of years and hands able to strike the octave, produce anything like the effect which he does. If, as we have intimated, it would be wise to withdraw Hofmann for a time from public life, this will apply with even greater force to Miss Ellice. Let her study and bide her time, and she may, one day, astonish the world.

Mlle. JEANNE DOUSTE gave a pianoforte recital at Prince's Hall last Saturday afternoon. The first piece in the programme was Beethoven's Sonata in B flat (Op. 22). The young lady is clever; but her rendering of that work showed very plainly that she has much to learn, and also certain things to unlearn, before she can do full justice to herself. She was more successful afterwards in pieces of various kinds; but the Beethoven Sonata was that from which one could best form an opinion of her powers, both as player and as musician.

MR. C. HALLÉ gave the eighth and last of his series of recitals at St. James's Hall last Friday week. There was an interesting programme, including Haydn's Quartette in A (Op. 20, No. 6); variations on a Schumann theme for piano, violin, and violoncello, by Iwan Knorr; Schumann's Fantasia (Op. 17) for piano; and the ever popular "Kreutzer" Sonata, interpreted by Mme. Norman-Néruda and the concert-giver. This series, just brought to a conclusion, has been, both with regard to the selection and performance of works, one of the best ever given by Mr. C. Hallé.

JOSEF HOFMANN gave his fifth and final pianoforte recital at Prince's Hall on Thursday afternoon. The chief piece of the programme was Mozart's Sonata for two pianos, which he played with his father. He was heard besides in pieces by Mendelssohn, Chopin, &c. The hall was crowded.

SATURDAY, JULY 23, 1887.

No. 794, New Series.

EDITOR cannot undertake to return, or correspond with the writers of, rejected manuscript.

is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Principles of Morals. Part II. By Thomas Fowler. (Oxford: Clarendon Press.)

THE first or introductory part of this work appeared last year, and was reviewed in the ACADEMY of June 26, 1886. It was announced as the joint composition of Prof. Fowler and of his friend the lamented Prof. J. M. Wilson, of Corpus Christi College, Oxford—the name of the latter standing first on the title-page. The present volume, forming the body of the work, although planned in partnership with Prof. Wilson and containing some passages—the extent of which is carefully pointed out—written either by or jointly with him, is as it stands substantially due to the pen of Prof. Fowler, who, therefore, although reluctantly, assumes the sole responsibility for its authorship. There seems no reason to suppose that had Prof. Wilson lived to share his friend's labours to the end the result would have differed in any essential particular from what is now placed before us. But the experiment of collaboration is so new in philosophy that, apart from other considerations, one would have liked to see it, for once, more completely exemplified. Nothing, indeed, seems more natural and fitting than that two friends and fellow-workers should be productively associated in a study whose very method, unconscious or avowed, has ever been to combine and harmonise independent or even conflicting views. It has been too much the fashion to speak of philosophy, whether moral or metaphysical, as an aggregate of isolated theories possessing no vitality beyond the lifetime of their author and of his immediate disciples; or, again, as if the same sharp oppositions of thought had recurred in every age with no more hope of agreement than at the time of their first collision. Such a view receives no countenance from history, and must especially miss what is most characteristic in contemporary speculation.

Prof. Fowler has more than one illustrious collaborator among the dead. His work is the outcome of a long and high tradition. He is one of those who look on morality as something not imposed on man from without, but the resultant, the realisation of his whole nature. In reviewing the introductory volume I ventured to characterise the standpoint of its authors as utilitarianism modified in an Aristotelian sense. After reading the sequel I should be more inclined to call it Aristotelianism developed on the lines of Bishop Butler, supplemented and corrected by the principles of utility and evolution. To put the same fact somewhat differently, the method is subjective and psychological, with frequent outlooks into the larger world of history and

positive law. Prof. Fowler goes in detail through all the feelings, conceived as springs of action, from the lowest to the highest, showing as he proceeds to what virtues they give rise. He refuses to brand as "selfish" those feelings which have for their primary object the good of the individual who experiences them, and prefers the term "self-regarding." Salutary in themselves, the limits within which they should be exercised are to be determined by considerations of utility, the modern substitute for Aristotle's somewhat vague and arbitrary appeal to the judgment of the wise. Care for one's own welfare is generalised by sympathy into care for that of others, and carried on by experience and civilisation in ever widening circles from the family through the tribe, nation, and church to the whole of mankind, or even to the totality of sensitive beings.

Again, the feelings are vertically divided into those having for their object some positive good, individual or social, and the "resentful feelings" whose primary function is to repel or avenge injuries received from others; and, as the first class are extended by sympathy into positive beneficence, so the second are converted by the same transforming agency into the virtue of justice. Readers of the *Ethics* may here be reminded of Aristotle's antithesis between desire and anger; and, more remotely, of the quantitative method applied to retributive justice in his fifth book, by Prof. Fowler's definition of an injury as a hurt inflicted without provocation or in excess of the provocation received. The "semi-social feelings," typified by the love of approbation, contribute still further to the consolidation of conscience. The function of reason in morals is to discover by what means desirable ends may best be attained, the determination of those ends themselves being exclusively a matter of feeling. What the school of T. H. Green would regard as the most characteristic work of reason, namely, the construction of moral ideals, is here assigned to the imagination. Finally, the will is studied chiefly in reference to the opposing theories of Liberty and Necessity, although our author agrees with Prof. Sidgwick that the issue is of no practical importance for ethics.

The vexed question of the ultimate end of actions was raised in the introductory volume of this treatise and answered by its authors, although not without some reservations, in a utilitarian or hedonistic sense. The same position is stated and defended with more detail in the present volume. Prof. Fowler does not much like to use the words "pleasure," "pain," and "happiness" in reference to moral ends, and suggests that "it would be a real gain to ethical nomenclature if we could, wherever there is any chance of misunderstanding, employ the words "good and evil" rather than "pleasure and pain" to designate the measure of our actions; for in cases of conflict they seem to suggest the sacrifice of the transitory to the permanent rather than of the permanent to the transitory" (p. 266).

And he holds that "happiness and misery" are equally open to misunderstanding from their materialistic associations. Still, at some stage or other of the enquiry the terms of ethical nomenclature must be defined, and

the inevitable demand for cash payment of moral bills must sooner or later be faced. For myself, I think there is much less danger of misunderstanding on this point than Prof. Fowler supposes; that is to say, outside the region of ethical controversy, where it seems unavoidable, no matter how carefully our terms may be chosen. In common conversation, at least, pleasure and happiness are habitually associated with the most arduous studies or with the most complete devotion to the good of others, not less than with the most vulgar gratifications of sense and vanity.

A more real difficulty is raised by the question whether we should admit a qualitative as well as a quantitative distinction between pleasures; whether they differ in kind as higher and lower, or merely in degree as more or less lasting and intense. Prof. Fowler accepts the former view, and uses it to enhance the stringency of self-regarding obligation:

"If we were so constituted that one man's actions had no effect whatever on another, we should each pursue exclusively his own interest, . . . but . . . the intellectual and aesthetic pleasures would still be as distinct as they now are from the pleasures of sense and appetite; they would still be characteristic of man and, in their higher forms, of the higher races of man. Among competing pleasures, therefore, it would still be man's duty to prefer some pleasures to others; it would still be wrong to sacrifice the higher parts of his nature to the lower, or, for the sake of immediate pleasure, to entail upon himself a large amount of future pain and suffering" (p. 236).

Now it seems to me that, on the law of parsimony, if the facts are as fully explained by admitting only a quantitative distinction we should not encumber our position by any further assumption. Until it can be shown that our intellectual and aesthetic enjoyments yield a smaller surplus of pleasure over pain than the gratification of our animal appetites—and in my belief this never can be shown—it seems gratuitous, if not dangerous, to seek for some more recondite ground of preference than that which decides our choice between two pleasures, both belonging to the same class.

I cannot help thinking that, in deciding between the two theories, Prof. Fowler's judgment was swayed, perhaps unconsciously, by a weighty systematic interest. Refusing as he does to admit conscience or the sense of right as an elementary irresolvable fact of human nature, and explaining it through the sympathetic feelings, he was called on to account for the binding force which distinguishes those feelings when they act as motives on the will from the more urgent instincts of self-preservation or self-aggrandisement. So, in the spirit of antique philosophy, he seeks for an ally within the self-regarding sphere itself, and finds it in the superior motive power of feelings which are nevertheless at the moment less intense; and since the sympathetic feelings share with these the mark of being more highly evolved, more human, more civilised, by an easy transition they are credited with the same controlling influence on the conduct of rational beings as such. Thus the humanistic method of Aristotle is carried into the heart of Butler's philosophy, and the mystical conscience which was an inheritance from sacer-

total tradition is replaced by the free self-determination of a Greek republic.

To discuss Prof. Fowler's theory of moral obligation, involving as it does the whole psychology of sympathy, would carry me far beyond my present limits. It is, perhaps, the least satisfactory part of what is, in most respects, a highly satisfactory performance. But I am not sure that a much better theory could have been made out consistently with the psychological method adopted in this volume. For certain purposes that is a good and useful method; for the President of Corpus it was probably the best and most useful that could be applied to morals. With the experience, the opportunities, and the responsibilities of an educator it was natural and right that he should look on morals chiefly from the educational point of view—that is to say, that he should look on them as a gradual discipline and ultimate harmonisation of all man's impulses and faculties. As an Oxford teacher, it was equally desirable that he should pay especial regard to the authorities and methods most in favour with his own university. The result is that he has produced what is, perhaps, for students the best existing work on the subject. It will show them how the lessons of their old text-books can without any strain be so extended as to cover the vast and complex interests of modern life. And it will also bring their minds into vivifying contact with a whole world of new phenomena, but of phenomena interpreted throughout by reference to what is highest and purest in themselves.

ALFRED W. BENN.

Court Life in Egypt. By Alfred J. Butler. (Chapman & Hall.)

MR. BUTLER went to Egypt, in January 1880, in the capacity of private tutor to the sons of the present Khedive. For reasons not stated, he resigned his appointment early in the following year; but not before he had collected materials for that excellent work, *The Ancient Coptic Churches of Egypt*, which at once, and deservedly, took rank as our standard authority on the subject.

Short as was his term of office, Mr. Butler saw and learned much. He wintered in Cairo, spent the summer months with the court at Alexandria, and had the good fortune to be attached to the Khedivial suite during the vice-regal progresses of 1880, when his Highness visited Upper Egypt and the Delta. While thus exploring the land of the Pharaohs, Mr. Butler—in compliance with the expressed desire of his royal master—kept a journal. Even if he were not careful to state that the present volume omits "most of the descriptions and events therein recorded," while, on the other hand, it contains "a good deal of personal matter" not included in its pages, we should have divined that *Court Life in Egypt* has little or nothing in common with that official log-book. It needs no special gift of penetration to see that Mr. Butler kept a private commonplace book (protected, we may be sure, with a good patent lock), and that he has given us, even now, but a discreet selection from its very curious contents. Were we inclined, indeed, to quarrel with Mr. Butler for anything at all, it would be for his discretion. Too fre-

quently he hints at mysteries which he does not reveal; and nothing is more tantalising than the "Well, well, we know," or, "We could, an if we would," long ago deprecated by a renowned Prince of Denmark. It is hard, for instance, to be told, on the authority of the Khedive himself, that "a certain unmentionable Pasha" caused several of his slave-girls and eunuchs to be bound hand and foot, tied up in sacks, and thrown into the Nile; and yet to be given no clue to the identity of this monstrous criminal. Of the same man we are told, on the same exalted authority, that he caused the murder of some eighteen or twenty members of the family of the former Sultan of Darfûr, and that the deed was done in cold blood, and in the city of Cairo. This massacre must evidently have been committed quite recently, as the only surviving heir to the throne of Darfûr is mentioned as "a boy of twelve" at the time when this particular conversation took place between Mr. Butler and the Khedive. It is not, perhaps, very difficult to hazard a shrewd guess at the name which should fill the "—" of Mr. Butler's anecdote; but it would not be fair to brand even the infamous Zebehr with more crimes than are already laid at his door.

If the atrocities of the "Thousand and One Nights" were possible but yesterday (are perhaps possible to-day!) in modern Egypt, it is no less clear that in unbridled luxury of living some other magnates of the court of Ismail Pasha outdid Aladdin himself. Not even the False Khalif, when he entertained Harûn er-Rashîd unawares, displayed more magnificence than a certain finance minister, or Mufettish, of whom Mr. Butler tells us that

"he had four hundred women slaves, all gorgeously attired in silks and decked with marvellous jewels. He had a set of twelve golden ash-trays encrusted with brilliants, each little tray worth £500. His kitchen cost £60,000 a year. When the present Khedive (then prince) went with the princess to pay the Mufettish a visit, they were dumbfounded by the lavish splendour of his palace" (p. 195).

Another notorious personage called Naib es Sultânah, who held some high office in the Treasury, possessed no less than seven hundred slaves, and was known to give £25,000 for a single Circassian beauty. This very man contrived in his day to pose before England and Europe as an ardent abolitionist of the slave-trade. The aforesaid Mufettish was his greatest friend; and there is no more tragical episode in Mr. Butler's book than the story of how, why, and where he caused that unhappy Mufettish to be murdered.

Of Ismail Pasha himself we are told some curious stories. His relations with Russia, according to Mr. Butler's showing, were of an extremely doubtful nature. His papers included many documents which proved that at the very time when he was most warmly cultivating the friendship of England and France, he was secretly intriguing with the Czar.

"His idea was that Russia would overthrow Turkey and declare Egypt independent. In the Russo-Turkish war he at first refused to send any troops from Egypt in aid of the Sultan; later, when he sent a contingent of 15,000 men, under Hassan Pasha, all were

miserably equipped, and the artillery had no horses. In excuse it was alleged that there were no horses then in Egypt to supply the deficiency. But even when properly horsed, the artillery, like the rest of the Egyptian contingent, did absolutely nothing. In fact, Hassan had secret orders to remain as inactive as possible, and, if he saw an opportunity of secretly damaging the Turkish cause, to seize it, and make the most of it" (pp. 208-9).

Elsewhere, Mr. Butler says that from his (Ismail's) accounts,

"which in the hurry of his departure were left behind, it appears that out of £100,000,000 which he borrowed, only about £15,000,000 was spent on public works in Egypt. Concerning the expenditure of the remaining £85,000,000, I shall relate neither what is known to me nor what is unknown" (p. 203).

Here, again, it must be confessed that Mr. Butler's discretion is very trying.

Of Tewfik he has naught but good to tell. Rarely, indeed, has a more amiable, upright, and single-hearted character been drawn by a contemporary biographer:

"The Khedive lives with his wife and family at the palace of Ismailia, near the Nile bridge. He is a strict monogamist, loyal in his married life as any European, and detests slavery as much as polygamy. All his attendants are paid servants. He rises at four or five o'clock every morning, eats no breakfast, but takes two hours' exercise, walking or driving, and between seven and eight o'clock drives in state to 'Abdîn Palace, which is the usual place of reception and ceremonial. Here the Khedive spends the day transacting various business, seeing ministers, reading letters and telegrams, and talking with his courtiers. At five o'clock in the evening he drives out again, accompanied by his guards, and dines about sunset at Ismailia" (p. 39).

In his personal habits he is simple almost to asceticism. He never smokes. He wears no jewels. Even his sword is like that of an ordinary pasha. If he plays at a round game, it is for counters only. He earnestly desires to improve the social and mental status of women in Egypt, "and has himself started a sort of high-school for girls in Cairo." As for slavery, Mr. Butler emphatically says:

"If there is one conviction planted root and fibre in my mind, it is that the Khedive in his heart of hearts detests the system. . . . He has never bought a single slave, though he had to take over some of his father's when he came to the throne. All his so-called slaves receive £2 a month as wages, besides food and clothing" (p. 150).

In 1881, shortly before Mr. Butler's departure for Europe, and mainly through Mr. Butler's earnest representations, His Highness did away with the "dosh," or trampling of the der-vishes—an act of brutal fanaticism which has been frequently described, though never better than by the author of *Court Life in Egypt*. To all that he says of the tortures inflicted by the passage of the Sheykh and his horse over that "road of human flesh," I can bear positive testimony. The Khedive had, it seems, always abhorred this ceremony, which he stigmatised as "an inhuman rite"; but he had hitherto doubted whether he could venture upon so extreme a measure as its summary abolition. The result proved that his apprehensions were groundless. The scene of the festival was shifted from Boulak to Abbasiah, on the verge of the desert; the

procession took place with the usual pomp; the Sheykh and his horse rode past upon the bare sands, and "there was not the faintest attempt or faintest sign of a wish on the part of any dervish to have his bones broken" (p. 296).

Of the Khedive's affection for his people, and of his untiring efforts for the improvement of their condition, Mr. Butler recites many interesting anecdotes. He attends to the petitions of the meanest among them, enters into their troubles, redresses their grievances, and gives liberally to those who are in distress.

"It is my aim," he said, in the course of a memorable conversation recorded at some length in Mr. Butler's tenth chapter, "to be loved in the hearts of my people, as I have always striven to gain the goodwill of those about me in private life. I have no ill pride, and nothing pleases me more than making other people happy. It was the same before I came to the throne. In those times all my household were well treated; if a man was ill, I went to see him in his room; if he was in trouble, I sympathised with him; and everyone was paid every month, even in those times when all public salaries were long in arrear. Only once was there any difficulty, and then I sent for a French merchant, and sold him all my ostriches" (p. 270).

Want of space compels me to omit many other passages which I had marked for quotation, including some vivid descriptions of scenery, sketches of native amusements and customs, and, above all, certain curious anecdotes of Gen. Gordon, which show the singular absence of tact which characterised that ill-fated hero in his intercourse with the present Khedive. Regarded as the spontaneous and unbiassed testimony of an English gentleman, *Court Life in Egypt* is undoubtedly of some political value. It places the Khedive before us precisely as he is, in his court and in his cabinet, in his strength and in his weakness. The book is not, perhaps, what one would describe as a volume for family reading, and it gives the impression of being somewhat hastily written; but it contains much curious matter, and it is decidedly amusing.

AMELIA B. EDWARDS.

The Historical Basis of Modern Europe. By Archibald Weir. (Sonnenschein.)

THIS, with some marked omissions and defects, is a well-informed and instructive book. Mr. Weir examines the series of events which have made the western world what it actually is, and the various influences which have determined the character of the civilisation we see around us. The political side of the work is its best part; and Mr. Weir has very fairly described the circumstances which have shaped the destinies of the different states and kingdoms of Europe. It is otherwise with the social side. The account of the many and complex causes which have given its form to modern society is not exhaustive, and is far from accurate. We dissent, too, from some of the author's judgments; and, while he sets forth at excessive length the intellectual and material forces which have principally affected the modern world, he scarcely alludes to the strongest of moral forces—religion as it has affected the nations. The

book, nevertheless, is worth reading; and as a "general view" will repay study.

The eighteenth century, Mr. Weir remarks, saw feudalism and all that was associated with it in permanent decay throughout Europe, and monarchy evidently in the ascendant. France had taken the lead in this revolution; Richelieu had made Louis XIV. supreme; and kingship at Versailles had extinguished the power of the old order of the ruling noblesse once omnipotent from the Garonne to the Rhine. The movement continued for many years, and manifested itself under various forms, in different lands, throughout Christendom; and one of the best parts of Mr. Weir's book deals with the events that marked its progress. It was conspicuous in the kingdoms of the North, and especially in the Russian Empire, where Peter the Great established his power and broke down that of a savage nobility; it was illustrated in the ruin of Poland; it was seen in the reforms of the Austrian Joseph, and in the legislation of Frederick the Great; nay, in England itself, where 1688 had made the Whig aristocracy dominant for a time, it was exhibited in the writings of Hume and Bolingbroke, and in the attempt of George III. to become "a real king." By the middle of the century monarchy had become the settled order of things in Europe. And, on the whole, it had been an influence for good, for it had established the supremacy of a general law; it had, in some measure, protected the weak, and it had counteracted, to some extent, the evils of superstition and of local tyranny. But just at the moment when it appeared all powerful, a set of causes were sapping a structure of government seemingly as strong as adamant. Monarchy had left the decaying remains of feudalism in society, while it had destroyed its power; and these galled and harassed national life, and, being associated with kingship, made it unpopular. Again, monarchy, though it had done much, had not, with all its boasted reforms, fully reached the people and the humbler classes. These, rising, year after year, in importance, were still largely ill-ruled and oppressed. The personages, too, who filled thrones in the eighteenth century were, with few exceptions, remarkable chiefly for gross vices or the absence of high qualities. In their case, in fact, unquestioned ascendancy had produced its usual bad results; and the institution was in decline in opinion. Finally, the intellectual movement of which Voltaire was the most prominent champion—a movement of almost unequalled force—though not, except in the writings of Rousseau, avowedly and directly opposed to monarchy, sapped, nevertheless, its props and foundations; and, by exposing to destructive criticism much that seemed inseparably connected with it, insensibly made it despised and disliked.

Republican freedom and all that is allied with it had, Mr. Weir correctly remarks, declined in Europe with the growth of monarchy. Venice, at all times an oligarchic commonwealth, had become a shadow of a mighty name; Genoa had lost her ancient glory and power; the House of Orange had acquired supreme authority in that cradle of liberty, the Seven Dutch Provinces. The revolt of America and the creation of the United States in a far distant continent ushered in the advent of the new era marked

by the subversion of the old order of Europe, with its declining kingship and its worn-out feudalism. France was the scene of the portentous change—France whose monarchy had worn its most repulsive aspect in the reign of Louis XV. and Du Barri, whose sceptical criticism and wild theorising had taken possession of the national mind, where an enlightened middle-class, deprived of just rights, had beneath it millions of artisans and peasants either brutalised by oppression and misery, or in that state of slow social progress in which the sting of wrong is most keenly felt. It must be pronounced an immense misfortune that the crisis came to its tremendous head in a nation, with all its splendid qualities, deficient in practical sense and judgment, carried away by specious and shallow ideas, and especially prone to run into excesses and to commit atrocious crimes in its passionate vehemence. Mr. Weir's account of the French Revolution is too much a narrative of the mere facts, and is wanting in generalisation and philosophic insight. The tempest did great things as a work of destruction. It swept away noxious and cumbrous rubbish that injured and weakened the national life—nay, it prepared the soil for prolific germs that ultimately were to be rich with blessings. But as a work of construction the Revolution failed. The institutions it planted were barren and worthless; and it would probably have led to European anarchy had it not passed into the hands of Napoleon. Mr. Weir's estimate of this extraordinary man is simply that of a brutal despot; but this is a ridiculous judgment on the restorer of order and law in France, on the author of the Concordat and the Code, on the Caesar who, tyrant as he was of the Continent, nevertheless has largely attracted the sympathies of the very races he had at his feet. Napoleon's career of conquest, too, produced results of extreme beneficence. It diffused ideas of equal law and of social equality from the Rhine to the Vistula; and it accelerated, if it did not actually cause, that movement of nationality which, in our day, has made Germany and Italy united peoples, and is the dominant force of modern politics.

Like other commentators on what is before their eyes, Mr. Weir is not happy in his *résumé* of the immediate antecedents of the present era. The settlement of Vienna in 1814 was like a thundercloud running against the wind. It was opposed to modern ideas and principles, and the system it has established has passed away. Mr. Weir rightly points to "nationality" as a cardinal fact in the order of Europe. From the days of the Carbonari to the National League it has agitated and perplexed governments; and, as we have said, it has made the German empire, and established for ever Italian unity. Democracy has not been, by any means, so general or so powerful a force. Unquestionably the great industrial movement—described minutely by Mr. Weir—which, beginning in England, has overspread the Continent, the diffusion of popular knowledge and culture, a free press and a cheap literature, have had a strong democratic tendency. But the "militarism" of the Continent has told the other way; and aristocratic Prussia, imperial Austria, and the half-barbarian despotism of the Czar, are

supreme from the Rhine to the Frozen Ocean.

Mr. Weir has wholly omitted to estimate the influence of religion—in most ages the most potent of moral forces—throughout the period he has passed under review; and his account of it here is extremely imperfect. Christianity has made immense gains through the failure of the Revolution in France. Atheism is no longer professed in high places; the philosophy of Voltaire is a thing of the past; and religious obligations are more deeply felt in every community, through all its classes, than they were a century and a half ago. This, indeed, seems to us the decisive advantage the present has over the past age; and the growth of the religious spirit has been accompanied by a stricter sense of duty throughout society, and by a philanthropic and humane tendency, not devoid of evil, yet, in the main, beneficent. It is idle to deny that the modern world is exposed to danger from such forces as Socialism, Nihilism, and kindred faiths. Yet these are rather theories than dominant facts; and Europe—though we do not forget the Commune of Paris in 1871—seems scarcely threatened by such hideous portents as the triumphant Jacobinism of 1793, the growth of a polite, but a godless and an indifferent, age.

WILLIAM O'CONNOR MORRIS.

Through the Long Day. In 2 vols. By Charles Mackay. (W. H. Allen.)

DR. MACKAY in a sub-title describes his book of reminiscences as "Memorials of a Literary Life during Half a Century"; but his life has really been that of a journalist rather than that of a man of letters in any strict sense of that term. He has been, and is, emphatically a newspaper man; newspaper work has absorbed his best energies; and neither the books of prose which he has written to please publishers, nor the books of verse which he has published to please himself, have taken a permanent place in English literature. His *Memoirs of Extraordinary Popular Delusions*, for which he tells us Mr. Richard Bentley paid him £300, is a readable book, and is probably still read; but we should imagine that everything else is already more than half forgotten; and, though Dr. Mackay speaks slightly of his popular songs, it is not unlikely that he will be longest remembered as the writer of "There's a good time coming" and "Cheer, boys, cheer."

Still, though Dr. Mackay may not be the rose, he has lived near it, having been brought into fairly intimate relations with persons whose claims to be considered men of letters are beyond dispute. He enjoyed what would be generally considered the great privilege of being a frequent guest at the much talked of "intellectual breakfasts" of Samuel Rogers, and his notes of the conversations at ten of these matutinal gatherings of the notables occupy a third part of the first of his two volumes. Young people of a reverential habit of mind, who are wont to regard great writers as persons living in an exalted sphere of intellectual interests in which they of the lower world have neither part nor lot, will be somewhat disappointed, but perhaps also somewhat reassured, by the discovery that the great ones are much less aggressively extraordinary

than they have always supposed. Indeed, others than youthful hero-worshippers will incline to think that—assuming Dr. Mackay's reports to be fairly adequate, and they have every appearance of being so—these breakfasts have won a fame very disproportionate to their deserts. A story is told of how Thomas Campbell, who had been pointed out to an old Scotch lady as "the great" Thomas Campbell, was mistaken by her for a locally eminent cow-doctor of the same name, and was implored to exercise his skill upon an afflicted "beastie" of her own. We do not say that Rogers's guests as a body could have been mistaken for cow-doctors, but they certainly did not wear their intellectual eminence upon their sleeves. No sensible person will think the less of them for this, though many sensible persons may doubt the advisability of reporting the free-and-easy talk of distinguished people who had no idea that they were addressing posterity through the literary mediumship of Dr. Charles Mackay. In the chapters devoted to these breakfasts the passage which we have found most interesting is a quotation from a book entitled *The Shipwreck of the Juno*, whence Byron drew the episode of the two fathers and their two sons in the shipwreck scene in *Don Juan*. The book, which was written by Dr. Mackay's great-uncle, William Mackay, who was second mate of the wrecked vessel, is known to have been read by Lord Byron as a boy; and Moore declared that Mackay's prose narrative was "in its plain grandeur, if not sublimity, far superior to Byron's poetry." The passage, in our opinion, quite justifies Moore's preference, though we should hardly choose his words as the best by which to describe it. It owes its impressiveness not to grandeur and sublimity, as they are generally understood, but to pure pathos, which is all the more effective because of the utter absence from the recital of any touch of literary artifice. Byron was too inveterate a rhetorician to compete successfully with the simple seaman.

When Dr. Mackay first went out to the United States on a lecturing tour he naturally fell in with some of the literary celebrities of the Western world, but their conversation, as reported here, is not more noteworthy than that of their English brethren; nor has Dr. Mackay anything that is specially interesting to tell us of Emerson, Longfellow, Hawthorne, or the celebrities of the Boston Club. The record of his second visit, when he went out as special correspondent to the *Times* during the Civil War, is, of course, mainly devoted to matters political, and the tone is not quite so genial as elsewhere. As Dr. Mackay made no secret of his Southern sympathies, and as the *Times*, which was largely guided by him, was practically the English organ of the secession party and the most powerful and bitter foe of the cause of union, it is not surprising that some of his old friends looked askance at him, or that he resented the coolness and even the overt animosity which he had certainly provoked.

Dr. Mackay began to write early; and "verse—or worse," to quote Douglas Jerrold's very mild witticism, was his first love. At the age of thirteen he had a poem printed in a penny periodical called the *Casket*, and was visited by the usual dream of poetic fame in life and a grave in Westminster Abbey; but

practical considerations drive many a young versifier from Parnassus to Fleet Street, and young Mackay drifted into journalism. His first engagement was on the *Sun*, a Liberal evening paper; his second, on the then famous *Morning Chronicle*, of which he became one of the sub-editors. His connexion with the *Chronicle* brought him into contact with some interesting people, and placed him behind the scenes at interesting, though in some instances, nearly forgotten events. Interesting is perhaps hardly the word to apply to the Eglinton Tournament—that *reductio ad absurdum* of mock mediævalism; but Dr. Mackay's account of the incidents of the wretched fiasco, the summons of the newspaper correspondents to dinner in the servants' hall, and the appearance of Lord Londonderry clad in complete steel, with casque, plume, and—umbrella, is very entertaining.

Indeed, the book, as a whole, is the reverse of dull reading, though its contents have certainly a look of having been shaken together which is not pleasing to the artistic eye. Here and there are little repetitions, evidently due to imperfect revision of chapters which have clearly been written at widely separated times, and perhaps originally published in different places. For example, after we have been told all about Mr. Charles Rice, the musical composer, we are introduced to him again as if he were a perfect stranger; while a story about Mr. George Dawson and Archbishop Whateley is not only told twice (vol. i., pp. 196 and 294), but is told in such diverse manners as to render it certain that one telling, at any rate, must be grossly inaccurate. George Dawson, who is erroneously described as a Unitarian minister, went to Manchester to make a speech at the opening of the Athenæum; and several bishops, who had also been invited, refused to meet a man who was supposed to be in some way heretical. Archbishop Whateley, however, was not frightened, and in telling the story for the first time, Dr. Mackay writes:

"After Mr. Dawson had delivered a set oration, rich in words but poor in ideas, the Archbishop turned to me and remarked that his reverend brethren on the episcopal bench, had they been present, would have received no shock to their feelings by [sic] Mr. Dawson's discourse, except, perhaps, the shock of knowing that so shallow and harmless a person had so large a following in so intellectual a hive of industry as Birmingham."

What is our surprise when we come to the second telling of the story to read the following sentences:

"Mr. Dawson was at the time a very young man, spoke with great eloquence and power, and impressed the audience favourably, the archbishop included. 'I think,' said Dr. Whateley, turning to me at the conclusion of the speech, 'that my reverend brethren would have taken no harm from being present to-night, and that more than one of them whom I could name would be all the better if they could preach with as much power and spirit as this boy has displayed in his speech.'"

There is clearly something wrong here. Perhaps for the sake of his own reputation for accuracy, as well as for the satisfaction of George Dawson's many friends, Dr. Mackay will kindly explain.

JAMES ASHCROFT NOBLE.

NEW NOVELS.

Diane de Breteuille. By Hubert E. H. Jerningham. (Blackwood.)

Disappeared. By Sarah Tytler. (Chatto & Windus.)

Madame's Grand-daughter. By Frances Mary Peard. (Hatchards.)

A Mere Accident. By George Moore. (Vizetelly.)

Brotherhood. By David M'Laren Morrison. (Simpkin, Marshall & Co.)

The Wild Curate. By J. McGrigor Allan. In 3 vols. (White.)

A Wilful Young Woman. By Alice Price. (Frederick Warne.)

Sir Hector's Watch. By Charles Granville. (John Murray.)

"V. R." By Edward Rose. (Bristol: Arrowsmith.)

Diane de Breteuille is a really exquisite little story—exquisite in its plot, in its style, in its combination of English frankness that never descends into brutality and French charm that never degenerates into *chic*. The central incident of the book—a well-educated and obedient French girl making overtures to an English gentleman to aid her in escaping from a marriage with the man of her parents' choice—is so delightfully improbable that Mr. Jerningham may be believed when he says that it is based upon fact. That incident, however, makes *Diane de Breteuille* what its author terms it—a love story, pure and simple. Diane having thrown out a signal of distress to Henry Vere, it is the most natural thing in the world that, from being her knight and protector, he should become her lover. The two drift into love as inevitably as do Juan and Haydee; and, happily, there is so little of Lambro about the Marquis de Breteuille that, when his daughter declines at the eleventh hour, and in the Mairie itself, to accept the husband he had chosen, and in the most literal and public fashion rushes into the arms of another, he accepts that other with good feeling as well as French grace. Then the surroundings of the lovers are thoroughly in keeping with themselves: they are utterly free from vulgarity. The bewildered, but loyal, governess; the Comtesse de Chantalis, all lace and grace; her good husband, Raymond; even the disappointed suitor, M. de Maupert, are the impersonations of French honour and dignity in their respective spheres. They plot and counterplot, struggle with difficulties, and bear disappointments in a style which is irreproachable, but which is happily not marred by affectation. It is hardly possible to forgive Mr. Jerningham for the half-tragedy with which his little story closes—the snatching of Diane from her husband and children after six years of domestic happiness. It is a fact, Mr. Jerningham says; but, not being a realist, he ought to have kept the fact to himself. It is inartistic, to say the least of it, to place the cypress in such juxtaposition to orange-blossoms. In spite of this jarring conclusion, *Diane de Breteuille* is so nearly perfect that it is to be hoped its author will not be tempted by his success to write a three-volume novel.

Miss Tytler's new story is more ambitious and less satisfactory than anything she has

published for three years past. In *Disappeared* she is, or professes to be, on English ground; and she tries to reproduce the coterie-talk of a university, and not the confidences of lovers or the tattle of village gossips. She does not quite fail—Miss Tytler is too laborious, has too much skill, even as an imitator, to quite fail in anything she undertakes. But *Disappeared* is not nearly so pleasant, or successful as, say, *In Logis Town*. St. Bernard's College looks like St. Andrews trying to pose as Oxford. Tom Gage, the frivolous, brilliant, erratic, and conceited student of the "there's nothing new, and nothing true, and it's no matter" school has a "got-up" appearance. As for Hugo Kennett, the earnest professor, and his sister, they are really Miss Tytler's ordinary, stalwart, enthusiastic Scotchman and his "sonsie" Martha off a sister a trifle Germanised. The "disappearance" of Tom Gage, who is "accidentally" pushed into the university river by Hugo Kennett while engaged in a controversy with him, is too trifling and improbable an incident to be the centre of any plot. Miss Tytler is, so far as this story is concerned, seen at her best in her sketch of Petronella Gage, Tom's sister, who is one of those simple, good-hearted girls that it is her mission to do justice to. Mr. Macnab, who illustrates *Disappeared*, has surely done his worst by it. Even if Hugo Kennett, a rough creature, who evidently does not know what to do with his hair, is not a caricature, Petronella Gage need not have been represented very much as a pauper lunatic.

Admirers of Miss Peard's work, more particularly of her Dutch work, will feel somewhat disappointed with *Madame's Grand-daughter*. That may be because the scenery in the vicinity of Cannes is, in spite of sunshine and the eucalyptus, not so plot-moving as that of which the Hague is the centre. Or it may be that Miss Peard is more at home in telling a simple, and on the whole, prosperous love story, than in reproducing an old woman's essentially Italian revenge. Whatever be the cause, one feels exhausted when one has got to the end of the maze of rather petty intrigue and misunderstanding in which Madame de Mérillon and her grand-daughter Marcelle, and Sybille Valette and Lambert Solignac, get lost. Solignac, too, although it may be allowed that he makes in the end a good choice of a wife, strikes one as rather too half-hearted and undecided a man to make a hero of. Some of the minor characters in *Madame's Grand-daughter* are good, such as fat Barnabé, the notary; while Mademoiselle Jeanne, Lambert's aunt and Marcelle's nurse, is shrewd enough and kindly enough to have been drawn by Mrs. Oliphant—as an elderly Scotch maiden lady of good family.

A Mere Accident is the best written, and, on the whole, the least realistic of Mr. George Moore's novels. There is, of course, a good deal of morbid sensuality in it. The hero, John Norton, who is composed, in about equal parts of fool, priest, and prig, talks sad nonsense, such as that "Sussex is utterly opposed to the monastic spirit; why even the downs are easy, yes, easy as of [*sic*] one of the upholsterer's armchairs of the villa residences," and that "Mr. R. L. Stevenson is "a

charming writer" with "a neat, pretty style, with a pleasant souvenir of Edgar Poe running through it." He dreams asceticism, and bores his visitors with monasticism, but he can give them brandy and soda, and, if need be, absinthe; while on the walls of his rooms are French pictures, and on his shelves are French novels. Of course, also, *A Mere Accident* ends tragically; the heroine, poor innocent Kitty Hare, having been outraged by a tramp, goes mad and throws herself out of window. But there is in it none of the man-millinery, and comparatively little either of the gorgeousness or the suggestiveness which spoiled *A Drama in Muslin*. *A Mere Accident* also shows that, if Mr. Moore were so minded, he could draw healthy, virtuous people and their simple surroundings with more than ordinary ability. Probably he will take to this line of fiction when he has finished his studies of the skin-diseases of humanity.

Brotherhood is a curious *mélange* of public school and university life and London gaiety (?), friendship and flirtation, self-sacrifice and adultery, cricket and boating, Italian scenery, Scotch whiskey and a Scotch mother's goodness. The reader may learn if he chooses—but he may as well not choose—what is the exact amount of drapery that an Italian child, in training to be a prostitute or an actress, is expected to wear when she is dancing the can-can; that at Aldershot officers are in the habit of addressing barmaids in the language that, according to Shadwell's *Fair Quaker of Deal*, such girls were a century ago insulted with by midshipmen and boatswains; and that "Lady Pagoda remained pure, not from love of virtue, but because she possessed no strong animal passions which rendered vice pleasing," &c. Yet *Brotherhood* is not a realistic novel, but rather what its author styles "a strange hotch-potch of humanity." The writer is, we should say, an earnest, but somewhat juvenile, moralist, who has read and travelled a little, but has taken to writing novels before years have brought him a firm philosophy.

Mr. McGrigor Allan's *A Wild Curate* is almost as much of a hotch-potch as Mr. McLaren Morrison's *Brotherhood*. It is a trifle worse; for it is distended to three volumes, and it contains pigeon-shooting, an attempted murder, raving politics, Rational Dress, Seneca, Keats, Dissent, and "Lady Honoria's rich *soprano* rising in unison with Captain Rasper's powerful baritone, in an exquisitely beautiful Italian duet, *Una Notte a Venezia*." Mr. Weatherall, the curate, is not so very wild after all, unless it be wild to twaddle on nearly everything under the sun. He is always ready to obey his mother like the hero of *Tancred*, develops into a rector, defeats the designs of his enemy, Blackadder, and marries Lady Honoria when she is minus an eye. *A Wild Curate* is very absurd and very tiresome; and its plot is nearly as harum-scarum as its style. Yet it contains passages that are decidedly readable.

A Wilful Young Woman is a very pretty and carefully executed story of an old-fashioned pattern. The young lady who never rests till she has atoned for the ruin brought on innocent folks by the weakness, rather than the deliberate villainy

of her father is an old friend; so is the young lady who makes a proposal of marriage to a blind genius, who worships her, but is ashamed and afraid to avow his devotion. Sydney Alwyn is the two in one, and the only wonder is that such a charming and resolute girl could have had such an unlovely and selfish mother as Mrs. Selwyn. Gilbert Hurst, the blind genius, is a strong, and, on the whole, original character; yet, for a man who has read and reflected, he is unduly sensitive to the wounds inflicted on his pride by a garrulous sister. Richard Drayton—the good genius of the story, supplying the wants of the virtuous and needy, baffling the villains, and marrying Sydney's bosom friend—is an excellent example of the English rough diamond. There are some portions of *A Wilful Young Woman* that can hardly stand analysis. But, then, it is a story which, to be enjoyed, ought not to be analysed at all.

No more careful amateur-detective fiction than *Sir Hector's Watch* has ever been published, at least in English. It is not so powerful as the average Gaboriau or Boisgobey story; but it is much brighter and pleasanter. It does not exhibit so many wheels within wheels of crime as any of the innumerable and curious volumes by the American author of *Shadowed by Threes*; but it is incomparably more refined and artistic. Mr. Granville does not explain completely how, in his pursuit of Sir Hector Mackenzie's watch and Miss Mackenzie's hand, he and his wonderful servant Simmonds—such a servant as the elder Dumas or M. Jules Verne should have anticipated Mr. Granville in creating—are on such intimate terms with the fraternity of thieves. But the tracing of the watch, or rather of one of the two watches, in the story, besides other valuables, to Sir Hector's secretary, Le Breton, is managed very cleverly, and with an ingenuity that is none the less likeable that it reminds one of Mr. Stevenson rather than of Lecocq. Plot and not character is, of course, the strong point of *Sir Hector's Watch*. Yet Lord Fitzroy deserves a word of notice as an admirable sketch of a stately beau and bachelor whose heart is quite as good as his head.

"V. R." is the preposterous and, in parts, rather silly story of an impossible young lady who, on account of her initials is, in 1837, mistaken by some incredibly gullible Norfolk rustics for the Queen. It is a Jubilee comedy of errors, which the Jubilee mania may excuse, but nothing else can. Mr. E. Rose, its author, would appear to have studied Douglas Jerrold, for some of his characters are, like Jerrold's, not so much possible individuals, as oddities more or less typical of a particular time. But Mr. Rose has not the playwright instinct of Jerrold. "V. R." alike in its many faults and its few excellences, suggests the idea that in writing it Mr. Rose had the theatre-going rather than the reading public in his eye. Revised, reduced, and very greatly corrected, it might even yet be made to suit the less critical of the two audiences.

WILLIAM WALLACE.

SOME TRANSLATIONS FROM THE CLASSICS.

The Odes of Horace. Translated by T. Rutherford Clark. (Edinburgh: David Douglas.) Mr. Clark disclaims any idea that, after so many versions, he can hope to "reveal to the unlearned the treasures of the ancients"; accordingly he addresses himself wholly to the small class that love Horatian versions *per se*, as exercises of ingenuity. (Pref., p. i.) He may fairly claim a higher position than this. His book is full of clever versification and very graceful turns of thought; nor can we recall any version better calculated to please those to whom the original is unknown. Horatian, in the strict sense of the term, the version is not. Too much of the form is sacrificed, and, with the form, too much of the poet's weightier mood. For instance, the grand mysterious ode (Bk. i., Ode 28) to Archytas, melts, in Mr. Clark's hands, into a pretty wistfulness, reminding one of Mr. Lang's occasional verses:

"Into the halls on high
What profit to presume?
Or round the vaulted sky
On spirit wings to fly,
Returning to the tomb?"

No novice he, you say,
In nature's verities;
But all the sons of clay
One night awaits, one way,
And no man treads it twice."

This is elegant and graceful; but it lacks the solemnity of the original. Another defect is the use of conventional phrases where the Latin is purely metaphorical. "The roar of battle" is a good phrase enough; but, as a rendering for "proelia virginum sectis in iuvenes unguibus acrim" ("the roar of battle waged by girl on boy"), is wholly out of balance, and almost absurd. It comes of thinking more of English phrases than of the meaning of the original. Neither, in the same ode, do we like "Merion" for Merionen; nor on p. 25, Ode 12, such a wholly alliterative line as:

"Fabricius, Furius frame";

nor (Ode xvii.), for the sufficiently ugly "olentis uxores mariti," the still uglier "The odorous sultan's harem." Mr. Clark follows Mr. Calverley and the advice of Prof. Conington in rendering the weightier Alcaic Odes into the metre of "In Memoriam"; and these are all powerfully and effectively done—e.g., Ode iii. 3:

"Being more resolute to ban
The gold best buried 'neath the soil
Ungarned, than to gather spoil,
Plundering high Heaven to pleasure man.

"So shall her conquering sword attain
Earth's utmost bound, and overrun
Dominions of a wilder sun,
And cloud-wrapt kingdoms wet with rain."

The language is poetical throughout, reaching sometimes great felicity, as in Ode ii. 5:

"Dearer than thy young Phœbe,
And Chloris with her shoulder white,
As pure and perfect as the light
Of moonbeams on a midnight sea,

"And Gyges, though, among the girls,
The keenest eye might fail to trace
The fair enigma of his face,
The riddle of his floating curls."

This is certainly delicately and beautifully expressed. Horace might well cry "Euge!" to it. Nor is such grace uncommon in Mr. Clark's little labour of love.

The Alcestis of Euripides. Translated by Margaret Dunlop Gibson. (Williams & Norgate.) The pathetic circumstances under which this translation has been completed will cause the preface to be read with sympathy and the translation itself with interest. We feel, with

Mrs. Gibson, that the "Alcestis" must always interest a Christian student, in one point at least, beyond other Greek dramas. We hardly share her impression (p. v.) that "it is curious to find the relation of stepmother deprecated in those early days." It is a prejudice rooted in human character, not in Christian civilisation. The "iniusta noverca" was as prominent in Rome as in modern literature. The blank verse, though somewhat stiff and monotonous, has at times a sedate beauty of its own, as, e.g., on pp. 14-15:

"And for these children, may I have in them
The blessing from the gods I lose in thee.
I will not mourn for thee a year or two,
But to the utmost verge of this my life,
In enmity with her that bare me, hating
My father, givers of lip-kindness only.
But thou has given for me thy dearest self,
And saved my life."

And the choruses, though studded too freely with short and weak lines, are in places gracefully turned—e.g. (p. 24-5):

"Dappled lynxes
Filled with joy, were with them fed;
Herds of lions tawny-red,
From the Othrys-valley sped.
Spotted fawns were
Dancing, Phoebus, round thy lute,
From the tufted pines they throng,
Springing with elastic foot,
Joying in the merry song."

Eumelus's childish complaint (p. 17) is somewhat too childish. We do not like "mamma" for *μαία* in serious poetry; nor "all the tinged flood-tide of her eyes" for *ὀφθαλμοτέκνη πλημμυρίδι* (p. 8). There is nothing about "tinged" in the Greek. It is hard to make l. 1145, p. 47 scan, either by ear or finger, as blank verse.

Medea. Translated by W. J. Blew. (Rivingtons.) There is a pleasant interest in the circumstances of this little book. It is the work of a grandfather, dedicated to his grandson. The dedicatory letter reminds its recipient that to read "Medea" in the old days, with no Mr. Sidgwick or Mr. Glazebrook at your elbow, was not a light task. It was lightened, however—so the translator assures us—by the ring and fire of Campbell's adaptation of the choric Odes, which, accordingly, are here reprinted. Finally—to encourage an English boy's natural love of boating—Mr. Blew translates the "Pinnacle" of Catullus. Here is a specimen:

"Amastrix, thou of Pontus, and Cyturus, tree on tree
Box-kirtled (saith the pinnacle), well hath this
been known to thee,
And is—that on this top she stood, from her
first baby-shoot
Till she dipped her maiden oar-blades in the
sea-floor at thy foot."

"Homeward Bound" is an allegory of Christendom; "The Ballad of Bacchus and the Rovers," a spirited version of the Homeric hymn. The translation of the "Medea" seems to us a little stiff and monotonous, though the language is often well chosen. We dislike the recurrent "Tyrsen" for Tyrrhenian; for *ἀνδρῶν τυράνων κήδος ἠράσθη λαβεῖν* we think a less affected rendering could be found than

"Kinship with kings was his inamorata."

But the sad scene (pp. 39-42) of the deaths of Glauce and Creon is given with great power and picturesqueness. This for instance, is good verse—

"She took the tissued robe
And folded it about her, and put on
The golden tiar round her curls, and trimming
Her hair at a bright mirror, laughs to see
Therein the soulless image of herself;
Then, from her seat upstanding, through the house
Paces, with dainty-stepping all-white foot,
At the gifts over-gladdened."

Few of us will write so well as that, as grandfathers, we opine.

Le Rane di Aristofane. Tradotte in Versi Italiani. Carlo Castellani. (Bologna: Zanichelli.) Prof. Castellani has the one pre-eminent qualification for a commentator and translator—an ardent enthusiasm for his author. His soul has been vexed—naturally, yet needlessly—at the long list of literary men who have disparaged Aristophanes. The great comedian has, undoubtedly, been raked by a cannonade from right and left. Those who could have understood his humour have, too often, been scandalised by his licence; those who could comprehend that satiric revelry need not imply moral corruption have, too often, missed, in a cloud of pedantry, the radiance of his wit. But we would respectfully bid Signor Castellani not repine at the adverse judgment of Plutarch; nor say regretfully that “la posterità generalmente confermò quella sentenza” (Introd. p. 2). As to Voltaire’s incredible *dictum* (p. 3 note)—“Il me paraît plus bas et plus méprisable que Plutarque ne le dépeint”—let it be ranked with the same critic’s estimate of Dante. Let them not be forgotten, but remembered as conclusive proofs of the point where Voltaire’s insight failed him. They criticise the critic. It is said to be a weakness of Italians to overrate the literature and criticism of France. In this case, at all events, the world confirms Prof. Castellani’s judgment and discards Voltaire’s. Whether the “Frogs” is rightly accounted Aristophanes’s best comedy (see note, p. vi.) may be matter of argument: that Aristophanes is among the three kings of comedy is accepted, Voltaire notwithstanding. The introduction (pp. 1-62), though lucidly and even brilliantly written, seems to us rather too massive for the prelude to a poetical translation. It is the result of Signor Castellani’s ambition. To acquaint Italy with Aristophanes, he thinks it needful

“Esplicarlo a tal segno che non rimanga nulla, non pure ignoto, ma dubbio o inavvertito; bisogna fare in modo che il lettore rispetto all’ oggetto della sua lettura si trovi, quasi per dire, nelle condizioni psicologiche in cui si trovava l’ateniese che assisteva alla rappresentazione della commedia.”

It is a generous enthusiasm, but the object is unattainable. We cannot so reach Dante, nor even Shakspeare, much less Aristophanes. None the less, the introduction is good and useful reading. We note a very misleading sentence (p. 8), where we are told that the Sicilian expedition “terminò con la totale distruzione delle forze ateniesi e con la morte dei capitani Nicia, Lamaco, e Demostene.” Who would not suppose from this that Lamachus took part in the catastrophe? But he was slain by the Anapus before the arrival of either Gylippus on the one side, or Demosthenes on the other. On pp. 38-9, the translator seems to have been misled by Aristophanes’s merriment into really supposing that Euripides justified the perjury of the tongue if the heart was unsworn—into thinking that his speculation, “whether life be not death and death life,” was a pure paradox. But this is to mistake Tenniel’s cartoons for literal history. It would certainly be possible, and even easy, to give the argument of the “Frogs,” in the most helpful form, in somewhat less than sixteen pages (46-62). But the notes are useful and readably short. On l. 105, we think the more unlettered reader, perhaps, should be told why the “beatii,” i.e., μάκαρες, are identified with the “conviti del re Archelao.” The jest is not brilliant, but without it the passage is pointless. Sometimes that is added in the notes which the mind should add for itself, e.g., on l. 216, p. 95, when the dead man refuses to carry Dionysus’s luggage cheap, with the oath ἀναβίβην ὄν πάλιν, we are warned that “con queste brevi e terribili parole è svelato

il mistero della vita.” Nothing goes so near blunting the fine edge of Aristophanes’s thought as this sort of explanation. The hint in Heracles’s farewell, χαίρε πάλα’ ὠδελφέ, is surely ignored in “Ti saluto, o fratello” (p. 92.) But often a really useful parallel is quoted: e.g., the local bearing of the phrase (l. 603) “le titrasie Gorgoni,” is neatly expounded “Cosi oggi di un fiorentino potrebbe dire *streghe di Camaldoli*.” Italian, no doubt, with its wealth of diminutives and humorous forms, lends itself particularly well to the translation of Aristophanes. Prof. Castellani is at his best, we think, in the mock-heroic passages, e.g., the address of Aecus to Dionysus (p. 131):

“O audace abominevole sfrontato,
Ribaldo arciribaldo ribaldissimo,
Tu che prendesti il nostro cane Cerbero,
Ch’era a mia guardia, e strettolo alle fauci,
Fuggisti via menandol tecco. Ma ora
Sei preso in mezzo: chè prigion ti tiene
E di Stige la rupe dal cuor nero;
E d’Acheronte il sasso che giù stilla
Sangue; e l’erranti cagne di Cocito;
Non che l’Echidna dalle cento teste,
Che ti lacererà tutte le viscere.”

But the purely satirical parts—e.g., the murdering of Euripides’s cadence by the ληκύθιον—is capitably done.

“Eur. Egitto, come il grido ovunque suona,
Per nave ad Argo co’ cinquanta figli
Essendo giunto—
Aesch. ruppe l’ ampollina.
Eur. Cos’ e quest’ ampollina? non andrà
Alla malora?”

And so on. The joke somehow seems to fit the Italian language more than another. Indeed, we confess to having found in this translation not a little reason for assenting to the comparison instituted by Mr. Browning as to the relative sonorosity of Greek and Italian. The defects of the translation and commentary—a tendency to amplify in the one, and to explain the obvious and suggest the inevitable in the other—may probably be ascribed to Prof. Castellani’s evident feeling that Aristophanes is not duly studied by his countrymen. We confess to a feeling of surprise that such should be the case. Where should his sunny genius be appreciated so well as in the sun-bright land that knows the mood of Carnival?

König Ödipus. Übersetzt von Emil Müller. (Halle: Max Niemeyer.) We are not acquainted with any English translation of a Greek drama, except Prof. Kennedy’s “Agamemnon,” that attempts the reproduction of the Greek iambic measure in facsimile, as Herr Müller does in this prettily printed German version. Prof. Kennedy’s alexandrines certainly do not attune themselves to the ordinary English ear. So far as we can judge, the monotonous pulse of the metre is less perceptible, yet still perceptible, in the German. In each alike, the form of the original is preserved; but its music seems to have floated away. Let anyone who can read Greek and German, or get them read to him, contrast the original and the translation of Tiresias’s famous warning to Oedipus of the unknown horror, soon to be revealed to him in his guiltless pollution (ll. 420-4).

βοῆς δὲ τῆς σῆς ποῖος οὐκ ἔσται λιμήν,
ποῖος Κιθαράν οὐχὶ σύμφωνος τάχα,
ἔταν καταίσθη τὸν ἄμναϊον, ἢ δόμοις
ἀνορμον εἰσπλευσας, εὐπλοίας τυχών;

“Dann vom Kitharōn schallt zurück dein Weh-schrei:
Von Berg zu Bergen halt er und von Strand zu Strand,
Wenn du begreifst, in welches Heim der Braut-gesang,
In welcher Port dich jenes Windes Gunst geführt!”

The translation is grave, admonitory, impressive; but it is not rhythmical and musical, it is not solemn with presence and awe, as the

original is. Yet who will say that the language of “Faust” is incapable of these qualities, any more than is the language of “Hamlet”? It was, we think, a pity to annul the interrogative form of the original, a pity not to get nearer to the phrase εὐπλοίας τυχών, a pity to amplify the ποῖος Κιθαράν into many mountains. Prof. Jebb will not allow that λιμήν has here its maritime sense. It is ill arguing with the master of many legions, or we would fain urge the context against his conclusion. On the whole, we prefer the choric renderings to those of the dialogue. There is a grave and sonorous sadness, not unworthy of the original, in the first chorus, describing the pestilence of Thebes. It is not literal, but it is fine.

“Auf dem fetten Gefilde nun
Hin welken die Halme, vergeblichen Wehen
In Foltterqual erliegen die schmendnen Mütter.
Und Seel’ auf Seel’ ellenden Schwungs, un-
aufhaltsam entfleucht mir.
Schneller als fressendes Feuer hin stürmen sie
Zu Hades’ Nachtgestade!”

But, to Sophocles, the souls passed away into the darkness like birds on nimble wing, more swiftly than unconquerable—not merely devouring—fire.

NOTES AND NEWS.

THERE is every reason now to believe that the Life of Mr. Darwin, by his sons, will be published in October. Mr. Joan Murray will also have ready about the same time M. du Chaillu’s work on the Vikings.

MESSRS. G. BELL & SONS have in the press a new volume by Michael Field, containing two plays, entitled “Canute the Great” and “The Cup of Water.” The latter is founded on a recently published prose fragment of Rossetti.

A DRAMATIC poem, entitled *The Sentence*, by Mrs. Augusta Webster, dealing with the life and times of Caligula, is now in the press. The publisher is Mr. T. Fisher Unwin.

PROF. J. E. THOROLD ROGERS is passing through the press two more volumes (v. and vi.) of his *History of Agriculture and Prices in England*, covering the period from 1583 to 1702. He intends ultimately to continue the work down to the end of the eighteenth century.

THERE is some talk, in Scotch geographical circles, of an expedition to Lake Chad, at the cost of Mr. Andrew Carnegie, and to be commanded by Mr. Joseph Thomson.

THE printers (in Benares?) are occupied with Sir Richard Burton’s third volume of *Supplemental Nights*, which will before many weeks be issued to subscribers. They contain the ten tales in Galland, beginning with “Zayn al-Asnam” and “Aladdin.” These two have been translated directly from the Arabic MSS. in the Bibliothèque Nationale, lately acquired by M. Hermann Zotenberg (see ACADEMY, January 22, 1887). This distinguished Orientalist, by-the-by, is now printing the text of “Aladdin” with prolegomena and annotations, which will be most interesting and novel to students. Sir R. Burton has been compelled, through the impediments placed in his way by the Bodleian authorities (see ACADEMY, November 13, 1886) to modify his plan, and to substitute Galland for the Wortley Montague MSS., of which he has as yet translated only half of the fourth volume.

MESSRS. CHATTO & WINDUS will publish shortly a new volume, by Mr. W. Clark Russell, entitled *A Book for the Hammock*.

A BOOK likely to cause some sensation in clerical circles is announced for immediate publication by Mr. T. Fisher Unwin. It is entitled, *Only a Curate*; and the writer died

while his book was yet in the press. The hero of the story is a young Canadian, who, on taking orders in England, is much astonished by the machinery—if so it may be called—by which the Church of England is worked.

MESSRS. TRÜBNER & Co. have in the press, for immediate publication, *A Guide to Alassio*: a Pearl of the Riviera, by Dr. Joseph Schmeer, containing a chapter on its history, an account of the town, the people, their manners and customs, trade and industry, excursions and meteorological observations.

An Old World Story is the title of a new tale, founded on the times of the Commonwealth, that will be published by Mr. Elliot Stock very shortly.

THE City of London Publishing Company will almost immediately issue a volume of poems, entitled *Roses and Thorns*, by C. W. Heckethorn.

THE next volume in the series of "Camelot Classics," published by Mr. Walter Scott, will be Mazzini's *Essays, Literary and Political*, with an introduction by Mr. W. Clarke.

MR. AARON WATSON has made arrangements to contribute to a number of provincial newspapers a series of studies in Bohemia, under the title of "Characters of the Day."

MR. ARTHUR SYMONS'S *Introduction to Robert Browning's Works* (Cassell) has sold out its first edition of two thousand copies within four months. A revised edition will be ready next month, with Mr. Symons's comments on Browning's *Parleyings*.

The Browning Society—of which Dr. F. J. Furnivall was elected president at the late annual meeting—has more members than ever. Mr. Henderson has accepted the post of secretary for New York.

ON Tuesday, Wednesday, and Thursday of next week Messrs. Sotheby will sell an unusually interesting collection of books, MSS., and autograph letters, the bulk of which come from the library of the late William Brice, of Bristol. Mr. Brice's books include many county histories on large paper, and are all well bound. He also possessed all of the four folios of Shakspeare, what is known as the Shakspeare edition of Holinshed, Purchas with the almost unique map, and the first edition of Hakluyt with the scarcely less rare map. Among the other lots we can only mention several holograph MSS. of Pope's poems, and—what is still more attractive—similar holographs of some of Rossetti's ballads and sonnets. It will be very curious to learn the comparative market prices of the originals of the "Essay on Man" and "The King's Tragedy."

By the death of the Rev. Dr. W. Maturin, of Dublin, the post of Marsh's librarian in that city has become vacant. Marsh's library has a curious history. It was founded in 1707 by Archbishop Marsh, who presented, as the nucleus of the collection, the books of the famous Bishop Stillingfleet, and endowed it with a good estate in the county Meath. At present it comprises about 20,000 volumes, besides some valuable MSS. The post is worth about £250 a year, with a residence. It is open to M.A.'s of any university in Great Britain or Ireland, and is not confined to clergymen, though hitherto the appointments have been notorious for unblushing jobbery. For more than a century—from 1773 to 1875—the librarianship was held in succession by three clerical members of the Cradock family, descended from a former Dean of St. Patrick's, and collaterally from an archbishop of Dublin of the same name. The duty of appointment is vested in a body of official governors, of whom two now happen to be Roman Catholics.

Applications should be addressed to the Archbishop of Dublin.

At a recent meeting of the Académie des Sciences Morales et Politiques, M. Barthélemy Saint-Hilaire called attention to Mr. H. J. S. Cotton's little book on *New India* (Kegan Paul, Trench, & Co.)—which (we may mention) has been translated into some half dozen of the vernacular languages. M. Saint-Hilaire commended the information given about the caste system, the joint-family life, and the influence of education; but, while he agreed that Christianity was destined to make no progress, he doubted the probability of the spread of Positivism in India.

THE FORTHCOMING MAGAZINES.

AN important series of papers by Mr. David A. Wells, the American economist, on the present "Great Depression of Trade," will be commenced in the next number of the *Contemporary Review*, which will also contain a continuation of Mr. Holman Hunt's autobiographical papers, and articles by M. Clermont Ganneau on "The Moabite Stone," by Lord Thring on "Irish Alternatives," by Prof. Stokes on "Alexander Knox and the Oxford Movement," and by Mr. J. Spencer Curwen on "The Progress of Popular Music."

PRINCESS LOUISE has placed at the disposal of the editor of the *Lady's World* the original drawing of the screen designed by herself and executed by members of the Lady's Work Society, of which she is president. The design is being reproduced by lithography, and will be given in the *Lady's World* for August.

MR. G. A. SALA'S house in Mecklenburg Square will form the subject of a special article, with illustrations, in the August number of the *Magazine of Art*; Mr. Richard Jefferies will contribute a paper entitled "Nature in the Louvre"; the frontispiece will consist of a steel engraving of "The Daughter of Palma," from the painting by Palma Vecchio.

LADY SOPHIA PALMER will contribute to the August number of the *Quiver* a paper on "Jerusalem as it is," containing her experiences of the city during a recent visit to the Holy Land.

"A TREACHEROUS CALM" is the title of a new serial story by Thomas Keyworth, the opening chapters of which will appear in the August number of *Cassell's Magazine*.

A TRANSLATION.

APRIL DRINKING SONG.

(From the Italian of Giosué Carducci, "Levia Gravia," I.-IX.)

Now from the leafy closes—
Dark holm-oak, almond pale—
Dances upon the gale
The blithe birds' nuptial song;
And the shy, sweet primroses,
On sunlit hills unfold;
Eyes of the nymphs of old
That watch the mortal throng.

And sunbeams sottly glowing
The orchards white salute;
And o'er the landscape mute
The sky bends low with love;
And April's warm breath blowing
Swayeth the corn in flower;
Like veil of bride in bower,
Which her soft love-sighs move.

With throbbing and leaping pulses,
Feel the sweet influence both
The vine's rough trunk uncouth,
The tender maiden's breast;
In odorous air of spring-tide
Buddeth the tree-trunk cold;
The love her heart doth hold
Is in bright blush confest.

The warm air breeds a ferment,
And in a seething flood
Leaps in the veins the blood,
Leaps in the cask the wine;
Ah, for thy native hillside,
Red prisoner, dost thou fret?
Is it thy strong regret
That shakes that tun of thine?
Here of the vine-shoot joyous,
The jocund spirit see;
How better now employ us,
Than set the captive free?
From where he is prisoned darkling,
Free to the glad sunlight;
Alive and brilliantly sparkling,
Here in the wine cup bright.

In sight of the hills that miss him,
Again to see the day,
Let the soft south wind kiss him
That ushers in the May.

Thou smil'st on him, O Sun, from thee he springs—
Begot when thou sink'st low on Ops' deep
breast.

And this thy gift comfort to sad life brings,
Ardent as thou art, yet serenely blest.
When thou recedest prone, himself he flings,
Celestial thrall in earth's dark jail opprest.
Then steep thy beams in heavenliest vermeil glow,
And kiss, immortal sun, thy child's bright brow.

Vermeil is this—But that of golden hue,
As thy bright hair, Apollo, lord of light;
Or the fair nymphs', that from Olympus drew
Thee, to pursue through Tempé's vale their
flight,

What time the Ionian spirit joyous grew,
And named thee lord of all things fair and
bright.

Alas, the fairest shapes are banisht now—
Yet kiss, immortal sun, thy child's bright brow.

Of them he only doth to us remain;
And well I love him whether white or red;
White, he's the light that flashes from the brain,
And sparkles into song in poet's head.
Red, he's the true heart's blood, strong to sustain,
That leaps to high-souled deeds and conquers
dread.

Steep then thy beams in gold and vermeil glow,
And kiss, immortal sun, thy child's bright brow.

M. R. WELD.

MAGAZINES AND REVIEWS.

THE "Smith and Wright" is the title of a very short paper in the *Antiquary*, by Mr. J. F. Hodgetts. It is instructive, but we feel that a great deal more information ought to have been given. So very much of what we call modern civilisation has been the direct result of the labours of the men who work in iron, wood, and stone, that we cannot but wish that the early and mediæval history of these "crafts" should be dealt with in an exhaustive manner. "Mellifont Abbey" is the subject of a paper by Mr. F. R. MacClintock. Though we have suffered more than any man can tell by the destruction of the remains of our monastic architecture in this island, the damage has not been so relentless as in Ireland. It is probable that, except in a few places on the eastern side of the island, the architectural glories of the green isle were never so great as those of England and Northern France. The long continued wars and rapine by which Ireland was tortured hindered the growth of architecture as it did the sister arts; but that there was much that was beautiful we know, and of that much but a few precious fragments remain. Enough, however, exists, to show that in Ireland as elsewhere, architectural beauty was a strong passion. Mellifont was a Cistercian house. Its founder was an Irish prince, but it really owes its origin to the great Saint Malachi, Archbishop of Armagh, the friend of Saint

* Ops—the Oscan earth goddess; the meaning is that the wine is generated when the sun hangs low over the earth in winter.

Bernard. Mr. MacClintock tells us that "monkish annals . . . do not, as a rule, furnish very profitable matter for reflection." In this we do not agree with him. How much should we know of the middle ages had it not been for the monastic chroniclers? We concede, however, that the storm-time of the Reformation, when the religious houses were secularised, is also important. Richard Conter, the last abbot, surrendered his house to King Henry VIII. in 1540. The abbey lands seem not to have been given away until 1566, when they were bestowed on Sir Edward Moore, an English soldier of fortune. The abbey was then converted into a dwelling house where the Moores resided until they removed to Moore Abbey, the present seat of the family, early in the last century. The work of destruction has not been so complete here as elsewhere; we gather from Mr. MacClintock's paper that the chapter-house is still in a nearly perfect state. The series of papers on "Old Storied Houses" progresses well. The Oaks, West Bromwich, is the one treated of now. From the engraving here given, it seems to be an excellent specimen of those half-timbered structures of which England once possessed so many fine examples. Mr. Peacock has contributed a paper on "John Hodgson," author of the *History of Northumberland*, which draws attention to the fact that Hodgson, as well as being a learned antiquary, assisted Sir Humphrey Davey in those researches which led to the invention of the safety-lamp.

THE *Theologisch Tijdschrift* for July contains another article on the date of the prophecy of Joel by Dr. Matthes, with reference to recent writers, especially W. L. Pearson, whose ill-thought-out tractate derives special importance from the assistance which the author states that he received from Prof. Dillmann. Dr. van Manen renews recent attempts to raise the credit of Marcion. This first paper contains a historical survey; in the next, a detailed discussion will be given relative to the Epistle to the Galatians. Dr. van Leeuwen notices W. Wason's edition of Plato's "Symposion," taking a higher and, as it seems, worthier view of that charming work. Dr. Hugenholtz draws attention to some points in Wundt's important work on ethics. Dr. Baljon criticises the treatment of the text in Heinrici's excellent commentary on 2 Corinthians. Dr. Tiele notices recent issues of the "Sacred Books of the East."

THE July *Livre* is as interesting as usual in its minor and contemporary articles; but the part destined for posterity is not so good as it might be, and as it often recently has been. A review of Mr. Rogers Rees's *Pleasures of a Book-worm*, and an account of "Les Grands Editeurs d'Allemagne" are, no doubt, both things which may very properly find a place in such a publication. But we hardly think that either is up to the level of chief piece of resistance in *Le Livre*; and other there is none. Something the same may be said of the illustrations—a portrait of Herr Paul Lindau, and a rather commonplace sketch of the Rouen Typographical Exhibition. They certainly "do not over-stimulate"; indeed, they do not "stimulate" half enough.

THE HISTORY OF THE INVENTION OF PRINTING.

XII.

I HAVE now endeavoured to demonstrate that when we place the printer of the Costeriana and his products in a period commencing with the year 1471 and ending several years afterwards, we find him and them out a very strange figure indeed among the other printers and the other products of that period. But when we place him and some, at least, of his works about and before 1454, that is to say, if we

acknowledge him as the inventor of printing and some of his works as the firstfruits of the art of printing, we are able, forthwith, to reconcile a variety of circumstances, traditions, and accounts, which otherwise remain hopelessly at variance with each other, and with a period of 1471 to 1474, and later. If we place the Costeriana about and before 1454, we make them (in accordance with the statement of the Cologne Chronicle) the first prefiguration of Mentz printing, and have the key to the perfection of the Mentz products which we already observe at the moment that the art of printing made its appearance there. If we refuse to date the Costeriana so early, and to accept them as the models of Mentz printing, this perfection of Mentz printing must always be regarded as an inexplicable fact. And if we refuse to date the Costeriana so early, and to accept them as the models of Mentz printing, we are compelled to act in the most extraordinary manner. In the first place, we should have to say that (though bibliographically speaking the Dutch and the Gutenberg and the Schoeffer *Donatuses* cannot be said to differ in point of time, yet in order to satisfy some theory) we declare the Dutch *Donatuses* to have been printed circa 1471-74, therefore about twenty or thirty years later than the Mentz *Donatuses*. Our next step would be, of course, to declare that the *Specula* and the *Doctrinales*, and all the other Costeriana which cannot be separated from the *Donatuses*, were likewise not printed before 1471-74. And when once we have satisfied ourselves that these arguments are perhaps not usual, but demanded by the exigencies of the Gutenberg theory, and have, accordingly, brushed the Dutch *Donatuses*, and the *Specula*, and the *Doctrinales* completely out of our sight, we smilingly say to anyone who dares to call our attention to Ulrich Zell's testimony in the Cologne Chronicle of 1499: "But, my dear sir, there are no *Donatuses* printed in Holland that Zell could possibly refer to as having been the 'prefiguration' for Mentz printing, for those that you are thinking of were printed long after the invention of printing had been made at Mentz. Zell was mistaken in every one of his particulars; he meant *Donatuses* printed from wooden blocks, not from movable types, and when he spoke of Holland he meant Flanders!" And if anyone should have the courage to refer to Junius's account of the Haarlem invention, we simply declare that his whole account is a fable, a legend, a myth from beginning to end. And if anyone should hesitate and murmur that, though some of Junius's particulars appear doubtful, and even wrong, yet a good many of the genealogical and bibliographical particulars mentioned by him have turned out to be absolutely true, and that this could not have been the case if everthing had been a falsehood—we reply that Junius also relates particulars about a mermaid, and tells us that a woman had given birth to 365 babies at one and the same time, and that therefore everything else mentioned in his *Batavia* must be a fable also.

In other words, if we refuse to date (some at least of) the Costeriana before Mentz printing, we are compelled to deal with Zell's account in the Cologne Chronicle in a manner which would not be allowed in any other case. We should have to say that this man, whose utterances as regards Gutenberg and Mentz printing are regarded as Gospel-truths, went completely off his head the moment he spoke of Dutch *Donatuses*, and said something quite different from what he meant, or, rather, referred to something that he omitted to say. In fact, desperate attempts to distort and discredit Zell's account have been made at all times, and by various authors. As long as no typographically-printed *Donatuses* had been discovered,

the opponents of the Haarlem claims pointed exultingly to this want of evidence in proof of Zell's allegation, who, therefore, so they said, could only have meant xylographically-printed *Donatuses*. Now that we have the very *Donatuses*, which were formerly (when people fancied that they did not exist) emphatically demanded as the only means of substantiating Zell's assertion, the opponents of the Haarlem claims turn round and say: (1) that Zell must have meant Flanders when he spoke of Holland; (2) that he could only have meant xylographic *Donatuses*, as otherwise his account would be contradictory in itself, ascribing the invention of printing to two persons and to two different places; (3) that he was a pupil of Peter Schoeffer, the rival of Johan Gutenberg, and, therefore, wished to detract from the latter's glory; and (4), lastly, some ingenious editor of the Cologne Chronicle professes to have discovered that Ulrich Zell, though he is expressly named as the author of the substantial part (the beginning and progress of printing) of the celebrated passage in the Cologne Chronicle, did not suggest it, after all. Explanations and applications of this astounding feat of interpretation may be read in Dr. Van der Linde's last two works on printing, and his explanations and interpretations are echoed by all those who wish to acknowledge Gutenberg as the inventor of printing. There is, of course, contradiction in the account of the Cologne Chronicle if we were to take it as a whole, because it apparently tells us in the first instance (1) that the art of printing was invented at Mentz in 1440; and it then goes on to say (2) that from 1440 to 1450 the art and all that belonged to it was investigated; and it continues to say (3) that in 1450 people began to print, the first book that was printed being the Bible in Latin; then follows the important contradiction (4) that, although the art was discovered at Mentz, as is said before, in the manner as it is now [1499] customary, yet the first prefiguration was found in Holland out of the *Donatuses*, which had been printed there before that time [1450], and from and out of them was taken the beginning of the aforesaid art, and it has been found much more masterly and more exact (*subtilis*) than that [other = in Holland] manner was, and has become more and more artistic; then follows (5) a contradiction of Nic. Jenson being the inventor of printing; then, again (6), an assertion that the first discoverer (*vinder*) of printing was a citizen of Mentz, who was born at Strassburg and named "jonker Johan Gudenburch"; then (7) an assertion that the art of printing spread from Mentz to Cologne, Strassburg, and Venice; finally (8), the information of the compiler that the beginning and progress of the aforesaid art had been verbally related to him by the upright man, master Ulrich Zell, of Hanau, still a printer at Cologne in 1499.

Now, it is admitted (in fact, it is clear from the wording) that statement No. 1 was copied by the compiler of the Cologne Chronicle from Hartmann Schedel's Chronicle, published in 1493; that statement No. 2 was written by the same compiler as a transition from statement 1 to 3; that the latter statement was made by Ulrich Zell. And rational people would come to the conclusion that statement No. 4 was also made by him. But no; statement No. 4 is declared to have been written down by the compiler, just as if the latter himself did not distinctly say that the beginning and progress of the art had been told him by Ulrich Zell.

I think it must be plain to everybody that if we remove statement No. 1, which is admitted to have been copied from Schedel's Chronicle, the whole passage in the Cologne Chronicle becomes quite clear; in fact, it is not in the least obscure, unless we decline to have any-

thing to do with the Haarlem tradition. We see that the compiler of the Cologne Chronicle took counsel with Ulrich Zell as to the art of printing, and that Zell told him certain things which he would not, or could not, reconcile with the statements which he found printed in the historical books at his disposal. So he copied first Hartmann Schedel's statement (1), and inserted No. 2 in order to reconcile statements Nos. 1 and 3. But when we remove Nos. 1 and 2, and also regard Nos. 6, 7, and 8 as the compiler's statements, as they certainly appear (even to Dr. Van der Linde) to be, what is there to prevent us from accepting statements 3 and 4 as Zell's utterances? They actually relate the beginning and progress of the art of printing, which the compiler, as he says, had heard from Zell.

We should, of course, have to reject Zell's statements if we had no *Donatuses* which could be said to have been printed in Holland before people printed at Mentz. I, for one, should even feel inclined to reject Zell's statement, if, after nearly four hundred years, we had found only a single *Donatus* printed in Holland, because Zell speaks in the plural. But we have several editions of *Donatuses*, which have undoubtedly been printed in Holland. These two circumstances (the plurality of the *Donatuses* and the fact that they were printed in Holland) agree, therefore, with Zell's statements. But those who wish to reject his testimony tell us that the *Donatuses* printed in Holland were not printed before people printed in Mentz. I have endeavoured to demonstrate that the *Donatuses* printed in Holland may be said to be at least as old as the Gutenberg and Schoeffer *Donatuses*; and that, if we grant so much, the Dutch *Donatuses* may then be said to be older than the Mentz *Donatuses*, for there is no difference between the printed books of the period 1454 to 1477. It is clearly the duty of the opponents of Zell's testimony to say why the Dutch *Donatuses* should be dated even a single year later than the Mentz *Donatuses*.

We should, of course, have also to reject Zell's statements, if the *Donatuses*, which we may fit into his account, differed, even in the minutest particular, from the books on which the claims of Holland (=Haarlem) are based by a tradition handed down to us by Junius, and which cannot be said to have derived, in any sense of the word, its particulars from Zell or from the Cologne Chronicle. If, for instance, the *Speculum* and the *Doctrinale*, on which Junius based the Haarlem (=Holland) claims, could be declared, with any degree of certainty, to have been printed not earlier than 1480-1490, I, for one, should certainly abstain from saying one word more. But when we see the opponents of the Haarlem claims themselves admit that the printing of those works cannot very well be placed later than 1471-1474, then we may be allowed to ask them what difference they can point out between the printing and workmanship of these Dutch and German incunabula produced between 1454 and 1474, which would compel us to date the former later than the latter. Or I for one should abstain also from saying one word more if the types of the *Speculum* and the *Doctrinale*, on which Junius based the Haarlem (=Holland) claims, differed, even in the minutest particular, from the types of the *Donatuses* which we may fit into Zell's account. But we know that the types of the three works mentioned, independently, by Zell and Junius are identical, and, therefore, forbid us to separate Zell's account from that of Junius.

But, really, the opponents of the Haarlem claims have realised themselves the difficulties of rejecting Zell's account, or of not ascribing it to him; otherwise they would not suggest, at the very moment that they deny that Zell

wrote the statements, that Zell meant xylographically printed *Donatuses*; least of all would they have suggested that Zell had been a pupil of Peter Schoeffer, the rival of Johan Gutenberg, and, therefore, wished to detract from the latter's glory. Here I really feel inclined to agree most heartily with Dr. Van der Linde and all other opponents of the Haarlem claims; for if Zell had actually been animated with such a feeling against Gutenberg he could not have chosen a surer basis for his opposition to his enemy's glory than the *Donatuses* printed in Holland before people printed at Mentz. They surely not only detract from Gutenberg's glory, but they destroy his claims to the invention altogether. Dr. Van der Linde and other opponents of the Haarlem claims, in suggesting this enmity on Zell's part, forget to tell us why Zell, the so-called pupil of Peter Schoeffer, in wishing to injure Gutenberg's reputation, should have ascribed the first prefiguration to non-German *Donatuses*, or to any *Donatuses*, or xylographic *Donatuses* in particular. Why should he not have said (if he meant xylographic *Donatuses*) that Gutenberg took his inspiration from block printing? Or, when he set about making a false statement, and wished to injure Gutenberg, why should he not have said that Schoeffer's *Donatuses* were the first prefiguration? I believe there is only one answer to all these questions, and a good many others that may be asked. Zell was speaking the truth to the compiler of the Cologne Chronicle, and the truth of his account is proved by the *Donatuses* which we possess, and which were printed in Holland before people printed at Mentz.

CORRESPONDENCE.

CHAUCER'S NUN'S PRIEST'S TALE.

Cambridge: July 14, 1887.

Tyrwhitt has pointed out how cleverly Chaucer has expanded his Nun's Priest's Tale out of one of the fables of Marie de France. He quotes the fable, in the original Old French, from the Harleian MS. No. 978, fol. 76. The same fable appears as No. 51 in Roquefort's edition of the fables of Marie de France (Paris, 1820), where it is printed from another MS. I think many readers would be glad of a translation of Marie's fable, as it enables one to make the comparison with Chaucer much more easily. I, therefore, subjoin one, following Tyrwhitt's text mainly, as it seems to be the better of the two:

"THE COCK AND THE FOX."

"A Cock our story tells of, who
 High on a dunghill stood and crew.
 A Fox, attracted, straight drew nigh,
 And spake soft words of flattery.
 'Dear sir!' said he, 'your look's divine;
 I never saw a bird so fine!
 I never heard a voice so clear
 Except your father's—ah! poor dear!
 His voice rang clearly, loudly—but
 Most clearly, when his eyes were shut!'—
 'The same with me!' the Cock replies,
 And flaps his wings, and shuts his eyes.
 Each note rings clearer than the last—
 The Fox starts up, and holds him fast;
 Towards the wood he hies apace.
 But as he crossed an open space,
 The shepherds spy him; off they fly;
 The dogs give chase, with hue and cry.
 The Fox still holds the Cock; but fear
 Suggests his case is growing queer—
 'Tush!' cries the Cock, 'cry out, to grieve 'em,
 'The Cock is mine! I'll never leave him!'
 The Fox attempts, in scorn, to shout,
 And opens his mouth; the Cock slips out,
 And, in a trice, has gained a tree.
 Too late the Fox begins to see
 How well the Cock his game has play'd;
 For once his tricks have been repaid.
 In angry language, uncontrol'd,
 He 'gins to curse the mouth that's bold
 To speak, when it should silent be.
 'Well,' says the Cock, 'the same with me;
 I curse the eyes that go to sleep
 Just when they ought sharp watch to keep
 Lest evil to their lord befall.'
 Thus fools contrarily do all:
 They chatter when they should be dumb,
 And, when they ought to speak, are mum."

WALTER W. SKEAT.

THE FIRST ENGLISH EDITION OF THE NEW TESTAMENT IN GREEK.

Ulm: June 29, 1887.

May I call attention in the ACADEMY to the fact that it is now exactly 300 years since the first edition of the New Testament in Greek was printed in England? Such, at least, is the

statement of the well-known editor Reuss, of Strassburg, and of all bibliographers whom I have read. On p. 91 of his *Bibliotheca Novi Testamenti Graeci* (1872) E. Reuss describes an edition "Londini, excudebat Thomas Vautrollerius, 1587, 16°, of which he says:

"Editio omnium in Britannia procuratarum prima. Typographi e Gallia oriundi nomen Le Long et Maschius p. 224 perperam Vautrollerium scribunt."

According to an indication on the title-page, which is confirmed by the collations of Reuss, the text was taken from H. Stephanus (*sine loco* 1576, 16°, or rather from the later reprint 1587, 16°) and diligently collated with the last edition of Beza. Even the types of H. Stephanus were followed by the English printer. Reuss adds:

"Unicum quod nancisci potui exemplar possidet Bibliotheca ad S. Genovevæ Parisiensis."

Nor was there a copy in the famous collection of Pastor Lorck, now in the Royal Public Library of Stuttgart.

Dr. C. R. Gregory mentions in his *Prolegomena to Tischendorf* (iii., p. 218), that Scrivener (*Introduction*, 2nd ed., Cambridge, 1874, p. 390, n. i.) speaks of an edition "Londini anno 1565"; but Gregory adds: "quæ hæc sit, nescio." And he has also the statement: "Bibliographi omnes N.T. Gr. in Anglia primum anno 1587 editum esse docent."

It is a remarkable fact that it took so long a time till the want of the Greek Testament was general enough in England to encourage an English printer to undertake an edition of it. This fact may be compared with the similar statement, which I happened to read the other day in Kapp's *Geschichte des deutschen Buchhandels*, that during the whole of the fifteenth century no edition of the Bible appeared in England, but between 1526 and 1600 no less than 306. And nowadays it is from England that we receive not only the reprints of the *textus receptus* published by the British and Foreign Bible Society—editions which we would rather miss—but also such standard editions of the Greek Testament as that of Westcott and Hort, not to speak of such minor, but none the less valuable, contributions towards the textual history of the Bible as those on the Codex Amiatinus which appeared lately in the columns of the ACADEMY.

I ought to add that I have no means of ascertaining in what English libraries and collections copies of this edition are to be found. Perhaps in England it is not so rare as it seems, according to this statement of Reuss, to be on the Continent. At all events, I hope to be excused, in this time of centenaries, for having called attention to what we must for the present consider as the first English edition of the New Testament in Greek.

E. NESTLE.

THE STOWE MISSAL.

Walmer: July 18, 1887.

Invalided, away from home and books, I am not well placed for re-arguing the various points raised in the latter half of Dr. MacCarthy's letter in the ACADEMY of July 16. I still join issue with him on the more important of them, while accepting his corrections on some points of detail, to which he now draws my attention for the first time.

With regard to the symbol N, the dates usually assigned to the books of Dimma and Mulling are extremely problematical, and rest on proposed identifications of their writers which may be as unfounded as Dr. MacCarthy's proposed identification of Moel Caich. Apart from this, the small liturgical portions of those volumes with which alone we are now concerned are, if I remember right, not coeval

with the bulk of the text, and may, like the St. Gall MS. 1395, be at least as late as the ninth, and possibly as the tenth, century.

The list of errata in my printed version of the Stowe text I accept as provisionally and presumably correct. Scholars will be generous enough to accept my explanation of them for what it is worth. My work was accomplished under difficulties. The Stowe Missal was at that time private property. There was no apparent probability then of its ever ceasing to be such, otherwise I would gladly have waited. Through the kind courtesy of the present Lord Ashburnham, I was practically the first person to have access to it. I travelled down from London to Ashburnham Place by the newspaper train in winter, starting about 5 a.m., and was engaged for thirty-six hours continuously (meal times excepted) in transcribing about one hundred pages of the MS. I worked through the whole night by candle light, and my eyes have not yet quite recovered from the strain. I was permitted to pay a second visit to Ashburnham Place to correct the proof-sheets, which I took with me. There were numerous misreadings of my own as well as printers' errors to correct. The MS. is not "as plain as print." A glance at Dr. MacCarthy's plate, as well as the long discussions in your columns about certain readings, prove this. It presented, and still presents, many unsolved difficulties, partly due to its palimpsest character, partly to the dislocation of two leaves, to which I have called attention on p. 261, note 62, partly to the carelessness of the scribes and the corruptness of the text. Frequently neither grammar nor sense helped one to the true reading. In a text where a collect is headed "In sollemnitatibus Petri et Christi" (p. 227) by error for "Petri et Pauli," one need not be surprised that Stellæ (= Epiphany) should be placed as a heading to words which refer to Maundy Thursday (p. 235).

Such rapid work in a limited time is very different from working at the MS. at leisure in the library of the Royal Irish Academy at Dublin, with another person's printed transcript and notes, though unacknowledged, by one's side, and with Irish experts at hand to consult in case of difficulty.

With this apologia I will stop. In the face of Mr. Whitley Stokes's letter in last week's ACADEMY, your readers will agree with me that discussion is difficult with a controversialist who can only escape from the charge of fraudulent references if he is willing to admit the charges of ambiguity and irrelevancy, and the gist of whose arguments it is sometimes impossible to catch, because they are not conducted upon the ordinary lines of English or of any other, save possibly Irish, logic.

F. E. WARREN.

[In Mr. Whitley Stokes's letter in the ACADEMY of last week, p. 42, col. 1, l. 5, for "1250" read "1150."]

DIVINATION BY THE WINNOWING BASKET.

July 9, 1887.

In the *Gentleman's Magazine* for July, is a paper by Mr. Sherer under the heading "Mystica Vannus," which gives some interesting particulars connecting the Eastern method of winnowing wheat with that practised in France during the middle ages, and, doubtless, long before. The writer also refers to the ancient Greek and Roman reverence for the Van, and to its mention in the Bible. He gives a curious account of the sanctity of the implement, and shows that it is still used in India as a babe's first cradle, in the same manner as is represented on Grecian bas-reliefs of great antiquity. Finally, he offers some speculations on the use of the epithet "mystica" in the mention of the "vannus

Iacchi" in the first *Georgic* of Virgil. "Reflection will show," says Mr. Sherer, "that there was a sacredness attaching to the winnowing-basket."

It is perhaps a dim reminiscence of this ancient cult that prompts some of the lower classes in Hindustan to use the *süp* as an instrument of divination. It should be mentioned that this primeval winnowing-engine is nothing but a flat basket with one side higher than the next two, the fourth being entirely open. It thus lets the grain fall, while at the same time it serves as a fan. Its form, therefore, resembles that of the modern English dust-pan. Through the wicker-work of the raised side, or back, a strong T-shaped twig is driven, one end of the cross-piece resting lightly on the finger. A question is then asked, and "Yes" or "No" is augured according as the basket, thus suspended, turns to left or right; an archaic anticipation of the oracles of "Planchette." This description is given from memory, after the lapse of years; perhaps Captain Temple, or some other Indian folklorist, can correct or amplify it. In any case it appears to point to a mystery and reverence hanging over the *süp*.

I may add that Mr. Sherer's attempt to connect the word with *sip*—"a bivalve-shell"—does not seem tenable. The two words are derived from two different Sanscrit roots.

Be this as it may, the article is full of interesting suggestion, and the subject deserves to be worked out as an old derelict of the common ancestors of Europe and Asia.

M. A.

"THE BLUE VASE" AND "THE PRUSSIAN VASE."

July 19, 1887.

Prof. W. Wright has called attention to the fact that my story, "The Blue Vase," in *Belgravia* for June, 1887, closely resembles Miss Edgeworth's "Prussian Vase," in her *Moral Tales*, vol. i., p. 167 (edit. 1832). I was quite ignorant that Miss Edgeworth had told the story till it was pointed out to me. It was given in 1817 in the *Niederrheinische Archiv*, vol. i., and thence was quoted repeatedly in Germany in the controversy which raged against the secret system of trial, and in favour of the introduction of trial by jury; and, as Dr. Löffler says, "without the slightest suspicion that the story was not authentic." At last Dr. Löffler, editor of the *Berliner Gerichts-Zeitung*, disputed the facts. He showed that there were improbabilities in it, which made it impossible to accept it, without further evidence, as genuine history. As it was so uncertain where fact ended and fiction began, I gave the incidents a romantic colour, and rounded them off as a story, without any suspicion that Miss Edgeworth had done the same long before. There is, probably, some substratum of fact.

S. BARING-GOULD.

SCIENCE.

DELITZSCH'S ASSYRIAN DICTIONARY.

Assyrisches Wörterbuch zur gesammten bisher veröffentlichten Keilschriftliteratur unter Berücksichtigung zahlreicher unveröffentlichter Texte. Von Dr. Friedrich Delitzsch. (Leipzig: Hinrichs.)

An American humorist has said that "it is better not to know so much than to know so much that aint so." The remark could nowhere be better applied than to Assyrian lexicography. The greatest harm has been done to Assyriology by the pretensions of some of its students to so much certain know-

ledge on philological questions. A few years ago, when Assyrian scholars were more moderate, their work commanded the respect of the learned world.

When the lamented George Smith discovered the deluge tablet, creating a revolution in Oriental study, public attention was directed anew to the value of Assyrian for Semitic philology and the history of the Bible. Smith's translations, after the lapse of a number of years, may still be studied with profit. The first attempt at an Assyrian dictionary was made by E. Norris, three volumes of which were published. The many references given made it an invaluable help to scholars. More recently a fairly complete concordance of words and of the passages where they occur has been issued by the Rev. J. N. Strassmaier; and the accuracy of Mr. Pinches has rendered available a large number of additional texts in the invaluable series issued by the British Museum. Notwithstanding this, Assyrian lexicography has but made a beginning. When we know how many thousand contract tablets still lie untranslated upon the shelves of the British Museum, in which a vast number of unknown words occur, and when we remember how small a part of the Assyrian and Babylonian literature we possess, we are bound to grant that we must be still a long way from finality in our knowledge of that very difficult language.

The published books, however, of Dr. Friedrich Delitzsch, of Leipzig, convey to the reader a very different idea. His works, *The Hebrew Language viewed in the Light of Assyrian Research* and *Prolegomena zu einem neuen Hebräisch-Aramäischen Wörterbuch Alten Testaments*, claim far too much for Assyrian. Upon him rests the responsibility for a large share of the disrepute into which Assyriology has fallen, and he deserves the rebuke which he has received at the hands of such scholars as Th. Nöldeke, D. H. Müller, and others. The idea which Delitzsch advances, that Assyriologists have arrived, in so short a time, at foregone conclusions on so many points of Semitic philology, is justly set aside by the best Arabic and Syriac scholars everywhere.

The most recent contribution to Assyrian lexicography, which is the subject of this review, was announced at least eight years ago; and scholars have waited impatiently for it, hoping that thereby the study of Assyrian would be made much easier. But how sadly have we all been disappointed! The book is neither fitted for the beginner nor for the scholar. For the beginner it is too bewildering and indefinite. He needs only to know the result at which Assyriologists have arrived, without being troubled with the processes by which these results have been reached. It is of no interest to him to learn when Delitzsch copied the texts he quotes, or how large or how small some of the unimportant tablets quoted are. In fact, these things do not properly belong to a dictionary at all. The beginner also is unable to appreciate the long discussions which are found all through the book. The scholar, on the other hand, has no use for them. The passages upon which they are based are all familiar to him, as likewise are many others which he wonders not to find mentioned. Every thorough

student of Assyrian will be struck with the very few letters and documents of which Delitzsch seems to have any knowledge. The same is true as to the contract tablets. Hence the dictionary is of no value for this class of inscriptions, and this is where the scholar would most desire such a work. What is the value of a dictionary which does not solve any of the difficulties of the language?

One qualification which is absolutely necessary in the preparation of such a work is the ability to copy Assyrian inscriptions correctly. In the publications of earlier years there are frequent errors, and these must be carefully corrected, or the lexicographer will be discussing words and giving references which in reality do not exist. Certain unpublished texts are so well known that they must be used in any dictionary. Furthermore, Strassmaier, in his concordance referred to above, published a great many unedited texts. Delitzsch, therefore, felt himself bound to do the same. This he has attempted; but with what success? In a small Assyrian document containing forty-four lines (K. 525) he has made twenty mistakes of copying. In his copy of K. 646 I have noticed several mistakes, besides many characters badly drawn. Even in the fragment of a tablet belonging to the creation legend (which is given twice on the same tablet) he has made several mistakes, such as reading *ut* for *liš*, &c. This text is beautifully clear, and no trouble to a good reader of Assyrian. In fact, so far as I have observed, not even the smallest and most clearly written fragment of the texts that Delitzsch has published for the first time is without mistakes. Moreover, the method followed must inevitably lead to mistakes. To attempt to publish unedited texts in transcription can be of no advantage to science, for they must all be published over again. Why then should so large a space be occupied by these untrustworthy transcriptions?

There are also many undoubted mistakes in the explanation of words. Delitzsch separates *adannu* (p. 135) and *adanniš* (p. 160), putting them under different roots. Now, the former is an adjective and the latter is the adverb from the very same root. The same word occurs in Arabic and Aramaic, and means "time." The word *Aba* is used for an official of some kind, and is of frequent occurrence. Delitzsch gives us the conjectures of others as to its probable meaning, including his own, and then begins his disquisition by saying that it is undoubtedly "good Semitic." But it is quite certain that the word is not Semitic at all, but Accadian. Delitzsch himself shows that he realises the weight of the argument against himself. This is, however, a weakness of his entire method. He considers almost everything Semitic. He tries to ignore the existence of anything else but Assyrian. One must everywhere be struck with the paucity of comparisons made with the other Semitic languages. Where are the many Arabic and Syriac words which ought to have been placed side by side with their Assyrian equivalents in any work professing to be an Assyrian dictionary? Have these languages no longer a place in Semitic philology? One would think so, if one had no other informa-

tion than that supplied by the works of Delitzsch. Has Assyrian advanced so far, and is the published literature so complete, that it can take such an independent position? We venture to think not. It is correct to dwell upon the light that Assyrian has thrown on the Hebrew language, for Hebrew undoubtedly owes much to Assyrian research; but it would certainly be more sensible to point out what Assyrian has become with the aid of and under the leadership of Hebrew and Arabic. What a pitiable condition Assyriology would be in now if it had not had the assistance of these languages, which were already well known before the first Assyrian text was deciphered!

Now, there is need of an Assyrian dictionary on quite a different plan from that of Delitzsch. Some scholar ought to prepare a pocket dictionary, containing eight or ten thousand words, giving the principal meanings, and, in case of unfamiliar words, adding one or two passages illustrating their uses. Such a work would meet the requirements of students, and could be published at a price within reach of those for whom it would be intended. The subscription for Delitzsch's book is about £15, which is as much above its merit as it is beyond the reach of most Assyrian scholars.

S. ALDEN SMITH.

THE "ARCHIV FÜR GESCHICHTE DER PHILOSOPHIE."

In this age of specialist periodicals, it may seem strange that so important a subject as the history of philosophy has hitherto had no recognised organ of its own, and that students should have had to turn to numberless reviews dealing not only with philosophy proper, but also with the classics and with theology.

This want is now to be supplied by the issue of an *Archiv für Geschichte der Philosophie*, which has already obtained the support of the best names in other countries as well as in Germany. The editor in chief is Dr. Ludwig Stein, dozent at Zürich, who will take as his special department post-Aristotelian Greek philosophy, Roman philosophy, and the philosophy of the fathers, the schoolmen, and the renaissance. The other editors of special departments are—Prof. Hermann Diels, of Berlin, for pre-Socratic philosophy; Prof. Eduard Zeller, also of Berlin, for the period from Socrates to Aristotle; Prof. Benno Erdmann, of Breslau, for modern philosophy down to Kant; and Prof. Wilhelm Dilthey, of Berlin, for the period since Kant.

A special feature of the *Archiv* is to be a Jahresbericht or annual summary of the current publications on philosophical subjects according to the classification just given. While in this summary Prof. Felice Tocco, of Florence, will be responsible for Italy; Herr P. Tannery, of Tonnesins, for French; Mr. Ingram Bywater, the Greek reader at Oxford, for all works in English relating to ancient philosophy; Prof. J. Gould Schurman, of Ithaca, New York, for English works on mediæval and modern philosophy; and Prof. H. Oldenberg, of Berlin, for all oriental philosophy, whether published in German or other languages.

Besides those already mentioned, the list of contributors includes the names of Prof. W. Wallace and Mr. J. A. Stewart, of Oxford; Dr. H. Jackson and Mr. R. D. Hicks, of Cambridge; Prof. G. Croom Robertson and Mr. E. D. Archer Hill, of London; Prof. Lewis Campbell, of St. Andrews; M. Paul Janet, of Paris; Prof. Gompertz, of Vienna; and Dr. A. Harnack, of Marburg.

Articles may be written either in German, Latin, Italian, French, or English. The first number will appear early in October; and the mode of publication will be quarterly, each number containing about 160 pages. The annual subscription is fixed at twelve marks. The publisher is Herr George Reimer, of Berlin.

CORRESPONDENCE.

PROF. JEBB'S "INTRODUCTION TO HOMER."

Scrayingham: July 19, 1887.

I have already in the *Cambridge Chronicle* made a solemn protest against the method adopted by Prof. Jebb in his recently published *Introduction to Homer*. The matter is so serious as to make it my duty to bring the question to an issue.

Prof. Jebb has stated that our *Iliad* and our *Odyssey* have come down to us substantially unchanged from the ninth century B.C., and that therefore our *Iliad* and our *Odyssey* formed the Homer of the Greek lyric and tragic poets. He has done this, without making any attempt to rebut the evidence which proves this theory to be absolutely untenable—the fact being that, in Dr. Paley's words, it is

"utterly impossible, from Pindar or any of the very numerous dramas or their titles (not less than 100) bearing on the *Troica*, to prove the existence of the *Iliad* or the *Odyssey* till the time of Plato."

I am bound to say again, as I have already said, that this challenge must be taken up, and the controversy decided not by citing the opinions and fancies of Aristotle, but by a thorough examination of the facts; and that to reason from the assumed antiquity of the poems to their present form, ignoring all the evidence which demonstrates that the idea of this antiquity is a delusion, is merely to spin a web of more or less plausible fiction and falsehood. I use these words advisedly and deliberately; and I have no hesitation in saying that the determination which clearly exists in some quarters to keep the truth about this question carefully out of sight is a most discreditable fact. In these quarters Prof. Jebb has been lauded as having "rendered a signal service to the scientific study of Greek literature." I assert, that, instead of doing this, he has written a book which from beginning to end can only mislead and deceive. The matter affects Prof. Jebb's personal veracity; and it is in the name only of common honesty and English truthfulness that I repeat this protest.

GEORGE W. COX.

SCIENCE NOTES.

It is proposed to form a museum of objects of ethnological interest in connexion with the Anthropological Section of the British Association at the forthcoming meeting at Manchester, of which section Prof. Sayce is president. This exhibition will include a remarkable series of casts taken from squeezes recently obtained by Mr. Flinders Petrie during his work in Egypt on behalf of a committee of the British Association. The casts are of much value in enabling the anthropologist to determine the racial characteristics of the people represented on the Egyptian monuments.

THE Clarendon Press will publish, within the next few weeks, the first number of a new scientific periodical, to be called *Annals of Botany*. The papers will be on subjects pertaining to all branches of botanical science, including morphology, histology, physiology, palaeobotany, pathology, geographical distribution, economic botany, and systematic botany and classification. There will also be articles on the history of botany, reviews and criticisms

of botanical works, reports of progress in the different departments of the science, short notes, and letters. A record of botanical works in the English language will be a special feature. The editors are Prof. Bayley Balfour, of Oxford; Dr. Vines, of Cambridge; and Prof. W. G. Farlow, of Harvard. The form of the publication will resemble that of the *Quarterly Journal of Microscopical Science*; and every effort will be made to secure for it the same excellence in the illustrations.

Coal Tar and Ammonia will be the title of the enlarged and more fully illustrated edition of Prof. Lunge's "Treatise on the Distillation of Coal Tar," which Mr. Van Voorst's successors, Messrs. Gurney & Jackson, have in the press, nearly ready for publication.

PHILOLOGY NOTES.

WE have to congratulate Mr. Jago on the publication of another Cornish book. The previous volume was entitled *A Glossary of the Cornish Dialect*, of which a short account was given in the *ACADEMY* of February 20, 1886. The present work is nothing less than an English-Cornish Dictionary, compiled from the best sources, and published by Simpkin, Marshall & Co. It consists of 230 pages quarto, and contains various interesting things besides the dictionary, such as Prince Bonaparte's letter accusing Pryce of plagiarism. As only a portion of the literature of the old Cornish language has come down to our time, the labour of making an English-Cornish Dictionary is not so great as a corresponding dictionary dealing with any of the other Celtic languages would be; and, as the author did not undertake to coin or compound new words, his task was confined to registering, under their English equivalents, the Cornish words which occur in the Cornish literature extant and in diverse vocabularies, together with what Cornish words still survive in the English dialect which has taken the place of the old language. Mr. Jago is proud of the extent of the Cornish vocabulary which he has thus been able to bring together; and he has, we think, a right to be proud of it. His words are to the following effect:

"It has been said that the husbandman expresses all his thoughts by using four or five hundred words, and Shakspeare used about 15,000 words. Thus it may be seen that the 'remains' of Celtic Cornish stand far beyond the vocabulary of the rustic, and rival in their amount the words of Shakspeare."

Mr. Jago has prefixed to the dictionary an account of these remains of Cornish literature. They consist principally of Mysteries or Miracle Plays based on biblical stories or the lives of Cornish and Breton saints, and their treatment of biblical and saintly characters is frequently very quaint. Mr. Jago's dictionary will be invaluable to all Welsh and Breton scholars who wish, without waste of time, to see at a glance what the Cornish word may have been which corresponds to any given word in those languages. This old Cornish Dialect of Bythonic speech stood just half-way between the languages of Gwent and Brittany.

WE have received, in the form of a doctor's dissertation, an able essay on Welsh grammar, by Max Nettlau, by whom it was offered recently to the Philosophical Faculty in Leipsic. It is the first part of a much larger work, as it only consists of an introduction and the phonology of the vowels. One of its special features is that the author has paid particular attention to the various dialects of Welsh. There is one drawback to his study of them, and that is that Dr. Nettlau has not yet been nearer Wales than the British Museum and the Bodleian Library; but the quantity of materials he has been able to accumulate from

books is very remarkable, considering the comparatively short time he has been working on Welsh, and how little help he could get, seeing that the Celtic scholars of Germany are mostly devoted to Irish and the other dialects of the Gaelic language. We hope this instalment of Dr. Nettlau's studies in Kymric grammar will soon be followed by the publication of the rest of his MS.

THE *Berliner Philologische Wochenschrift* for July 16 contains full reviews of Dr. Sandys' *Orator* (by Dr. Heerdegen) and Mr. Jevons' *Greek Literature* (by H. Müller). Both receive praise, the former particularly so.

MEETINGS OF SOCIETIES.

BRITISH SCHOOL AT ATHENS.—(First Annual Meeting, Wednesday, July 6.)

THE EARL OF CARNARVON in the chair.—Mr. Macmillan read the report, of which the following are the most important passages:—At the last meeting, on October 19, 1886, it was announced that the school building was complete, and that a director had been found for the first year in the person of Mr. F. O. Penrose. It was further stated that an income of £400 a year had been provisionally secured for three years. Mr. Penrose went out to Athens early in November; and about the middle of December Mr. Ernest Gardner, of Gonville and Caius College, Cambridge, and now Craven University student, was admitted as the first student of the school. Two months later the Oxford Craven fellow, Mr. David G. Hogarth, of Magdalen College, was admitted. Later in the session two more students, Mr. O. J. Jasonides, of Athens, and Mr. Rupert Clarke, of Exeter College, Oxford, were added to the number. In accordance with the rules drawn up by the committee, Mr. Penrose, besides directing the work of the students, has delivered three public lectures on the Parthenon, the Erechtheum, and the Temple of Olympian Zeus, and will deliver three more in the course of October before he lays down his office. He has, moreover, at the expense of the Dilettanti Society, conducted excavations on the site of the Temple of Olympian Zeus at Athens, which have established the important fact that the temple was octastyle, not decastyle, as has hitherto been generally supposed. Before closing this brief record of the first year's work of the school mention must be made of the very cordial welcome given to the director and students of the British School both by native Greek archaeologists and by the members of the other foreign institutes. Special mention is due of the extreme friendliness of the relations between the British and American Schools. The American director and students did their utmost to smooth the way for their English colleagues, generously throwing open their excellent library. Representatives of the British School were present at the laying of the corner-stone of the American School building, which is now in course of erection on the adjoining site. The two properties have been surrounded by a single fence at the joint cost of the schools, and will, it is hoped, be to a certain extent enjoyed in common. It is obvious that for the work of a school at Athens one indispensable requirement is a good library of archaeological and classical books. The committee are happy to be able to state that a very good beginning has been made in this direction during the first year. In the first place, valuable gifts of books have been received from the delegates of the Oxford University Press, from the syndics of the Cambridge Press, and from many publishers. Mr. F. F. Tuckett, Mr. Barclay Head, and other private individuals have also made valuable gifts to the library, and it is hoped that their example may be widely followed. In the next place, the committee have expended a sum not far short of £250 upon the purchase of the books which it was considered most important for the school to possess. Turning to the financial position of the school, the managing committee regret to say that the appeals for aid made for last year after the meeting of subscribers in October did not produce very much results. The new donations amounted to no more than \$115; new annual subscriptions

were promised to the amount of £70 15s. a year. Donations towards the establishment of a capital fund or annual subscriptions will be gladly received by the hon. treasurer, Mr. Walter Leaf, Old Change, E.C. Finances apart, the committee feel that there is every cause for satisfaction in the progress made by the school in this the first year of its existence; and the outlook for the future is no less promising. As Mr. Penrose's successor the committee have been fortunate in securing, for two years at any rate, the services of Mr. Ernest Gardner, who is a thoroughly trained archaeologist, and has had the great advantage of working under Mr. Penrose as a student during the past season, so that he will take up the work with full knowledge of what is required. It is proposed next session to provide board and lodgings at a moderate rate in the school building for a limited number of students. Information upon this point may be obtained from the hon. secretary, Mr. George Macmillan, 29, Bedford Street, Covent Garden, W.C., to whom all applications for admission to the school should be addressed.—Mr. Penrose gave an account of his work during the past year. He had been able to visit and collect objects of art from Palermo, Oropus, Sicily, and other places, and in his labours the American and German archaeologists had afforded him much valuable help. He had, unfortunately, contracted a fever, but had been able to give lectures on the Parthenon, the Erechtheum, and other subjects, and had been honoured by the presence of Sir Horace and Lady Rumbold, and Mr. Watts, the artist. Mr. Hogarth, Mr. Clarke, and the other students had been doing good work, and had achieved valuable results.—Sir C. Newton, as a veteran, was not disappointed at the number of students, as the qualities of a real student were difficult to find in combination, and the gentlemen who were now students of the school had shown themselves to be possessed of those qualities. Great results were to be expected from their labours—such as those which the French archaeologists had already obtained in Delos. He desired specially to refer to the Greek journal *Ἐφημερίς Ἀρχαιολογική*, which was a model of what a paper devoted to such subjects should be, and ought to excite the emulation of English scholars.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromo and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. HAZEL, 115, Strand, near Waterloo-bridge.

Notes on the National Gallery. By Walter Armstrong. (Seeley.)

THESE papers, which originally appeared in the *Guardian*, would deserve notice if only for the rarity of publications which take any serious notice of our great national collection. With the exception of Dr. J. P. Richter's learned book on Italian art in the National Gallery, this small pamphlet is almost the only independent work in English which has of recent years been devoted to the National Gallery. Mr. W. Armstrong is beginning to be well known as one of the best equipped of the few serious students of art; and it is to be hoped that this rather slender contribution to the literature of the National Gallery is only an instalment of what he proposes to do in the same direction.

He begins with an interesting account of the growth of the institution, which includes a testimony to its value which is well deserved.

"In the total of its pictures the National Gallery is about half the size of the museums of Dresden, Madrid, and Paris, the three largest in the world, and considerably less than those of Berlin, Munich, and St. Petersburg. But in quality it is surpassed by none of its rivals."

This is a very important fact which redounds greatly to the credit of Sir Charles Eastlake,

Sir William Boxall, and Sir Frederick Burton. They have all been subject to criticism, they have bought what (in the opinion of others) they should not have bought, and have left unbought what they ought to have bought; but, on the whole, they have spent the public money well, and the gifts and bequests have been very extensive and valuable. These are facts which are not sufficiently recognised, and cannot be repeated too often.

The greater part of Mr. Armstrong's pamphlet is devoted to a description of pictures about which there is little dispute, and he shows throughout a grasp of art history and a catholic appreciation of the merits of various artists of various schools. There is little other cause for remark except in regard to a few points of connoisseurship. To record his opinions on these points appears to have been one of the motives for the publication. We agree with him in doubting whether "The Rape of Helen" (591) is by Benozzo Gozzoli. We think he takes it too much for granted that Piero della Francesca was a pupil of Uccelli, though there are strong points of resemblance in the work of the two masters; and also that the fine "Rhetoric" (755) and "Music" (750) are undoubtedly by Melozzo da Forlì; nor can we agree with him in giving to Catena the pretty Madonna and child in a landscape now ascribed in the catalogue to Basaiti, still less the "Death of Peter Martyr," generally accepted as a Bellini. Though there is some resemblance in the landscapes of these two pictures, the drawing of the trees and the foliage can scarcely be by the same hand. Mr. Armstrong here, as in other opinions, follows Dr. Richter. Mr. Armstrong's suggestion that the much-disputed "Madonna with Angels" and "Tobit and the Angel," ascribed to Antonio Pollaiuolo, are really by his brother Piero, is one which must have occurred to many—to Signor Morelli, for instance, who thinks they came out of Piero's workshop, but does not venture to say they are by his hand. Mr. Armstrong, we think, insists (with Dr. Richter) too much on what he calls the "childish mistakes in proportion" in the figure of the Virgin. Abnormal length of body was traditional in the seated figure of the Virgin. If it existed in the other figures the argument would be more forcible. The recent opening of the new galleries makes it possible to easily examine what we take to be Mr. Armstrong's most important suggestion—viz., that the little "Last Supper" (1127), bought at the Hamilton collection as a Masaccio and now assigned to the "North Italian School," is by Ercole Roberti. Mr. Armstrong is unusually, but not, we think, too, positive on this point, when he declares that "a glance is sufficient to convince one that its author was he that painted the 'Israelites gathering Manna.'" The latter is a small work recently added to the gallery from the collection of the late Earl of Dudley.

But Mr. Armstrong's intelligent survey of the pictures is not confined to the Italian schools. We think he is mistaken as to the pictures ascribed by Mr. W. M. Conway to Bouts. Mr. Conway ascribed the "Deposition" (664) to Bouts, but Mr. Armstrong gives it to Rogier van der Weyden the younger. He is also mistaken in saying that there are four pictures ascribed to this master

in the catalogue. That most interesting and beautiful picture by an unknown artist, "The Adoration of the Magi" (1079), is the subject of one of Mr. Armstrong's most interesting notes. To him is due the interesting discovery of the word "Ouwater" written low down in the left-hand corner. Other particulars might be noticed to establish the strong affinity between this picture and Gheeraert David's beautiful picture in the same room; but Mr. Armstrong has been the first, we think, to point out the likeness between the St. Joseph in the one and the beggar in the other. It would be pleasant to find that we have a real example of the great unknown Albert van Ouwater. Whether we agree or not with Mr. Armstrong, all his remarks show the care of the student and the eye of the critic; and we hope that he will himself carry out some of the schemes for investigation which he generously suggests to others.

COSMO MONKHOUSE.

THE ROYAL SCOTTISH ACADEMY.

THE second of the Royal Scottish Academy's exhibitions of Water-colours and Works in Black and White is now being held in their galleries in Edinburgh. The display of current art has been supplemented by a few drawings representative of the water-colour art of the past. Among the works by English artists that are shown are three small, but typical and exquisite, subjects by Turner—his sunset view of "Shoreham"; his lovely little "Streetan," from the celebrated Farnley Hall collection; and his vignette of "Berwick-on-Tweed," executed for the illustration of Sir Walter Scott's poetical works: and among the examples of David Cox is a road-scene in Wales, a very simple and beautiful work in the painter's earlier manner. The water-colours by deceased Scottish artists include representative examples of Sam Bough, H. W. Williams, J. C. Wintour, E. T. Crawford, and J. Cassie; and there are some good drawings by the modern Dutchmen, among the rest B. J. Blommers' excellent rustic subject of "Gossips"; Albert Newhuys' freely handled and admirably lighted "At the Window"; and P. Sadée's noble study of a peasant woman at her cottage door, "Working and Waiting"—a work full of refined and dignified form, and of restrained, but complete and satisfying, colour. Among living Scottish painters Sir William Fettes Douglas, is very fully represented by a selection from the delicate landscape work in water-colours which, during recent years, has exclusively occupied his brush. Mr. W. E. Lockhart, who has been honoured by Her Majesty's commission to paint the Jubilee Thanksgiving Service in the Abbey, sends an imposing flower-piece and two life-sized portrait heads. Mr. Tom Scott contributes some of the most attractive work in the exhibition in his small Italian subjects, distinguished by their crisp and subtle draughtsmanship, and by their vivid rendering of sunlight and atmosphere; and from Mr. A. Melville we have two important and telling, if rather forced, subjects, representative of his work in landscape and in figure-painting.

NOTES ON ART AND ARCHAEOLOGY.

THE following are the arrangements for the annual meeting of the Royal Archaeological Institute, to be held this year at Salisbury. On Tuesday, August 2, after the inaugural meeting, at which Gen. Pitt-Rivers will deliver the

presidential address, the members will inspect the cathedral, the bishop's palace, and St. Nicholas' hospital; and in the evening the Bishop of Salisbury will open the antiquarian section. On Wednesday, August 3, Old Sarum, Amesbury, Vespasian's Camp, and Stonehenge will be visited; and in the evening the Dean of Salisbury will open the historical section. On Thursday, August 4, the annual business meeting will be held, after which Precentor Venables will open the architectural section; and in the afternoon Britford and Downton will be visited. On Friday, August 5, the members will go by rail to Bradford-on-Avon, and afterwards drive to South Wraxall and Great Chalfield. On Saturday, August 6, Wardour Castle, Tisbury, and Wilton House will be visited. On Monday, August 8, Longleat, Warminster, and Heytesbury. On Tuesday, August 9, the Romano-British village at Rushmore will be inspected, under the direction of Gen. Pitt-Rivers. After the close of the meeting, some of the members will cross over into Brittany with the object of examining the megalithic remains.

MESSEURS. T. & A. CONSTABLE have in preparation an illustrated catalogue of the very remarkable collection of examples of modern French and Dutch art, which was brought together by Mr. Hamilton Bruce last year in the Edinburgh International Exhibition. The letterpress, consisting of a description of each picture and critical and biographical notices of the various painters, is to be from the accomplished pen of Mr. W. E. Henley; and the illustrations will consist, in addition to numerous reproductions of pen *croquis*, of a series of etchings by Mr. W. Hole, and Mr. A. Zilcken. Judging from a series of proofs by the former etcher, transcripts from Corot, Matthew Maris, Monticelli, and others, now included in the Royal Scottish Academy exhibition of water-colours and works in black and white, these illustrations will be of very unusual excellence in the spirit of their handling, and the fidelity with which they reproduce the feeling of their originals.

MR. MCLEAN has now on view, at his gallery in the Haymarket, a large picture by Mr. C. Kay Robertson, called "Leading Conservatives, 1887."

AT a recent meeting of the French Académie des Inscriptions, M. Bertrand read a report upon the Gallic cemetery recently discovered at St. Maur-les-Fossés, near Paris, by M. Ernest Macé, who has presented most of the objects to the Museum of National Antiquities. They are identical with those found hitherto in that part of Gaul which Caesar allotted to the Belgians. The tombs are dug to the depth of about 3 ft. 6 in.; they vary in length from 6 to 7 feet, and in width from 2½ ft. to 3 ft. Most had been walled round to a height of from 12 to 14 inches to keep back the sand at the sides, and the body is placed immediately upon the sand and covered with a row of large flat stones. In every case the bodies are laid with the face upwards, the sword in the right hand, fastened by a jointed iron belt near the head. On the right hand side is the point of a lance, the handle of which is placed between the legs, having probably been broken as a token of mourning. Among the other objects discovered is a sword in good preservation, with the chain still attached to it. This sword is 32 inches long, the sheath being of iron, while the hilt and the guard are ornamented with three heavy nails representing a sort of shamrock.

PROF. GEORGE STEPHEN writes from Copenhagen of an important "find" lately made near Bergen, in Norway. A bone stylus with a Runic inscription was discovered, together with a little book in red Latin letters, evidently written with the stylus. The date seems to be twelfth century.

THE STAGE.

"DEVIL CARESFOOT."

MR. RIDER HAGGARD—from whose first story of *Dawn* Messrs. Stanley Little and Haddon Chambers drew the play which, as excellent efforts of the dramatists' art, we applauded at the Vaudeville on Tuesday week—is, as everybody knows, the sensational novelist of the moment, holding to-day the crown and sceptre which were Hugh Conway's three or four years ago, and destined, perhaps before the fulness of time, to pass them on to another. For the public will not be as faithful to Mr. Rider Haggard as, doubtless, Mr. Andrew Lang will be. The public will take up with a new favourite—some humourist, perhaps, freshly declaring himself, or some realist who shall study London—or it may be even it will remember, with more than its present enthusiasm, accepted men of genius in letters, like Stevenson and Hardy. Anyway it can hardly be expected to be entirely faithful to the author of *She*. *She* excites something of that wonder and curiosity which the hero of "Fifine at the Fair" by no means begrudged to

"Doré's last picture-book."

But, with a fire in the house—that hero went on to observe—Doré's last picture-book would very probably get chucked to the wall. The rush would be to save the Raphael. And so with those who, whether in fiction, verse, or essay, have won popularity a little cheaply. The moment is for them. What lasts, of course, is literature—the writing you can return to and dwell upon.

But the writing you can return to and dwell upon is not needed as the groundwork of a successful play. What you want nowadays for that is a powerful story. *Dawn*, in its own fashion, is quite a powerful story. Mr. Haddon Chambers and Mr. Stanley Little have treated it excellently. Their dialogue has crispness, directness, smartness, style in it. And doubtless the characters—where life and individuality were lacking to them—have gained by coming on the stage; gained as second-rate or as impossible characters do sometimes gain on the boards, by the mere fact that henceforth we can associate each one of them with some definite personality. Devil Caresfoot, for instance—that must henceforth be Mr. Charles Charrington, looking as ugly and vicious as his art can make him. When Mr. Charles Charrington acts him it is possible to believe in him. The performance impresses you by its grim power; but the conception of the character—a scoundrel so absolute, so unreasoning, so superfluously mischievous—we do not, looking at it calmly, find that very full of the subtlety which is genius. Devil Caresfoot has the qualities which help the novelist to carry on the reader to number the next. Such a character is a convenience; but, when we have done with number the next, he is not a permanent possession.

How much of the impressiveness of the piece as it goes is owing to the dramatists and to the actors—who yet were far from being equal in excellence—is shown by the fact that the very strongest scene in the play is the love-scene with which the first act ends, the love-scene brought about by the compelled departure of Arthur Beaumont from

Angela. This is the strongest love-scene we have seen on the stage since Miss Alma Murray's in "In a Balcony." It is written with vigour and unconventionality. It soars above the spooony. It has what, in love affairs, we must venture to describe as the interest and virtue of passionateness. And, really, it was acted remarkably well by Mr. Fuller Mellish and Miss Achurch. Preceded to some extent by that which had not been very moving, and followed, if not in the next act, yet certainly in the third, by some commonish and familiar effects of melodrama, it had the character of a page torn, for once, from *la vie véçue*. It had the air, at all events, of a *chose vue*. Yet here, perhaps, Mr. Stanley Little and Mr. Haddon Chambers, watching it carefully from their private box, may have recognised what seemed to us a mistake. The curtain should have fallen on the actual parting, and Miss Achurch—who had comported herself admirably to that point—should not have been left with any words whatever to say after it. The risk of anticlimax may here surely have been perceived.

The stolen document business of the third act plunges us into full melodrama. Here it is question of compromising love letters, penned by Lady Bellamy, ages ago, to Devil Caresfoot, who is now about to marry Angela against her will, and who has employed Lady Bellamy, as his agent to win Angela, under threat of exposure, should she decline to assist him. A little wicked mean old man—Sir John Bellamy—has been on the track all the while. He possesses himself of the letters just when Lady Bellamy is of opinion that her services to the blackguard have at last ransomed them. And there comes to be a fight between the great blackguard and the little rascal, the blackguard acted still powerfully by Mr. Charrington, and the rascal somewhat too obviously rascal and monkey besides, through Mr. Dodsworth's abuse, I cannot help thinking, of his distinct faculty, which I have elsewhere recognised, for "making-up" and "character-acting." Now the "character-acting" of Mr. Eric Lewis, as one Lord Minster, is, on the present occasion, seen to much greater advantage. In the fourth act—to do the dramatists justice—and especially as that act proceeds, the interest is regained which had been a little lost. There is a scene necessarily unpleasant, but I will not say untrue, between Devil Caresfoot and Angela, recalling a little in its action a scene in M. Sardou's "Nos Intimes." Lastly, the young lover—Arthur Beaumont, who had been banished—comes back, and Devil Caresfoot, married for a day, dies of heart disease increased by excitement.

Thus are the innocent delivered, and the play closes in happiness. If the characters are not in themselves original, they conduct the intrigue, upon the whole, with skill. I suppose it would have been perfectly impossible to have dramatised the piece better. The dialogue, it has been said already, is such as one can listen to with satisfaction; and the play holds the attention of the audience. It will certainly be seen again. And when it is in the "evening bill," it will successfully invite the attendance of the large public.

FREDRICK WEDMORE.

STAGE NOTES.

MR. IRVING'S farewell performance, last Saturday night, was one of the finest he has given. Never, certainly, has his Shylock been more intense, more vivid, or fuller of significant detail. It is now some few years since we last saw it. Are we right in thinking that the actor has to some extent modified his conception of the character, laying stress again where stress was wont to be laid by his great predecessors in the part, from Macklin downwards? At first, if we remember rightly, Mr. Irving was wont to sacrifice something to rouse our sympathies for the sufferings of the Jew and for his character; but now, all that is mean in Shylock and all that is savage—the "lodged hate, and a certain loathing"—are brought into a prominence which we seem to remember they were once without. The performance is one of extraordinary power and completeness, and is not open in the slightest degree to the charge that it succeeds in investing the Jew with undue dignity; indeed, Mr. Irving's Shylock is, in many passages, as unattractive and unwholesome an elderly gentleman as one could easily meet. What are called the "mannerisms" of Mr. Irving are distinguished but slightly in this part, while one of the true characteristics of his acting—variety, delicacy, and force, in facial expression—is peculiarly manifest. Miss Terry's Portia gains, if anything, in earnestness, and has never needed to gain in grace. In the casket scene, on Saturday night, she was the very image of picturesque anxiety; in the trial scene she was of noble carriage and of expressive speech. Indeed, in this trial scene, there were some curiously admirable illustrative gestures to prepare the way for the remark that was coming. It was with real art that the actress made the famous and always difficult address about the "quality of mercy" seem to flow directly from a question of Shylock's, and to succeed almost inevitably the gesture which was her first answer to that question. One reason why Miss Terry's Portia—especially in its most celebrated scene—is among the finest things that she can do, is because it makes no call upon her for the absolute passion which she cannot display. Two deficiencies it seems, nevertheless, bound to have, though in presence of its qualities of graciousness and justice it is not difficult to forgive them. Miss Terry continues to show but little feeling for the rhythm of blank verse; and, in the matter of sense, as well as of sound, her emphasis is sometimes wrong. On Saturday night for example, instead of

"Which is the merchant here, and which the Jew?" we had

"Which is the merchant here, and which the Jew?"

"THE performance of the "Merchant of Venice" over, Mr. Irving came before the curtain and said some interesting things to the audience. First as to his plans for the autumn and winter. He goes to Edinburgh and Glasgow, to Manchester and Liverpool, from about the middle of August to the second week in October. Then, after a three weeks' interval, he opens in New York; plays likewise at Philadelphia, Chicago and Boston, and ends his third American tour with a second visit to New York. Then as to his plans for England. He opens at the Lyceum in April—it will be tenanted till then by Miss Mary Anderson; and, though we did not gather certainly whether "Faust" would once more appear on the bill on Mr. Irving's return, there is no doubt of the intention to give another chance to "Werner," and to place Mr. Calmou's "Amber Heart" in the repertory, because of the admirable and even extraordinary use which Miss Terry has already shown she can make of what we confess we should have thought its somewhat scanty opportunities.

"THEODORA" is the only new piece—or piece new to England—in which M^{me}. Sarah Bernhardt appears during the brief engagement which began last Monday. And "Theodora" is an immense and repulsive melodrama—Sardou quite at his worst. But M. Sardou is a very clever tailor of parts for M^{me}. Sarah Bernhardt. He cuts and he fits to a T. He produces precisely that garment of words which permits the best of sensational effect. And the sensational effect is obtained to perfection, no doubt, by an actress whose powers time seems only to have matured. M^{me}. Sarah Bernhardt can now hardly say that she is "not a show"—the public, at all events, take her for one—but she is at all events an artist into the bargain.

MUSIC.

RECENT CONCERTS.

THE season now coming to an end has been an unusually busy one, and it has been impossible for us to notice all the concerts as they deserved. Every week we have received the programme of the students' concerts at the Royal College of Music, but some engagement or other has prevented us from going. On Thursday week, however, we were able to attend the last concert of the summer term, and record with pleasure that the college orchestra greatly distinguished itself. Mendelssohn's overture to "Ruy Blas" was performed with immense spirit. The tone of the strings was excellent, and light and shade were carefully observed. The audience tried hard to have the piece encored. Formerly it used to be marked on the programme that encores were not allowed, and yet they were accepted. Now the notice is withdrawn; but Sir George Grove has evidently determined to abolish them. The players had a more difficult task in the performance of Goetz's fine symphony in F; but here again they passed through the ordeal successfully. Dr. Stanford, the conductor, has laboured with good results, and these cannot have been obtained without much patient work. The programme included Mozart's Concerto for Pianoforte in D minor (with cadences by Mr. J. F. Barnett), played by the accomplished student, Mr. Barton; Bennett's "Parisina" overture, and some vocal music. The concerts will be resumed in October.

The students of the Royal Academy of Music also gave an orchestral concert at St. James's Hall last Saturday evening. The singing of the choir in Brahms' "Song of Fate" was very good. The soft introductory movement was rendered with smoothness and delicacy, and the more agitated section with its difficult intervals and rhythm came out most effectively. The last time we heard the choir was in Beethoven's Mass in C, and then we were not able to speak in such favourable terms. There has therefore been great improvement, for which thanks are doubtless due to Mr. Barnby, the conductor. While praising the choir we must not forget to note that the orchestral accompaniments were effectively rendered. A symphony in E minor, by a student, Mr. J. E. German, is a work of considerable merit. The opening Allegro Spiritoso answers well to its name. It is Mendelssohnian in character, and shows a good knowledge of form and orchestration. The Andante pleased us less, but the Menuetto is exceedingly graceful. The Finale is bright. Mr. German knows well how to express his thoughts, and we shall probably hear of him again. The programme included an Allegro Moderato from Mr. Prout's organ concerto, neatly rendered by Mr. H. J. Wood; and the Intermezzo and Finale from Schumann's Pianoforte Concerto, interpreted by Mr. G. W. F. Crowther in an intelligent manner. Miss Norman was very successful in "Una voce."

LITERATURE.

Juvenilia. By Vernon Lee. (Fisher Unwin.)

THE eleven essays contained in these two beautiful little volumes seem to me, all things considered, among the very best things their author has given us. Quite apart from the more familiar and personal setting, she is here more unaffected, closer, and even more candid with her reader than in any book of hers that may have fallen into his fortunate hands. To such books one must needs come with pen or pencil, and be thankful for a broad margin to write on; for, let us say here, though not for the first time, that the best service Vernon Lee does for us is not merely to suggest new subjects of thought, which anyone can do, but to make us review and revise the judgments that have already, may be, hardened into convictions. It is almost needless to say that *Juvenilia* is written with the luminousness, the choice wealth of illustration, the entire absence of *floriture*, that have made the author notable among modern English writers for equal grace and strength of style. We naturally expect much, and we are not disappointed; for the essays run on without a trick or caper to distract one from the business in hand.

As for the essays themselves, it is impossible to pass from one subject to the other without allowing oneself an interval for readjustment. We must think, and the thought must be fruitful. So, without the faintest tendency to cheapen her themes, the author deals with such really momentous perplexities of contemporary life (or thought, if you like) as call on all of us for some practical solution as soon as ever we become conscious of them. This makes it a little hard to understand why a stumbling-block is placed at the very threshold in the curiously misleading title. For these *Juvenilia* are not what is usually understood by the name; and I venture to quarrel with the author over this with less hesitation, as I freely confess that it is the single point of opinion on which I do not feel sure her judgment is as sound as her authority is weighty. Just in the same way Mr. Ruskin's "Notes on the Construction of Sheepfolds" is a good sub-title; but a good sub-title is poor consolation to the farmers who bought the tract with an eye to the comfort of sundry quadrupeds. The title, then, will not be understood till we have examined the introduction—itsself a discourse of great interest and excellence. The book is a series of essays on art. The author hints a belief that such things are mere playthings, not at all the realities of life, which, indeed, call on us first of all for an answer to the serious question, "In which direction shall our grain

of dust's weight be thrown?" We are not all leaders, we must learn, be led,

"As tender, surely, for the suffering world,
But quiet—sitting at the wall to learn,
Content henceforth to do the thing I can."

"Therefore it behoves us to know what the world is; . . . what we think, and why we think it." But who is to decide on the relative pertinence of the several subjects of contemplation to "reality"? Surely we have no right to regard any serious play as mere juvenility. How do we know—to put it in another way—that there is not, as there is in Mrs. Ewing's story, a land of lost toys, where our playthings will exact from us in a clearer daylight hereafter as much as we have inflicted on them in this ambiguous and misty present?

The Lake of Charlemagne, Botticelli at the Villa Lemmi, Apollo the Fiddler, Perigot, and Christkindchen—all of these are essays of extreme interest. The first four are very closely connected, though they do not profess to be strictly coherent. They deal mainly with the relations of archaeology and art, or (better) of archaeology and life. The first, "an apology of association," is an examination of what that faculty (may we still call it a faculty, I wonder?) brings us of good or evil. It interferes, as the author shows, with the simple enjoyment of a work of art; and yet, without it, the same work would mean nothing to us. Sometimes we see sentimental or psychological qualities where the artist expended himself solely in "a hundred beauties of line and curve and boss"; but sometimes the work of art acts as a nucleus for the collection of so much precious flotsam else entirely lost to us. Indeed, works of art themselves are such aggregations from the chaos of the experience of the men and women who produced them. "Botticelli at the Villa Lemmi" tells us how a certain fresco was removed from the villa for which it was painted and in which it *lived* to that fearful cemetery at the Louvre. This transaction is the text for reflections on the value of modern "appreciation" of art, which the author thinks actually makes it harder and harder to assimilate art into our lives. It is surely true, as she writes, that "we love the elements of the work before the work itself is dreamed of." Who does not know that beautiful things *per se* cannot create a love for themselves? Yet each beautiful thing that we see or feel may make some microscopic contribution to our sympathies and ejects some ugly old idol. Nothing so well shows how fragmentary and capricious and gradual is the growth of what we call taste as the fact that people may live within reach of the loveliest things brush or chisel ever left, and yet, as a glance at a Florentine sculpture-shop is enough to prove, may be more than content with the merest harlotries of art. "Apollo the Fiddler" claims for art a "pageant" character. Why else is so much of its very best anachronistic? Its "form," indeed, is permanent; but the materials it uses may be differently adapted by each generation. The people who are indignant "at such hotch-potch things as operas," twitted by the author in the essay on the Botticelli of the Villa Lemmi, will, perhaps, not be convinced by this essay that they are unreasonable, if, indeed, they are not

provided with the means of answering their critic out of her own month. It is, perhaps, all a question of degree. Some of us, the least musicianlike, no doubt, are not "refreshed" by the ridiculous jumble of a "serious" Italian opera; some people eat sweets, as they did when Aristotle was a boy, at the theatre; some like to hear Beethoven in a gilded restaurant, over lamb and green peas, or (rather) like their lamb the better for the Beethoven. But we can easily imagine that our author is fastidious in the concoction of the hotch-potch, as she herself calls it, that is to serve as the vehicle of her pleasure. It is all a question of degree, we may say. I am sure that I have never seen a Raphael that one would put in a pork-butcher's shop; but I can put my finger on an Ostade that is fit for no other place. So with operas; the Pan's pipe and Punch and Judy were made to be married, and are delightful taken together; but let it be permitted to us still to think that music can be desecrated by idiotic acting, attitudinising, or libretto. The more complicated and refined an art becomes, the greater its need of isolation. The simple majesty of Greek tragedy (which, observe, represented *fact* to the spectator) was not affected by the doubtless rude music of the choruses. Titania and Miranda are rightly waited on by dainty melodies; but Lear in the rain and lightning with the finest music in the world is a conception no nobler, perhaps, than Nahum Tate's.

On page 185, of vol. i., in "Apollo the Fiddler," we read of a common type of crucifixion picture:

"The gentlemen in furred robes and ladies in high coifs, who knelt at the foot of the cross, the pages holding the caparisoned horses, and the half-naked St. Johns and red-hatted St. Jeromes of Van Eyck's and Memling's pictures were not supposed to be really coexisting with the fainting Virgin, the sobbing Magdalen, the bleeding Redeemer; the cross was not really supposed to be erected in front of a Dutch castle farmhouse, with fowls cackling by its barn-door, palfreys crossing its drawbridges, and ducks swimming in its moat. . . . For the agony on the cross, the anguish of the Virgin and her attendants, touched people's hearts; the knights and ladies and horses impressed their imagination; the barn-door, the drawbridge, the ducks, the rabbits, the twenty familiar irrelevant details, tickled their fancy; the singing angels sounded delightful; and the whole—to us so incongruous—picture was enjoyed like some great play, in which there is tragedy and comedy, and pastoral and allegory, all mixed together, and the whole effect of which is delightful."

The common and familiar background brought the story home. Is it not a mere truism to say that we do not feel things unless they are fitted into our lives? "Knowledge by suffering entereth"—our own suffering, of course. Now the hearts of even Van Eyck's contemporaries were more easily got at than are ours. Nor is it doing our generation much injustice to suppose that the story of Christ's agony was true to them in a sense in which it is not to common folk in these days. We dare not imagine a background for the Crucifixion consisting of some part of Trafalgar Square, with Mr. This, Mr. That, and Mrs. So and So at the foot of the Cross. It is not merely humility that would make us shrink from finding our own faces pictured

at the foot of the cross. We should feel something more, perhaps, than simply archaeological incongruity. So, too, we laugh at the picture of Apollo fiddling, though Sarasate, to be sure, is acceptable enough. But Apollo came home to Raphael's contemporaries in nearly the same degree as the group at the Cross. There was room for stories of both; and in neither case did these poor superstitious people see any anachronism when they painted the things of their own time as backgrounds for things true for all time.

It is impossible to do more than hint at the interest of this book. To discuss it properly would require more space than a single number of the ACADEMY could afford. To say that it leaves one unsatisfied is to give it the highest praise such a book can receive. It will be read and re-read with pleasure; and, although it treats of "Juvenilia," they are such youthful things as are, even if they do not so appear, of as much interest to the old, who think they must engage in matters of greater concern, as to the youths and maidens who have no doubt of their infinite importance.

P. A. BARNETT.

The Silver Pound. By S. Dana Horton. (Macmillan.)

MR. DANA HORTON was justly ranked by Jevons "quite apart from ordinary bimetallicists." He commands a peculiarly respectful attention as the most learned and one of the ablest champions of a cause in favour of which so much ability and learning are now being enlisted. The historical research and the dialectical acumen by which he is distinguished are conspicuously manifested in the work before us. Monetary history—a field neglected by most economists—has been cultivated by Mr. Horton with a rare diligence. His labours have been rewarded by the discovery of hidden treasures. He has brought to light documents illustrating the views of Locke and Newton. He is in a position to describe the various stages of opinion through which the unfettered mind of Locke passed. He extracts from this new-written page of history the following lesson:

"The final outcome of Locke's activity in speculation and action in monetary affairs is that his authority makes for the concurrent use of the two metals as money, and for the power and duty of the state to maintain them in that function."

The views of Newton are interpreted in a similar sense. Continuing the monetary history of England, Mr. Horton shows in what sense silver, or gold, has been "the standard" at different times. He traces all the downward steps which form what he calls the "Descent to Gold." He throws a new light on the epoch of Lord Liverpool, exhibiting the unfavourable conditions under which the celebrated *Treatise on the Coins of the Realm* was produced. Mr. Horton does not spare the father of monometallism. It is part of his design to prove that those who made monetary history were themselves lamentably deficient in historical knowledge. He regards Lord Liverpool as a sort of non-conductor, isolating the present century from the historical past. The ignorance and negligence which he fixes upon the authorities to which monometallists

look up are astounding. We do not venture to join issue upon details with one whose special knowledge is unmatched. But it may be permissible to doubt whether the general impression conveyed by Mr. Horton's criticisms is not a little exaggerated; whether the author of the classical *Treatise* was quite such a driveller as the following passage imports:

"... Lord Liverpool's cardinal proposition—that the principal measure of property can be made of one metal only—acquires an air of Hibernian simplicity. The subject contains the predicate quite as explicitly as in the proposition 'the larger of two apples can only be one apple.' A short cut to final judgment upon the matters in hand will, perhaps, be found in the remark that if we proceed... to argue that, because the larger of two apples can only be one apple, therefore it follows the smaller apple is not an apple at all, or at least ought not to be so regarded, we shall have sounded the depth and completed the circuit of Lord Liverpool's reason."

These historical researches have a direct bearing on the author's thesis. According to him, the prejudice in favour of monometallism is founded upon the sentiment *Nolumus leges Angliæ mutari*. Now he contends that the earlier historical precedents make for the concurrence of the two metals; while the laws by which in later times the "disinherison of silver" has been decreed were made by legislators not entitled to the respect of posterity. We have already quoted his opinion of Lord Liverpool. Peel he describes as "praising Newton to the skies for supposed anachronistic opinions from which Newton would probably have recoiled, not merely as an imputation upon his judgment, but upon his honour." Mr. Horton thus points the moral of this incident:

"The entire statement, so far as it attempts to justify the exclusion of silver, is baseless; and yet it is through the intervention of Peel that the exclusion of silver was transmitted to the present generation, and it is by favour of his mistake that people in England to-day believe that the gold standard necessarily implies the exclusion of silver as full money."

Misinterpreted history is not the only idol of the market-place which Mr. Horton undertakes to clear away. The prepossession against a fixed par between silver and gold is largely due to an erroneous theory concerning the relation of law to the value of money. Mr. Horton combats the doctrine of non-interference with his usual warmth. Aristotle's dictum that a king ought to know "what coin should be raised or lowered in price and when" is shown to be by no means so absurd as it appears to some moderns. One of the instances by which our author proves that even in a monometallist régime the state does regulate the value of money will be new to most readers. He cites from a return made by the Bank of England the statement that "the ounce of gold—equal in weight to £3 17s. 10½ of ideal coins—was worth in 1827 £3 17s. 6d.," and in subsequent years different amounts varying to the extent of 5d. At many other points the bimetallic leader attacks successfully the monometallist intrenchments. Nor can it reasonably be denied that he has carried at least the outworks of those defences—all the loose mass of unfounded prejudices by which it has been

sought to bar even the approach to a consideration of the subject.

It is another question whether he makes much impression on the interior lines of defence occupied by picked champions—upon the position which an eminent economist has recently thus indicated: "There is agreement [between the ablest monometallists and the ablest bimetallicists] as to the qualities or general tendencies of the causes under discussion, but not as to the relative quantities of those tendencies." What is required for the practical decision of the matter is to estimate rightly the degree of certain probabilities and utilities. What is the probability of nations being induced to form a monetary convention? What is the probability that such a convention would (as Jevons thought) be set at nought by paper issues; or, that if it were maintained, there would occur an inundation of silver? Problems such as these do not admit of demonstration, and we may properly defer to the opinion of experts. In the delicate balance of authorities what weight should we assign to our author's judgment? It is an invidious duty to have to point out that the prestige attached to so great ability and learning is somewhat impaired by the appearance of a certain want of measure and moderation. The writer's tone is too often that of an advocate brow-beating a jury, rather than of a judge impartially summing up the case. The following passages are characteristic:

"Of course, casuistry and special pleading can have full exercise in the game of hide-and-seek between causes and conditions. It would be a dull and barren age which, after having set on foot an inter-continental outlawry of one of the money-metals of man, should make default of sophistry in self-defence."

"The ancient and well-invented bull of the witnesses, who sought to prove a defendant's innocence of stealing by swearing that they did not see him steal, has at last appeared in the flesh. So fatal is the Nemesis that pursues science when she is untrue to her better self."

"For the rest, we can close this section by recommending to whom it may concern [a certain argument] as a cucumber, more likely than any in the field, to yield sunshine:

"One who should put forth speculations upon the desirability of there being but one sex... would meet with little sympathy in this common-sense world... And yet how far is the 'monometallist' with his one-metal doctrine... free from exposure to the *reductio ad absurdum* which must haunt the monosexist...?"

This slap-dash style of argumentation will no doubt be effective with a large class of readers. The sort of person who takes his opinions on political unionism from the leader of a party newspaper may approve of discussing monetary unionism in a similar style. On the other hand, those who consider that the decision of the matter turns upon fine questions of degree may doubt whether the case is quite so clear as our author represents. They will remember that, as Lord Liverpool says, in a passage which our author has quoted, but does not seem to have laid to heart: "Many persons of acknowledged abilities and great authority have entertained different opinions on this subject." Those who approach the subject in this spirit will, perhaps, not find

much in this volume to modify the conclusion of Jevons :

“To wade through the interminable discussions on bimetallism is about as useful as to wander through a forest in a mist, the happiest result of which is usually to find yourself back again at the point you started from.”

F. Y. EDGEWORTH.

TWO GERMAN BOOKS ON BULGARIA.

Prince Alexander of Battenberg. By A. Koch, Court Chaplain to his Royal Highness. (Whittaker.)

The Kidnapping of Prince Alexander of Battenberg. By A. von Huhn. Translated by Captain F. Beaufort. (Stanford.)

MAJOR VON HUHN'S book in its German form has already been noticed in the ACADEMY of January 15, 1887. Little need be added here. The author in his preface disclaims the notion of writing “academical books.” We must, therefore, not expect style either from him or his translator; but he has a most interesting story to tell, and he tells it truthfully and well. His book should be read by all who take an interest in Russia's foreign policy in the Balkans. Mr. Koch's book deals with a far longer period of Bulgarian history, and practically covers the entire reign of Prince Alexander. If the German soldier writes with a sword rather than a pen, it is difficult to describe the substitute for a pen with which the German chaplain writes. The following is a fair instance of his style :

“How, therefore, is it possible that there should be a confederacy of the Balkan peoples against their over-powerful neighbour, when, for the reasons just given, one Balkan state cannot even meet another in the stadium of preliminary conferences; when each one of them is only on the watch to blacken the other to a powerful neighbour, in order that it may pose as the good child; when every success of the one calls forth a storm of indignation on the part of the other; and in this way envy and ill-will towards the other determines the policy of each?” (p. 48).

If those who most desire to see a Balkan confederacy must mournfully admit that there is much truth in this remark, surely Mr. Koch goes too far when he states that “the statesmen in the other Balkan states are for the most part exactly like those in Bulgaria.” No one in his senses would compare Zankoff and Karaveloff with Tricoupis and Garschanine; although, strange to say, these four prime ministers, differing in everything else, have one good quality in common—they have not enriched themselves at the expense of the state they served. But even in this respect Mr. Koch does not do justice to the Bulgarians. Prince Alexander, he says,

“had become acquainted with the fact that among the Bulgarians, and in their party disputes, money is a great factor; that to secure a minister's post, with the pay attached to it, and to pocket high salaries, form the pivot of domestic politics” (p. 27).

It would have been more generous in Mr. Koch had he not made Prince Alexander the vehicle for this opinion of Bulgarian public men, unless, indeed, the prince actually expressed this opinion, which it is difficult to believe. On the other hand, Mr. Koch is more fair in his estimate of Bishop Clement

than the major. Perhaps this is natural in speaking of a brother clergyman. The major speaks of Clement as a “depraved and ignorant voluptuary” (p. 59); but the chaplain, while referring to his “rather disreputable private life,” mentions the fact that he has made a name for himself in Bulgaria as the author of two popular dramas. For Zankoff, Clement's civilian partner in the kidnapping, Mr. Koch has not one good word. Dragan Zankoff is indeed a “gipsy” by nature as well as by descent. The prince called Zankoff in 1880 “a thoroughly depraved man,” and this description was deserved. At the time of the Danubian conference, Zankoff assured the Austrian consul-general that Bulgaria would vote unconditionally for the Austrian presidency of the river. At the same time he assured the Roumanian consul-general that Bulgaria would vote against it. When the matter was put to the vote in the Danube Commission at Galatz, the Bulgarian representative, Kyriak Zankoff, a nephew of the minister, recorded his vote against the Austrian presidency. The Austrian government was naturally indignant at this duplicity of one who held in the cabinet the two portfolios of prime minister and foreign minister; but Zankoff merely resigned these posts and took over the Home Office. This mere exchange did not satisfy the prince, who wrote to Karaveloff, the new prime minister, demanding Zankoff's removal from the cabinet “for the preservation of the dignity of the Bulgarian government” (p. 66). Zankoff resigned on December 29, 1880. The prince's *coup d'état* took place in the following spring. That a parliamentary majority should have given him Zankoff and Karaveloff for his chief advisers forms the prince's best excuse for abrogating the constitution. Mr. Koch shows, however, the weakness of his case by taking refuge in metaphors. The prince, he says (p. 87), “dared not rob his people of the right of free disposition of themselves—only such over-luxuriant tendrils and excrescences were lopped off as threatened to attract all the healthy sap to themselves.” The first to suggest to the prince the abrogation of the constitution was Gen. Ernroth, the Russian war minister. It was the irony of fate that made Ernroth the instrument of the Czar for suspending the Bulgarian constitution. Ernroth had always himself adhered to the letter of it. As the constitution forbade anyone wearing arms to enter the chamber, Ernroth used always to divest himself of his sword before doing so. But it was not only in anise and cummin, but in the weightier matters of the law that Ernroth was unlike his Russian brethren, and gained the good opinion of the Bulgarians. On his own motion his salary was cut down by one half.

Sobobeff, in *Der erste Fürst von Bulgarien* (see ACADEMY, January 15, 1887) states that the prince abrogated the constitution by the advice of Austria and Germany in order to excite enmity between Russia and Bulgaria. This statement has been contradicted by Ernroth in the Russian press, and is contrary to the facts. When the elections on the proposed suspension of the constitution were being held, the entire influence of Russia was exerted on the side of the prince. “The

Czar's government wishes that the Bulgarian people should remain indissolubly united with their prince, and should repulse all the lures of the traitors who are working against him.” So ran the telegram which the Russian consul-general caused to be posted through the streets of Sofia. The Pan Slavist party of Russia, as well as the Czar, supported the prince's *coup d'état*. The letter of Aksakoff to the prince of July 30, 1881, is most instructive (p. 76). A recently published pamphlet thus expresses Bulgarian public opinion on the matter :

“So long as the Prince of Bulgaria listened to the insinuations of such people as Katkoff, and worked against the interests and freedom of his people, he was a saint for those Moscow Slavophiles; and Katkoff proclaimed from Moscow, with might and main, ‘the prince is even more than a Slav.’ Yes, in those days he was the right man for them, in those days he was their ideal. But when—seeing that the road he had struck into was a wrong one, and that by proceeding in it he only placed a new yoke of slavery round his people's neck, and merged his princely crown in the title of viceroy—he consequently arranged his government otherwise, he suddenly turned from a saint into the scum of humanity for those Moscow gentlemen. And they all began to impute to him as a crime his endeavour to preserve the freedom, autonomy, and independence of his country” (p. 89).

By the side of his rival Karaveloff, Zankoff assumes almost heroic proportions. In the minds of all Bulgarians, including the partisans of Russia, Karaveloff is, of all men, the most despicable. “You are a loathsome wretch, a cur not worth a thought. I am ashamed that I ever believed in you.” These were the words of burning indignation, addressed by Stambouloff to Karaveloff, in the ministerial council, after the return of the prince. Karaveloff, who crouched on his seat as if crushed, only replied: “I can't defend myself now” (p. 254). It was owing to Stambouloff that in the summer elections of 1884 Zankoff was thrown out, and succeeded by Karaveloff. Stambouloff has himself never sought office, and this is the secret of his unbounded influence over his countrymen. Stambouloff is the Cincinnatus of Bulgaria. Had Karaveloff reversed the Chauvinist foreign policy of Zankoff towards Serbia he would have deserved the gratitude of his country, but unfortunately he only intensified it. The result of the Zankoff-Karaveloff policy was the Serbo-Bulgarian war. As I have stood alone among English writers in pronouncing the conduct of the Serb government natural, though not generous, I cannot refrain from quoting from a letter written by the prince to his parents immediately before the outbreak of that war on November 13, 1885 :

“With Serbia the case is different. Here the Bulgarians can only smite their breasts, and confess that they have themselves to blame for this state of things. They [the Bulgarians] have unfortunately always been really bad neighbours, and especially during the last two years. From political shortsightedness and propensity to factious intrigues they have continually ran foul of Serbia and her king in the most unjustifiable way. Certainly Serbia would have behaved more generously in the moment of danger if it had forgiven as an elder the misbehaviour of a younger brother. Milan's policy is not according to my taste, as it is a policy of

revenge; but it is not undeserved by Bulgaria" (p. 242).

Mr. Koch makes no mention of the attempt of Kaulbars and Soboleff to kidnap Prince Alexander—a singular omission. Nor is his book deficient in padding: chapters i. and xii. might well have been spared. He has nothing new to tell us about the Philippopolis revolution of 1885; but his pages throw much light on the interesting and little known period of Bulgarian history between the meeting of the Second National Assembly in 1880 and the formation of Karaveloff's second administration in June 1884. This period exactly covers the career of "old Father Zankoff" as a minister. On his fall in 1884 he resumed the more congenial rôle of conspirator. The result of his consummate abilities for intrigue is fully described in Major von Huhn's book, which should be read as a complement to Mr. Koch's.

J. G. COTTON MINCHIN.

Introduction to the Catholic Epistles. By Paton J. Gloag. (Edinburgh: T. & T. Clark.)

THAN Dr. Gloag there could not easily be a more fair-minded controversialist, or a more judicial and impartial critic; and the present work will certainly add to his already well-established reputation as a Biblical scholar. It may be that Dr. Gloag has no absolutely new light to throw upon a subject which has been so abundantly discussed as the Catholic Epistles—in dealing with the alleged obligations of second Peter to Josephus, for example, he is content to refer to the trenchant criticism of Dr. Abbot's theory by Prof. Salmon; but he brings to his task not only the thoroughly judicial temper to which I have referred, but sound judgment, accurate scholarship, and a seemingly exhaustive acquaintance with the literature of the subject. He possesses, moreover, the power of clear statement and logical arrangement in a remarkable degree; and the result, accordingly, is a volume which is a distinct gain to Biblical learning.

But Dr. Gloag is nothing if not orthodox; and so great is his fairness that he does not even pretend to be entirely unbiassed. "The truth, and the truth only," he says, "ought to be the great object of our pursuit: all other considerations must yield to this." But he adds, "It is impossible to read [these Epistles] without some prepossession. . . . There is, we believe, a divine harmony in the books of the New Testament, because we regard them as all inspired by one Spirit." Now, the man who believes that the books of the New Testament are divinely inspired, and who assumes that the particular books under discussion belong to that category, cannot be considered entirely free; and it is not, therefore, surprising that Dr. Gloag, while apparently giving all due weight to adverse considerations, settles down at last, in each case, into the orthodox conclusion. The check, it may be, operates unconsciously. Dr. Gloag, indeed, is too sound a Protestant to rest the authenticity of the New Testament books on the authority of the Church; and he stoutly repudiates as of dangerous consequence the opinion that because a book has been pronounced canonical it must be inspired Scripture. "No divine superintendence," he

tells us, "was promised to the Church in determining the canon of Scripture; each writing must stand or fall on its own evidence." If this means that although a book be included in the canon it may notwithstanding be a forgery, it is as much as the freest investigator could ask. For this plain statement, therefore, even though it may not quite harmonise with what has been quoted above, Dr. Gloag is to be thanked. If, after all, he is wholly unbiassed, it can, of course, only be noted as a remarkable fact that out of so many works of doubtful authenticity he does not find sufficient grounds for the rejection of even one.

Dr. Gloag's work, it will be observed, is entitled an Introduction, and this word defines its scope and limits. It discusses in order the authenticity and authorship of each epistle, its readers, its design and contents, and the time and place of writing, balancing the arguments on either side and noting the leading authorities for each opinion. As may be anticipated, Dr. Gloag does not acknowledge any opposition between James and Paul, though he admits different points of view, and that they use the word "faith" in different senses. The early date which he assigns to the Epistle of James—prior to the council of Jerusalem—however inadmissible otherwise, is, it must be confessed, the only one consistent with the assumption of its non-polemical character. It is, of course, unnecessary for me to say whether Dr. Gloag is successful or not in his defence of the two Epistles of Peter. It is certain, at least, that he argues the case with great ability and commendable moderation. It speaks well, too, for his common-sense that he perceives the explanation which would refer the resemblances between second Peter and Jude to inspiration to be uncritical. Dr. Gloag has no doubt that either writer was indebted to the other; but which was the first is a point on which, he confesses, it is "almost impossible to come to a distinct and definite conclusion." Of his treatment of the Epistles of John, I will only say that, with regard to the second and third, it seems a little beside the mark to speak of forgery. Dr. Gloag says a forger would have called himself the apostle, which is probably true. But the writer does not even call himself John, and it surely does not follow that he was the apostle because he does not call himself so. Perhaps the real point requiring explanation is how it comes to pass that two private letters having no lesson—or no very profitable one—for the Church, and which, it must be said, breathe very little of the spirit of the Master, have been included in the canon of Scripture.

Besides the matter more strictly pertaining to the subject of the work, Dr. Gloag introduces a number of interesting dissertations—on the Book of Enoch, for example, the Assumption of Moses, &c.—all of which are distinguished by the same qualities of clear statement, nice balancing of evidence, and strict impartiality, which characterise the rest of the work. Still, in some cases, it must be confessed, the conclusion arrived at is more safe than profitable. In treating of the "spirits in prison," Dr. Gloag says, "The meaning of the passage must be left in uncertainty. It is one of those obscure statements of Scripture on which it is impossible to dogmatise, and any inference derived from

which must be extremely problematical." It is difficult not to believe that a further exercise of common-sense and a really free criticism might have led to some more satisfactory result. ROBERT B. DRUMMOND.

THE STUDY OF OLD FRENCH.

La Langue et la Littérature Françaises. Par Karl Bartsch et Adolf Horning. (Paris: Maisonneuve et Leclerc.)

WE can conceive but one unfavourable criticism being passed on this excellent book, and that is of a mainly technical kind. Herr Bartsch might have distinguished it rather more clearly from his admirable *Chrestomathie*, of which it is neither a sequel nor a new and enlarged edition, while, on the other hand, it is not entirely independent of it. This, however, matters very little. The book is larger and on a more elaborate scale than its forerunner, the choice of texts is wider, the apparatus criticus given with each is much more extensive, the glossary is proportionately fuller, and the prefixed grammar by Herr Horning is, in its scale and measure, nearly complete. Indeed, except so far as literary history goes, it may almost be said that the student has his whole requirements, in at least the earlier stages of his study of Old French, bound up together here. The extracts are taken from more than a hundred different works and authors, and are in each case not mere snips, but solid chapters, if we may so call them. And it may, perhaps, be as well to add that the objections often, and in our own opinion not unjustly, made to extracts in the study of both ancient and modern languages do not apply here. The range of dialectal and even of grammatical variation in the five centuries of what is usually called "Old French" (that is to say the centuries from the eleventh to the fifteenth) is very considerable, and requires illustration from, if not the complete study of, a large number of works. But it is impossible, from the length, the repetition, and the frequently diffuse style and plan of much of this literature, that many of its books should, by younger students at any rate, be studied as wholes. In the present volume the difficulty is met and solved, and it is most sincerely to be desired that it should be introduced largely in the upper forms of English schools. None of the objections made to the study of merely modern languages applies to Old French, which has at least something both of the unfamiliarity and of the method of the classical tongues; while until it is studied to some extent as a part of secondary education, the establishment of schools or triposes in it by the universities is, in a great degree, lost labour, or, rather, labour whose expense is defeated by the neglect of others to do their part. We do not say that it is quite as absurd for a third or fourth year man of ordinary education at either university to plunge into half-a-dozen old French books, without a ghost of a previous acquaintance with the grammar or the vocabulary or the history of the subject, as it would be for a boy from one of the upper forms of the modern side of a school to plunge into half-a-dozen books of Greek; but the absurdity is the same in kind if not in

degree. There are some of us who, however fond we may be of modern languages, believe that the merely educational value of their strictly modern forms is not very large. But the older forms have, even according to these heretics, a value less indeed than that of the classical languages, but approaching to it. This value can only be got out by methodical and regular study, to which, in the case of Old French, no single help so convenient as this book has yet been given.

GEORGE SAINTSBURY.

NEW NOVELS.

- The Crusade of the Excelsior.* In 2 vols. By Bret Harte. (White.)
- Her Son.* In 3 vols. From the German of E. Werner. (Bentley.)
- Thralldom.* By Julian Sturgis. (Longmans.)
- An Exile's Romance.* By Arthur Keyser. (Vizetelly.)
- Friend Sorrow.* By Mrs. Austin. (Burns & Oates.)
- Moy O'Brien.* By E. S. Thompson. (Dublin: Gill.)
- An Iceland Fisherman.* From the French of Pierre Loti. (Maxwell.)
- My Brother Yoss.* From the French of Pierre Loti. (Vizetelly.)

It is a pleasure to encounter Mr. Bret Harte elsewhere than in a silver mine in the Sierra Nevada or on a Californian ranche. Not but that he is the most charming of companions either in the mining gully or round the prairie camp fire, but one can become as satiate with these as Amael with the milk of Paradise. As a sketcher of the life of the Far West he is still unrivalled, but even such masterpieces as *The Luck of Roaring Camp* or *Flip* have no claim to be considered complete romances. They are brilliantly coloured fragments of a fragment, glimpses of lives momentarily all the more vivid from the abrupt darkness which envelopes their past. But in *The Crusade of the Excelsior* the author has not been content with characterisation, description, and startling incident: plot has allured him from his beaten way and drawn him far afield. Mr. Bret Harte's new story is a tragi-comedy of a kind which is unfamiliar in English fiction. In this romance, if he prove his affinity to any one it is to the humorous author of *The Casting Away of Mrs. Lecks and Mrs. Aleshins*. *The Excelsior* is a vessel bound from Boston to San Francisco, *via* Cape Horn. The passengers are a queer set—mostly every-day personages, and yet each with distinctive traits. Chief among them are the fascinating and aristocratic Mrs. Brimmer, who believes that the husband whom she is about to rejoin is known and revered wheresoever the human tongue waggeth; the strong-minded Mrs. Markham, whose mission is to enfranchise her sisters in bondage; the acute Yankee merchant Banks, who loveth not sentiment or romance; the lovely Miss Keene, journeying westward to join her brother; the saturnine Hurlstone, whose strange actions as the vessel nears the West Mexican Coast puzzle his fellow passengers extremely; the mysterious, ever complaisant, poetry-quoting Señor Perkins, who, in the

cabin, is considered a benevolent bore, but whom the reader at once recognises as a principal motor in the tragi-comedy which is to ensue. The story opens as the vessel is off Cape Corrientes and the passengers are eagerly looking forward to touching at Mazatlan. Mysterious circumstances disappoint them. Señor Perkins affords Capt. Bunker the benefit of his knowledge of the coast further north, and guides the ship into the eternally fog-shrouded straits of the harbour of Todos Santos, an old-time Mexican stronghold and an advanced station of the Catholic Church. Each passenger goes ashore, and is amused, charmed, or disgusted by the backward state of the inhabitants, who from the Commandante, Alcalde, and Padre downwards appear entirely ignorant of aught that has occurred for several generations. While enjoying their new experiences they learn that the *Excelsior* has disappeared, and that it has been seized for the Central American Free State of Quinquambo by Señor Perkins, who turns out to be the Liberator, Generalissimo Leonidas Bolivar Perkins. This eccentric individual (vaguely akin to the genial "Count" in Mr. Wilkie Collins's *The Woman in White*) is as passionately enamoured of revolution for revolution's sake as any aesthete of art for art's sake. But though dexterous with either knife or pistol when the occasion occurs, he prefers bloodless surprises: hence his desertion of the *Excelsior* passengers at fog-bound but hospitable Todos Santos. Mr. Bret Harte's readers will greatly enjoy the amusing account of the travellers' life at the Mexican outpost; the absurd revolutionary fiascos; the love-episodes, the restless energy of the Americans among the indolent and ignorant Mexicans; the strange end of Generalissimo Perkins, and the very clever way in which at last the castaways are extricated. In this story the author shows a faculty of invention and a literary tact so noteworthy that we may even venture to expect another romance as superior in permanent value to the delightful *Crusade of the Excelsior* as the latter is to its lengthy predecessor, *Gabriel Conroy*.

The author of *Her Son* is one of the most popular of contemporary German novelists. *No Surrender* and *Under a Charm* are already known in an English guise in this country; but neither book was so interesting nor so artistically worked out as the ably written romance which Miss Tyrrell has very satisfactorily translated. As a rule, the translations of German books are better than those from the French; the effervescence is not so collapsed, the draught not so stale. On the other hand, the novels of Deutschland are apt to be as little entertaining as a Scotch clergyman's harangue in the noon of a summer-day. There is a terrible conscientiousness about the Teuton romancist. The baking of a scone, the knitting of a stocking, must be chronicled with as diffuse veracity as the fall of Hector or the ruin of Troy. Village gossip and commonplace loquacity are as worthy of record as the oratory of Demosthenes or the wisdom of Solon. *Her Son* is a pleasant contrast to much German fiction of this kind. The story is interesting, the plot consistent and well developed, the dialogue natural, and the characterisation distinctly good. Haughty, intolerant, domineering, but not hard-hearted

Count Steinrück and his unacknowledged grandson, Michael Rodenberg, are the protagonists representing intolerable pride and passionate determination conflicting in an eager life drama. The author of *Her Son* has sought to delineate the power of consanguinity—how ill-treatment, indifference, neglect, absence, and a hundred other ills of life are incapable of arresting the manifestation of the characteristics of a dominant race. By slow degrees Michael Rodenberg forces his way in the world, under the very eyes of his antagonistic grandfather; and in the end he comes into his own again (and another's also) and marries his beautiful cousin. A skilful plot has been woven for the evolution of this motive; and, though the book would certainly not lose by condensation, it may fairly be said to justify its length—a rare thing with three-volume novels.

Thralldom is an improvement upon Mr. Julian Sturgis's last romance, which was clever rather than interesting. The title refers to the spiritual bondage of Gabriel de Courcy to one of the female personages in the book—to whom it would hardly be fair to say, as a clue would thereby be afforded which would spoil the interest of the story. If Mr. Sturgis had restricted himself to mesmerism *Thralldom* would have been a stronger romance than it is. The mumbo-jumbo, giant negress, Obeah-horrors business is anything but impressive, and quite discounts the narrative of the wonderful magnetic power possessed by the strange woman who so effectively pulls the strings in the background. The Fanes, father and son, are excellently delineated. Tom Fane is the hero, and is as foolish, vain, good-natured, and worthy a fellow as most heroes would be if recruited from ordinary humanity. He and Gabriel de Courcy are both desirous to win the hand of Sibyl Mervyn; but the one is checkmated and the other successful by means of strange doings beyond their control. Like so many books of this kind, one feels that *Thralldom* might have been made a really remarkable story. This it is not; but it is an amusing and interesting *conte* well worthy of a spare hour's devotion. The author seems to have written more hurriedly, though not less brightly, than usual—at least, his present critic noticed one or two slips, such as "from whence." But in his next story Mr. Sturgis should not allure the reader with visions of blood-curdling terrors, and ultimately offer him only second-rate and rather stale conclusions.

Mr. Arthur Keyser's story would not suffer from the removal of its sub-title, "Realities of Australian Life." Arthur Dacre's experiences "up-country" and elsewhere—south, east, and west—suggest a vivid imagination on the part of the author of *An Exile's Romance*, rather than convince the reader of their veracity. Arthur Dacre goes forth from London, unable to marry the girl whom he loves, owing to his shameful folly in squandering away his fortune among gamblers. In the deserts of Australia he encounters in the most natural manner a French gentleman who had helped to ruin him in London, and who now puts him on the track of a quondam friend, who will restore much cash, if not the girl of whom also he has deprived Arthur

Dacre. The latter goes to and fro upon the earth, his journeyings being narrated with a brevity and abruptness which must charm the reader if he should be at all bored. It is necessary for Dacre to find Darrell's accomplice, a certain Comte de Deauville. This gentleman has experienced a reverse of fortune, and has been sent as a convict to New Caledonia, on a charge of forgery and murder. Dacre does find him—tarred and feathered, he rules as king of the Cannibal Islands! Finally, of course, all comes right. The lady goes out to Australia, and finds her lover on the plains about to be devoured by carrion crows. The story is not uninteresting, despite its improbabilities and unskilful evolution of episode. It is, however, poorly written; and there are many wearisome pages of commonplace padding. Surely it is time for novelists, even of the Hugh Conway type, to cut dissertations on that ill-used word "good-bye." "There is no other word in the English language which contains as much as this" (and so on, for sentence after sentence, in the usual hackneyed style), writes Mr. Arthur Keyser. We have all also heard of the buoyant little craft, called *Hope*, which wrecks itself against the rocks of life in the seas of time.

Friend Sorrow is an unpretentious story, well-told. The musician, Luigi Pasturini, is the real hero. The woman who has the long companionship of "Friend Sorrow" is Ethel Merton; but at last, after much suffering, she and Luigi find out that they love each other. Even when a book does not strongly interest, it is always worth reading, if it be a faithful mirror of life, and be well written. Such a book is *Friend Sorrow*.

Moy O'Brien, as the title conveys, is a story of Irish life. Presumably there are yet many people who are not bored to death by Irish novels. That "most distressful country" has been as prolific of romances as of potatoes or patriots, and of none of these does there seem to be any lack. Miss Thompson's story, however, is distinctly above the average; and even those who have a wary eye on Irish fiction and the politics therein inevitably broached, may take up *Moy O'Brien* with a light heart and with an assurance of interest in the narrative of how Moy O'Brien and Denis Gilmartin at last, after the usual devious course, reached the goal of marriage.

Pierre Loti is one of the ablest and most noteworthy of living French writers. He may be called the Clark Russell of France, except that he is less of a story-teller and more of a literary artist than our popular sea-novelist. He is so admirable a writer, indeed, that, young as he is, academical honours are erelong certain to be his. His *Pêcheur d'Islande* and his *Frère Yves* have already been noticed in the ACADEMY in their original guise, so here I need only mention that Miss Cadot and Miss Fletcher have accomplished their respective tasks most creditably. These books should find many readers in this country. They represent the best achievements of contemporary French fiction; and either is worth a hundred of the sensational vulgarities put forth by Gaboriau and F. du Boisgobey, whose badly translated productions are being so widely disseminated throughout England. It is to be hoped that

either Messrs. Maxwell or Messrs. Vizetelly will enable readers to enjoy some others of Lieut. Viard's ("Pierre Loti's") romances, especially that exquisite Tahitian idyll, *Le Mariage de Loti*, his Turkish story, *Asiyadé*, or his admirable *Roman d'un Spahi*.

WILLIAM SHARP.

RECENT LITERATURE.

The Pleasures of Life. By Sir John Lubbock. (Macmillan.) To those—and their name is legion—who are just starting on their holiday rambles and need some literary provender on the way, we heartily recommend this portable, well-printed volume. It is emphatically a small book on great subjects; and it would be difficult to find two better essays—more happily expressed and more suggestive of thought—than those felicitously entitled "The Duty of Happiness" and "The Happiness of Duty." Again, Sir John Lubbock deserves to be heard upon the Choice of Books, for it is quite evident that he knows their contents at first hand, and is not afraid to speak his mind about them. It is just what we should expect that Plato occupies a somewhat lower place than Aristotle in his estimation, while among moralists he gives the highest place to Epictetus. He considers the *Enchiridion* one of the noblest books in the whole of literature, and expresses his surprise that it is so little known. This remark may, perhaps, induce the thoughtful traveller to add it to his well-chosen store, and assuredly he will not regret the addition. If we have any fault to find with what Sir John says about the Pleasures of Travel, it is that he says too little. His quotations are, indeed, apt and interesting; but one would rather have had more of his own personal experiences, which, we believe, have been considerable. In one of them, at least, many have shared—"No one who has not travelled can realise the devotion which the wanderer feels for Domiduca, the sweet and gentle goddess who watches over our coming home." We hope this charming little volume will find many readers, for it will whet the appetite for wholesome reading as well as for calm reflection. Sir John will, in any future edition, correct the spelling of the great schoolmaster's name (pp. 185-6), which is not that of the metropolitan magistrate.

The Theory and Practice of Archery. By Horace Ford. Revised and re-written by W. Butt. (Longmans.) This re-issue of the late champion's work on archery, thoroughly brought up to the level of practice at the present day, is a gratifying sign to all lovers of the bow. No man in modern times has made better scores than Mr. Ford, and shown what it was possible to accomplish with that weapon. His book on archery, originally published in 1856, at once became the standard authority. The second edition, published in 1859, has long been out of print. No other work on practical archery can be named by the side of Mr. Ford's book; and when all the recent improvements and the experience of Mr. Butt, who has for many years been the secretary of the Royal Toxophilite Society, are added, it is superfluous to commend the present work, which is absolutely indispensable to an archer. It may be broadly divided into a full account of all connected with the bow, and the position in which it should be used, and a list of the different public archery meetings with details of the scores of the chief shooters. The old rule which prevailed up to the middle of the century, or a few years later, was to draw the arrow to the ear. Mr. Ford's improvement, which has revolutionised modern archery, is to draw the arrow below the aiming eye and suffer it to lie in the same vertical plane as the line between the eye and the object to be hit.

A good deal of variation, however, in this rule may be observed among archers. In the palmy days of the Royal Sherwood Archers we once saw a lady win all the three prizes—for greatest score, greatest number of hits, and most central gold—who drew her arrows, without effort and apparently without aiming at all, to her waist. This society, established in 1833, under the patronage of the Duke of Sussex, to which all the most celebrated archers of the midland counties belonged, recently expired, after an existence of half a century. Lawn tennis, frivolous though it may seem to the scientific archer, has proved a formidable rival to his sport. Anyone can play at the former pastime without a tithe of the practice necessary to make even a fair figure with the long bow. Many of the appliances needful for archery—arrows, bracers, shooting gloves, and the like—are here figured. Their use is also described with the utmost care. A portrait of Mr. Ford, who was champion for twelve years, will please those who remember his prowess; and it is well matched by a photograph, taken by Mr. C. E. Nesham, the present champion, of Major Fisher, champion archer during 1871-4. The book is retained within moderate dimensions by the omission of much historical matter relating to the use of the English long bow in mediæval warfare. This can be conveniently found in other works. Mr. C. J. Longman (himself champion in 1883), to whom is due the preface of Mr. Ford's book, may be congratulated on its appearing in time for the Grand National Archery Meeting at Cheltenham on August 3. The scores of all the leading archers at this meeting, from its commencement in 1844 to last year, can here be found at a glance.

Letters from Ireland, 1886. By the Special Correspondent of the *Times*. (W. H. Allen.) These letters deserve the careful perusal of Home Rulers and Unionists alike. While quite free from the bitterness which at present marks the *Times*, they go far to carry conviction by their calm and temperate tone. The writer is not only manifestly a truthful man, but probably a lawyer, as he appears experienced in weighing evidence. The letters, too, exactly cover the long vacation of 1886. They are written from the point of view of a fair-minded Unionist. The writer is no horror-monger, but he gives authentic instances of boycotting for the gratification of private spite. A man who was refused by a girl used his influence with the League to have her and her family boycotted, and they are now suffering under the ban of "exclusive dealing" solely because she rejected his suit. There is, however, evidence even in these pages that the Irish have made material, if not moral progress. One of his car-drivers had lived with "ould Martin" (of Ballinabinch), and remembered when Martin paid a hundred labourers in the week, and he "couldn't say one of them had a bit of bread or a cup of tea from Monday to Saturday." "And now they all have it," he went on, "and won't look at stirabout or milk at all. Every shilling they get goes to the shop for tea and bread, that's no food for labourin' men, and its ruin' them." In another part of Galway the correspondent found that the landlord had got for a tenant (who kept a small shop) a chest of the same Indian tea that he was using himself at 2s. a pound; but the tenant brought it back in great distress, saying that her customers would never buy such a coarse leaf—"in fact they will have none but the finest China tea at 3s. and 3s. 6d. a pound." It is only fair to add that the drinkers of this aromatic tea all pay their rent without any reduction (in 1886). The book (which only consists of 181 pages) is mainly full of facts, but a few specimens of Irish humour are given. Mr. Ashley's residence on the exposed promontory of Mullaghmore was thus described by

the car-driver: "It is a nice place in summer, but a terrible place in winter, without a stick or straw between you and the parish of New York." "Coercion," said another Irishman to the author, "sure, what is it but allowing a decent man to walk the road?" "In God's name, sir, when are they going to put us down?" is another remarkable saying. The writer considers there are more people in Ireland than the soil can support, and that from interested motives the priests try to keep them there. The result is (according to him) that, though the Irish are "the finest nation that ever grew on a fruitful soil," they are still

"Fightin' like devils for conciliation,
And hatin' each other for the love of God."

The Round Table Series. Edited by H. Bellyse Baildon. (Edinburgh: William Brown.) The six essays that compose the present volume appeared originally in separate numbers, and the editor was well advised when he gathered them together in this more permanent form. For, taken altogether, they are ably written and interesting. The subjects, too, are well-chosen. They are Emerson, George Eliot, Ruskin, Whitman, Darwin, and Dante Gabriel Rossetti. The object, says the editor in his brief preface, "was to secure a critical estimate positive and cordial, rather than negative or coldly impartial." Perhaps, the best essay in the book is that on Rossetti, by the late P. W. Nicholson, the artist. The author has just that sympathetic appreciation which is necessary for a proper understanding of the life and work of the man he seeks to exhibit. He is able to value both the poet and the artist. "Had Rossetti not been a painter by nature," he says, "his poetry would have been vague, thin, visionary." For his mind was of "so mystical a nature that, had he not been very strongly aware of the symbolical form of expression, his verses would doubtless have been very intangible." Comparing Rossetti with other poets of the time, Mr. Nicholson writes:

"He has not the direct force of religious or philosophical teaching so openly evident in the work of Browning, nor the swift, strong insight which gives value to the critical quasi-pessimism of Arnold; nor the agnostic hopelessness of Clough; nor the comparatively firm faith which informs with fervour and with light the verse of Mrs. Browning or of Tennyson; but he has that quality present in all their poetry: that sympathy, that pity for the foiled, circuitous wanderer, for the ever-eluded grasp of eager, human souls."

Mr. Patrick Geddes is hardly so able an exponent of Ruskin as Mr. Nicholson is of Rossetti. His essay has too large an element of what he doubtless considers slashing criticism—not, to be sure of Ruskin, but of those terrible "orthodox economists" who have vexed the soul of Ruskin. If Mr. Geddes has failed to grasp thoroughly the teaching of those "orthodox economists" he has only repeated the defect of his master; but he would have been better employed if, instead of weakly imitating his master's insolence of language, he had explained clearly what Mr. Ruskin's own economic theories really are. He admits that Mr. Ruskin's "chief services" as an economist are "constructive," and adds:

"Exceeding all other economists in clear vision of physical realities, in insight and criticism of the quality of production and of life, he is more than any other writer the legitimate continuator of the Physiocratic School and the forerunner of its complete re-systematisation by the aid of physical and biological science."

The editor, who contributes the paper on Emerson, shows that he has a fair understanding of the great seer. Mr. John Robertson displays good critical judgment in his paper on Whitman. The essays on George Eliot and Darwin are careful and discriminating. On the whole the book is welcome, and we hope

editor and contributors will be encouraged to continue their work.

American Literature, 1607-1885. By Charles F. Richardson. Vol. I. (G. P. Putnam's Sons.) In this volume of his elaborate work Mr. Richardson treats of "The Development of American Thought," discussing, first of all, what he terms the race-elements in American literature, and then the writers, ancient and modern, on theology, politics, and philosophy. He promises that, in a second and concluding volume, to be issued next year, he will deal with poetry and fiction. We have it on the authority of the writer himself that his work is a modest endeavour to aid readers to decide what has been and is the environment of American literature; what have been the relations between cause and effect, between the Saxon mind in England and the Saxon mind in America; what American writers have thus far done worthy to be mentioned beside Goethe, Schiller, Hugo, Wordsworth, Tennyson, Carlyle, George Eliot, and all the great writers of this and previous centuries; what American books are "world books" and why; how and why American writers have succeeded and failed. There is much in Mr. Richardson's book that will command general assent, for instance, that "if we go to Poe for what he cannot furnish we shall be disappointed." Elsewhere we cannot agree so readily, as, for example, when, in pointing out the difficulty he feels in discussing "the work and relative rank of contemporary writers in the same historical field" as his own, he says that praise might seem to be the puffery of mutual admiration. Again, some of Mr. Richardson's critical judgments may fairly be questioned. Speaking of Lowell, he says:

"No argument is needed to show that Lowell is the most conspicuous American critic—the writer whom he would instructively [?] name as occupying a representative position like that of Mr. Arnold in England. Lowell represents indigenous American culture as Arnold represents English."

In saying this he may understand Lowell; but evidently he does not understand Arnold. To link, as he does, Artemus Ward and Mark Twain together seems to point to the critic's own deficient sense of humour—a deficiency which probably accounts for the existence of his present work. On the other hand, the book, though it disappoints the expectation it creates, is far from worthless. The author has not spared pains in gathering his materials together, and there is much information of a useful and interesting kind to be found in these pages. Mr. Richardson is quite capable of forming an independent and intelligent judgment on men and things. There is good critical discernment in such a passage as this: "He [Thoreau] knew nature, and loved it; in his descriptions of his life there is no affectation or attitudinising of the Walt Whitman order." The complaint against Mr. Richardson is that he has not understood his limitations. We may be permitted to say, without offence, of him, what he says of Emerson, that "he is at times superficial and, what is worse, speaks authoritatively on subjects concerning which he has no deep knowledge." The idea of his present book is preposterous. A century hence, at the earliest, will be soon enough to make such estimates of the American literature of to-day as he has attempted. The wisest man in the world could not do it now; but, being wise, he would not have attempted it. Mr. Richardson is a young man in a hurry. Let him possess his soul in patience, and put forth his efforts within the realms of the possible, and he will produce something worthy. We shall hope to meet him again under better conditions.

Struggles for Life. By William Knighton. (Williams & Norgate.) "Invention is learning

digested; quotation is learning vomited up raw." This severe dictum of Bentham's occurred to us as we read this volume; and yet we can express neither surprise nor regret that it should have reached a second edition. The book is exceedingly readable, and its tone of happy optimism is a fault on the right side. It is literally stuffed with quotations from writers of every age and language. Coleridge and Azurara, Ruskin and Raffles, Mr. Mulhall and Moses, Bishop Latimer and Tacitus, are found cheek by jowl with correspondents of the *Times*, the *Daily News*, and the *Standard*. This is just one of those books that we should expect to find popular, for those who read it can learn so much with so very little trouble to themselves; nor has Dr. Knighton been "sleepless himself to give his readers sleep." With judicious skipping the book is very pleasant reading. The skipping becomes necessary when Dr. Knighton appears and pleads in his own person. The following is taken at random as a sample of the author's own work, unadulterated by quotation: "If we could make the people free from the many bonds that impede them, it would of course be a great blessing; but the task is a very difficult one" (p. 64). The author, after delivering his soul of this truism, proceeds to declaim in a mild fashion against party government. But we have no wish to argue with one who has so crowded his pages with the witticisms of the wise and the wonders of nature. Chap. ii., entitled "Struggling with Nature," is especially interesting, and a healthy tone makes itself felt throughout the volume.

Then and Now; or, Fifty Years of Newspaper Work. By William Hunt. (Hull.) Mr. William Hunt has been president of the Provincial Newspaper Society of Great Britain and Ireland, and is undoubtedly a man of great experience and ability; but we cannot congratulate him on having written a book that will interest the general reader. The small volume before us hardly tells those who are not journalists the amount and the value of Mr. Hunt's own work. It is too full of trivial details; such as his account of the *Times* correspondent opening his bedroom window at night (p. 50), or of events so generally known as the results of the Hull elections (p. 182). Nor is Mr. Hunt always accurate, as he speaks of "the two elections which preceded the passing of the great Reform Bill" of 1832 as "the last elections in Honiton." The last election in Honiton was held in 1865, and not in 1832, as Mr. Hunt, an old Honiton man, should have known. No journalist would, however, find the book tedious, and we can recommend it as the modest record of a useful and honourable career.

The Story of the Life of Queen Victoria. By W. W. Tulloch. (Nisbet.) This is indeed a story for boys and girls all over the world, and it has had the advantage of having been revised—with the exception of the last chapter—by Her Majesty herself. Not mere gossip, or exaggerated stories, but a truthful record. The last chapter deals with the wonderful fifty years of progress and good works. The author says the Queen has always, during her reign, been asking herself the question, "Are my people happier?" "And in looking back there can only be one answer," he adds—"Yes they are."

Ernest Jones. By Frederick Leary. (Democrat Publishing Office.) Few probably remember that this renowned Radical took his name from his godfather, Ernest, King of Hanover. Ernest Jones was unquestionably the most disinterested and the most interesting English democrat of this century. It is for his moral even more than for his intellectual gifts that he deserves to be held in remembrance. He was one of the few men who emphatically had

not got his price. He not only beggared himself by his politics, but he refused £2,000 a year which was offered him on the very cheap condition of holding his tongue. Whatever, therefore, may be thought of his political opinions, there can be but one opinion of his life. As the *Saturday Review* said of him :

"Such men elevate the standard and purify the atmosphere of public life. He has the gratification of giving up all that men hold dear, in order to promote what he believed to be political truth. . . . There is no going to heaven as a reward for political usefulness; and as political usefulness is a rare and precious quality, even in a free country, we cannot but regard Mr. Jones as one who is a national benefactor."

We were therefore prepared to welcome a life of Ernest Jones, but we can give no welcome to the pamphlet under review. It is written in the style of a penny-a-liner, omits important matters, lays stress on what is unimportant, and is disconnected and uninteresting. Ernest Jones deserves, and (let us hope) will yet find, a biographer more worthy of the noble life he led.

NOTES AND NEWS.

WE are glad to hear that there is some probability of a collection of essays and other miscellaneous writings by the late Rector of Lincoln being published shortly.

THE work upon which Prof. Mahaffy has been engaged for some time—and to which his little book on *Alexander's Empire*, in the series called "The Story of the Nations," and also his recent lectures before the Royal Institution, were in the nature of "chips"—may be expected early in the autumn. It is entitled *Greek Life and Thought from the Macedonian to the Roman Conquest*; and the publishers are Messrs Macmillan.

THE most interesting announcement already made for the Christmas season is an *édition de luxe* of all Randolph Caldecott's "Picture Books," printed on the finest handmade paper, from the original blocks, by Edmund Evans.

WE hear that the volume of poems by Mr. Edwin Arnold, to be published by Trübner & Co. in the autumn, will contain several original pieces. "In an Indian Temple," which consists of a dialogue between an English official, a Nautch-dancer, and a Brahmin priest, embodies some deep Hindu metaphysics and moral questions in a lyrical Oriental setting. "A Casket of Jewels" introduces us in a recdite manner to legends connected with precious stones. The book will also contain many minor poems.

MESSRS. MACMILLAN will publish immediately a book in two volumes, entitled *Romantic Love and Personal Beauty: their Development, Causal Relation, Historic and National Peculiarities*. The author is Mr. Herbert T. Finck, the musical critic of the *New York Evening Post*; and the tendency of his researches is to show that "romantic love (as distinguished from conjugal affection) is a modern sentiment, only about 600 years old."

THE new volume of the "*Gentleman's Magazine Library*" will be issued by Mr. Elliot Stock immediately. It will contain the completion of the section on *Roman-British Remains*. In it will be found a record of the discoveries of Roman remains in all parts of the country, classified under counties. The usual introduction and notes by the editor are given, besides a copious index to this section of the work.

THE American Dante Society are now passing through the press the concordance of the *Divina Commedia* prepared by Prof. Fay, of Washington. The text followed is Witte's (Berlin 1862), with the addition of such words

of the edition of Niccolini, Capponi, Borghi, and Becchi (Florence 1837) as differ from Witte's. The Concordance will make a volume of from eight to nine hundred pages. Messrs. Trübner & Co. are the London agents.

THE next volume in the series of "Great Writers" will be *Adam Smith*, written by Mr. R. B. Haldane.

THE City of London Publishing Company have in the press a novel entitled *Gerald Grantley's Revenge*, by Dr. Tanner.

MESSRS. MACMILLAN announce a cheap edition of Mr. Thomas Hardy's *The Woodlanders*, which (we may add) seems to have met with a greater success in America than any of his recent novels.

ON Saturday last a meeting of the Selden Society was held in the old hall of Lincoln's Inn, for the purpose of receiving the report of the provisional committee appointed in January last, electing a council and other officers, and settling the rules of the society. The chair was taken by Lord Justice Lindley. The council will consist henceforth of the Lord Chancellor, the Lord Chief Justice, the Master of the Rolls, the President of the Probate, Divorce, and Admiralty Division, the Attorney-General, the Solicitor-General, the treasurers of Lincoln's Inn and Grays Inn and of the Middle and Inner Temple, the Chief Justice of the Supreme Court of the United States, and the president of the Incorporated Law Society. The above are members *ex officio*. To these were added the names of Mr. Phelps, Minister of the United States, Lord Derby, Bishop Stubbs, Lord Herschell, Lord Thring, Lord Aberdare, three of the Lords Justices (Cotton, Lindley, and Bowen), eight other members of the judicial bench, Mr. Justice Gray, of the United States, and about eighty leading lawyers in England and America. The provisional committee were able to announce the early publication of a volume of thirteenth-century Pleas of the Crown, from the Eyre Rolls preserved in the Public Record Office, to be edited by Mr. F. W. Maitland, Reader in English Law at Cambridge, with full indices both of subjects and of persons and places. This volume will throw considerable light on the history of the petty jury. It is proposed next in order to print a series of records of real actions and of cases illustrating villein status and villein tenure; but how soon these may appear will depend on the number of subscribing members who may join the society. The annual subscription is one guinea, and the secretary is Mr. P. Edward Dove, of 23 Old Square, Lincoln's Inn.

THE FORTHCOMING MAGAZINES.

THE *Century* for August will contain another instalment of Lincoln's biography, by John G. Nicolay and John Hay; the first part of a new tale, "Azalia," by Joel Chandler Harris, with illustrations; a paper on the cause of "Low Prices, High Wages, Small Profits," by Edward Atkinson; and "An Episode of the Lady Franklin Bay Expedition," by Lieut. Greely.

MR. G. J. HOLYOAKE, President of the Co-operative Societies, will contribute an article to the *Fortnightly* for August on "The Growth and Development of Co-operation."

THE August number of *St. Nicholas* will contain "An Idaho Picnic," by Mary Hallock Foote; "The Boyhood of Oliver Wendell Holmes," by W. H. Rideing; "Fiddle John's Family," by Hjalmar Hjalt Boyesen; and "The Brownies Fishing," by Palmer Cox.

MESSRS. CARR & Co., of 26, Paternoster-square, have made arrangements for the publication of *Outing*, the well-known illustrated American magazine of sport and travel, in

England. Mr. Alfred C. Harmsworth will edit the English edition; and among the contributors are Dr. W. G. Grace, Mr. J. D. Dougall, "Rookwood," Gen. Marcy, Mr. Methven Brownlee, and Dr. Darbishire. The first number will appear on October 1.

THE August number of *The Scottish Church* will contain "The History of a Vain Young Woman," an article on "West Highland Sports," and "Facts and Fallacies of the Crofter Question."

THE forthcoming number of the *Central Literary Magazine*, the quarterly organ of the Birmingham Literary Association, will contain an article, by the Rev. S. Fletcher Williams, on "Heinrich Heine."

ORIGINAL VERSE.

LONDON IN JULY.

WHAT ails my senses thus to cheat?

What is it ails the place;
That all the people in the street
Should wear one woman's face?

The London trees are dusty-brown,
Beneath the summer sky;
My love, she dwells in London town,
Nor leaves it in July.

O various and intricate maze,
Wide waste of square and street;
Where, missing through unnumbered days,
We twain at last may meet!

And who cries out on crowd and mart?
Who prates of stream and sea?
The summer in the city's heart—
That is enough for me.

AMY LEVY.

MAGAZINES AND REVIEWS.

IN the *Revista Contemporanea* for July, Jimenez de la Espada prints the first portion of his notes on the History of the New Kingdom of Granada, by Juan de Castellanos. Señor Pidal writes with enthusiasm on the poetry of his friend, the late Duque de Almeriara. Don J. S. de Toca finds the best remedy for the agricultural distress in agricultural banks, syndicates, and associations, like those of the Bauernverein in Germany. Maria Saaroma gives a genial and amusing account of his visits to Paris and London in 1851. There is a further chapter of "Brihuega and its Fuero," by Juan Catalina; and Becerro de Bengoa begins a careful study of the Philippine Islands.

THE *Boletín* of the Real Academia de la Historia for June contains reports on José Montero's *El Archipiélago Filipino y las Islas Marianas, &c.*, by Javier de Salas; on M. Castan's *La Cronica General de Gonzalo de Finojosa*, Bishop of Burgos (1313-27), by Fernandez Duro; on Stoppani's "L'Ambra," by Antonio Fabié; and on a MS. History of the Colegio de San Gregorio de Valladolid, by Vicente de la Fuente. All are favourable, and the publication of the last work is recommended. Fernandez-Guerra fixes the sites of two cities of Bastelania: the one, Asso, at Las Cuevas de los Negros, near Caravaca; the other, Argos, at Vereda, on the river Argos. Padre Fita prints a detailed description of the Juderia of Xeres, in 1266. Several newly discovered Moorish coins, inscriptions, Latin, Keltic, and other remains, are described in various papers, and in the *Noticias*.

No. 2 of Tomo V. of the *Revista de Ciencias Historicas* begins with a contemporary account of the three sieges of Gerona in 1808, by the Franciscan Friar Manuel Cundaro, who himself took part in the defence. The Conde de la Vinaza publishes important additions to Cean Bermudez's Dictionary of Artists in Spain. The

present instalment covers the whole of letter A. The wood-work of the choir of the Church of Guetaria, said to have been brought from England, was really done by Andres de Aravz of Vitoria, who was paid for it December 30, 1562. Don J. Izart tells the history of the two Societies of Excursions in Catalonia, and of the excellent work which they have done. José Brunet shows that the game of chess really existed in Ancient Egypt, and gives illustrations of pieces found in the tombs, and of pictures on the monuments.

THE HISTORY OF THE INVENTION OF PRINTING.

XIII.

It will have been observed that in trying to assign a date to the Costeriana I have not placed them earlier than 1446. This I have done on account of the *Doctrinales* mentioned by the Abbat of Cambray as having been bought by him in that year and in 1451. And as I am not aware of any of the titles of the Costeriana being mentioned earlier with some additions which might suggest to us that there was question of printed works, I do not think it necessary to inquire whether the Costeriana (or some of them) might not be earlier. We read, indeed, of a MS. Catalogue that belonged to Jean des Roches, who wrote an essay on the origin of printing in *Mémoires de l'Académie de Bruxelles*, i., pp. 536 and 540, and who regarded this catalogue as of the fifteenth century. Among its titles was "Item Dominicalia in parvo libro stampato in papyro, non scripto," while at the end of the MS. he read: "Anno Domini 1340 viguit qui fecit stampare Donatos." Bernard, who quoted these entries (i. 91), thinks that we must read 1440 instead of 1340, as the Catalogue is said to be of the fifteenth century, which is, moreover, plain from the use of Arabic numerals. But not having access to this MS. Catalogue, and being unable to examine it, I merely draw attention to these entries in order that they may not be forgotten, and be verified if the MS. is still in existence.

It is a singular thing, which deserves to be noticed, that when we work our way back to 1446, we touch not only the year in which the Abbat of Cambray bought printed *Doctrinales*; but, what is still more remarkable, the very year in which Laurens Janszoon Coster is asserted to have "brought the first print into the world." This assertion and the year are found in an old pedigree of Coster and his family preserved at Haarlem. It was made for an inhabitant of Haarlem (Gerrit Thomaszoon), who claims to be a descendant of L. J. Coster, and who died in 1563 or 1564. Dr. Van der Linde professes not to understand the phrase in the pedigree, though it is plain to anybody who desires to understand it. Nor does he attach any weight to the document; and at one time says that it was forged in the nineteenth century, at another time that it originated late in the sixteenth century, while in his last book he asserts that it could not have been written later than 1520. (By the way, this last assertion is made by the same Dr. Van der Linde who invariably tells us that the Haarlem tradition is not older than 1561.)

It is curious to notice with what learning Dr. Van der Linde discusses the pedigree, notwithstanding the enormous difference in the dates which he assigns to the document shows that he has no knowledge of such things. And it is an open secret that what he says about it has all been suggested to him by others, and he changes his dates just as it suits his purpose. However, the date 1520 seems to have been suggested to him by persons who ought to know, and, what is of still greater value, it seems to agree with the internal and external

circumstances connected with the document. Therefore, the Haarlem authorities will do well to preserve the document carefully, and we ought to bear its date and statement in mind whenever we deal with the tradition of the Haarlem invention of printing.

In working our way back to 1446, we touch, moreover, the year which we obtain by deducting the 128 years which Junius mentions in his text—"habitavit ante annos centum duodetringinta Harlemi Laurentius Joannes cognomento Aedituus Custosue"—from the date (1575) of his prefaces to the *Batavia*. But on this circumstance I can lay no stress for the present, because those who have examined the MS. of Junius's *Batavia*, which still exists at Haarlem and the Hague, say that the account of the Haarlem invention must have been written in 1568, and that the prefaces dated 1575 are a later addition.

It behoves me to say a few words as to the man, or men, who have been regarded as the Haarlem inventor of printing. Since 1870, Dr. Van der Linde has endeavoured, in three different works, to create the impression that Laurens Janszoon Coster, mentioned by Junius as the inventor, was altogether a myth; and he has succeeded so well that I am constantly asked by otherwise well-informed persons (1) how I could think of setting up a person who was entirely legendary; (2) could I show, from any genuine document, that such a person had ever existed? &c. In fact, Dr. Van der Linde has even succeeded in persuading himself that this Coster was a myth, as he always uses this word in speaking of Coster. But if he can be said to have proved anything, he has proved that Coster was certainly not a myth. It is true that, if his figures are correct, the Haarlem people and the authors who have written on the subject before 1870 have dealt with the tradition of the invention and the reputed inventor, in a very reckless manner, by mixing up two totally different men. On the other hand, it would be worse than useless to base any arguments or speculations upon such works as that of Koning of 1816, and least of all upon those of Dr. Van der Linde published from 1870 to 1886, which latter I have shown to be simply a reproduction of the old errors of 1816, with some new ones of his own added. But if we accept so much of Dr. Van der Linde's figures as have been corroborated to some extent by other writers, it would seem that there lived at Haarlem a "Lourens Janszoon" from about 1380 to 1439, who is duly authenticated by entries in the original Haarlem Registers and other documents. This man began to be regarded by the Dutch authors as the person indicated by Junius as the inventor of printing, when they considered that the invention had taken place so early as 1423. This man is, moreover, regarded as the "lou janssn" whose burial is recorded in a Haarlem Burial Register of 1439. But "Lourens Janszoon" was a very important personage in Haarlem history; and I have shown in my third chapter (ACADEMY of May 14) that the burial entry of 1439 has hitherto been misunderstood, and points to a man whose relatives were unable to pay the costs of his burial, which makes it doubtful whether the man who was buried in 1439 is the same who has been traced back as far as 1380.

But, however this may be, it seems certain that this man was never called "Lourens Janszoon Coster," and Junius calls the Haarlem inventor by this name. That there was such a man living at Haarlem, from 1436 to 1483, therefore, exactly at the time that printing may have been invented there, is established by Dr. Van der Linde himself, if he can be said to have established anything. He professes, moreover, to have established that the

genealogy of this L. J. Coster perfectly agrees and tallies with the chief person (Gerrit Thomaszn) mentioned by Junius as a descendant of Coster. Under these circumstances, one feels inclined to ask what objection Dr. Van der Linde can have against this man?

Ah! says Dr. Van der Linde, though all this is in perfect historical and genealogical order, yet this Coster could not have been an inventor of printing or a printer, because he was a chandler and an innkeeper. I do not see that we need trouble ourselves much about such an argument, because the inventor of printing had necessarily to be something else. Dr. Van der Linde would, probably, not feel disposed to argue that printing could only have been invented by a printer. We have seen, moreover (ACADEMY, May 21), that a Bishop of Liège and his sister, a nun, possessed, in the first half of the fifteenth century, instruments for printing images and pieces of texts, from which we may infer that "printing" (that is, block-printing) at that time was done more by private persons than by ordinary mechanics (printers, *prenters*).

It would be a more serious objection to Junius's account, if we were absolutely bound to pin him to all his dates and biographical particulars, that this Lourens Janszoon Coster resided (I can only quote Dr. Van der Linde) at Haarlem from 1436 (when he occurs as inheriting a chair in a club) till 1483, when he was not yet too old to depart from Haarlem. Such a man could hardly have been a grandfather already in 1440 when he invented printing, according to Junius, by attempting to instruct his grandchildren. And it seems that Junius had really the year 1440 in his mind; because he asserts that the thief who stole Coster's types printed with them in 1442 (a year after the theft) at Mentz. If Junius had said "1452," and if we could date the invention of printing according to the date of his preface, there would be *nothing* against his account. But, without a further investigation as to the circumstances under which Junius wrote and the transcripts of his work were made, I scruple to make any suggestions. I only wish to remark that we shall, perhaps, have to deal with Junius's dates and statements very much in the same way as with those in the Cologne Chronicle; that is to say, those which were derived from Chronicles and printed sources will have to be sifted from those derived from more trustworthy sources.

CORRESPONDENCE.

DR. MACCARTHY'S "FRAGMENTA HIBERNICA."

London: July 16, 1887.

"When one Irishman is on the spit, another is always ready to turn the handle." Now that Dr. MacCarthy is before the fire of public criticism, I have been reminded of this old saying by the alacrity with which one of his Celtic fellow-countrymen has brought to my notice the doctor's "Fragmenta Hibernica," published in the eighth volume of the *Irish Ecclesiastical Record*—a monthly journal conducted under episcopal sanction, and having, I am told, a large circulation in the Catholic world. These *Fragmenta* comprise the text of a Middle-Irish tractate on the incredulity of S. Thomas found in the *Lebar Brecc* (pp. 194-6 of the facsimile), together with a translation and notes. As this tractate, in which every Irish sentence is either a translation or a paraphrase of the preceding Latin sentence, had not previously been edited, the following corrigenda will supply some material for judging how Dr. MacCarthy would have dealt with the treatise on the Mass in the Stowe Missal, if a transcription and translation of the greater part of that difficult document had not appeared in Kuhn's *Zeitschrift*. For Dr. MacCarthy's convenience, I will arrange these corrigenda under three heads, viz.: (a) misreadings of Latin words, (b) misreadings of Irish words, and (c) mis-translations of Irish words.

(a) Misreadings of Latin Words.

DR. MACCARTHY.	FACSIMILE.
P. 129, l. 14 <i>mannus</i>	<i>manuus</i> (i. e., <i>manūs</i>)
130, l. 16 <i>fixtorem</i>	<i>fixuram</i>
131, l. 9 <i>Vidistis</i>	<i>Videtis</i>
1. 26 <i>Tibratis</i>	<i>Tibriatis</i>
132, l. 23 <i>renuit</i>	<i>rennuat</i>
133, l. 24 <i>virtutem</i>	<i>ueritatem</i>
135, l. 1 <i>Ad hoc via</i>	<i>Ad hoc enim via</i>
237, l. 11 <i>contractandum</i>	<i>contractandum</i>
237, l. 15 <i>incredulus</i> *	<i>incredulus</i>

(a) Misreadings of Latin Words (cont.).

DR. MACCARTHY.	FACSIMILE.
238, l. 24 <i>Hille uere credit</i>	<i>Hille etenim uere credit</i>
285, l. 19 <i>possinus</i>	<i>posimus</i> (i. e., <i>possimus</i>)
1. 26 <i>claudant[ur]</i>	<i>claudant[ur]</i>
265, l. 27 <i>obtrectoris</i>	<i>obtractoris</i> (i. e., <i>obtrectoris</i>)
266, l. 3 <i>maledicium pro maledico</i>	<i>maledictum pro maledicto</i>
1. 24 <i>Hocta</i>	<i>Hocto</i> (i. e., <i>Octo</i>)
267, l. 16 <i>congregabunt</i>	<i>congregabuntur</i> .

Such errors—like his *Noster erat Boetianus* for the *Notus uir erat Berachus* of the Antiphony, and others mentioned in the ACADEMY for April 2, 1887, p. 238, col. 1—justify a certain amount of hesitation in accepting Dr. MacCarthy's readings of the Stowe Missal when they differ from Mr. Warren's.

(b) Misreadings of Irish Words.

The knowledge of the Irish vocabulary possessed by one who believes in the existence of *sonsa* (account), *chathar* (comb), *Iudech* (Jew), *remenithus* (providing), *bennachar* (blessing), *ainisi* (of unbelief), *diadat* (divinity), *dodochaide* (unending), *roceris* (thou has [sic] believed), *denta* (teeth), *anives* (faith), *codling* (with perseverance), *boberim* (I give), *saiter* (zeal), *descairdechu* (uncharitable), *genar* (blessing), &c., can only be equalled by the knowledge of the Irish grammar displayed by one who gives *cuirp* as the dat. sg. of *corp* (body), *oes* as the gen. sg. of *oes* (age, body), *ainmain* as the dat. sg. of *ainm* (name), *athar* as the acc. sg. of *athair* (father), *aspalu* as the nom. pl. and also as the gen. pl. of *aspail* (apostle), *rúin* as the acc. pl. of *rúin* (mystery), and *discipula* and *discipulu* as the nom. pl. of *discipul* (disciple); who gives *tectam-sea*, *nobatar*, *cretub*, and the infinitives *bennachar*, *bennacher* as genuine verbal forms; who translates *doraga* as a present; and who, lastly, gives *insin* as the combination of the prep. *in* with the article. Such barbarisms and blunders may fitly pair with the "coland" and "imabred" in his edition of the Stowe Missal, as well as with his *lam* given in the same work as a dat. sg. and *graiith* as an acc.

(c) *Mistranslations of Irish Words.*

Here, wherever Dr. MacCarthy has misread the MS., I shall give the reading of the facsimile.

DR. MACCARTHY.

P. 129	<i>tarrustar</i> "were"	stood	unbelieving
	<i>ancretmech</i> "faithless"

	<i>fireoin, firenuib, firenu,</i> "faithful"	just, righteous
	<i>ní getar ar.</i> "it shall not be refused to"	it shall not be taken from

I could add much more; but I remember a saying, which, as it is not in Irish. Dr. MacCarthy will, doubtless, understand—*Vince, sed ne nimis vincas.* It is a venial sin for an Irishman, even a Celtic Irishman, to be ignorant of the ancient language of his country. But for one to publish Irish texts, and to speak authoritatively on questions of Celtic philology and palaeography, without being able to translate easy Irish words, to decline ordinary Irish nouns, or to copy a legible Irish MS., this is a treason to the commonwealth of letters, calling for prompt and severe punishment. In the present case, the only mitigating circumstances are, first, that the crime was committed fifteen years ago; secondly, that the criminal is no worse than his neighbours in Dublin and Cork, who edit Brehon laws and compile Middle-Irish glossaries; and, thirdly, that, like some others of his countrymen, he has inherited the mental and moral defects of which a Saxon poet thus sang in the last century:

"Nature denied them common-sense,
But gave them legs and impudence."

WHITLEY STOKES.

P.S.—Let me add to my letter in the ACADEMY (July 16, 1887, p. 41, col. 3) that the name of the first bishop of Ardagh occurs in the gen. sg. as *Mel* in the Lebar Brecc, p. 64 b, l. 15; *Mel, ibid.*, l. 20; in the dat. sg. as *Mel*, p. 64 a, l. 65; in the acc. sg. as *Mel, ibid.*, l. 46. This Kymric name is as indeclinable in Irish as *πάροχα, ἀλφα*, and other foreign words are in Greek. Let me also say that in the ACADEMY for July 9, p. 26, col. 3, l. 25, the words "the Low-Latin" should come before *sacrificiale*, and that in l. 48, after *n*, the words "or rather in" should be inserted.

W. S.

SCIENCE.

PETERSON'S EDITION OF THE "HITOPADESA."

Hitopadesa by Nārāyana. Edited by Peter Peterson. Sanskrit Series, No. xxxiii. (Bombay.)

IN these days, when every Sanskrit scholar, whether in Europe or in India, thinks of nothing but editing texts that have not been edited before, when, in fact, no one calls himself a Sanskrit scholar who has not published one "Anecdote" at least, a new edition of the *Hitopadesa* seems at first sight almost an anachronism. No text, I believe, has been edited and translated more frequently than these fables. It is the first book which every student of Sanskrit wades through with grammar and dictionary by his side, but which he hardly ever looks at again when he has once entered on a serious study of Indian literature. Even for a study of the migration of fables the *Hitopadesa* has been supplanted by the *Pañkatantra*, from which it is professedly taken. A new edition, therefore, coming from Bombay, and from the pen of Prof. Peterson, who has proved himself one of the most courageous explorers of the unknown tracts of Sanskrit literature, is, at first sight, somewhat perplexing.

And yet this edition will be welcomed, not only in India, where there was a demand for it, as it is still the most popular textbook used in schools and colleges, but also in Europe. Scholars have hitherto not troubled themselves much about the MSS. of the *Hitopadesa*. It is a compilation to which every reader might add to his heart's content. Its age was unknown, the very name of the compiler was forgotten. Most editors were, therefore, satisfied with producing a readable text. The edition which Schlegel and Lassen brought out in 1829 professed, indeed, to be a critical edition; but it was an eclectic, not a diplomatic criticism which guided these scholars in establishing their text. I followed the same principles both in my translation of the *Hitopadesa*, published in 1844, and in my edition of the text, published in 1866.

Prof. Peterson, however, thought that the *Hitopadesa* deserved a better fate. First of all he shows that this compilation is by no means so very modern as is commonly supposed. Of the three MSS. on which he established his text, one (B) was written in A.D. 1541, while another (A) is declared to be considerably older—Prof. Peterson adds, "perhaps as much as two hundred years older"; but he leaves us in the dark as to his reasons for this "perhaps." A Sanskrit book of which we have a MS. written in the beginning of the fourteenth century cannot certainly be called quite a modern compilation. But while Prof. Peterson was printing his text, and the sheets to p. 57 had actually been struck off, he received another MS. of the *Hitopadesa*, which Mr. Bendall had discovered in Nepal; and which he, with the permission of the authorities of the British Museum, most generously lent to Prof. Peterson. This MS. (N) is dated A.D. 1373, and it was found to agree on all important points with the old MS. A. This was a most valuable discovery, for it showed that even before that time some text of the *Hitopadesa* had become a kind of *textus receptus*, such as might serve as a foundation for a critical edition. It is a pity

that Prof. Peterson was not allowed to cancel the first fifty-six pages of his edition. He has done, however, what was possible under the circumstances, and has given us in his *apparatus criticus* all the important readings of MS. N.

In speaking of his predecessors, and more particularly of Schlegel and Lassen, whose edition of the *Hitopadēsa* appeared in 1829, Prof. Peterson, like most young scholars, is far too severe. He has no idea of the difficulties under which these first explorers of Sanskrit laboured. To be able to construe a Sanskrit text was at that time a great achievement. Questions as to spelling, as to grammar, metre and syntax, which are now answered in every elementary grammar, were then discussed as questions of high scholarship. Few had even seen Sanskrit MSS., still fewer had used any; and as to the age, the localities, the families of MSS., all was darkness. Still it was fortunate that some of our first Sanskrit scholars had passed through the best schools of classical philology, and that they treated Sanskrit texts with the same minute care with which a Hermann treated Greek texts. We know now that the rules of conjectural criticism have often done harm, and that in Sanskrit, more than anywhere else, diplomatic criticism is our only safety. Still, as a discipline, the principles followed by Schlegel and Lassen have proved really beneficial to Sanskrit scholarship, and even now they are bearing good fruit among a small but ever increasing class of Sanskrit scholars.

Prof. Peterson is particularly severe on Schlegel and Lassen for having suppressed the last verse. They thought it was a late addition, possibly they did not quite understand it. But certain it is that it contains the name of the compiler of the *Hitopadēsa*, namely Nārāyana, and of his Maecenas, Dhavalakandra. Prof. Peterson is justly proud of his discovery; still, like most discoverers, he will find that he has been anticipated. In the preface to Shri Lalluji Lal Kab's *Rajñiti* we read:

"At a certain time Shri Narain Pundit made a collection of stories from moral philosophy into Sanskrit. Having made one book, he called its name *Hitopadēsa*. Then, in the year 1869, Shri Lalluji Lal Kab, a Guzerati Brahman, of the Saahasr Awdich family, resident at Agra, extracting the meaning thereof, and putting it into the Brij language, gave the book the name *Rajñiti*."

Prof. Peterson has not only established the name of the author of the *Hitopadēsa*, but he has likewise established a text which bids fair to remain the permanent text. His notes are decidedly valuable. On looking at some of the contested passages, we find that in i. 24 (p. 4) the expression *Kakātālyavat*, "like the crow and the cocoa-nut," is better explained than by Schlegel and Lassen. They thought it referred to a story of a crow who alighted on the ground in the nick of time to be killed by a nut falling from a tree. Prof. Peterson shows that what is meant is that a crow alighted on the tree at the very moment that a nut fell, and that the mistake we are thus taught to guard against is to mistake the *post hoc* for the *propter hoc*.

I am less convinced by Prof. Peterson's

interpretation of verse i. 14. There we read:

"If in beginning to count the list of virtuous men, the chalk does not fall full of surprise at a son—i.e., full of admiration of a son's virtues—then a mother may hardly be called a mother by such a son."

Prof. Peterson appeals to the system of counting usual in India. Either the fingers of the open hand are brought down one after the other on the open palm, or the fingers of the closed hand are raised one after the other. In either case the little finger leads the rest, and it is the custom to give to the little finger the name of the individual to be honoured. This is perfectly true, and the verse quoted by Prof. Peterson fully establishes the fact. The verse means:

"Formerly when poets had to be counted Kālidāsa resided in the little finger; now, as a like poet is not to be found, the little finger is rightly called nameless."

But though the little finger is called *anāmikā*, "nameless," or *kanishthikā*, "the youngest," *kathindā* has never been met with as yet as a name of the little finger; and for the present, therefore, we must keep our judgment in suspense.

Prof. Peterson, by his valuable edition of the *Hitopadēsa*, has earned the thanks of all Sanskrit scholars, and more particularly of myself—to whom he has done the honour of dedicating his latest work.

F. MAX MÜLLER.

OBITUARY.

HENRY WHITE WALLIS.

University of Göttingen: July 23, 1887.

It is with the deepest regret that I have read to-day in the papers the news of Mr. Wallis's death. I trust you will allow me to express my great sorrow at the loss which the University of Cambridge and English scholarship had suffered by this most sad event. Mr. Wallis had attended my lectures for only six months; but I have seen enough of him to be able to say that he was a most earnest and successful student, and that he certainly would have become a first-rate Sanskrit scholar had he lived.

F. KIELHORN.

[Mr. Wallis graduated at Cambridge with honours in both the classical and the Semitic triposes; and he was elected to a fellowship at Gonville and Caius College so late as last June. In 1884 he obtained a Hibbert studentship; and his essay on "The Cosmology of the Rig-Veda" has just been published (Williams & Norgate) by the Hibbert trustees. Mr. Wallis died at Cambridge on July 18. He was the youngest son of the late Rev. Joseph Wallis, of Stockwell.]

CORRESPONDENCE.

PROF. JEBB'S "INTRODUCTION TO HOMER."

London: July 28, 1887.

The tone of Sir G. Cox's letter fortunately carries its own condemnation in the eyes of all sensible men, or it might be regarded as a serious degradation to English learning. No one could expect a gentleman against whom such a challenge is directed to stoop to pick it up. But the attempt to make a matter of evidence and opinion into one of personal veracity is not without its value as throwing light upon the writer's qualifications for rational controversy. The *Nautical Almanac* is not in the habit of discussing at length the vagaries

of "Parallax" concerning the figure of the earth. This, according to Sir G. Cox, is a matter which "affects the personal veracity" of the astronomer royal.

Dr. Paley is so highly esteemed, and is in his own department so eminent a scholar, that one would infinitely have preferred to be allowed to keep a respectful silence as to his unfortunate wanderings into other fields. But if his friends insist upon utterance, it is no longer possible to mince words. His Homeric hypothesis has been refuted again and again till it has not a leg to stand on. After the effective execution worked by Dr. Hayman and Prof. Mahaffy little has been left to do beyond the ungrateful task of slaying the slain. Prof. Jebb's pages are far too valuable to be wasted on work such as this; and Dr. Paley's friends would have been well advised if they had been satisfied at finding in his book a mere statement of the theory without the explicit condemnation which it might well have received.

No scholar of repute, so far as I know, thinks Dr. Paley's arguments worthy of further attention. The one such scholar to whom he might at one time have looked for support has now wisely left his side for the far more plausible hypothesis of Prof. Fick. The opinion of France and Germany, for once harmonious, may be gathered from M. Pierron and Dr. von Christ in the introductions to their respective editions of the *Iliad*.

If any one should venture to assert that Dr. Paley's theory has not received fair and conscientious examination from those whose business it is to give it, he would indeed raise a question of personal veracity—but not of Prof. Jebb's.

WALTER LEAF.

SCIENCE NOTES.

THE Geologists' Association has just issued a neat little pamphlet intended as a guide to those members who are about to join in the long excursion to Cornwall. It contains, in addition to the illustrated programme or daily itinerary, a long paper by Mr. J. H. Collins on the structure of Central and West Cornwall; a description of the igneous rocks of the western promontory, by Mr. J. J. H. Teall; and a note on the Pliocene beds of St. Erth, by Mr. Robert G. Bell. The association is fortunate in having secured the co-operation of the Royal Institution of Cornwall, the Royal Geological Society of Cornwall, and the Royal Cornwall Polytechnic. The excursion will last from August 8 to 13.

PHILOLOGY NOTES.

GOPĀLA CHANDRA CHATTOPADHYAYA is publishing at Calcutta a new edition of the *Bhagavadgītā*, with Sridharasvāmin's commentary and a Bengali translation. By putting figures over the words in Sanskrit and the corresponding words in Bengali he has made it very easy for those who know Bengali to read and understand the Sanskrit original. The book is chiefly intended for native students; but it will prove useful to English students also, and would have done so still more, if it had been printed with Devanāgarī letters.

THE important Lapp lexicon by Prof. J. A. Friis (Christiania: Dybwad) will extend to six parts instead of five as originally promised. The sixth fasciculus, however, containing the conclusion of the dictionary and an outline of the grammar, will be delivered to the subscribers without extra charge. The work is a marvel of cheapness. It will contain 950 pages of the size known in England as imperial octavo, and the price complete will be only £1.

THE first volume of the *Giornale della Società Asiatica Italiana* contains—besides original

articles by Profs. de Gubernatis, E. Schiaparelli, Teza, Pizzi, and reviews by the veteran orientalist, Senator Amari, and Prof. Guidi (on Mr. Budge's *The Book of the Bee*)—a review by Prof. David Castelli of Dr. Löwy's article on the Moabite Stone. The learned reviewer concludes as follows:

"Non è certo con argomenti di tal genere che può essere seriamente compromessa, e molto meno assolutamente negata l'autenticità della stela moabitica. Polranno forse muoversi dubbi forvati sopra altre ragioni; ma, fino a che non se ne avranno altre che quelle del Löwy, davvero che questa stela non sarà, come egli dice, un pietra d'inciampo, a stone of stumbling, e resterà per gli studi biblici e per i semitici una pietra angolare."

Thus Dr. Löwy stands isolated in his attack upon the Mesha inscription.

FINE ART.

MAJOLICA AND HISPANO-MOESQUE AT THE BURLINGTON CLUB.

THE exhibition of Majolica and Hispano-Moresque ware, which has now for some weeks been on view at the Burlington Fine Arts Club, is a logical and instructive sequel to last year's magnificent gathering of Persian, Rhodian, and Damascus pottery. The decorative art of the East, as seen in pottery, seems to have found its way into Europe in two streams—one from Syria and Asia Minor to Venice, the other passing through Africa with the Moors to Spain and Southern Italy; but what is generally termed majolica, that gorgeous flower of Italian pottery, seems to have been little influenced, except, perhaps, in technique, by the Southern stream. The colouring, with its striking yellows, greens, and blues, its decoration with dramatic scenes from Scripture and mythology, even its bold floriated patterns and its capricious arabesques, have little in common with the perfect but gentle harmonies of blue and silver and gold, with the simple but effective diaperings of the Moors. Even the Italian lustres, with their gorgeous rubies and emeralds, are not in tune with the delicate opalescent shimmer of the best Hispano-Moresque. Unfortunately we know very little about the history of these remarkable wares; and we are not likely to learn much more, except by means of such exhibitions as this, and continued patience in description and comparison of specimens. But such exhibitions as this ought not to be without their value to the student, especially when accompanied by such a carefully written catalogue as that which has been prepared for its visitors by the Burlington Club. Seeing how rare fine majolica is, except in public museums, the club is fortunate in obtaining a collection of such high average quality, and containing so many specimens of unusual interest. Most of them are, indeed, lent by its members, especially by Mr. Drury Fortnum, whose name is so well known as an authority on the subject; by Mr. Salting, whose collection of Chinese porcelain is the latest wonder of South Kensington Museum; and by Mr. Godman, who sends most of the best Hispano-Moresque. But valuable help has been received from outside. The Queen has graciously lent a magnificent dish of Venetian majolica, with grotesques, &c., in grisaille on a blue ground (140), which it is interesting to compare with Mr. Drury Fortnum's somewhat smaller specimen (174), dated 1540, which is the earliest dated specimen of this *fabrique*; and valuable contributions have been obtained from about twenty other non-members, including Lady Hay, of Kinfauns; Mr. A. Andrews, the Baron de Cosson, Mr. S. G. Hollond, and the Marquis of Santuree.

It is not easy, in an assemblage of pieces of

such various interest, to select specimens for particular mention. Some are specially important by reason of dates and signatures; and among these are specimens (all duly noted in the preface of the catalogue) of Maestro Giorgio and Maestro Cencio of Gubbio, of Orazio Fontana and other artists of Urbino, and of the wares of Pesaro, Castel Durante, Faenza, and Caffaggiolo. But it is not always these pieces which arrest on account of their beauty. In spite of its gold and ruby lustre and its rich colouring, its curious landscape and more curious figures, Mr. Salting's very important dish by Maestro Giorgio (245) is as unprepossessing an achievement as one could well see. But perfection in majolica is hard to find, or, at least, its perfection has a more artificial standard than almost any other art-product. You may get good design or fine colour, there is rich and splendid lustre now and then, and sometimes an approach to really good drawing; but to find all these qualities united in one piece is, to say the least of it, exceptional. On the other hand, there is nearly always something to attract or amuse in the least important specimen. These plates and dishes reflect with the greatest impartiality the designs of all nations and schools of the fifteenth and sixteenth centuries. It appears to have been a matter of indifference to the artist whether it was a painting by Mantegna or Albert Dürer, a drawing by Raphael, or an engraving by Marc Antonio, that he selected for the decoration of his dish or plate. In no other class of art, perhaps, is the spirit and movement of the Renaissance in Italy and the life of the time so fully and vividly reflected. Besides his numerous specimens of what is usually called majolica, Mr. Drury Fortnum exhibits a bust of St. John of the school of Donatello, and two fine examples of Della Robbia ware: one a tabernacle, (69) with a Virgin and Child, a beautiful early specimen (catalogued by mistake among the Hispano-Moresque ware); and the other a bas-relief (182), which is a replica of one of Andrea della Robbia's panels in the altar-piece at the Duomo of Arezzo—a work of singular grace and fine expression. Mr. Fortnum's contributions are too numerous and fine for us to do justice to all of them; but among the most important or interesting are the perfect candle cup and cover (134) of Urbino, the vases (146 and 150) made in Rome in 1600, the Casa Pirola plate with arms (155), the Tazza with the portrait of Jerolima Bella (159), the fine examples of Gubbio lustre (160-62), including the remarkable "Hercules and Hydra," with the blood effectively painted in ruby lustre; the fine Faenza Tazza (165), with Marc Antonio's Cupids; and that with a bull in a landscape (167). But to mention these alone is almost to insult others equally rare and beautiful. It is also impossible to do justice to the large and singularly fine collection of Mr. Salting, which, besides many choice examples of Faenza Castel Durante, Urbino, &c., contains some fine Gubbio of the richest lustre, of which 206 is one of the best. In the central *vitrine* there are a grand cistern, some fine jugs, bottles, and dishes, lent by Sir Francis Cook, Mr. Andrews, Mr. Pfungst and others; and the walls are enamelled with a rich display. But we must leave it to the visitor to pick out, if possible, for himself, with the assistance of the catalogue, what in this magnificent show is most interesting and attractive to his own taste.

The collection of Hispano-Moresque is the first of any importance which has been got together outside of a museum. For those whose eyes are sensitive to the more delicate effects of colour, and who prefer decoration of pure and simple patterns, this portion of the exhibition will be most attractive. There are few things here which give such perfect artistic satisfaction as the dishes (21 and 25), with their

beautiful mingling of gold and cream and their glimmer of mother of pearl. Others may prefer those in which blue is introduced, like the lovely pair (23 and 26) also belonging to Mr. Godman; others, again, the bolder patterns and richer colours of such pieces as the Baron de Cosson's Plateau (14). Though the collection is small compared with that of majolica, it contains specimens of nearly all the kinds and shapes of this beautiful but limited class of ceramic art, from the silver and gold of the more delicate and earlier specimens to the copper lustre of coarser and later fabrics. It contains plates and plateaux, albarcellos and ewers, bowls and vases, beakers and benitiers, many made for, and by, Christians, but all rich with the lustre of the Moors and governed by their genius of decoration, and the best affording a luxurious rest for the eyes which few other artificial things of this world can provide with equal success. C. M.

OBITUARY.

MISS MARGARET GILLIES.

WITH regret, but hardly, indeed, with surprise, must we record the death of Miss Margaret Gillies—who may be styled the *doyenne* of the old Water Colour Society. She was in her eighty-fourth year—would have attained that age, in truth, had she lived till August 7. Hardly even can a painter of the importance and character of Ingres retain to the age of fourscore years his influence with the younger generation; and by the younger generation Miss Margaret Gillies was very slightly known. Yet her's was a figure not without importance in the records of English Art, and her's a personality distinct and impressive almost to the very end. Her energy was such that she continued to work—at intervals, at least—until the present year; and this very summer she was attending Hampstead garden parties, and seeing her friends as usual at her house in that artistic quarter of the town. Those who know the story of her life will honour the perseverance, the energy, the self-denial, the cordiality of feeling which were with her from first to last. Miss Gillies was the daughter of a Scotchman, settled as a merchant in London. She was born in Throgmorton-street. He suffered reverses, and she was placed under the care of her uncle, Lord Gillies, the well-known judge in Edinburgh. There, as a girl, she had the best society of Edinburgh in its great day. Erskine, Jeffrey, and Sir Walter Scott were of those whose acquaintance she enjoyed. But pleasant ease little suited the activity of her temperament; and she determined to be an artist at a time when that choice of a profession was, for a gentlewoman, to say the least, extremely unusual. Miss Gillies quickly gained a reputation as a miniature painter. She was but twenty-four when Wordsworth summoned her to Rydal. She remained there many weeks, and was ever afterwards sincerely interested in all that concerned the poet and his life. Before miniature painting went out of fashion she had managed to become more or less the pupil of Henry and of Ary Scheffer. She lived a while in Paris for this purpose. Then, devoting herself to water-colour drawings, chiefly of domestic, romantic, or sentimental themes, she became, in or about 1853, the first lady member of the old Water Colour Society; and for a long while her contributions—some of which were engraved—were among the most popular of the drawings in the annual show. It is the customary fate of artists who live to be old to find themselves, ere they leave us, long past the moment at which they were most highly esteemed. Nor was Miss Gillies a stranger to this depressing experience. Yet her works—coming less frequently, of course, as time

advanced—still sold; and when her art, by reason of her fourscore years, had to take but the second place in her life, she was yet able to give pleasure to others by her friendship and to value its return. F. W.

CORRESPONDENCE.

“NOTES ON THE NATIONAL GALLERY.”

Redhill: July 26, 1887.

One or two mistakes have crept into the very kind review, by Mr. Cosmo Monkhouse, of my small pamphlet on the National Gallery, in the *ACADEMY* of last week. As they relate to facts of some little interest to students of early art, I venture to beg for space to correct them.

1. I do not ascribe the “Deposition (No. 664)” to Roger van der Weyden the younger, who is to me no more than a name.

2. Mr. W. M. Conway does not ascribe it to Bouts. The plate (p. 280) in his *Early Flemish Artists* is so lettered in error, as the words of his text are enough to show, and as, moreover, he himself told me. The pictures he assigns to Bouts are those I say, Nos. 774 and 943, and to me the ascription seems well founded.

3. Mr. Monkhouse will see, on a further reference to the Gallery catalogue, that I made no mistake when I said four pictures were ascribed to Roger the younger; their numbers are 653, 654, 711, and 712. Three different men seem to be represented by them. The other points of difference between Mr. Monkhouse and me are matters of opinion.

WALTER ARMSTRONG.

NOTES ON ART AND ARCHAEOLOGY.

IN the International Exhibition which is to be opened in Glasgow next May, under the patronage of the Queen, and with the Prince of Wales as hon. President, it is intended to give special prominence to the fine arts department. This will include both a loan and sale collection of works in oils, water-colours, and black and white, and of architectural drawings and photographs. In the British loan section a gallery will be devoted to the productions of living and deceased Scottish painters; and in the formation of the foreign loan and sale section the committee have secured the advice and assistance of Mr. Alma-Tadema. It is believed that a good representative gathering of works of sculpture will be brought together, including examples of the modern French school. The president of the fine arts section is the Marquis of Bute; and its corresponding secretary, Mr. Robert Walker, the secretary of the Glasgow Institute. Works of art will be received for exhibition in March next.

THE hon. degree of Doctor of Philosophy has been conferred upon M. Naville, in recognition of his eminence as an Egyptologist and explorer, by Hamilton College, U.S.A.

DURING next week, from Tuesday to Saturday, Messrs. Sotheby will sell a great number of coins from several collections. The most interesting series is that of Indo-Scythic, Hindu, and Mohammedan pieces, which is sent—presumably as duplicates—by the Indian government.

MR. JOHN M. GRAY has wisely caused to be reprinted for private circulation a series of notes of his on Lord Lothian's treasures at New Battle Abbey, which first saw the light in a Scottish newspaper. Here are six and forty pages—for those fortunate enough to get them—elaborately descriptive of some early Italian and other foreign art, and of some of the finest portraiture in Scotland. What an excellent modern Waagen Mr. Gray could be, all over

the country, if he only chose, so well does he know its treasures, and so thorough are his investigations! He does, too, what Waagen comparatively rarely ventured to do, and what the modern German does too much—he sets people right. See, for instance, his really learned and judicious notes on the portrait hitherto known as that of the first Duke of Hamilton, in which he recognises a portrait of that duke's brother William—and tells us plainly why. The curator of the new Scottish Portrait Gallery—now curiously trained to observe faces as well as to amass facts—here, and often, speaks with authority. Nor has he forgotten to speak, from time to time, with the charm of style.

THE STAGE.

THE PRINCESS'S MELODRAMA.

IN “*Shadows of a Great City*”—played now at the Princess's Theatre—we see a strong melodrama, in the authorship of which an exquisite actor, not of melodrama at all, but of comedy, has had some part. Probably, however, Mr. Joseph Jefferson's collaborateur has had more to do than Mr. Joseph Jefferson with the piece which, on the Princess's play-bill, bears the names of both. If not, then Mr. Jefferson's taste in writing is notably less fine than his taste in acting. For though “*Shadows of a Great City*” is in its own way a worthy, it is essentially a rough, production. It tells us no very new story. But that matters little. It presents us—and that is more to the point—with scarcely a fresh character. Its dialogues is on the whole not bad; but in certain places it is decidedly redundant—to wit, the speeches of Biddy, the Irish girl, are long and irrelevant past all bearing. Let us chronicle with honesty the fact that the audience—or a very great part of it seated aloft—laughs at them; none the less are they insufferably tedious and conventional. The acting is fairly good all round; the scenery is good, and one or two of the scenic effects novel. Thus there is a diorama of New York Harbour—the East River at least: the Harlem River, as it is elsewhere called. But at the Princess's—and especially at the Princess's under the rule of Mr. Barrett—we have been accustomed to excellent scenic effect. The efforts of Miss Hawthorne, the new manageress, though sufficient, do not cause us to forget those of her principal forerunner. Of the chief characters and of the manner in which they are acted we will speak a little more particularly. The hero is one unjustly accused—a convict who did not deserve to be one. He escapes. He saves a child's life. He brings her up and falls in love with her. He is reminded of his past, and compelled to separate from her. And all these phases of his career Mr. Barnes illustrates in an approved manner; nay, more, he is natural and sympathetic. The chief plotter against the happiness of the young woman, and of the man who saved her, is a polite villain acted extremely well by Mr. Abingdon; in a way, it is true, that recalls a little, at times, the method of Mr. Willard—but the younger actor is presumably none the worse for following a good model. Miss Catherine Lewis represents the popular Biddy on a stage which had just before witnessed, night after night, the extraordinary skilful and original comedy of Miss Annie Hughes. Comparisons, however odious, are sometimes very instructive; and it is useful that the public should be invited, not to disapprove of Miss Lewis's performance—which indeed is quite good in its own way—but to recognise the difference between the competent and clever following of a stage tradition and the brilliant inventor of a new thing. The pleasant and long-suffering heroine of “*Shadows of a Great City*” is played by Miss Mary Burke. The more poetic and passionate

a part you give this actress, the better is she suited. Here, however, the words count for but little, and the emotions are those of melodrama. Still, even melodrama—with its suggestions of romance—affords to Miss Mary Burke a better opportunity than does conventional modern comedy, such as that she lately played in at the Haymarket. And in the new piece this lady acts with tact and delicacy, and makes an appearance that is thoroughly picturesque. The play-bill is not by us as we write, or there is one other actor we should like to name. That is the gentleman who plays so very well, in the last scene of all, the aged person who sits on “the prompt side,” and is half paralysed and wholly grotesque at the failure of his not very virtuous schemes. Altogether the piece, though a little lacking in novelty, does manage to command one's interest. When it is withdrawn, sometime during the autumn, Miss Hawthorne will appear as Theodora. We thank the *Globe* for reminding us that the play has been seen before.

STAGE NOTES.

WE hear with interest that, on the opening of the Haymarket by Mr. Beerbohm Tree in September, the part in “*The Red Lamp*,” which has been played at the Comedy by Lady Monckton, will be played by Mrs. Tree. Either while “*The Red Lamp*” continues to be acted, or else on its withdrawal, there will be produced at the Haymarket a version of “*Gringoire*.” In it Mr. Beerbohm Tree will play what is, perhaps, almost his first quite serious and sympathetic part. “*Gringoire*,” if we remember rightly, is by M. de Banville, and at the Théâtre Français it was one of the earliest of the serious parts of Coquelin.

It is said that there will be repeated shortly, for the benefit of a charity, the performance of “*A Midsummer Night's Dream*,” which was given in a private garden near London a few evenings ago, and in which the acting of Miss Norreys, as Puck, was accounted to be quite remarkable. Let us suggest that the representation take place in a regular theatre, in which the interesting young *comédienne*, from old habit, would be certain to be quite as gay, and nobody need have rheumatism afterwards.

MUSIC.

MUSICAL PUBLICATIONS.

Lectures on Musical Analysis. By H. C. Banister. (Bell.) The author of the well-known *Text Book of Music* has certainly added to his reputation by these published lectures. He modestly attributes the interest awakened by them when delivered at Dr. Campbell's College for the Blind to “the charm of the subject”; but, subject apart, Mr. Banister's easy diction, clear statements, and happy musical illustrations, could not fail to give pleasure. And we can scarcely agree with him when he speaks of the subject as having charm. Musical analysis—the study of form—is a mere valley of dry bones; but Mr. Banister has clothed them with flesh, and breathed into them the spirit of Haydn, of Mozart, and of Beethoven, so that they are no longer dry bones. Take, for example, the second lecture. He is considering the mode of proceeding from the first to the second subject, and the second subject itself in a movement in sonata-form. The plan of operation is soon described; but when giving examples he points out an important chord, some contrapuntal device, some characteristic feature, all of which kindle an interest in the music itself, and help the student to enjoy it as well as to understand its structure. In quoting from Beethoven's Sonata, Op. 31, No. 3,

he finds points for comment "upon which I had better dwell at once, even though I digress from the matter which we are specially considering." Such digressions give to the lectures a free-and-easy style: it is not a master teaching, but a friend talking. The illustrations are drawn principally from Haydn, Mozart and Beethoven. We think we are correct in saying that, of modern composers, Mendelssohn is the only one quoted. Mr. Banister is quite right. In these masters one finds all that is necessary for the discussion of fugue, sonata and rondo forms; and, if the student fully understands the lines on which they are constructed, he can easily examine for himself modern works. Our author's enthusiasm about Haydn is refreshing. In speaking about modulation, he gives three illustrations from Haydn, Mozart, and Beethoven. The one by Haydn is as discursive, extraneous, non-relative as any of them; "although," he adds, "it is sometimes thought that he is old-fashioned, conventional, and un-daring." Mr. Banister says that in early writers—Haydn and Mozart—the second subject was similar to the first. There are, however, also traces of that old custom in Beethoven, as for example in the first movement of Op. 57. Again, in speaking about the second subject of a sonata-movement in the key of dominant when the piece begins in a minor key, instead of, as is usually the case, in the mediant, he says he cannot recall any instance of this structure prior to Beethoven. There is, however, a very clear instance in Em. Bach's sonata in F minor in his third "Sammlung" of sonatas and rondos. The second subject and the remainder of the exposition are in the key of the dominant (C minor). Once more, Mr. Banister refers to a sonata of Haydn's in which first and last movements are in E flat, but the middle one in an "unrelated" key. E major is certainly not related to E flat; but did not Haydn think of it as the key of F flat major, writing for obvious reasons the movement in E? Between E flat and F flat, the minor second of the key, a relationship may be traced. And, again our author finds, in the adagio of Beethoven's "Waldstein" sonata, a foreshadowing of the subject of the succeeding rondo. If a foreshadowing at all, it seems to us extremely faint. His remarks about this matter on the first movement of Op. 111 are extremely interesting. We have made these few observations on Mr. Banister's book not in any carping spirit, but principally to prove to the author that we have looked well into it.

The Song of Jubilee. By J. Bradford. (Novello.) The composer has taken his degree of Doctor of Music at Oxford, and hence we are not surprised to find an excess of fugal writing; even "God Save the Queen" is made to do duty as the subject of a fugue. The counterpoint, by the way, at the end of this number, is far from strong. The composer lacks the gift of melody; and hence the cantata, with all its show of learning, must be pronounced a dull work.

The Organist's Quarterly Journal. Part 75. Vol. X. (Novello.) Mr. W. Mullineux's "Pastorale" is extremely light in character, and the subject-matter possesses but small interest. The first movement of a sonata in G, by Mr. E. T. Driffeld, is also light, but contains some good workmanship. Two other movements are announced to appear in subsequent parts. Mr. E. Hake's "Evening Song" is calm and inoffensive. W. Conradi's "Trio with Inversions of the Theme" is more curious than pleasing. The volume concludes with a short prelude by Mr. T. Downes.

Daily Technical Studies for the Pianoforte. By O. Beringer. (Stanley Lucas.) Mr. Beringer, in a short preface, gives some very good

reasons for publishing a new work of this kind. Czerny wrote some "Daily Studies"; but, excellent as they are, they do not contain all that is necessary for a player who wishes to master the difficulties of modern pianoforte music. Our author, indeed, does not even mention them. Tausig's "Daily Studies" are for very advanced players; and Mr. Beringer has endeavoured, most successfully, to provide an introductory course to them. Tausig, considering Kullak's "Octave School" all that could be desired, wrote no special octave studies. Experience, however, has taught Mr. Beringer that Kullak's work frightens students by its length and difficulties; hence he has written a few studies embracing what is most essential. Other interesting features of the scheme are the exercises and fingered scales in thirds and sixths. We cordially recommend this volume both to teachers and students.

The Sleeping Beauty. Madrigal. By G. F. Cobb. (Weekes & Co.) *A Message to Phyllis.* Glee. By G. F. Cobb. (Novello.) Mr. Cobb is an industrious composer—now it is a piece of church music, now a suite for the pianoforte. This time he has chosen—as the above-mentioned pieces show—forms of art little cultivated at the present day. The madrigal is set to some excellent words by the poet Rogers, and the writing is as smooth as it is skilful. The glee is also good, though not so homogeneous. The glee proper has no pianoforte accompaniment; but Mr. Cobb, following the example of Bishop and others, has added one.

The Empire Flag. A Patriotic Song for Solo and Chorus. By Dr. Mackenzie. (Novello.) The composer has here aimed at simplicity. The melody is, for the most part, diatonic, and the accompaniment does little more than support the voice. He evidently felt that the music had to yield to the patriotic words of Messrs. Reid and W. A. Barrett. But if simple, it is not, in any way, commonplace.

Heart's Devotion. Ballad, by M. W. Balfe; *Nocturne*, vocal duet by L. Denza; *In Arcady*, song, by A. Hervey (Ascherberg); and *Songs of Childhood*, by H. Klein (Klein), may be recommended to singers who like light, soothing, sentimental music.

Twelve Songs to Old English Words. By E. Allon. (London Music Publishing Company.) Mr. Allon has, at times, some very good ideas and considerable knowledge of harmony. But his writing is unequal. He is too apt, especially with regard to the melodic part, to fall into the commonplace. Of the twelve songs, the best are Nos. 7, 8 and 11. He may be commended for his choice of words.

Three Romances. For the Pianoforte. By M. Bourne. (Ascherberg.) Three unpretentious, but exceedingly well-written pieces. The composer knows how to write effectively for the pianoforte.

Evening Thoughts. For the Pianoforte. By T. Gibsons. (Ascherberg.) Easy, graceful, and smoothly written. The second piece, "The Shepherd's Prayer," reminds us not unpleasantly of Heller.

A Waltz Whim. For Pianoforte. By Tobias A. Matthey. (Ascherberg.) The title is undoubtedly well chosen. The music is whimsical. The composer, however, has talent, and we shall wait to judge of it in something more serious.

Andante and Allegro Scherzo. For the Pianoforte. By M. Watson. (Ascherberg.) A long, rambling, and uninteresting piece. We have seen better things from Mr. Watson's pen.

THE FORTNIGHTLY REVIEW

For AUGUST. EDITED BY FRANK HARRIS.

THE GROWTH of CO-OPERATION in ENGLAND. By GEORGE JACOB HOLYOAKE.

THE EXPOSITOR

For AUGUST, price 1s., contains:—

SOME LESSONS of the REVISED VERSION of the NEW TESTAMENT. By Canon WESTCOTT, D.D., D.C.L.

THE CHRISTIAN REFORMER,

For AUGUST, price 1s., contains:—

1. THE YEAR of JUBILEE. By the Rev. P. H. WICKSTED, M.A. 2. PHILO'S CONCEPTION of the NATURE and SOURCES of MORAL EVIL.

SATURDAY, AUGUST 6, 1887.

No. 796, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

"Great Writers."—*The Life of Charlotte Brontë*. By Augustine Birrell. (Walter Scott.)

It may be doubted whether there was any clearly audible demand for a new life of Charlotte Brontë, but there is always a demand for writing like Mr. Birrell's. Few of us may think it faultless, some of us may at times find it a little irritating, but none of us, except the very superior or the very stupid person, will deny that it is singularly refreshing and exhilarating. There must necessarily be something of life and individuality lost where thought is poured into the mould of literary form, for even if a clever man be a poor talker there will be in his talk a certain piquancy of personal savour which evaporates in his "works"; and Mr. Birrell is a specially pleasant writer because he manages so to preserve the note of colloquy that in reading his books we feel that we do not merely read but, as it were, overhear. This peculiarity is naturally most noticeable in the papers which with a certain characteristic courage he has called *Obiter Dicta*, for the essay is a form of literature in which personality has free play; but it is by no means absent from this *Life of Charlotte Brontë*. Mr. Birrell has hardly anything new to tell us, as the additional particulars concerning the early life and love of the Rev. Patrick do not count for much; but there is just one thing that is better than a good new story, and that is the retelling of an old one in such a fashion as to give it the freshness of novelty.

Happily, this freshness is not achieved by the artificial and tiresome process of building up a new Charlotte Brontë who is warranted to be entirely different from all Charlotte Brontës previously presented to the public. This kind of thing has been done pretty frequently of late, and we know the manner of the performance. Mr. Cordy Jeaffreson has painted a vulgar liar and sensualist, and has called him the real Shelley; on another canvas Mr. Hall Caine has shown us the picture of a well-poised, firm-willed nature whom we are told is Coleridge. Both works of art are ingenious, and the latter is attractive; but they are not portraits, they are creations—the outcome of the painter's "moral consciousness," and are in their way quite as good as those avowed fictions, *Live it Down* and the *Shadow of a Crime*. It may be that Mr. Birrell, not being a novelist, distrusts his creative powers, or he may hold the antiquated opinion that biography is not the region in which to display them; at any rate, he sticks to portraiture, and, therefore, does not astonish or startle us. He even dares

to give longish quotations from Mrs. Gaskell's memoir—an act which, though it may be a confession of weakness, is not displeasing to those of us who believe that when a thing has once been done perfectly it is best to accept it as having been done finally.

We are, therefore, brought again into the presence of a familiar figure—a woman courageous, self-reliant, loyal, sternly conscientious, and rich in varied nobleness, but not, I think, in any way winning—one might almost say repellent, did not the word seem too crudely harsh to be applied to so finely touched a spirit. Charlotte Brontë was, probably, a woman not to be honoured merely, but to be loved, for there is something lovable in all sorts and conditions of goodness; but one cannot help feeling that her goodness turned its unlovable side outwards, and to get to the other side it was necessary to scale a *cheveux de frise* calculated to appall the boldest. She was clearly wanting in one thing which the novelist of all people can least afford to lack—catholicity of sympathy. She has produced certain characters of whom it is surely safe to say that they will live as long as English literature; but all of them—Jane Eyre, Rochester, Lucy Snowe, M. Paul Emanuel—are on one plane. They are Charlotte Brontë "writ large" and in a disguised caligraphy; but the disguise is one which does not deceive even the 'prentice expert, for it consists only of an occasional reversal of the slope. Her hand preserved its cunning only so long as it was occupied with a character standing in some definite relation to her own. It might be either a relation of similarity or of direct contrast, but the personal *nexus* must exist. It may be said that the imaginative insight and sympathy of Charlotte Brontë's first biographer was wider in range than her own, though Mrs. Gaskell belongs assuredly only to the second rank of novelists. Still, while we remember the disparity, we may be none the less certain that if the author of *Cranford* and *Wives and Daughters* had had to deal with the curates who cut such a poor figure in *Shirley* she would have made more of them than Charlotte Brontë has made. We should have seen all their weak points as clearly as we see them now, for the satire in becoming more genial would not have become less effective, but we should have seen their essential humanity as well. We should have felt, as Mr. Gladstone felt with regard to the sometime unenfranchised, that they were "our own flesh and blood," which at present we certainly do not feel. Lack of vital sympathy with curates is, however, a more pardonable offence than lack of vital sympathy with children, and here also Charlotte Brontë was defective, for the simple reason that she herself was always grown-up. As Mr. Birrell writes:

"Miss Brontë had not, on her small but wonder-opening bunch, the tiny key that unlocks the heart of childhood. As she glances upon children she seems to say: 'Wait, little one, wait awhile, till your eager heart has been bruised in the ceaseless strife of the affections; till the garden of your soul is strewn with withered hopes; till you have become familiar with disappointment, and know the face of sorrow; and then, if you seek me out, we shall have much to say to one another; not of foolish sentiment or Byronic gloom, but downright

vigorous good sense and pinching of each other's delusions.'"

I will make no comment on these sentences beyond saying that they are unfortunately true, and truth is apt at times to be somewhat repellent. Nothing but stupendous power within her own range could compensate for Charlotte Brontë's limitations. Goethe has an often-quoted remark about the impossibility of jumping off one's own shadow. In life it is true that the jump cannot be made; but in dramatic art—and the novel is a modified form of drama—one of the fixed conditions of supreme all-round success is that it shall be made, and Charlotte Brontë never makes it. The illuminating sentence in which Mr. Birrell says that "had Miss Brontë been a greater novelist than she was *Villette* would not have had the biographical interest it has," applies not merely to the story mentioned, but to all her books. They are simply crammed with biography, which, curiously enough, seems to have been written quite unconsciously. Charlotte Brontë was one of the most rigorously truthful persons, and yet she made the utterly astounding statement that Jane Eyre resembled herself in nothing but in being little and plain. When a shrewd and veracious woman does manage to deceive herself, how great is the deception!

Of Mr. Birrell's criticisms it is not necessary to speak at any great length, though they do not deserve to be dismissed hastily, for they have the somewhat rare charm of writing which is at once solidly sensible in matter and vivaciously fresh in manner. His estimate of the absolute and comparative merits of the poems of the Brontë sisters seems to me specially good, for the simple reason that it is sane and truthful; and amid the rhetorical subtleties of much contemporary criticism sanity and truth fare somewhat badly. Indeed, most of his separate judgments are likely to commend themselves to unsophisticated readers; and not until they reach the last chapter, in which Mr. Birrell begins to philosophise at large, will such readers have the feeling that their guide is getting a little too far beyond them. Here he speaks more oracularly than it is his wont to speak; and his words, like those of other oracles, are impressive, but vague. In endeavouring to fix the place of Charlotte Brontë among novelists he indulges in the dangerous luxury of formulating general principles; and though they sound well—sounding well is the strong point of most general principles—I cannot for myself be sure either that I understand them or that I know how to apply them. Mr. Birrell says, for example, "The test of merit for a novel can be nothing else than the strength and probable endurance of its pleasure-giving capacity." At first there does not seem anything wrong here; but we soon perceive that the clause "and probable endurance" must be abandoned, because this is a matter in which we have no canons of probability. Mr. Birrell is quite sure that Miss Austen will be read with pleasure a century hence, and he gives good reasons for his belief; but then literary fashions are independent of good reasons. Miss Ferrier's novels have lately been republished after being out of print through two generations of men and women who cared not to ask for

them. Sir Walter Scott and his contemporaries found in them a "pleasure-giving capacity." Our contemporaries will probably re-find it, for it is certainly there as in the books of Miss Austen; but in the intervening time they were things of nought. And so, when we are told that the test of merit for a novel is the strength of its pleasure-giving capacity, it seems inevitable that we should ask—"Pleasure-giving to whom?" This question Mr. Birrell never answers; and his final chapter, though full of good quotations, good counsels, and other good things, is therefore a little ineffective. Mr. Birrell's theorising must seem thankless work even to himself when he knows that people do exist who honestly feel that *Middlemarch* is as pleasure-giving as either *Villette* or *Pride and Prejudice*, and that there are even some who find great enlargement of spirit in *King Solomon's Mines* who could not without weariness read any of the other three. Of course, Mr. Birrell is not blind to this very obvious fact—indeed, he explicitly admits it; the difficulty is to square his admission with his general principle.

The discussion of general principles, especially principles of taste, is, however, a somewhat profitless occupation; and happily the new *Life of Charlotte Brontë* contains little matter for discussion and much for enjoyment. It is full of good things, by which I do not mean merely things well put, but well thought. So thoroughly pleasant is it that it has half persuaded me to forgive its writer for his essay on Emerson, and to say this is to say much.

JAMES ASHCROFT NOBLE.

Rhodes in Modern Times. By Cecil Torr. (Cambridge: University Press.)

THIS book is a worthy sequel to the author's former work, *Rhodes in Ancient Times*, the merit of which has been recognised both in England and in Germany; and it is no slight credit to any writer that he should have shown himself so competent to treat the mediæval as well as the ancient history of the island. The work fills a vacant place in literature, since the time of the occupation of Rhodes by the Knights of St. John is the only part of its annals that has attracted attention; and even their story remains to be fully and accurately told. It covers the period from the third century of our era to the Turkish occupation; and, though it does not profess to be exhaustive, yet the author claims the merit of having critically compared the primary authorities, and having derived information from sources which had not previously been investigated. These, we may add, are very various and recondite, and the examination of them involves a wide knowledge of the general history both of Eastern and of Western Europe. One result of Mr. Torr's straightforward method is that his work frequently takes the form of a chronicle of events, and, therefore, is not light reading. There is an absence of light and shade in the narrative, in consequence of the smallest facts requiring to be introduced as well as the greatest. It is also truly ascetic in its disregard of all attempts at interesting methods of statement and *pace* of style. But this feature has its favourable side, since it is evidently the author's object to bring together

well-ascertained facts, and to explode erroneous views; and, in securing this, graphic treatment would be only an impediment. Now and then he springs a mine under his reader by unexpectedly introducing absurd legends, or dryly humorous comments of his own, in the midst of matter-of-fact narrative. The following notice of the gardens of the Grand Master is an instance:

"They were irrigated by water pumped up from a well by a windmill. In 1496, an old ostrich and two young were kept with their wings clipped in a walled enclosure here. They laid their eggs in sand and hatched them by simply looking at them; they fed on iron and steel. There was also a sheep from India, and various other strange animals; particularly a hound given to the Grand Master by Sultan Bajazet. It was about the size of a greyhound, mouse coloured, with no hair at all except about the mouth, and it had claws like a bird. From this last fact comes the story that the Grand Turk had a bird that every year laid three eggs, and from two of the eggs came birds, but from the third a puppy. It was necessary to remove the puppy as soon as it broke its shell, otherwise the birds pecked it."

Mr. Torr has grouped his facts under the heads of Public Affairs, Social Life, Religion, Art, and Learning; and to these subjects separate chapters are devoted. This arrangement is of necessity somewhat artificial, so that, for instance, the history of the building of the city walls is brought under "Social Life"; but much confusion of statement is avoided by this means. We thus obtain valuable notices of the commerce, the money transactions, the commercial jurisdiction, and the pawnbroking that were carried on in the island in the time of the Knights. During this period it seems frequently to have been a resort of pirates, and also of fugitive debtors from Western Europe. The inhabitants of the city seem to have been as motley as they are at the present day; for we are informed with regard to the sale of a house that the vendor was a Cypriot, and the adjacent buildings belonged respectively to a Venetian, a Florentine, and a Jew. The friendly relations which have existed between the Jews and the Turks since the capture of the city—for the Jews are the only non-Mussulman population that are allowed to live within the city walls—are easily explained by the following passage:

"On the 9th of January, 1502, the order was given that all adult Jews of either sex, in the dominions of the Knights in the Levant, who refused baptism, should be shipped off to Nice on the Riviera within forty days. During that time they might realise their property in land or goods; but if any remained longer their property would be confiscated to the treasury, and they would themselves be sold as slaves. And the Grand Master was empowered to baptise Jews of either sex, who were minors, in spite of their parents' protests. The Jews were sent to the West to prevent them giving the Turks information about Rhodes. On the capture of the city in 1522, the Turks compelled all the baptised Jews there to return to their old faith."

The Order of the Knights of St. John existed nominally for the service of the poor and the defence of the Catholic faith, and its members were subject to the vows of chastity, poverty, and obedience; but there is ample evidence in this volume of their neglect of

these. In Rhodes they lived in a luxurious manner, and the wealth of the order was reputed to be as great as that of the rest of the Church together. Still, it was said that the hardships and dangers in warfare and at sea were such that not one Knight in twenty attained the age of fifty years, and this is corroborated by the shortness of the average tenure of office by the Grand Masters, notwithstanding that they were appointed for life. Concubinage was generally prevalent among them; and one result of this remains in the collection of amatory poems in Greek, addressed by them to the ladies of Rhodes, and *vice versa*, which was found in the British Museum and edited by the late Dr. W. Wagner, under the title of "The Alphabet of Love" (ὁ ἀλφάβητος τῆς ἀγάπης). The literary value of these, we think, Mr. Torr unreasonably depreciates. In respect of commerce and general well-being the Rhodians gained greatly by this occupation. They were secured from the attacks of enemies, and were well supplied with commodities, while justice prevailed in the market-place and the law-courts, and extortion was almost unknown.

In a few pregnant sentences Mr. Torr disposes of the view, which has been entertained by several writers of late years, that the explosion which destroyed St. John's Church at Rhodes, the church of the order, in 1856, arose from gunpowder that was treacherously concealed in the vaults beneath by Andrea d'Amaral, the chancellor of the order, who was the rival of the last Grand Master, l'Île Adam, in order to hasten the capitulation of the city. Here, as in some other places, our author hardly does justice either to the fulness of his own investigations or the intricacy of the subject, owing to the conciseness with which he has stated his conclusions and the omission of authorities. He says that the complaint against Amaral was, not that he had concealed any powder during the siege, but that he had been remiss in bringing in powder beforehand. We have no doubt that this is correct; but as M. Guérin, in his book *L'Île de Rhodes*, states, also without authorities, that there is contemporary evidence for the story of the concealment of the powder, we should like to have seen the question more fully discussed. Mr. Torr goes on to say that, if Amaral had concealed any, this treachery would inevitably have been discovered in the interval between his execution on November 8 and the evacuation of the city on January 1 following; and that powder could not have been concealed by any one in such a well-known place as the vaults below St. John's. He does not touch on the further question, whether gunpowder could retain its explosive power for more than three hundred years. This, however, has been submitted to a high authority on explosives, and has practically been determined in the negative. Gunpowder, if kept perfectly dry, might retain its explosive power for an unlimited period; but the chances of any magazine which existed in the sixteenth century being so proof against moisture are infinitesimally small. H. F. TOZER.

Essays and Addresses. By the Rev. James M. Wilson. (Macmillan.)

THE head master of Clifton College has achieved considerable distinction both as a bold and independent thinker and as a popular expounder of religious subjects. This collection of essays seems likely to increase his fame in both these particulars. It consists of a number of papers, lectures, &c., whose general drift is described by himself as "an Attempt to treat some Religious Questions in a Scientific Spirit." No fault can be found with this description, if we except two papers which might be more fairly described as "an Attempt to treat Scientific Questions in a Religious Spirit." Probably, however, Mr. Wilson would say that such a distinction signified little, science needing to be qualified by religion as much as religion to be harmonised with science. The book may indeed be described as a kind of Eirenicon, and the author as unwaveringly a mediator between science and theology. Taking his place between the belligerents he displays the theological side of his shield to scientists and negationists and the scientific side to his fellow theologians. In this respect the book is equally opportune and noteworthy. That men of thought and culture are turning away from traditional presentations of Christianity is a fact as lamentable as it is undeniable. That the clergy as a class are doing nothing to avert this defection is unhappily no less true. The complaint of the Mayor of Bristol to Mr. Wilson, on this head would probably be re-echoed by hundreds of intelligent laymen in all our large centres of population :

"Parochial sermons," he said, "do not meet our intellectual needs. They seem intended for the young or for the uninstructed; they rarely touch the points on which men want guidance as to principles or information as to facts. We do not know what you clergy really think on some of the most important and fundamental questions of religion, questions which underlie what are commonly called doctrines. . . . That important questions should be avoided universally by the clergy produces the impression that you shirk awkward facts and awkward questions, and that at bottom you are as sceptical as we are. . . . We read the reviews, which are full of apparently well-reasoned papers which seem incompatible, or at least incommensurable, with much that we hear in church; and we cannot tell what you, our professional advisers, think on these questions. They are rarely touched on at diocesan or church congresses," &c.

With characteristic courage Mr. Wilson not only admits the justice of this damaging impeachment, but enforces it in language no less cogent and striking, e.g. :

"I think the church ought to provide meat for her strong men as well as secure that her babes shall get milk. . . . A church which declines to recognise the right of the few who are fond of wisdom not only to be tolerated, but to be respected, must become stagnant. . . . No army will conquer which dismisses its pioneers, and no church will conquer which not only deprives itself wilfully of the services of those who are most anxious to serve it in cutting new paths and letting in new light through the wilderness of ignorance and superstition, but stones 'its prophets, wise men, and scribes.' . . ."

I have transcribed these passages at some length, because they convey better than any

words I could have chosen the motive and aim of the book. Mr. Wilson is determined to have no share in the guilt of "shirking awkward facts and awkward questions" which Sir Joseph Weston rightly charges against the clergy. He discusses with an admirable mixture of freedom and caution most of the burning questions which have come up for solution since the publication of *Essays and Reviews*. He has his say on Inspiration, the Limits of Authority and Free Thought, Secularism, Church Authority, Christian Evidences, Miracles, Evolution, Fundamental Church Principles; and on all these topics his remarks will be found deserving of attention by all thoughtful and ingenious persons. Perhaps the paper which best displays the characteristics of Mr. Wilson's thought and his method of dealing with extreme Negationists is his "Letter to a Bristol Artisan." Here we have extreme tenderness in dealing with intellectual error, sympathetic insight into the better instincts and principles often found in combination with it, blended with a firm, straightforward statement of what he himself regards as fundamental truth. Such a letter must have produced on the feelings of an honest and thoughtful man a beneficial effect, whatever influence it exercised on his conviction. On the latter point it would, however, be especially interesting to learn its actual result not only in the case of the Bristol artisan to whom it was written, but of other similarly minded Secularists who chanced to read it. To me, I confess, it seems, with all its undoubted excellencies, not to lay sufficient stress on the chief cause of Secularism and Negation. The ordinary Atheist and Secularist suffers from overweening intellectualism—hypertrophy of reason, if such a term be allowed. He manifests the ostentatious omniscience which is the invariable accompaniment of aggressive ignorance. Judging from his treatment of this somewhat favourable case, Mr. Wilson thinks it best to meet these symptoms with an appeal to their owner's sentiments—to the aesthetic and emotional side of his nature. But this appeal presupposes the existence of that aesthetic material, which may be, and often is, wholly lacking. Besides, the plea is liable to be misunderstood by its objects as an appeal *ad misericordiam*. In my opinion this plethora of intellectualism would be best met—as similar symptoms in the physical frame—by a judicious system of depletion, such a method, e.g., as Socrates applied to the dogmatic arrogance of young Athenians. In other words, the infallibility of the reason must be questioned. Its numerous errors and vacillations in human history should be insisted on. The high place which a judicious suspense in speculative matters has occupied in the minds of the greatest thinkers should be pointed out. Impartial self-analysis should be recommended, and persistent and reverent enquiry (truth-search) should be inculcated. But the subject is by no means free from difficulty, and probably no uniform corrective would serve to meet all diversities of mental disorder.

In a book treating such a great variety of topics, addressed to such different audiences, and presenting diverse views of the self-same subject, seeming imperfec-

tions and inconsistencies might easily be discovered. I cannot find, e.g., that Mr. Wilson's utterances on authority and its kinds and limits can always be harmonised. There is, to take a specific instance, an apparent inconsistency in his "Letter to a Bristol Artisan" and his paper on Authority and Free Thought as to the consideration and respect which "spiritual giants," &c., are entitled to receive. He seems occasionally to speak of scepticism, i.e., negation, as if it were in all cases an avoidable defect, whereas negative dogma is as much constitutional in some mental natures as positive dogma is in others. Although admitting the indemonstrable nature of certain speculative truths, Mr. Wilson does not seem to me to lay sufficient stress on probability, both as a mode of conviction and as an incentive to action. In this respect he has something still to learn from the author of the *Analogy*. Further, when he incidentally subordinates aspiration to conviction he manifests, for one who appreciates so fully the scope of emotion in religion, an unexpected lack of spiritual insight, as well as a marvellous ignoring of familiar phenomena in religious history.

But these, after all, are comparatively slight defects, perhaps inseparable from a work which covers so large an area of controversial thought. Taken as a whole, the book must be said to meet admirably one conspicuous want of our church and time. It is a thoughtful, cautious, well-balanced attempt to solve the difficulties which intelligent men find in our popular theology. Mr. Wilson is clear-sighted enough to perceive, and courageous enough to avow, that Christianity must share, to a certain extent, the evolution which is the common law of the universe. He aspires to a "new Reformation,"

"in which spiritual truths will be more precious, while we shall feel that our expressions of them are less adequate; and in which conduct and charity and heavenly grace will be thought the truest evidence of the possession by the soul of those spiritual truths independently of the selection of the intellectual form in which those truths may be deemed least inadequately expressed" (p. 302).

Though "one swallow does not make a summer" in the moral and religious any more than in the material world, yet the publication of this book so soon after that of Dr. Abbott's striking and thoughtful work, *The Kernel and the Husk*, must be regarded as a significant sign of the times. Both are pioneers in the New Reformation of which Mr. Wilson speaks; and to both a fellow-worker for more than a quarter of a century in the same field heartily wishes "God speed." JOHN OWEN.

TWO BOOKS ON RECENT IRISH HISTORY.

Eighty-five Years of Irish History. By W. J. O'Neill Daunt. In 2 vols. (Ward & Downey.)

Irish Wrongs and English Remedies. With other Essays. By R. Barry O'Brien. (Kegan Paul, Trench & Co.)

In literature, as in politics, Ireland demands special treatment. Of the two books above named it is absolutely impossible to write a purely literary review. I should like

to see an average English critic take in hand Mr. O'Neill Daunt. He would point out that the book has the defects as well as the excellencies of what is understood as Irish writing—a tendency to go off on side issues, to interpolate matter (the career of Fergus O'Connor, for instance, and the sad story of Tom Steele) not directly connected with the subject, to bring to the front evidence (like that of *chef de bataillon* Miles Byrne, about '98), which, though almost certainly true, fails to convince English readers, because it is not backed up with the array of proofs to which such readers have grown accustomed. But, if he were a critic with a heart, desiring (as most Englishmen, even critics, do) to deal fairly with Ireland, he could not stop there. He might regret, from a literary point of view, the form of Mr. Daunt's book; but, at the same time, he would confess that in any other form it would have been less telling. That picture of pre-Union society, grouped round "King" Bagenal, is surely a plea, stronger than any argument, for Catholic emancipation. A system under which the mass of the people had the manhood crushed out of them, so that (as used to be said) "you could tell a Catholic by his walk," and a Catholic merchant's son would account it an honour to be allowed to play marbles with the son of a Protestant attorney, proves more conclusively than any amount of argument the folly of government by Ascendancy. The ugly story of the Union shows the hopelessness of expecting anything but disappointment from a connexion so brought about. The whole sketch of the Old and Young Ireland parties reminds us that the cry for Home Rule, though sometimes only whispered, has never once ceased. Even O'Connor's eccentricities, we feel, are to some extent chargeable on the hopelessness of the Irish political horizon before the dawn. Our critic would, therefore, sum up by admitting that, after all, a series of graphic pictures, though it may leave something to be desired from a literary point of view, is, for the majority of readers, the most suggestive way in which the subject can be presented. People like to read between the lines; and between such lines as Mr. O'Neill Daunt's they can scarcely read wrongly. For, having taken part in a great deal of what he describes, Mr. Daunt writes with that fervour of conviction which is better than any amount of argumentative skill. Mr. O'Brien's style is more compact than Mr. Daunt's, because he was writing for English reviews; and, moreover, he has schooled himself in that abstention from rhetoric which is becoming such a feature in the Irish writing of the day. They both simply set forth facts, though facts of a different class: the latter gives us facts of social life resulting more or less directly from the bad system which is in process of removal, the former brings forward facts of legislation connected with the various attempts to remove this bad system. And these facts are so monstrous that Mr. O'Brien's calm judicial way of simply stating them is as astonishing as it is admirable. A Catholic, a Nationalist, fully alive to past and present wrongs and to the needs of the future, deeply sympathising with all that Irishmen are striving for, he is yet content to let his facts of "remedial" legis-

lation tell their own sad tale with even less comment than that supplied by Mr. Daunt. And he is right. He feels, for instance, that the education difficulty could not be better illustrated than by pointing out how Archbishop Whately struck out of the class-book "Breathes there a man with soul so dead?" and Campbell's "Irish Harper," and put in:

"I thank the goodness and the grace
That on my birth have smiled
And made me in these Christian days
A happy English child."

The suppressed pieces had been inserted by the Scotch Presbyterian minister, Mr. Carlile, to whom Government in its inscrutable wisdom had committed the arrangement of the education scheme. But his Grace improved on Mr. Carlile. He feared lest some fourth-standard child might for Caledonia read Erin, and he struck out Scott's lines as well as everything else that savoured of patriotism. I am not now quoting Mr. O'Brien. He merely states the fact, and caps it with the following exquisite attempt at training the young in the way in which they should go: "On the East of Ireland is England, where the Queen lives. Many people who live in Ireland were born in England, and we speak the same language and are called the same nation."

Young "Pat" is generally thought to be not wanting in shrewdness. Were he the dullest clod imaginable, he could scarcely avoid thinking: "True, the Queen certainly never lives here; and the gentlemen who are kind enough to govern us were nearly all born in England." Not only in education, however, but throughout there has been the same determination on England's part "to ignore Irish public opinion, and to give Irishmen not what they want, but what Englishmen think they ought to have." It was so with the Poor Law. The report of the Commission, made up of Irishmen and Englishmen of Irish experience, which had been three years at work, was disregarded, and Lord John Russell acted on the report of a Scotchman, Mr. Nicholls, whose knowledge of the country was derived from a flying tour of six weeks. Till Mr. Gladstone's recent legislation, it has been the same with the land. Any measure so ruinous as the Encumbered Estates Act could not have been planned even by the most imbecile of native parliaments. Such is a fair sample of Mr. O'Brien's facts. He does not enlarge on the chronic insolence which has treated every national demand as the voice of a pack of children crying for the moon. He leaves the irony of his extracts from the *Times* of 1842 and 1850—when that newspaper was roaring against Irish landlords, comparing them to Turkish pashas, and conjuring the Legislature to interfere and to replace such a worthless set by men of capital and intelligence—to speak for itself. He leaves his readers to draw the parallel between Lord Melbourne in 1837 vilified by Lord Roden and the Orange leaders "for maintaining a conspiracy fatal to the integrity of the empire, and by his league with O'Connell endangering British rule and the Protestant religion" (p. 102), and Mr. Gladstone, in 1887, subjected to even more virulent abuse from the self-styled Unionists. Then, as now, the tranquillity which could only be denied by a quibble was attributed to

the undisputed triumph of "anarchy." Lord Melbourne fell, as Mr. Gladstone has fallen; but there the parallel ends. Mr. Gladstone will rise all the stronger for his fall, for English opinion is far more intelligent now than it was fifty years ago; neither is it now, as it was then, "bitterly hostile to the Irish people" (p. 13). This is the most hopeful change of all in the varied panorama of Irish affairs.

Very instructive are Mr. O'Brien's papers on the Lichfield House compact and on Thomas Drummond. Very interesting is his suggestion that Mr. Gladstone supported the Irish Church so long, and only so long, as he believed it to be Protestantising the Irish people. More practically important just now is the remark (p. 211) that "in Ireland there are not two nations, but a nation and a colony. . . . The Orange descendants of the Scotch settlers who occupy a corner of Ulster can no more be called a nation than can the 'Dutch Palatines' of Munster." These men, though "English to the Irish," have always been "Irish to the English" whenever the executive has not given them their own way; and yet Mr. O'Brien is sure that "if the Ulster colonists could only be persuaded that Home Rule does not mean Rome Rule they would fall into the national line before a twelvemonth." To those who really believe in local boards and such like, with or without coercion, I recommend the remark (p. 30) on "grudging concessions spoiled for lack of the sympathy that crowns a gracious deed." Nor should I be right in omitting almost the only bit of dogmatism in the book; it puts the case so clearly: "Ireland is in trouble because her material grievances have been but slowly and unwillingly redressed, and because the national sentiment has never been respected."

From Mr. Daunt's two volumes it is less easy to pick *γνώμαι*. They deserve to be widely read and pondered over, not without a sense of humiliation that such treatment was possible at the hands of free and enlightened England. Everyone (now that the time when England deemed she could profit by Irish rivalries is for ever gone by) will join in the wish "that Irishmen of all creeds could recognise and rejoice in each other's good qualities"; and those who still have a lingering dread of the "Rome Rule" bogey will be glad to hear from the Protestant Sir John Parnell (*Historical Apology for Irish Catholics*) that "the Irish Catholics are the only sect that ever resumed power without exercising vengeance"; and from Dr. W. Cooke Taylor (*History of Irish Civil Wars*) that "it is but justice to this maligned body to say that on the three occasions of their obtaining the upper hand they never injured a single person in life or limb for professing a different religion." Mr. Daunt has done a good work by bringing out indisputable authorities like these.

HENRY STUART FAGAN.

SPANISH FOLKLORE.

Biblioteca de las Tradiciones Populares Españolas. Tomos VII.-XI. (Madrid.)

THE volumes of this excellent collection of Spanish folklore show no falling-off as they advance. Nay, in some respects, the interest becomes greater. Vols. vii., ix., xi. are

occupied with the "Cancionero popular Gallego y en particular de la provincia de la Coruña," by Don José Perez Ballesteros. Vol. viii. contains (1) a charming essay in Portuguese on "The Rose in the Life of the Peoples," by Cecilia Schmidt Branco; and (2) "The Folklore of Proaza in the Asturias," by L. Gener Arivau. The contents of vol. x. are "Popular Tales collected in Estremadura," by D. Sergio Hernández de Soto. It will be seen at once that such a series is of no little value for philological purposes as well as for folklore. We have, too, a most pleasing variety of matter in the separate volumes. The "Cancionero Gallego" consists wholly of verses and couplets improvised or composed by the people, stanzas which pass orally from mouth to mouth without any one demanding who is the author of them. The volume of Señor de Soto contains fairy tales only; while Señora Branco's contribution is a delightful *résumé* of whatever the superstition or fancy or poetry of many peoples have associated with the rose in literature. Señor Arivau's "Folklore of Proaza" is gathered chiefly from one narrator, a native of the place, in service at Madrid. It includes traditions, legends, tales, superstitions, *coplas*, and romances.

The "Cancionero Gallego" of Señor Ballesteros is introduced by an excellent prologue by Theophilo Braga, in which he claims Galicia as the true fountain-head of Spanish song. He gives proof of the richness and complexity of its many forms by quotations—some of which are singularly beautiful—from the Cancionero of the Vatican (sæc. XIII.). He remarks on the likeness to Keltic poetry in the Triads; but the chief distinction of the verse is the skill and telling effect with which repetitions and refrains are managed, recalling in this some of the older forms of French versification. The form of the *coplas* has evidently been moulded by the compass of the instrument to which they were sung; or by the dance to which they lent, or from which they caught, their rhythm. Speaking generally of these Gallegan *coplas*—for we have not space to go into detail—they have neither the exquisite tenderness, nor the graceful fancy, nor the almost frenzied passion of the Southern Spanish. They are the production of a harder race. They deal more with outward life, with agricultural scenes, or with the daily lot of the fisher and the mariner. They are often satirical: the priest, the miller, the dressmaker, and the step-mother, are the classes which most often fall under the lash. The morality indicated in them is not high. On the other hand, they often evince a true feeling for nature—as love of trees, and an affection for cattle—not often found among rustics. "My god-mother," says one, "if I die, don't bury me in the churchyard; bury me in the green field, where the cattle go to graze." *Romerías*—i. e. pilgrimages—seem to hold as large a place in Galician life as do the *Pardons* in that of Brittany. The nursery songs are numerous and good. There is plenty of rustic wit and repartee. Occasionally we have reminiscences of far older ways of thought, as in vol. ix. 181, where Venus is addressed as the star of abundance; and another on p. 199, where the *cowado* is possibly alluded to. In one the manufac-

turing supremacy of England is commemorated:

"D'os panos que hai n-a tenda
Moito me gusta o *Manchester*,
D'os filhos que tèn teu pai
Tamén me gusta Silvestre."

"Of the cloths there is in the shop
I much prefer the *Manchester*,
Of the sons your father has got
I also do like Silvestre."

A note to the final word of l. 2 tells us that it is "an English cotton which formerly bore this name."

The Asturian *coplas*, and especially the ballads and romances, given by Señor Arivau are far more poetical than the Gallician; but they are not so rich in rhythmical forms. They are given in Spanish, not in the Asturian Babel, and have not so much peculiar to the soil. The religious folklore is rich, and some of the Christian symbolism very pretty. One superstitious practice is curiously opposite to Protestantism. "One ought never to pray for a person living, for that attracts death to him." But perhaps the most useful part of this collection is the proof that it gives, in the ballad of the death of Prim, and in the Carlist *coplas*, that folklore is still being formed among us. "The Death of Prim" is a legend entirely in the old style.

This collection, as we have said above, was formed from Asturians in Madrid, and taken down in Spanish. Had Señor Arivau taken his *Cuentos* from the lips of Asturians in their own country and in their own dialect, I think he would have modified his statement that "belief is no element in them." Among the Basques, who have told me variations of these tales, some certainly most fully believed that there was a time when animals, and even trees, spoke; others, who from wider intercourse had lost their faith, assured me that once they really believed this. The legal precedent of the pleadings of the man and the serpent in the Fueros of Navarre and Aragon was certainly not believed in at the time it was written down or printed; but it points back (like our John Doe and Richard Roe) to a time when men could think and express themselves only in concrete terms; when both thought and language in the effort to express abstractions were compelled to humanise external nature; when to the confused consciousness of sentient man everything else was sentient, and he could not believe it to be otherwise. Modern society is still somewhat like a vertical geological section. However rich and complex may be the forms in the upper strata, as you descend they become simpler and less complex, till at last we reach the remnants of the simplest rudimentary organisms. And these rudimentary forms in thought and language are still to be found throughout Europe. There are still those whose thoughts really dwell wholly in the concrete, even though their lips may repeat the abstractions which they have learnt by rote or caught parrot-wise from their superiors.

WENTWORTH WENSTER.

NEW NOVELS.

James Hepburn. By Sophie Veitch. (Paisley: Alexander Gardner.)

Could he do Better? By A. A. Hoffmann. (Hurst & Blackett.)

Autobiography of a Slander. By Edna Lyall. (Longmans.)

Scamp. By J. Sale Lloyd. (White.)

Walter Ellithorne. By A. S. Melville. (Elliot Stock.)

Passages in the Life of an Undergraduate. By Bee Bee. (Sonnenschein.)

James Hepburn is a story of very unusual power, promise, and desert. It is not, indeed, altogether easy to read. The workmanship is too close, the threads too firmly knit together, the thought too terse for any lazy lady to gallop through it with her feet on the fender. There is in it no marrying and giving in marriage and no love-making; and it deals with the mental history of two very dissimilar persons, neither of them the hero—lovely Lady Elinor Farquharson and Rob Blackwood. The story of Lady Elinor is exceedingly pathetic; and all her moods, as she gradually progresses along a path of peril, are described with a hand at once sure and delicate. The young and beautiful wife of a stiff and formal old husband—a sort of animated and respectable ramrod in shoulderstraps and belts—she is thrown much upon the society of a gay, fascinating and generous young man of her own age, Sir Maurice Adair. She had married General Farquharson with feelings merely of respect and esteem; and she soon begins to pine for genuine love and sympathy, which is just what her husband is restrained from offering to her from a fear of appearing uxorious and absurd. He masks his really passionate devotion to his wife under a calm, immaculate propriety of demeanour, which gives him in her eyes the appearance of indifference, and in the reader's of an exasperating formalism and punctilio. How under these circumstances she passes from girlish pleasure in Adair's frank admiration to a startled dread of his influence; how, unable to avoid his company, she bravely battles with her own weakness and his growing passion; how again and again she reaches safe ground, only again and again, as if by fate, to slide into peril; how at last she is swept away on the stream of her lover's passion, and of her own yearning for some affection to take the place of that which her husband had never shown her, is told with intense interest, much psychological insight, and perfect delicacy. Robert Blackwood's, on the other hand, is a wild warped nature; a strange mixture of talent, loyalty, and vindictiveness, with a curious moral twist in it, which makes him act as a villain without a villain's motives. The fight in which the minister knocks him senseless and wins his devotion, the crisis at which he surrenders himself to justice on a charge of murder to save the minister his friend, and his escape from gaol, are most vividly described. Both to Lady Elinor and to Rob the Minister Hepburn is a kind of confessor and saviour. A man of unconventional habits, and of a bluntness which is skillfully made to verge upon boorishness, he is a paragon of unselfishness, who bewitches the people in the book without offending the people who read it. The tragedy of the tale is relieved by the picture of his petty, pestering, tattling congregation. It is true the tragedy is rather too psychological. The

minister preaches at times till he nearly prozes; and, skilful as is the birth of a mountain of gossip out of a molehill of fact, the tattling of the congregation is rather brittle and trivial. The railway accident, too, which concludes the drama, is both wanting in originality and hardly adequate to work such a change in Rob as it does, consistently with the previous history of his mind. The minor characters are well done. Mrs. Munro and Mr. Laing are especially sharp and fine in their drawing. The plot is unusually coherent and well constructed. So far is the book from having superfluous incident that the full force and effect of each incident is almost more than a memory of ordinary power can carry away in the course of the tale. On the whole, *James Hepburn* is an excellent novel, and one which it is a satisfaction to have read.

Could he do Better? is a novel which improves very much as it goes on. The first volume consists mainly of a rambling and unskilful introduction of the personages and a commonplace picture of the society of a small country town. Now, whatever may be the value of realism, it does not justify every observer of parochial society in jotting down a semi-humorous description of it and calling it a study from nature. But when the plot and passion has had time to expand Mr. Hoffmann shows that he has a real talent for weaving a complicated plot and that he can interest his readers in his personages. Often, indeed, his plot is too complex. Three or four of the characters play at a kind of hide-and-seek of proposal and refusal of marriage; and the air is darkened with rumours of engagements, and the fate of the hero and heroine, with their consequences. The heroine, poor Judith Topham, a sweet and only too conscientious girl, is kept on the rack—duty warring against affection—to the very last page of the last volume, until one rises in arms at the prolongation of her sufferings. True it is all undergone for the redemption of the hero—a gentleman, who, under the chastening influence of crosses in love, is brought to exchange his trade of politician for the comparative honesty of the manufacture of patent varnish. This is the theme of the book, and the fault of the process is that it is too full of stratagem. The young man shilly-shallies with a lovely widow so fond of diamonds that she sleeps in them. He proposes to her, or rather to her bankbook; and when he is accepted, he most inconsistently “shuddered as if a corpse had risen to life and embraced him. A horrible giddiness and nausea overtook him,” which, being in Park Lane, in the drawing-room of the proprietor of the bankbook, he fortunately controls. He gets out of this; and, strange to say, by means of a contested election, is brought to his better mind, and at last does poor Judith justice. If Mr. Hoffmann would not aim at quite such high *finesse* in his conversations, in which he misses his mark, and would not manoeuvre his pawns so adroitly that he forgets they ought not to be pawns at all but creatures of flesh and blood, he would do much better. No doubt he has the talent to do so, and it is to be hoped he will.

Miss Lyall is a little hard on gossip in her *Autobiography of a Slander*. The design on

the cover, which typifies her treatment of her subject, represents a small serpent coiling round a cup of tea, and trying without much success to sting the tea-spoon. Miss Lyall exaggerates the poisonous qualities of this sort of reptile. The slander in question is merely the statement that a Polish merchant, who loses his temper in a drawing-room about Russian despotism, must be a Nihilist in disguise. Anyone might have said that. This simple remark, uttered in September, kills the Pole with consumption in a Russian gaol on the following New Year's day. This is a portentous game of Russian scandal. In print gossips usually get the scourge. They are kicked and have no friends; but really to belabour them with the knout in this fashion provokes a recoil in their favour. Apart, however, from its intrinsic exaggeration, the tale has the merit we have learned to look for in Miss Lyall. It is very slight and hardly worthy of her; but it is skilful and fluent, and is well worthy the thirty minutes it takes to read.

What would novelists do without lover's misunderstandings? Given “Scamp,” a young lady with “two coral-red Cupidon lips and a row of pearl-like teeth” (why two lips and but one row of teeth?) and “a high-bred instep,” who gets engaged at fifteen to a warrior of five and thirty in the boughs of a walnut tree; given the confirmation of this engagement at the age of eighteen at vol. i., p. 126; the problem is to keep the young things apart, unhappy and interesting, till vol. iii., last page but fifteen. The thing is simple, though it is doubtful if a mere man could have done it. “Scamp” has undertaken to play guardian angel to the love affairs of an amorous solicitor and the daughter of a wicked baronet, who forbids such a *mésalliance*. The warrior catches the solicitor and “Scamp” by night in a summerhouse, and misinterprets Pyramus talking to the wall into Pyramus talking to Thisbe; and thereupon he vanishes for a volume or so, in haste and wrath, to India and waste spaces of jealousy and desolation of heart. Thereupon ensues a perfect carnival of love-making. “Scamp” gets six proposals of marriage—one from the baronet, and three from a nobleman, who afterwards crowns the edifice with a seventh to someone else. Still Adela, *alias* “Scamp,” behaves nicely and pathetically, with a tendency, however, to address rejected suitors as “my friend.” After her father's death, “etherealised, but equally lovely,” she encounters her warrior near her father's tombstone, which was “very chaste and pure looking and massive too,” just as the lover was placing on it “a rarely beautiful wreath of white flowers.” “A spasm of uncontrollable joy swept through her heart;” but the warrior, colder than the tombstone, takes himself off, “gnawing the ends of his brown moustache fiercely,” and muttering “Fool that I was to come here.” After so promising a conjuncture, no experienced novel-reader will doubt that marriage and happiness cannot be far off. Though Miss Lloyd has hammered out a very small nugget of gold into a very large surface of gilding, still there is gold in her nugget. In spite of a strong dose of the conventional absurdity of novels, the book is a pleasant and refined one, and may well be read.

For a stranger to point out which way the genius of the author of *Walter Ellithorpe* lies would be presumptuous, since he who ought to be no stranger to himself has lamentably mistaken its direction. Clearly, however, it never will make him a novelist. His subtitle, “A Country Parson's Facts and Fancies,” is a very good description of his book, so far as it goes; for the book consists of the fancy of some one who is not a man of the world, and who avenges the peacefulness of his country life by the lurid character of his imaginings. Gambling, forgery, a brace of suicides, child stealing, apoplexy, and heart disease are the minor links in the chain of events. Yet it must not be supposed that the book is exciting. It would not ruffle the tranquillity of a convent. The conversations consist largely of that class of talk which adorns the specimen conversations of etiquette books. The English language, too, has difficulties for Mr. Melville. He writes: “I would advise that to whichever of you he proposes, to say yes without any hesitation,” and “she and her stepdaughter were after having an unpleasant interview with the young lady's father,” when what he means is that they had just had one; and with unconscious pleasantry he remarks that “if Captain Sharp did not meet Miss Winton within the walls of her father's house, he met her very often in the city at concerts and other places.” When any of the male characters falls in love he always buys new hats and collars, which trait, with other things, suggests that the writer is a lady and not a parson, and is better acquainted with some suburb than even with the country.

Passages in the Life of an Undergraduate is a misleading title. It should be passages in the lives of three or four undergraduates, a parcel of their “lady friends,” and some irrelevant old fogs, with selections from tourist handbooks to Spain, Norway, and other unknown regions. If there is a plot, it lies in the awful consequences of a boy-and-girl flirtation at a Commemoration ball. The girl, without telling mamma, writes the boy a letter and sends him a knot of riband—doubtless a gross impropriety, and worthy of condign punishment, though there are still some of us who walk the streets—whited sepulchres that we are—with similar crimes on our conscience and a smirk of respectability on our lips. More lethal than the shirt of Nessus, the riband kills a child, conducts the girl to the brink of the grave, and deafens a naval lieutenant. To tell how this is managed would be to squeeze what little juice Bee Bee's orange contains. The story is brief, and the accounts of Oxford briefer, but they are not brief enough to avoid errors; which fact, with the entire freedom of the book from the detestable vices of youthful cynicism and affectation of worldly wisdom, goes far to prove that the author, who clearly is young, cannot be an undergraduate, and probably is a young lady who visited Oxford for a week during the Commemoration of 1886.

J. A. HAMILTON.

SOME SCOTCH BOOKS.

View of the Political State of Scotland in the Last Century. Edited by Sir Charles Elphinstone Adam. (Edinburgh: David Douglas.) This is a statistical and political curiosity, being

a confidential report by some unknown person or persons on the political opinions, family connexions, and personal circumstances of the 2,662 individuals who alone had the franchise in Scotch counties in 1788. It was intended to assist William Adam and Henry Erskine, the Whig managers in Scotland a century ago, in their campaign against Pitt and Dundas. The main thing that it proves is that it must have been quite as easy a matter to canvass the whole of Scotland then as it is to canvass a single county now. The notes attached to the names of the voters reported on are characterised by worldly shrewdness rather than by malice. Here are three specimens:

"James McHarg, writer in Edinburgh, wishes for a small office. Unmarried. Not rich. Thought will vote for Sir Andrew Cathcart; swayed by John Hunter, W.S. . . . John Bushby, Sheriff-Clerk of Dumfries. An able, sharp man. Wishes for preferment and business to his son at the Bar. . . . John Carruthers, of Holmains. This estate and vote sold to James McCrae, Esq., cousin of the Earl of Glencairn, who will have influence with him."

Occasionally these notes tell odd stories, e.g.:

"Henry Rankine, of Knockdow. An oddity. Begs on the high way. Has amassed money. . . . John Christie, Baberton. Old man. Dying. Made his fortune by a lottery ticket. Arthur Forbes, of Culloden. Very independent fortune. Got a sum from Government for a monopoly of making whisky, duty free. . . . Hercules Ross, of Bossie. A new proprietor. Very rich. Made his money by privateering in the West Indies."

This report was decidedly worth printing.

A Short Border History, by Francis Hindes Groome (Kelso: Rutherford), is an admirable little book, and supplies a much-felt want; for, as the author says, "rich as is Border literature, there has till now been no short Border history to slip into the pocket, and be read on the actual battle-fields of Otterburn, Flodden, and Ancrum." Mr. Groome loves his subjects, knows thoroughly the story of every inch of the 110 miles which, following the Border and starting from Berwick-on-Tweed, one has to travel before one reaches the Solway Firth. He has also a nimble fancy, and is as opinionative as Prof. Blackie himself, occasionally waving his arms and shouting out such views as "The drama 'Monarchy' is all but finished, and the 'gods' are growing impatient for the end; for is it not to be followed by the grand new harlequinade 'Democracy,' in which all the fine actors shall heigh! presto! be turned into clowns?" But Mr. Groome's book is, perhaps, all the better, and it is certainly none the worse, for outbreaks of this kind. It contains all that the stranger, or the tourist at all events, needs to know of the history, the social life, the geography, and the ethnology of the Border. There is scarcely a superfluous, and not one uninteresting, line in it.

St. Kilda and the St. Kildians, by Robert Connell (Hamilton, Adams & Co.), is based on certain articles which its author contributed to the *Glasgow Herald* in October, 1885, and June, 1886, in the character of a "Special Correspondent." Mr. Connell does not add much to the information recently supplied on the subject of St. Kilda, with its fulmars and its Free Churchism, its tetanus and its intermarriages, by such writers as Mr. Sands and Mr. Seton; but he saw its inhabitants when they were in deep distress, and he writes clearly, graphically, and vigorously. Occasionally, indeed, he seems too vigorous, as when his topic is the Free Church clergyman on the island. His recommendations for the amelioration of the condition of the St. Kildians deserve careful and prompt attention. Plainly something must be done for them. It is to be regretted that the

sentimental yachtsman and other folks who have recently been paying some attention to the St. Kildians have—so says Mr. Connell—rendered him a "fibresless" creature.

My College Days (Paisley: Gardner) purports to be the autobiography of a defunct Scotch student, and to be only edited by Mr. R. Menzies Fergusson, who is known already as the author of *Rambles in the Far North*. But it is, to say the least, eminently probable that Mr. Fergusson relates his own experiences in Edinburgh and St. Andrews. He does so in a sufficiently lively and "freshman" style. To judge from what Mr. Fergusson says, Scotch students, more particularly in St. Andrews, drink a good deal of beer and whisky, and have sufficient leisure on their hands to write a large quantity of jovial verse, in which they hit off the peculiarities of their professors. As some of this verse is rather indifferent, Mr. Fergusson might have given his readers a little less of it. One regrets to hear that "many Scotch students who go up with scholarships to Oxford become in the course of time so much Anglicised that they are anything but favourable specimens of their class. They get snobbish, and think it a proper thing to run down the university which they have left."

It is evident that this latter mistake is not one that Mr. Fergusson will ever commit. He has a good deal to tell of Scotch professors and Scotch landladies, as well as of Scotch students. We confess to being somewhat surprised to learn that Prof. Fraser, the eminent Berkeleyian, is a humourist. So it seems, however. At all events,

"a student who sent in an essay of 160 pages, finished up his production by saying that as it was Saturday night and very near the Sabbath, he would now bring his remarks to a conclusion. 'Gentlemen, I never felt so thankful in my life,' said the professor, 'for the Christian institution of the Sabbath.'"

My College Days is, on the whole, as readable as any book of the kind that has recently been published.

THE anonymous author of *Law Lyrics* (Paisley: Gardner), which, we see, is in its second edition, cannot be placed on a footing of equality, as regards either ability as a versifier or intimate knowledge of Scotch feelings and character, with either Outram or Neaves. These "lyrics" lack finish and suggest the criticism of "coarse kintra wark," which the Edinburgh beadle, an expert in sermons, was in the habit of applying to the lucubrations of provincial preachers. But the subjects they deal with are sufficiently varied, including love, law, lakes, wigs, and crofters. Their author has the power of condensation, too, as in lines like these:

"Farewell! to Craigmore, his bare forehead
erecting
O'er hills, streams, lochs, islands, and fens,
a full score,
Where Achray and Katrine lie sweetly reflecting
Bens Vane, Ledy, A'an, Venue, Voirlich, and
More."

Unkempt enthusiasm and rollicking good humour are the chief features of this little volume.

The Captive King, and other Poems. By James Sharp. (Paisley: Gardner.) It would be unfair to criticise these poems too sharply, as they are the productions of a Glasgow merchant, although some of them were written after their author had retired from business. The most ambitious of them—"The Captive King," illustrating certain passages in the life of James I. of Scotland, and "Tullebardine's Bride," which is a sort of Scotch version of "The Lord of Burleigh"—flow smoothly, and are agreeably free from sentimental twaddle. Occasionally, indeed, Mr. Sharp becomes too

prosaic, as when, in "Tullebardine's Bride," he tells us that

"The patient had in lucid interval
Flora to see, a strong desire express.
The doctors urge upon the family all,
The policy of granting this request."

Mr. Sharp is seen at his best in his shorter poems. In these, as a rule, healthy sentiment is expressed in unpretentious verse.

Early Songs and Lyrics. By Ebenezer Black. (Edinburgh: Brown.) The type and paper of this book are rather attractive; and Mr. Black has carefully polished his rather thin verses, which, some in Scotch and some in English, trudge along the road that Burns strode before their author. Mr. Black's ecstasies in Scotch are not very inspiring. There is not much contagious passion in

Oh the glory o' that night,
When the moon was at her heicht,
And through the wud in her brow licht
I gaed hame wi' Bella!

Occasionally he strikes out a happy conceit, as in

I loved her once, I love her yet,
While round my heart entwine
The tendrils of the wild regret—
She never will be mine.

There is some promise in Mr. Black's book, and almost no nonsense.

Border and other Poems. By Robert Allan. (Kelso: Rutherford.) The author of these poems writes a flowing style, and has an easy command of the Scotch dialect of to-day. His ethical and religious sentiments are irreproachable. That is all that need be said of him and his poems.

NOTES AND NEWS.

WE understand that Mr. John P. Prendergast, the author of "The Cromwellian Settlement," has just ready for publication with Messrs. Longmans another work on *Ireland from the Restoration to the Revolution*—an interesting period of Irish history in relation to the Act of Settlement and its consequences.

NEXT month Mr. George Allen, of Orpington, will publish *Hortus Inclusus*, being a volume of selections from Mr. Ruskin's Letters to Miss Beaver, with a preface and notes by Mr. Ruskin. The book has been edited by Mr. Albert Fleming, and will form a companion volume to *Frondees Agrestes*.

MR. AUSTIN DOBSON has made a selection of the poems of Goldsmith, which will be published later in the year by the Clarendon Press.

PROF. ROBERTS, of St. Andrews, is preparing for publication a volume entitled *Greek, the Language of Christ and His Apostles*. The work is expected to be ready in the course of a few months.

THE second and concluding volume of Dean Plumptre's translation of Dante will be published in September. Besides translations of the *Paradiso* and the minor poems, it will also contain several essays on subjects of interest to Dante students.

AN edition of Macaulay's *Lays of Rome* is being printed at the Chiswick Press, on hand-made paper, for Messrs. White & Allen, of New York. The impression is limited to 1,250 copies and 350 large paper, of which numbers, 250 and 100 respectively will be consigned to Messrs. J. M. Dent & Co., who will issue them for sale in England, with autotype medallion portrait, in calf and morocco bindings.

THE demand for the new edition of part i. of *The Sea: its Stirring Story of Adventure, Peril, and Heroism*, has been so large that Messrs. Cassell & Company are now reprinting it, and a second edition will be ready in a few days.

UNDER the title of the *Story of Creation* Mr. Edward Clodd will shortly issue a plainly written résumé of the theory of evolution.

How to write the *History of a Family*, by Mr. W. P. W. Phillimore, is announced by Mr. Elliot Stock as shortly to be issued by him.

Our Church Manual: a System of Suggestions for Prayers and Devotions at Home and at Church, arranged by the Rev. A. Hunter Dunn, will be published immediately by Messrs. Roper & Drowley. A special feature of this manual is that, while complete for use as issued, the first sixteen pages can, at a trifling expense, be filled with any local matter desired by the parochial clergy. Canon Maclear, warden of S. Augustine's, Canterbury, contributes a commendatory preface.

LAST Monday Miss Bennett, the principal of the well-known Ladies' College of Ogontz, Philadelphia, started in a four-horse coach, with several of her old pupils and their friends, for a drive to Canterbury and back, to see the road and scenes they have long known so well in Chaucer's Canterbury Prologue. They invited the founder of the Chaucer Society to go with them; but he, being near Henley-in-Arden for his holiday and Shakspeare work, was unable to go.

AT Prof. Arber's request the Early English Text Society has agreed to supply certain of its books at a much reduced price to students preparing for the matriculation and honours examinations at the University of London. Thus Prof. Skeat's edition of *Havelok the Dane* (for the matriculation, 1889) is to be had, post free, for half price, 5s.; and the professor's edition of the three parts of Barbour's *Bruce* (for the B.A.), with its seven indexes and glossaries, is to be had for 7s. 6d., though published at 47s. In every case prepayment to the society's printers, Clay & Sons, Bungay, Suffolk, is indispensable. Any profit the society may make out of the sale will be applied to reprinting its out-of-print texts of 1866, though the fourth of these, Dan Michel's Kentish *Ayenbite of Inuyt*, edited by the Rev. Dr. Richard Morris, is already at press. But seven more need reprinting, and three for 1867.

Two American girls—Miss Gertrude Baxter and Miss Hussey, of New Bedford, Massachusetts—have made an index to seventy-eight of the volumes of the Early English Text Society. They are willing to complete the society's other fifty volumes if the society will print the index. This the committee will, of course, gladly do, if the specimen of the work to be sent meets with their approval. The index can then include the books of 1888, and thus comprise the society's first twenty-five years' work.

THE Froebel Society offers prizes to the amount of twenty guineas for the best essays on the following subject: "The Ethical Teaching of Froebel, as gathered from his Works." Essays must be sent in not later than November 1, addressed Froebel Secretary, office of *Journal of Education*, 86 Fleet Street. The judges will be the Rev. R. H. Quick, Prof. J. M. D. Meiklejohn, and Miss Snell.

ARRANGEMENTS have been made in Manchester for the celebration of the phonographic jubilee and tercentenary of modern shorthand, both of which anniversaries occur in 1887, by a series of meetings on August 29 and 30. A committee, of which Mr. W. E. A. Axon is chairman, and which numbers among its members the Bishop of Manchester, the Bishop of Salford, Principal Greenwood, and others, with Mr. A. W. Croxton, editor of the *Shorthand Monthly*, as hon. sec., have now issued a programme of arrangements for the meetings. The meetings are to be inaugurated by a public conference upon the present position of short-

hand, to be presided over by the mayor (Alderman J. J. Harwood). Papers will be read by Miss Reynolds, Messrs. W. E. A. Axon, E. J. Baillie, E. J. Cross, and Henry Pitman. In the evening a dinner will be given to Mr. Isaac Pitman by the Vegetarian Society, of which Mr. Pitman is a vice-president, to be followed by a social reception, at which an exhibition of shorthand rarities, type-writing machines, &c., will be held. The meetings will conclude on Tuesday, August 30, by a public meeting, at which an address will be delivered by Mr. Isaac Pitman, the inventor of phonography. Sir Edward W. Watkin, it is expected, will preside on this occasion. Arrangements have also been made with the authorities of Chetham's College and the Free Reference Library for an exhibition of shorthand works and MSS. at the respective libraries.

MR. CHARLES MARVIN has been elected corresponding member of the Imperial Russian Technical Society in recognition of his writings on petroleum.

THE following were the prices paid at Messrs. Sotheby's sale last week for the holograph MS. of some of the late D. G. Rossetti's poems, &c.: "Rose Mary," £22; "The King's Tragedy," £17; "The White Ship," £21 10s.; "The House of Life," sonnet (signed), £11; Lyrics, £8; Sonnets, including five in Italian by Proserpine—*La Bella Maro*—£11 5s.; "Wellington's Funeral," and sonnets, £8; various sonnets, £10 15s.; Swinburne's *Atalanta in Calydon*, original edition, with Rossetti's signature on fly-leaf, £7.

ORIGINAL VERSE.

DRIVING IN WINTER: ENGLAND.

WHERE brown-clad hill and wold ascends
With delicate crests against the sky,
Glossed in the wandering river-bends,
Ice-fringed, we hasten by.

Along the ridges sombre-firred
The girdling blue is clear and cold;
Shy melodies of morning heard
From dewy field and fold.

From rusted bough the last leaf drops
Reluctant as a hidden sigh;
Along the purple-hearted copse
Soft trains of shadow lie.

We haste by lonely quarry huts,
Their lintels green and dark with rain,
And from the roadway and its ruts
The blue sky glints again.

Our swift wheels, splashing left and right,
Grate on the stones. All else is still,
Save when a wood-dove takes its flight
Across, from hill to hill.

A beat of wing, a rushing air—
Thy shadow'd bough is gain'd, O dove,
To find thy gentle fellow there;
But I am far from her I love.

FREDERIC HERBERT TRENCH.

THE TEACHING OF GREEK IN PUBLIC SCHOOLS.

The head masters of Marlborough, Winchester, and Harrow have addressed the following letter to masters of preparatory schools:—

"July 25, 1887.

"We think it well to inform you that we purpose shortly to make certain changes in our school course, with the object of encouraging masters who are preparing boys for our schools to begin Greek at a later age than is usual under existing circumstances. At present, masters of preparatory schools are frequently induced by the requirements of the public schools to start boys in Greek before either their knowledge of Latin or their mental growth has qualified them to enter on the study of a second dead language. Our experience shows that the minds of young boys are confused by the multiplicity of subjects taught at the same time;

and all the more, when they are taught Greek before they have acquired the power of reading an easy Latin author, and are still grappling with the rudiments of Latin Grammar.

"Boys who began at a later age would be able with more rapidity and less confusion to assimilate the grammar of a language which has many features in common with Latin.

"And there would be other considerable advantages in beginning Greek at a later age. Time would then be set free for the study of French, geography, and the outlines of history; and above all for gaining such acquaintance with English as would both stimulate interest and thought, and promote a more intelligent study of Latin and Greek.

"We are persuaded that such a plan as is proposed would tend to diminish the number of boys who leave school at sixteen or seventeen with a confused and inaccurate knowledge of the classical languages, and too ignorant of subjects which should form part of a liberal education.

"The conference of head masters has already taken up this subject; and their committee have lately issued a report (a copy of which is enclosed) showing their unanimous opinion that the evidence submitted to them proves that boys who begin Greek before the age of eleven might, as a rule, have spent their time on other subjects without any loss to their Greek. We should be prepared to go even further. While we fully recognise that the age test is rough and unscientific, and can only be provisionally accepted as a convenient mode of fixing a definite idea, we hold that the evidence which has been brought forward shows that Greek scholarship would sustain no loss, and in many cases would gain, if even boys with some gift for language did not begin Greek till twelve: while, in our opinion, backward boys might profitably wait till later. To meet the needs of such boys we are prepared to make arrangements for teaching Greek in our own schools *ad initio*, and to admit boys on the classical side up to a certain standard in the school without a knowledge of Greek.

"We are most anxious to do nothing that will diminish the range and influence of classical education in England. But we believe that a change of method on the lines here indicated would lead to a higher average of intellectual attainment in public schools, and that, so far from injuring the cause of classical education, it would strengthen it by removing reasonable objections, and by establishing the study of both Latin and Greek on a more scientific basis.

"J. E. O. WELLDON."

THE HISTORY OF THE INVENTION OF PRINTING.

XIV.

LET us now see whether the assertion of the Cologne Chronicle "that the *Donatuses* printed in Holland were printed before there was any printing in Mentz [consequently, that the invention of printing was made in *Holland*, not at Mentz]," and the assertion of Junius, "that it was made in Haarlem," and my own contention (based on what I venture to call the very strong circumstantial evidence which I have detailed above) that both the Cologne Chronicle (= Ulrich Zell) and Junius are in the main correct, and that printing was invented at Haarlem, are in any sense of the word, contradictory to the so-called documentary evidence that we have regarding Gutenberg, and the assertion that he invented printing at Mentz in Germany. Those who believed this to be a fact always point out to us that up to 1561 the whole world was unanimous on that point. So it was, when we except such a trifle as the contradiction in the Cologne Chronicle. But when we trace this unanimity to its origin and its source, it begins to look very suspicious. The earliest document which allows us to connect Germany, Gutenberg, and Mentz with the art of printing is the Notarial document of November 6, 1455, record-

ing the decision in the lawsuit between Johan Gutenberg and Johan Fust. By the mouth of Johan Fust it speaks of "the work"; by the mouth of Johan Gutenberg it speaks of "tools" in preparation, of "servants' wages, house-rent, vellum, paper, ink, &c.," and of "the work of the books"; while by the mouth of the judges it speaks of "the work to the profit of both of them," of "their common use," and of "their common work"; but none of the persons concerned in the affair say a single word about an "invention," or about a "new mode" of printing. And yet the occasion was such as to make it almost imperative on Gutenberg to say at least one word about his "invention," if he had made any, for he had spent 1,600 guilders (no trifle in his days) of another man's money on the affair, and was on the point of being robbed and having taken away from him all that he had made and done to give effect to his "grand idea." In the next document, the colophon of the Psalter of 1457*, published by Fust and Schoeffer, the art of printing is plainly indicated and its importance fully realised; for it is said that the Codex was "venustate capitalium decoratus, rubricationibusque sufficienter distinctus, adinventione artificiosa imprimendi ac caracterizandi absque ulla calami exaratione sic effigiatus," but not a word is said of an inventor, nor of the place where it was invented. On the other hand, the colophon speaks not of an "inventio," but of an "adinventio," which may be taken to mean that the "invention" itself had already been made, but that now something additional, some "new mode" of printing, had been effected. The same colophon is repeated by the same printers in 1459 twice (Psalter and Durandus), in 1460 (Clementinae), in 1462 (Bible), and in several later publications. In 1465 we find a variation introduced and used in some books: "non stramento [communis, added in 1468] plumali canna neque aerea, sed artificiosa quadam adinventione imprimendi seu caracterizandi [or, after sed, simply: arte quadam perpulsa];" but, whatever variation is made, there is never a single word about an inventor or a place of invention. In 1460 there comes a new testimony, namely, the colophon of the *Catholicon*, in which the new mode of printing is still more fully indicated, and its importance still more fully realised, for it says that the book in 1460

"impressus atque confectus est alma in urbe maguntina nationis inclite Germanice. Quam [the German nation] dei clemencia tam alto ingenij lumine donoque gratuito ceteris terrarum nationibus preferre illustrareque dignatus [dignatus] est. Non calami, still aut pennae suffragio sed mira patronarum formarumque concordia proportionis et modulo."

Here Gutenberg himself speaks, according to the advocates of his claims. He had been robbed and wronged in 1455 by his former partner Fust, in conjunction with Peter Schoeffer. He had, it is alleged, succeeded in obtaining fresh money from a certain Dr. Homery, a Syndic of Mentz, to establish a new printing office, and now, in 1460—after he had seen his two cruel rivals publish book after book with colophons loudly proclaiming the importance of the new art "invented and perfected" by himself—he (Gutenberg) issues a grand product of his own, with a long-winded and verbose colophon about the new mode of printing and the blessed German nation, without mentioning his own name or

* An earlier document would be the *Donatus* published by Schoeffer with the colophon, "arte nova imprimendi seu caracterizandi per Petrum de Gernsheim in urbe Moguntina cum suis capitalibus absque calami exaratione effigiatus," for it may be presumed to have been issued about, or before, 1456. But it has no date, and can, therefore, not be placed in a strictly chronological sequence.

his "invention" with one single word. Dr. Van der Linde and others have considered it necessary to explain this silence, this extraordinary silence, which indeed has struck everybody. This silence was necessary, it is argued, otherwise Gutenberg's creditors would have seized the copies and his printing-office into the bargain. This explanation is, indeed, as extraordinary as Gutenberg's silence itself. It may be supposed that the publication of such a book as the *Catholicon*—a large folio volume of nearly 400 leaves—would excite attention even at the present time among the ocean of large and small publications that are issued daily. But in 1460 such works did not appear every hour of the day. And as the colophon says distinctly that it was printed and perfected at Mentz (the very city where Gutenberg's chief creditor resided) in the year 1460, by an art which is described with most remarkable details, I do not see how its printer could possibly have expected to escape being found out. Fust and Schoeffer, who printed in that very same city of Mentz, at the very same time, could hardly have lost sight, since 1455, of their interesting former colleague. They must have known it if there had been another printing-office established at Mentz besides their own, as printers were not then so numerous; only one other at Strassburg, leaving the Haarlem office out of the question. They must have known, moreover, who was the owner of that third office. But even if they did not know, the appearance of such a work, printed on vellum and on paper, and provided with a colophon in which every detail connected with the book, except the printer's name, is trumpeted about with great minuteness, could not have escaped their attention. And it is incredible that Fust and Schoeffer, or any other person, if Gutenberg owed him any money, would have been so guileless as to leave Gutenberg alone simply because he did not publish his name in the colophon.

I think if we examine further documents we shall find another and a more satisfactory explanation of Gutenberg remaining silent while his rivals were proclaiming aloud that they produced books by some "by-invention," and even copied afterwards expressions from his own colophon. In 1465 (17 January), eleven years after printing had been going on at Mentz, the Archbishop of Mentz issued a decree whereby he rewards Gutenberg for "his services"; but not a word is said about his "invention," nay, not even of his career as a "printer." On February 26, 1468, Dr. Homery (the man who had helped Gutenberg, it is said, to a new printing-office) wrote a letter of obligation to the same Archbishop of Mentz, acknowledging to have received from the archbishop "several forms, letters, instruments, implements, and other things belonging to the work of printing, which Johan Gutenberg had left after his death, and which had and still belonged to him [Dr. Homery], and undertaking to use them, but in no other town than Mentz, nor to sell them to any person but a citizen of Mentz, even if a stranger should offer him a higher price for the things." Here, indeed, we see that Gutenberg had been in possession of things "belonging to the work of printing," but there is, again, nothing about him as an "inventor."

Again, in this same year, 1468, this long spell of silence about an "invention" of printing in Germany is broken; but it is not broken by Germany, nor by Mentz, nor by Schoeffer, nor by any other German printer, but by Italy, by an Italian bishop; and the testimony that we receive from thence is silent about an "inventor." And as the first two printers of Italy (who are supposed to have inspired this testimony) were Germans, who may be, or are, presumed to have learnt their art at Mentz, under the very eyes and presence

of the so-called inventor, it looks as if this Italian testimony, as regards this German invention, is simply derived from the colophons of the Mentz books, without the bishop and his informants knowing anything, or feeling justified in saying anything, of an "inventor."

At last, in 1472, the long spell of silence about the "inventor" is broken; but, again, not by Mentz, not by Germany, not by any German printer, but by France. I allude to the letter of Gul. Fichet to Rob. Gaguin, discovered at Basel, by Dr. Sieber, the librarian of the Basel University, in a copy of *Gasparini Orthographia*, printed at Paris circa 1472, in which Fichet speaks of Johannes Bonemontanus as the inventor of printing. This testimony has attracted a good deal of attention during the last two or three years. Some people have gone so far as to say that this early testimony finally settles the dispute in favour of Gutenberg. Dr. Van der Linde prints it with a shout of triumph. But, as the letter was apparently written and printed in 1472, it comes only two years before the publication of the Chronicle of Philippus de Lignamine (Rome, 1474), which speaks of Gutenberg as printing in 1459, but not as the inventor of printing. And as this latter testimony has never been considered conclusive, it is hard to see how a difference of two years could make the Gutenberg tradition more weighty. Fichet, moreover, tells us that his story is a rumour current in Germany ("ferunt enim illic"). But Fichet's letter, though it is useless to those who wish to regard Gutenberg as the inventor of printing, is of considerable importance to those who, like myself, feel forced to deny that he was the inventor. Let me explain. It is, perhaps, not unreasonable to say—in fact everybody admits—that Fichet must have heard the rumour about Gutenberg from the first three Paris printers (1470), two of whom are known to have resided at Basel, and to have most likely learned their craft there, before they settled at Paris. This circumstance leads us back to Berthold von Hanau, who was printing at Basel in 1468, and who is presumed to be the "Bertolff von Hanauwe" who appears in the Mentz lawsuit of 1455 as Gutenberg's servant. To this chain we may link on the facts told us by Dr. Van der Linde (*Gesch. der Erfindung*, iii. 895, on the authority of the *Liber fraternitatis*), that Gutenberg was a lay member of an ecclesiastical fraternity established in the collegiate church of St. Victor, near Mentz, and that of this church his relative, Ivo Wittig, who, in 1504, erected a memorial stone to Gutenberg, was a canon and the custodian of its seal. This same relative of Gutenberg, Ivo Wittig, wrote, or at least is presumed to have written, the dedication to the Emperor Maximilian of the German translation of the *Livy*, published in 1505, by Johan Schoeffer (the son of Peter Schoeffer, and grandson of Johan Fust), in which he ascribes the honour of the invention to Johan Gutenberg, whereas the same Johan Schoeffer, when he is left to himself, invariably ascribes that honour to his father (Schoeffer), or to his grandfather (Fust). And when we remember (1) that the Heidelberg professors, who wrote epigrams in 1494 in honour of Johan Gensfleisch (= Anscarus), which were published in 1499, were inspired by Adam Gelthus, another relative of Gutenberg, and (2) that Franz Behem was established in the collegiate church of St. Victor (mentioned above) as a printer, and, in 1541, printed there the well-known poem ("de Chalcographiae inventione") of his press reader, Arnold Bergellanus, in which the invention is ascribed to Gutenberg—we cannot fail to see that the assertion that Gutenberg was the inventor of printing was made and propagated in an off-hand and unofficial way by no other persons than those who either were related to him, or

had stood in connexion with him or the St. Victor Church. Hence, we may say, perhaps without the possibility of a doubt, that the tradition that Gutenberg was the inventor of printing originated from no other person but Gutenberg himself. No doubt, during the hours which Gutenberg spent among his convivial fellow-members of the St. Victor fraternity, he indulged in some talk about his "invention," perhaps, in order to obtain a fresh loan, or, perhaps, in order to account for the total disappearance of the 1,600 guilders lent him by Johan Fust, without his having published any books. But, however loquacious he and his friends may have been within the safe precincts of the monastery, they were, apparently, very careful not to say anything about their "invention" in public, at the time that such an assertion could have been contradicted or affirmed. His servant Berthold seems to have spoken of it at Basel as a rumour; the Archbishop of Mentz seems to know nothing about it; and Dr. Homery—one of the founders of a merry, gastronomical fraternity at Mentz (Van der Linde, p. 897), therefore, one not likely to be silent if he knew anything about it—is silent on the point, though he had to speak of Gutenberg in connexion with almost everything "that belonged to printing." Surely, such testimonies regarding Gutenberg being the inventor of printing would be instantly rejected, if they came before a court of justice and were confronted with what has been said in favour of another party?

CORRESPONDENCE.

THE EVANGELISTARIUM OF ST. MARGARET, QUEEN OF SCOTLAND.

St. Mary's Entry, Oxford: July 30, 1887.

In the sale of the library of William Brice, Esq., of Bristol, at Sotheby's on the 26th of this month, lot 104* was thus described:

"Evangelia iv. Generatio Jesu Christi. Manuscript on vellum, with intittulation in letters of gold and 4 Figures of the Evangelists, illuminated in gold and colours, from the Brent Ely Library, old calf, gilt edges, Saec. xiv."

The Bodleian Library purchased this manuscript for a moderate sum, and it is found to be the identical "book of the Gospels" which was the daily companion and prized possession of St. Margaret, Queen of Scotland, sister of Eadgar Ætheling and mother of Matilda, the wife of King Henry I.; and the very volume which was the subject of a miracle described in the Lives of St. Margaret. Many of your readers will remember the principal facts of the Queen's life: her flight to the Court of Malcolm III., King of Scotland, their marriage in 1070, and the mild and civilising character of her influence on her court and country until the death of both husband and wife in November 1093. She was the foundress of Dunfermline Abbey; and St. Margaret's Chapel in the Castle at Edinburgh is one of the most venerated, as it is almost the oldest, of existing buildings in Scotland. We are fortunate in possessing a detailed and authentic biography of her by a priest closely attached to her person, whether the author be Theoderic of Durham, as is stated in one of the two surviving MSS. of the life, or as most suppose Turgot the Bishop of St. Andrews. It may be noted also that St. Margaret is a link in the genealogical chain which joins the Plantagenet line with the English kings before the Conquest.

A short account of the volume may precede the proof of its history. It is a Latin copy of all those portions of the Four Gospels which were used in the Mass, and was called from early times by the names of Evangelium, Evangelistarium, and Evangeliarium. Its English name appears to be Gospel or Book of the Gospels (W. Maskell, *Dissertation on the Ancient Service Books of the Church of England* [Oxf., 1882], also prefixed to the second edition of his *Monumenta Ritualia*, pp. lvii., lix., cl.; it seems to be called "liber evangelicus" at p. cccxix). The liability of such a title to confusion with the full text of the Gospels is obvious. The passages contained in the volume are Matthew i. 1-21, ii. 1-12, iii. 13-17, iv. 1-11, 18-22, xx. 17-19, xxvi.-xxvii., xxviii. 1-7, 16-20; Mark i. 1-8, vi. 17-29, xiv.-xv. 46, xvi. 1-7, 14-20; Luke i. 1-4, 26-38, ii. 1-14, 21, 22-32, x. 38-42, xxii.-xxiii. 53, xxiv. 1-12; John i. 1-14, xiv. 23-31, xvii. 1-11, xviii.-xix., xx. 1-9. The book measures 7 by 4½ in., and consists of 38 leaves (A¹B¹C¹D¹E¹F¹G¹H¹I¹, but G¹ is only a strip ¼ in. broad; there are no signatures in the volume). The writing and illuminations appear to be of about the year 1000. Of the latter the principal are four full-page pictures of the Evangelists, seated, writing in a book, of the general type so common in Byzantine MSS.; but the details are no doubt English. The outer border is of gold and orange, and the upper part, in the case of the two first Evangelists, is occupied by two curtains looped back; in the other two by a semicircular arch resting on pillars, with two figures of buildings in the upper corners between the arch and border. St. Luke is writing on a roll; St. John is in a chair with high square back. The colours most used are gold, pale green, blue, orange, and red; but the details of these

* This lot, however, seems to have been only "added" to the Brice collection for the purposes of this sale.

and other particulars must be left to the skill and sagacity of Prof. Westwood to describe. These pictures are on foll. 3^r, 13^r, 21^r, 30^r; on fol. 4^r there is a peculiar and characteristic capital L (in the word Liber), the corner being rounded and the ends spreading into interlaced work with four mouths of dragons; the whole is gold except the mouths of light red, and a band running lengthwise in the middle of the letter of light orange, edged with dark red, and bearing a series of dark red pellets surrounded by white circles. Many of the capitals are entirely of gold, and the rubrics in gold or red. The writing is in general Carolingian minuscule of the period I have suggested, with rubrics in half-uncial; but a discussion of further details is perhaps too technical for the ACADEMY. The binding is perhaps of the early part of the seventeenth century—ordinary brown calf or leather, with plain gilding and an oval stamped ornament on each side.

The identification of this MS. with St. Margaret's Gospel-book is as follows. On fol. 2^r of the MS. is written a Latin poem, here transcribed, in a hand which might be as early as 1090 or so, but would strike one as somewhat later:

- "Christe tibi semper grates persolvimus omnes,
 Tempore qui nostro nobis miracula pandis.
 Hunc librum quidam inter se iurare volentes
 Sumptuerunt nudum sine tegmine nonquam
 ligatum.
 5. Presbyter accipiens ponit sinuamine uestis:
 Flumine transmissis codex est mersus in
 amnem:
 Portitor ignorat librum penetrasse profundum,
 Sed miles quidam cernens post multa momenta
 Tollere iam voluit librum de flumine mersum.
 10. Sed titubans subito librum dum uidit apertum.
 Credens quod codex ex toto perditus esset.
 At tamen immittens undis corpus cum vertice
 summo [sic, hypermetricis]
 Hoc euangelium profert de gurgite apertum.
 O uirtus clara cunctis, O gloria magna!
 15. Inuolutus enim codex permansit ubique,
 Exceptis foliis binis qui cernis utrinque.
 In quibus ex un dis paret contractio quedam,
 Que testantur opus Christi pro codice sancto.
 Hoc opus ut nobis maius mirabile constet
 20. De medio libri pannum lini abstulit unda.
 Saluati semper sint Rex Reginaque sancta,
 Quorum codex erat nuper saluatus ab undis.
 Gloria magna Deo, librum qui saluat eundem."

Now observe the following extract from the life of St. Margaret* by her own confessor, who would presumably have charge of the volume:

"Vita S. Margaritae Reginae Scotiae, caput 3, § 25. (*Acta Sanctorum*, Jun., tom. ii., p. 333 [Anst. 1698]. *Vitas Sanctorum Scotiae*, ed. J. Pinkerton, p. 348 [Lond. 1789].)

"Habuerat librum Euangeliorum, gemmis & auro perornatum, in quo quatuor Euangelistarum imagines pictura auro admixta decorabat; sed & capitalis quaeque littera auro tota rutilabat. Hunc codicem, praeter ceteris, in quibus legendo studere consueverat, carius semper amplexata fuerat. Quem quidam deferens, dum forte per vadum transiret; liber, qui minus caute pennis fuerat obvolutus, in medias aquas cecidit; quod ignorans portitor, iter quod inceperat securus peregit: cum vero postea librum proferre vellet, tum primam quod perdidit agnovit. Quaresbatur diu nec inueniebatur. Tandem in profundo fluminis apertus

* The reference to St. Margaret, which is the key of the whole matter, was supplied by Miss Lucy Hill (*quam honoris causa nomino*), daughter of the editor of Boswell's *Life of Johnson*, to whom, on July 29, while I was engaged in cataloguing the volume and lamenting that there was no clue to the *rex reginaque*, I mentioned accidentally the story of the miracle. She instantly remarked that the same incident occurred in the life of St. Margaret. To her is due much of the credit of the discovery—which is here recorded in a note, and not in the text, only because it is a personal matter.

jacere reperitur, ita ut illius folia impetu aquae sine cessatione agitantur, & panniculi de serico violentiâ fluminis abstraherentur, qui litteras aureas, ne foliorum contactu obfurescantur, contexerant. Quis ulterius librum valere putaret? Quis in eo vel unam litteram parere crederet? Certe integer, incorruptus, illaesus, de medio fluminis extrahitur, ita ut minime ab aqua tactus videretur. Candor enim foliorum, & integra in omnibus formula litterarum ita permansit, sicut erat antequam in fluvium cecidisset; nisi quod in extremis foliis, in parte, vix aliquod humoris signum videri poterat. Liber simul & miraculum ad Reginam refertur: quae, reddita Christo gratiarum actione, multo carius quam ante codicem amplectitur. Quare alii videant, quid inde sentiant; ego propter Reginae venerabilis dilectionem, hoc signum à Domino (fuisse opinor)."

No one can compare these accounts together and read the description of the volume which I have already given, without a conviction that we have before us the very subject of the miracle. Before considering the points of interest in the two narratives, let me add the only other original description of the event:

"*Vita S. Margaritae Reginae Scotiae*, quam quidem S. Adelredus [Adelred, Ailred, Edelred, of Rievaulx] abbas primo conscripsit, sed haec, quam nos edimus, ab alio quodam incerto auctore, ex illo brevis descripta est. (*De probatis Sanctorum historis*, ed. L. Surius, tom. iiii., p. 580.)

"Codex quidam Euangelicus, gemmis & auro ornatus, in quo studere & legere solebat, custodis negligentia in aquam cecidit, & per diem ac noctem sine aliqua iniuria vel laesione inuolutus permansit."

It is tempting to suppose that we have in the poem the composition and even the handwriting of Turgot himself, who, after the queen, had most interest in the book and the miracle. The poem seems to be the earlier, soberer, less ornamental account, but it may be doubted if there are any discrepancies. The "sinuamine vestis" is not inconsistent with the "pannis involutus"; nor, on the other hand, need the "profundum fluminis" of the prose account—which might appear not to agree with "vadum"—be a misunderstanding of the word "profundum" (hardly more than "water") of the poem. It is clear that when we find such phrases as "gemmis ornatus" applied to precious volumes, the terms may be taken to refer to the "theca" in which the book is deposited. We need not suppose that the book was torn from its binding for the purpose of transmission to have an oath taken upon it.

Were the words "Salvati semper sint rex reginaque sancta" written before the death of the king and queen in 1093? I think not. The use of "salvati," and not "salvi," and of "sancta" as applied to the queen (who was not canonised till 1251, and to whom the author of her *Life* never ventures to apply the term, so far as I have noticed) point to this conclusion, the prayer referring to the intermediate state between death and judgment. On the other hand, the phrases "nostro tempore," "nobis," and especially "nuper," preclude the idea that the poem can be later than 1100.

It is interesting to notice that the proper title of the *Evangelistarium* was at that time *Evangelium*, and that it was the custom to insert loose pieces of linen or silk between the leaves of an illuminated MS. The liturgical and textual points I must leave to be treated by others.

To return to the MS.: the last leaf but one shows signs of contraction and crinkling from the action of water; but with respect to the miracle itself, one would like the opinion of Mr. Maunde Thompson, whether the immersion of an illuminated parchment MS. for a few hours (the "per diem ac noctem" may be regarded as an unauthorised expansion of "post

multa momenta") would necessarily affect its condition, if carefully dried, without the application of heat. It might be thought no otherwise miraculous than was the bursting out of a spring through the prayers of St. Frideswide, at the well of another St. Margaret, at Binsey, in a water-meadow so low-lying that the later pilgrims to the scene had to construct a causeway in order to approach it.

The marks of ownership in the MS. are the following:—"Ceraelh [l and h perhaps doubtful] eli" scratched with a stylus on fol. 30^r at an early date: "Linguo Quax ranis, crooke corvis, vanaque vanis Ad Logicam pergo quae mortis non timet ergo" and "Claytoun Sudlaw," and "John Stowe" (the Chronicler?), both apparently sixteenth century; "William Howard,"* and a name which Bodley's librarian reads as "O'Reilly," of the seventeenth century; "Liber Ihois this ys bouke," seventeenth century (?); "Fane Edge," and "Brent Ely Library, L. i. 30," eighteenth century; and, quite modern, "No. [9 altered to] 8."

I trust your readers will help to elucidate these and other points which suggest themselves in dealing with the MS. Enough has, perhaps, been said to draw attention to a relic which must always have an interest for students of the Latin text of the Gospels, of palaeography and illumination, and of the early history of the English and Scottish churches.

F. MADAN.

P.S.—Prof. Westwood, who is unable to write himself this week, allows me to say that in his opinion the style and ornamentation of this codex are of the same period as the Canute Gospels in the British Museum (Royal MS. I. D. 9)—that is early in the eleventh century. He has no doubt that it was written and painted in England; but few distinctively Anglo-Saxon forms of letters are found, except in N, where the first perpendicular stroke is continued below the line, and the cross stroke is horizontal and very low. In general the writing is fine Caroline minuscule. The gold is not burnished, but consists of thick gold leaf laid on the parchment, and is either dull in tint or, where brighter, of a reddish colour ("rutilabat"). Beneath the figure of St. Luke is a representation of the earth as a rugged surface. St. Mark and St. John are represented as bearded.

F. M.

SHYLOCK AND HIS PREDECESSORS.

Glasgow: July 21, 1887.

In my former letter (*ACADEMY*, June 18, p. 434) I cited what I believe to be the earliest European version of the bond-story, from the Latin *Dolopathos*. I omitted to mention that a writer in the *Foreign Quarterly Review* (No. xxxv., p. 193), remarking that the scene of many mediaeval European legends is laid in Denmark, refers, among other instances, to "the oldest form in which we have yet met with the story of Shylock—an Anglo-Latin MS., where it is said to have occurred in Denmark." The version here referred to I do not know, but it is not likely to be of earlier date than *Dolopathos*; at all events, the writer could only have known the latter from the French metrical rendering made by a Trouvère in the thirteenth century, the original Latin

* The words "William Howard" are undoubtedly in the handwriting of Lord William Howard of Naworth, who died in 1640. In the *Catalogue MSSrum. Angliae et Hiberniae* (Oxford, 1697), vol. 2, p. 14, is a list of the MSS. possessed by Charles Howard, Earl of Carlisle, collected by his great-great-grandfather, whose signature is in the book; but the MS. seems not to be in that catalogue, unless it be miserably represented by "637.27. Officium B. Virginis. Fragm. de Miraculis." Lord Howard may have obtained it from Stowe, and probably gave it its present binding.

work having been discovered, at Vienna, by Dr. Mussaffia, in 1864.

It is very amusing to find—as we do frequently—old-world tales and fictions reappearing in different countries and ages as historical occurrences; thus in the *Jewish World*, 1863, the following curious version of the bond-story is given:

"In Rome, during the pontificate of Sixtus V. (1585-90), a wager like that of the "Merchant of Venice" was actually made between a noble and a Jew, only in this case it was the Jew who was to forfeit the pound of flesh if he lost the wager. He lost; the noble demanded the forfeit; the Jew offered money instead in vain. The cause was brought before the Pope, and Sixtus decided for the noble, with the provision that he should cut off exactly a pound of flesh, and no more or less, on pain of being hanged. The noble declined to take this risk, and the Pope fined both parties in heavy sums for making such a wager."

There can be little doubt, I think, that this is a modern *rechauffé* of a Persian version of the bond-story, reversing the relative positions of the parties, probably to make it tell against the Christian, and introducing the novel conclusion, in which both are fined. The Persian form of the story to which I refer—found in Gladwin's *Persian Moonshie*, and also existing in several of the vernacular languages of India—is the only one at present known in which the cutting off the pound of flesh depends on the result of a wager, not on failure to repay money lent, as in the other versions.* And this brings me to speak of the Indo-Persian story of the "Kâzi of Emessa," where several amusing incidents are interwoven with the "pound of flesh" business—incidents which are passed over in the abstract of the story given in Malone's edition of Shakspeare, but which, as we shall see, are of some interest to students of the genealogy of popular fictions:

A Mohammedan merchant, seeing an opportunity of trading to advantage, went to his neighbour, a rich Jew, and begged a loan of 100 dinars, promising half the profits in return for the obligation. The Jew had long been enamoured of the merchant's beautiful and virtuous wife; and he now thought that, could he but contrive to involve her husband in a difficulty, she would intercede for him, and thus be brought to gratify his passion. So he told the merchant that he would lend him the money he wanted, without interest, on the sole condition that he would allow a pound of flesh to be cut from his body if he did not repay it by a given day. The merchant at first refused to take the money on such terms; but, pressed by his necessities, ultimately agreed in presence of a number of respectable Mohammedan witnesses, and with the 100 dinars set out on his trading journey. In good time he sent the money to his wife, who, not knowing of her husband's engagement with the Jew, applied it to her household purposes, and thus the penalty of the bond was incurred. Some time after this the merchant was returning with large gains, in full confidence that he had escaped from the snares of the Jew, when he fell among thieves, who plundered him of all his property, and he reached home even poorer than he had left it. The Jew, hearing of his arrival, called and blandly inquired after his health, and on the following day returned to claim the payment of the bond. The unlucky merchant told him how he

* Prof. Palmer, in his *Desert of the Exodus*, pp. 306, 307, states that among the tales related to him at night over the camp fire by "old Salem" he "was struck with a Bedawé version of Shylock, the main facts of the story agreeing in every particular with those of the well-known European version, except that the Portia in this case was the debtor's own wife, who appeared before the Cádi in the guise of a Turkish soldier to plead her husband's cause; and having consulted the Jew, proceeded to thrash him well with her own fair hand, after which the Cádi obligingly passed him over to the executioner." It is significant that in the *Dolopathos* version the debtor is also defended in court by his wife, disguised as a soldier.

had lost his all; but the Jew replied, "My money or the forfeit!" They went before the local kázi, who gave his decision in favour of the Jew. But the merchant insisted upon referring his case to the kázi of Emessa, to which the Jew consented, both parties binding themselves to accept his judgment as final; and they set out together for Emessa. On the way they saw a runaway mule, with its master in pursuit, who called out to them to stop the animal or turn it back; and the merchant flung a stone at it, which knocked out one of its eyes. Upon this the owner came up, and, seizing the merchant, accused him of blinding his beast, and demanded compensation. The Jew objected to this, as he had a prior claim, but told the man he might come with them if he pleased and submit his case to the kázi of Emessa. So the muleteer joined them, and all three pursued their journey together. At night, when they reached a village, they went to sleep on the (flat) roof of a house, and being suddenly roused by an uproar in the street, the merchant jumped from the roof, and falling on a man who was sleeping below, caused his death. The dead man's two sons seized the merchant, and would have killed him in retaliation, but the Jew insisted on their laying their complaint before the kázi, to which they agreed, and the four proceeded towards Emessa in the morning. As they journeyed on, they came up to a man whose ass had stuck in the mud, and he begged them to help him to extricate the animal. While the man tugged at the bridle, and the others took hold each of a corner of the load, the unlucky merchant pulled the beast by the tail, which came off in his hands. The peasant was enraged, and declared he must be paid for his animal; but the others bade him be quiet and come with them and tell his story to the kázi. When they came to Emessa, they saw a man tossing about on a bier, whom the people were carrying to his burial; and when he protested against the measure, appealing to the bystanders to say whether he was not alive, they assured him that he was certainly dead, and the poor man was buried.

Next morning they presented themselves before the kázi, and began all to make their complaints; but the kázi told them to cease their clamour and to speak one at a time. So the Jew began: "My lord, this man owes me 100 dinárs, upon the pledge of a pound of his flesh. Command him to pay the money or the forfeit." Now, it happened that the kázi and the merchant were old friends; so when the kázi asked the merchant what he had to say, he frankly confessed that what the Jew had alleged was all true, but he was utterly unable to pay the debt, hoping, no doubt, that the contract would be declared null. And he was astonished to hear the kázi declare that if he could not return the money he must pay the penalty; and, when the officers were commanded to prepare a sharp knife for the purpose, he gave himself up for lost. Then the kázi, turning to the Jew, said: "Arise, take the knife and cut off the pound of flesh from his body, but so that there be not a grain more or less, otherwise I will make you over to the governor, who will put you to death." The Jew replied: "It is not possible to cut it so exactly;" and being frightened at the kázi's words he added that he would forgive the debt altogether. "Very well," said the kázi; "but since you have brought this man so far on a claim which you cannot maintain, it is but reasonable that you should pay him for his time and the support of his family during his absence." And the Jew was compelled to pay 200 dinárs as compensation to the merchant.

Next came the muleteer and stated his case. In reply to the kázi, he said that his mule was worth 1,000 dinárs before it lost its eye. "A very simple matter this," said the kázi. "Take a saw and cut the mule in two parts from head to tail, give the man the blind half, for which he must pay you 500 dinárs, and keep the other half to yourself." To this the muleteer objected, because he said the beast was still worth 750 dinárs, so he preferred putting up with his loss. The kázi admitted he was at liberty to do so, but he must make amends to the man for such a frivolous and vexatious suit, and pay him 100 dinárs.

The two sons of the man whom the poor merchant had unwittingly killed then stated

their case. The kázi decreed that the merchant was to place himself on the ground outside the court-house and the young men were to get upon the roof and jump down upon the merchant as he had jumped on their father*; but they would not risk such a kind of retaliation, and, in their turn, had to pay 100 dinárs to the merchant for the trouble they had given him.

Last of all came the owner of the ass, and related how the merchant had deprived his valuable beast of its tail. The kázi ordered his own ass to be brought, and told the man he might pull off its tail if he could. He exerted all his strength; but the kázi's ass soon showed its resentment by such hearty kicks that the man begged leave to decline further satisfaction. The kázi replied that he might take his own time; but the more the man pulled the harder the vicious creature kicked, till at last, all bruises and blood, he declared that he had accused the merchant falsely, for his own ass never had a tail. The kázi said that it was contrary to practice to allow a man to deny what he had once alleged, and ordered him to pay the merchant 100 dinárs.

When all the plaintiffs had left the court, the kázi, collecting the different sums in which he had mulcted them, divided the whole amount into two equal shares, one of which he reserved for himself, and the other he gave to the merchant, who then desired the kázi to explain to him the reason of the living man being carried to his grave, as he had seen on entering the town. Said the kázi: "I assure you the man was really dead. Two months ago his wife came into court, pleaded that her husband had died in a distant country, and claimed legal authority for marrying again. I required her to produce evidence of his death, and she produced two creditable witnesses, who deposed to the truth of what she had said. I gave decree accordingly, and she was married. But the other day he came before me, complaining that his wife had taken another husband, and requiring an order that she should return to him. As I did not know who he was, I summoned the woman before me and ordered her to account for her conduct. Upon which she said that he was the man whom she had two months ago proved to be dead, and that she had married another by my authority. I then told the man that his death had been established on evidence which could not be refuted; that my decree could not be revoked; and that all the relief I could afford him was to give orders for his funeral."†

The merchant expressed his admiration of the kázi's acuteness and wisdom, thanked him for his impartial judgment in all his causes, and then returned to his own town, where he passed the rest of his days in the frugal enjoyment of the wealth which he had gained at Emessa.

I suspect that this is not the actual original of the bond story, but rather think it likely to have been adapted from some Sanskrit variant, not yet discovered, of one of the *Játakas*, or Buddhist birth-stories, namely, No. 257 of the Páli text of the *Játaka-Book* edited by Prof. Fausböll, of Copenhagen, a translation of which, by Dr. Richard Morris, is found in the *Folk-Lore Journal*, 1885, p. 339 ff., of which the following is the substance:

A farmer named Gámáni borrows two bullocks of a neighbour, ploughs with them all day, and then goes to the owner's house to return them.

* This shrewd judgment reappears in the chap-book collection of jests ascribed to George Buchanan, "commonly called the King's Fool," where a Flemish tyler looking out of his window at a street brawl falls on a Spaniard and kills him on the spot.

† Near akin to this is the tale of "Eraclius the Wise Emperour," in one of the Old English versions of the *Gesta Romanorum* (Harl. MS. 7333, Tale lviii.—p. 241 of Herbage's ed., E. E. Text Soc.), taken out of Seneca, from whom Chaucer has also borrowed it in his *Sompnours Tale*—see Harl. MS. text of the *Canterbury Tales*, printed for Ch. Soc., p. 253, l. 2017 ff. According to the law of Islám, evidence cannot be received in support of a negative; so that a fact legally established cannot be refuted.

Entering the house, accompanied by the bullock. Gámáni sees the owner and his wife eating rice and chagrined at not being asked to join them, he leaves the animals without formally handing them over to the owner. During the night the bullocks are taken away by a party of thieves, and the owner, on discovering his loss, determines to hold Gámáni responsible, though he well knew they had been stolen. So he goes to Gámáni and demands his bullocks. "Did they not enter your house last night?" asks Gámáni. "But were they formally delivered to me?" retorts the owner. "I admit they were not," says Gámáni. "Well then," quoth the owner, "here's a king's messenger for you." Now it was a custom among these people to take up a pebble or potsherd and say, "Here's a king's messenger for you"; and, whoever refused to go, was punished by the king, so off Gámáni starts along with the owner of the bullocks.

On the way to the king's court they came to a village where lived a friend of Gámáni, who enters his house, telling the other to await his return. His friend happens to be from home; and his wife sets about preparing some food for him, and in hastily ascending the steps leading to the granary she slips and falls to the ground, and being pregnant the fall causes a miscarriage. Just then the husband returns, and seeing what has happened, he accuses Gámáni of being the cause of the calamity, and saying, "Here is a king's messenger for you," takes him prisoner, and sets off for the king's court.

As they journey on, they meet a man who can't turn back his horse, and who calls to Gámáni, desiring him to strike the beast with something or other. Gámáni throws a stone, which strikes the horse on the foot and breaks it in two, as if it were a castor-oil plant. Quoth the groom, "You've broken my horse's foot, here's a king's messenger for you." So he was led off now by the three men.

Gámáni, in despair at all the serious claims against him, resolves to put an end to his life, and seeing a hill near the road, with a precipice on one side, he obtains leave of his captors to retire thither for a short space. Having climbed the hill, he throws himself down from the precipice and falls on an old basket-maker seated below with his son, and causes his death on the spot. The son accuses him of killing his father, and the four men proceed with the poor fellow to the king's court.

One should suppose that Gámáni had quite sufficient cares of his own without being troubled with those of strangers; but after this he is successively accosted by a number of men and animals who desire him to submit to the king certain matters which trouble them. Thus the headman of a village says to him, "I used to be handsome, rich, honoured, and healthy; but now I am very poor and a leper also. Ask the king what's the cause of this." And some Bráhmán students say, "Formerly every passage we committed to memory was clear to us, but now it does not remain in our minds, but runs out like water in a leaky pitcher; neither is it intelligible or clear to us. Ask the king the reason of this."

When the party entered the king's court of justice, the owner of the bullocks charged Gámáni with having failed to return his two bullocks. Quoth the king, "Is that true, Gámáni?" "Well, sire, just listen to me"; and Gámáni told the king the whole affair. Then the king asked the owner of the bullocks whether he saw the bullocks when they entered his house. He replied that he did not see them. "What!" said the king, "have you not heard people call me King Mirror-Face? Speak the truth." "I saw them, sire." "O Gámáni, because you did not restore the bullocks formally to their owner you must pay for them; but since this man saw them and told a deliberate lie, saying he did not see them enter the house, do thou tear out the eyes of this man and give him four-and-twenty kabápanas, the value of the bullocks." Having said this, they put the owner of the bullocks outside. He fell at the feet of Gámáni, saying, "What is the use of money to me if I have my eyes torn out? O Gámáni! take the money at which the bullocks are valued and also all that I have here." So giving Gámáni the money he had with him he went away.

The man whose wife had a miscarriage then

akes his complaint; and the king rules that Gámani should take the woman into his own house, and when she bears a child give it to her husband.* The owner of the horse whose foot was broken having stated his case, and denied that he had requested Gámani to strike the horse, but afterwards confessing he had done so, the king gives Gámani liberty to cut out the man's lying tongue but he must pay him 1,000 kahápanas, the price of the animal. The man saves his tongue by giving all his money to Gámani, and takes to flight.

Finally the son of the basket-maker comes forward and relates how his father had been killed by Gámani falling on him. The king says, "O Gámani, this man must have a father; but we cannot bring back the dead, so do thou take his mother and place her in thy house, and be a father to him." But the basket-maker, being unwilling to break up his house, gives all his money to Gámani and goes home.

Having thus gained all his law suits, Gámani begins to deliver to the king the several "cases for opinion" entrusted to him as he journeyed to the court. The king said regarding the case of the village head-man that "he used to decide cases with impartiality, and was, therefore, beloved and popular, and men, being pleased with him, brought him many presents; so he was handsome, wealthy, and respected. But now he takes bribes and decides cases unjustly, wherefore he is poor, miserable, and afflicted with leprosy. If he again acts as a just judge he will be in the same position as before." The case of the Bráhmán students the king thus explained: "There was formerly in their abode a crowing cock that knew the time. At cock-crow they rose up, learnt the sacred texts, and repeated them right up to the dawn of day. Consequently, they did not forget whatever they learned. But now they have in their dwelling place a cock that crows at the wrong time—that is to say, either very early, long before daybreak, or very late. If it crows too early, they rise up at the noise it makes and learn their texts; but, being overpowered by sleep, they lie down without repeating them; whereas if it crows too late (i.e., after sunrise) they get no time for repetition, and so they do not know what they have learned." In like manner the king explained twelve other "cases," and, after bestowing on Gámani much wealth, dismissed him.

Although the main question in this Játaka is not the "pound of flesh" but that of responsibility for the loss of two bullocks, yet its general resemblance to the Persian story of the Kázi of Emessa can hardly be considered as merely fortuitous. In both tales the unlucky man meets with additional mishaps on his way to the judge, two of which are virtually similar in both, namely, the killing of the man by falling on him, and the injury done to the runaway animal by throwing a stone at it. The questions submitted to the king, through Gámani, by the village headman, the Bráhmán students, and others, find parallels, or analogues, in Boccaccio and the Talmud. In the ninth novel of Day ix. of the *Decameron* two young men go to Jerusalem to consult Solomon. One wants to know how he may be well liked, the other how he may best manage a shrewish wife. Solomon advises the first to love others, and the second to repair to the oracle of Oca. From this last counsel neither

* In the great Sanskrit collection, *Kathá Sarit Ságará* ("Ocean of the Streams of Story") the ass of a washerman strays into the backyard of a Bráhmán's house, and is playing havoc among the vegetables, when the good wife runs out with a stick and belabours the ass, which falls into a ditch and breaks a hoof. The washerman, coming up and finding his beast thus injured, beats the woman so severely that she, being pregnant, miscarries. The Bráhmán and the washerman bring their counter cases before a sapient judge, who decrees that the Bráhmán must carry the washerman's load until the ass is again fit for work, and the washerman must put the woman in the same condition she was in when he beat her. No wonder the Bráhmán went forthwith and hanged himself!

can extract any meaning, but it is explained on their road home; for when they come to the bridge of that name they meet a number of mules, and one of the animals being restive, its master forces it on with a stick. The advice of Solomon being now understood, it is followed with complete success. (*Dunlop.*) In the Talmud a man whose life is embittered with a froward wife sets out to seek counsel of Solomon, and on the road overtakes another man whose business results in loss every year instead of profit. The sage Hebrew king tells the first to go to the mill, and the other to get up early in the morning. The man learns how to subdue his wife on seeing corn threshed near the mill; and the other, by getting up at daybreak, discovers his servants loading a cart with his goods, which they are stealing. Whether the Talmudic story be a comparatively modern interpolation derived from some Italian source, we have in both these versions interesting examples of the transformations which old Asiatic tales and legends have undergone in their wanderings.

W. A. CLOUSTON.

"INITIALS AND PSEUDONYMS."

London: Aug. 2, 1887.

A book has lately been published in America in which English books of the same class are freely made use of without the slightest acknowledgment. One of mine is of the number. I wrote to the English agents for the book complaining of the piracy. They communicated with the author, who denied it. As I was prepared to prove my case, I thereupon commenced an action for an injunction against the agents, who then rendered me an account, showing that if they sold all the copies they had bought when in America they could not repay themselves the money they had laid out. Not wishing to punish them, as they had acted with good faith in the matter, I have allowed the sale to go on for a time.

The title of the book is *Initials and Pseudonyms: a Dictionary of Literary Disguises*, and the name given on the title-page as the compiler is "William Cushing, B.A." He has taken every pseudonym in my *Handbook of Fictitious Names*, not only without acknowledgment, but under "Olphar Hamst" the title of my handbook is suppressed, and the title *Aggravating Ladies* only given. I am not quite sure whether this is the result of suppression or incompetent editing. For under "Max O'Rell's" name I find entered *John Bull's Womankind*; but the work that made the name of "Max O'Rell" famous is omitted!

If Mr. Cushing had admitted the fact, or made some slight acknowledgment to previous bibliographers, his offence could have been condoned. No; his book is to be treated as the first and only one on the subject. Halkett's and Laing's dictionary has been used in like manner. Every little pseudonym or article under initials not likely to be met with in England, much less in America, has been taken from the *Bibliotheca Cornubiensis* of Messrs. Boase and Courtney. It will be observed that, like mine, the book treats only of pseudonyms; but no doubt as soon as Halkett and Laing's great work is completed there will be sufficient matter for Mr. Cushing to issue another original compilation, consisting of the purely anonymous books in that work.

As a book of reference, I am quite ready to admit that *Initials and Pseudonyms* may be of great use for the American portion. The English part is so full of errors that it might almost be the work of a foreigner. Mr. Albert R. Frey assisted Mr. Cushing. In fact, a year or two ago he published a prospectus of a work to be entitled *Masques*, which is incorporated in *Initials and Pseudonyms*. Mr. Frey's ideas of literary honesty, it would appear, are on a par

with Mr. Cushing's; for the very first pseudonym in his prospectus is taken from my *Handbook of Fictitious Names* without acknowledgment. Mr. Cushing gives, on p. 579, a list of Voltaire's pseudonyms prepared by Mr. Frey, who, of course, never heard of a celebrated French bibliographer named Querard, who did something of this kind some years before Mr. Frey.

RALPH THOMAS.

SCIENCE.

ARE THE AINOS THE ABORIGINES OF JAPAN?

WITH great appropriateness the Literature College of the Imperial University of Japan has devoted the first number of what promises to be a valuable series of memoirs mainly to an examination of the much-debated question whether the fifteen thousand or so of fishers and hunters who roam over the desolate shores and wilds of the Hokkaido ought to be regarded as the remnant of an *Urvolk* that once peopled the entire Japanese group from Satsuma to Saghalin. Much, it is true, has been written about the Ainos and their language, characteristics, and customs, since they were first visited by a Catholic missionary in 1617—their existence had been previously indicated by the Jesuit Froes in his book published in 1574—by Dr. Schenke, Dr. Baelz, the Chevalier von Siebold, Pfizmaier of Vienna, who may justly be regarded as the pioneer in the thorny ways of Japanese scholarship, by Davidoff and others, and by that most enterprising of travellers, Miss Bird; while hundreds of volumes are extant to attest the interest felt by the Japanese, both of Bakufu and later times, in their northern subjects. Nevertheless, little accurate knowledge of the structure of the language, as isolated, apparently, from all other tongues as the speakers of it are from all other races of men, had been attained; and it has been reserved for two of our countrymen to make the most important contribution that has yet been furnished to the philology of the north-eastern tract of the great Altaic province. The volume before us opens with a monograph on the relations between the *Urvolk* and the present population of Japan, illustrated by a comparison of the languages and mythologies of the Ainos and Japanese, and by an investigation of the geographical nomenclature of Japan, now for the first time attempted. The remainder of the volume is taken up with a treatise on the Aino language, which entirely supersedes all previous work on the subject. Mr. B. H. Chamberlain, lately appointed Professor of Japanese Philology in the Imperial University, contributes the essay; and the Rev. Mr. Batchelor, of the Church Missionary Society, who has for many years laboured among the Ainos, is the author of the grammar. I propose to summarise the main conclusions arrived at by both these excellent and painstaking scholars.

The phonology of Aino—as Mr. Batchelor prefers to term the subject of his studies—presents a general similarity to that of Japanese. The vowel-systems in both languages are alike, and of a simplicity that leaves little if any scope for *umlaut* or *ablaut* changes. In both, again, sonant consonants are only found in compounds, never in roots or stems. But in Aino surds constantly terminate the word, while in Japanese words invariably end in a vowel or the nasal *n*—in archaic Japanese the *n* is replaced by *m*. This difference seems to negative decisively any community of origin between the vocabularies of the two languages. It is certain that at no period did final consonants exist in Japanese, otherwise some traces would have been found of them, at least in the archaic tongue, just as in modern Pekingese

the final consonants of old Chinese, still preserved in Cantonese, have left their mark in certain of the tones. On the other hand, the resemblance in structure between the two languages is exceedingly close; and it may be doubted whether, in view of the recent advances made in philological science, the grammatical or etymological differences noted by Mr. Chamberlain ought to be regarded as really incompatible with some degree of relationship. What he well terms the "iron rule" of Altaic speech—the absolute relegation of the verb to the end of the sentence, the pre-position of the attributive and the post-position of the predicative adjective in relation to its substantive—obtains with as much rigour in Ainu as in Japanese; while the fifteen points of difference between the two tongues which Mr. Chamberlain enumerates as salient might well turn out—did we know anything of absolutely unsinced Japanese—to be of comparatively minor linguistic importance. The difference in phonology, however, seems to me, as I have already said, decisive; and my own belief is that Ainu belongs to an earlier form of speech than Altaic—a form of which traces will be found, if anywhere, in linguistic areas so widely separated as those of the Eskimo and Melanesian languages.

Ainu, like Japanese, has no accident. Mr. Batchelor indicates what he regards as traces of an inflexional system in the language; but these are very few, and of doubtful quality. On the other hand, it is well provided with compositional affixes and suffixes, which might give great range and extension to the language as a vehicle of thought. A few examples may be subjoined, proving Ainu to be, in some respects, more capable of evolutionary development than Japanese, which is almost wholly destitute of compositional elements. Abstract nouns are formed from verbs and adjectives by adding *i* or *ambe*: *wen* "bad," *wen-i*, or *wen-ambe*; *yainu* "think," *yainu-i* "thought." The addition of *p* (*pe*—"a thing") concretises a verb: *ese* "to answer," *esep* "an answer"; *e* "to eat," *ep* "food." So *katu* (reminding one of the Japanese *koto*) converts verbs to nouns: *an* "to be," *an katu* "existence." *An katu*, however, has a suspicious resemblance to the Japanese *aru koto*. The vowels *a e i o u* are extensively prefixed to verbs, and variously modify the meaning. Thus, *a* gives a passive sense—*nu* "to hear," *a-nu* "to be heard"; *e* turns intransitive into quasi-transitive verbs—*kira* "to run away," *e-kira* "to run away with"; *i* has an intensive power—*nu* "to hear," *inu* "to listen"; *u* adds the idea of mutuality (like the Japanese *ai*)—*raige* "to kill," *uraige* "to kill one another." Various suffixes are also used with powers akin to those of these prefixed vowels. The latter seem rather vocalic differentiations preserved through some sort of selective process than worn-down word-elements. In addition, a number of auxiliary forms exist, by the aid of which continuance, conditionality, time, negation, and desire can be perfectly expressed; and compound and reflective verbs seem possible to any extent. Sometimes these are agglutinative sentence-words of considerable complexity, both as to form and meaning, as, for instance, the verb *uveyairamikashure*, which means "to bestir oneself with the view of obtaining the mastery."

Mr. Chamberlain's researches into the relations of Ainu to place-names in Japan are exceedingly interesting. Some years ago I gave an account, before the Royal Asiatic Society, of a visit I made to Ainu-land in 1865; and I took the opportunity of pointing out the need there was of some such investigation being undertaken as Mr. Chamberlain has so admirably conducted. I specially indicated the common termination *be* of many Japanese

place-names—Ishibe, Hamabe, &c.—as possibly being identical with the Ainu *pets* (*pet*) river. It was a perusal of the *Karafuto Nikki*, a diary of two Japanese officials in Saghalin, under the Shogunate, that led me to suppose that some place-names in Japan might be of Ainu origin. Mr. Chamberlain, after a right good fashion, which it were well philologists more commonly followed, enters upon his task with an examination of the positive material at his disposition. This consists of place-names in Yezo and their Japanese transliterations, ample lists of which are drawn up by Mr. Chamberlain. We thus learn what sort of names the Ainu are in the habit of bestowing upon places, and what changes these suffer under Japanese manipulation. Criteria are thus established that both authenticate and facilitate the detection of the Ainu element in Japanese place-names. The task was no easy one. The Japanese write down their place-names upon the how-not-to-do-it principle carried to an extreme. They use Chinese characters for the purpose, which may be read by their Chinese names (Sinic-Japanese), or by one of their many Japanese meanings. There is nothing, in any case, to show which mode of reading ought to be adopted; and, in fact, each place-name must be separately learnt independently of the characters with which it is written. Very often the name can only be accurately ascertained upon local inquiry. When read by the Japanese meanings of their compound characters, these meanings may be used significantly—if I may use the expression—or evidently as phonetic attempts to render some non-Japanese name. Thus, *Nagasaki* is written by characters, read and meaning *naga* "long," and *saki* "cape," and the whole name may be regarded as a significant one. But hundreds of names read significantly make pure nonsense. Such are (among others adduced by Mr. Chamberlain) *Izumo* "issuing-clouds," *Naki* "name-tree," *Ai-no-mura* "mutual-moors-village." It is principally among this latter class of names that traces of an Ainu origin must be sought. Thus, *Izumo* in Ainu means "the bay near the promontory," *naki* "stream," and *Aino* of *Ai-no-mura* (*mura* is Japanese for "village," literally "swarm," "cluster") "the Ainu people." It is much more in accordance with probability that names of this kind are really Ainu names, than that they are Japanese names of absurd derivation. And it is almost certain that they must be so when the differences between them and the Ainu words of which they are alleged to be corruptions are exactly paralleled by those which obtain between modern Ainu names and their Japanese renderings. Lists of these Ainu place-names, taken from every province in Japan, from Aomori to Satsuma, are given by Mr. Chamberlain, with their derivations and explanations so far as he has been able to make these out; and they prove, in my opinion decisively, that the Ainu race at one time extended over the whole Japanese group. They were the *Urvolk* who immediately preceded the Japanese, being, there is reason to believe, themselves preceded by—or contemporaneous with—a race of Malayo-Polynesian origin.

An elaborate bibliography at the end of the volume gives the titles, with brief indications of contents, of 465 books upon Yezo, Saghalin (Karafuto), and the Ainu, nine-tenths of which are, of course, of Japanese authorship.

F. VICTOR DICKINS.

CORRESPONDENCE.

JAGO'S "ENGLISH-CORNISH DICTIONARY."

London: July 28, 1887.

Allow me to correct some slight inaccuracies which have crept into this very useful work compiled by Mr. Fred W. P. Jago (London: Simpkin, Marshall & Co., 1887.)

At p. 205, after quoting my "Letter accusing Pryce of Plagiarism," Mr. Jago says:

"As the above letter of Prince L.-L. Bonaparte contains only a part of Pryce's preface, it will be more fair to Pryce to give the whole. A verbatim [*sic*] copy of the preface to the *Archæology Cornu-Britannica* is, therefore, inserted here to serve as Pryce's defence, and also because of the information the preface contains. It is very probable that there were more words and phrase of the ancient language of Cornwall known, and used about a century ago, than Prince L.-L. Bonaparte seems to be aware of. This may be the reason why Pryce felt justified in appropriating what Tonkin wrote to Gwavas, applying the words to his own time, about 1790," &c.

The verbatim (read *verbatim*) copy contains nothing in Pryce's defence, as any impartial judge will admit; and how can Mr. Jago impartially say that Pryce may have felt justified in appropriating to himself what Tonkin wrote to Gwavas about sixty years previously, for the strange reason that there were more Cornish words than in Tonkin's (not, I insist, Pryce's) Dictionary, about a century ago, as if Pryce's shameless plagiarism were not a mere copy of Tonkin's Dictionary. In fact, Mr. Jago himself, at p. viii., admits that Pryce used Tonkin and Gwavas's MS. written about fifty years before, and yet he persists in asking whether my charge of plagiarism be just or not? But do not Pryce's self-praising words—a copy of those that Tonkin employs towards Gwavas—sufficiently show the plagiarist's bad faith? (See and compare the words of pp. 204 and 205.)

With regard to the assertion that it seems that I was not aware that there were more words and phrases of the ancient language known and used about a century ago, I never said a word on this subject, my only aim having been to punish, even after his death, an unscrupulous author, by making known to the scientific public the names of the true authors of the Cornish Dictionary, which can no longer, without injustice, be called Pryce's.

At p. viii. I find: "Prince Napoleon's letter [I am not Prince Napoleon, my exclusive names are *Louis-Lucien*], in which Pryce is called a *plagiator*," &c. This gives me occasion to confess that I was guilty of a gallicism in using this word instead of "plagiarism"; but I did not certainly use *plagiator* for "plagiary," as Mr. Jago gratuitously asserts. My words are these: "As the production of the evidence of the *plagiate* of Pryce is by itself," &c. With a very small amount of reflection any one can perceive that my wrong word *plagiator* for "plagiarism" is not applied to Pryce himself, but to his "plagiarism," as the preposition "of" clearly indicates.

I do not know, neither do I care to know, whether Gwavas was a reverend or not; but, as at p. xii. Mr. Jago, in quoting my "observations on the Rev. R. Williams's preface to his *Lexicon*," says: "This work contains a copy of a letter from the Rev. [*sic*] W. Gwavas to T. Tonkin," I must demur to that "*sic*" which cannot refer to me, as I have never given this title to Gwavas. My words are these: "I conclude these observations with the following letter from Gwavas to Tonkin." It is impossible for me to guess to what that "*sic*" applies.

L.-L. BONAPARTE.

THE INSCRIPTIONS OF NAUKRATIS.

Queen's College, Oxford: July 30, 1887.

As a discussion has been raised in regard to the inscriptions of Naukratis, it may be worth while to quote the evidence afforded by two of the earliest of the multitudinous Greek *graffiti* which I copied four years ago at Abydos.

One of them reads: *Ναυκράτης μ' ἔγραψε*. The characters have the early Milesian forms—the *epsilon* is written *v*, the *eta* has three bars, the *gamma* is four-lined, the upper part of the *gamma* loops upwards, the *rho* has a long tail, while the three lines of the *psi* end in a single point. Below this *graffito* was another, the first few letters of which were unfortunately obliterated. It ran—*Μ(?) . . . ης ἡλθε ἐπὸδδῆ (sic)*. Here the *eta* has three bars and the *sigma* consists of four lines (which are rounded, however, and not angular); but the *epsilon* has almost the same form as the corresponding letter in the Karian alphabet. It is represented by an oval, through the centre of which runs a horizontal line. The *heta* has the Milesian form. The proper name, *Ναυκράτης*, reminds us of *Ναυκρατία*. The other early Greek inscriptions of Abydos cannot be put in evidence, as the dialects employed in them are not Ionic.

A. H. SAYCE.

THE OLDEST MS. OF THE "HITOPADEÇA."

British Museum: August 2, 1887.

With reference to the loan of my Nepalese MS. of the "Hitopadeça" for Prof. Peterson's new edition, as to which Prof. Max Müller speaks in such kind terms in the last number of the ACADEMY, I think it will prevent misunderstanding, if I state that Prof. Peterson and, consequently, Prof. Max Müller, are mistaken in supposing that the MS. was lent by permission of the "authorities of the British Museum." My journey to Nepal, though permitted by the trustees of the Museum, was at my own risk and expense, aided by the University of Cambridge. Consequently, my MSS., of which I have been glad to lend some dozen already to fellow-scholars both on the Continent and in India, remained my own on my return, though nearly all have now been presented or sold to the university or to the national collection. Folklore, both Buddhistic and Brahmanical, was evidently popular in Nepal from early times. I am, at present, endeavouring to edit the "Tantrākhyāna," a short collection of tales, which has much in common with both the "Hitopadeça" and "Pañca-tantra." Three Newāri translations of this have been brought from Nepal to Europe, but my own Nepalese palm-leaf copy is the only Sanskrit original known to me. I take this opportunity of enquiring of scholars, especially those in India, whether anything further is known of this book?

CECIL BENDALL.

PROF. JEBB'S "INTRODUCTION TO HOMER."

Forayingham: July 30, 1887.

If Mr. Leaf thinks that, in the letter which appears in the ACADEMY of to-day, he is adopting a method likely to convince those who wish merely to know "the truth about Homer," he is, I believe, mistaken. Nothing is gained by referring to cases which are not parallel. "Vagaries" about the figure of the earth do not stand on the same footing with facts concerning the Homer of the lyric and tragic poets. It has not been shown that this Homer was our "Homer"; and the evidence which shows that it was not has not been met. It is kept out of sight. I repeat my protest, adding only that I am unconscious of having said anything more than what has been said by Dr. Paley. Seekers after truth are not to be put down by browbeating; and I can see little more in Mr. Leaf's letter.

GEORGE W. COX.

PHILOLOGY NOTES.

THE forthcoming number of the *Babylonian and Oriental Record* (David Nutt) will contain the following articles: "Zoroastrian Deities on Indo-Scythian Coins," by Dr. Mark Aurel Stein; "A Legal Term in Contract Tablets," by Prof. Eberhard Schrader; "Some Euphratean Names in the Lexicon of Hesychios" (concluded), by R. Brown, jun.; "A Babylonian Wedding Ceremony," by Theo. J. Pinches; "A new Hittite Seal found near Tarsus," by T. Tyler; "A Season's Results in Egypt," by W. M. Flinders Petrie.

DR. W. VIETOR's new periodical, *Phonetische Studien* (Marburg: Elwert), begins its career with considerable spirit. Besides reviews of books and short papers, the first number contains three long articles by J. A. Lundell, Paul Passy, and Max Walter. M. Paul Passy's article on the phonetic system of the French language is especially valuable for the careful observations which it contains respecting the varieties met with in educated usage with regard to the rendering of some of the elementary sounds. Among the minor contributions the most generally interesting is the lively discussion between Drs. Engel and Lohmeyer as to the pronunciation of Greek—the former vigorously assailing, and the latter as vigorously defending, the method at present followed in German schools. Both papers are worth reading, but that of Dr. Lohmeyer is decidedly the more effective. By way of illustration of the practical inconvenience of adopting the modern Greek pronunciation of the classical language, he gives the following ingeniously constructed sentence: "Ἦν ἔμα τῆ ἡοί ὄν, ἡ ὄσι, ἡ οἰ ἡ ὄι (ἡ οἰη λῶν), ἡ νῆσ ὄφ τῆν χροῶν ἔβροχον διατελέσειν; which, he says, a modern Greek would have to pronounce as follows: "In amæ ti ii ii i ii i ii i ii iii i i(j)i so tin chroan a wrochon dhiatelesin." If this is not irresistible as an argument, it is at any rate amusing.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromo, and Photographs, hand-painted framed. Everyone about to purchase pictures should not miss this. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

THE ECCLESIASTICAL SEALS OF DENMARK.

Danske Geistlige Sigiller fra Middelalderen. Ved Dr. Henry Petersen. Folio. (Kjöbenhavn: C. A. Reitzel.)

SPHRAGISTICS is a noble study and a captivating. It goes far, far back to famous lands and empires, and still flourishes, though with diminished splendour. Accordingly, it has been widely treated by distinguished men and artists, and is portrayed in scores of costly tomes, often richly illustrated.

In Scandinavia, in spite of partial efforts by zealous pioneers, it is only of late that the national perishing seal stores have been fittingly gathered. Till to-day, Sweden alone was properly chronicled in this respect. The valuable folio of the late accomplished Swedish Riks antiquary, Bror Emil Hildebrand, *Svenska Sigiller från Medeltiden*, was published at Stockholm in 1862-7. We have now the equally satisfactory instalment of Dr. Henry Petersen for Denmark. Propitious fates will also, doubtless, one day give to Norway its own seal enthusiast.

Seals, as the legal insignia of bishops, abbots, and chapters in Denmark, begin in the twelfth century, shortly after their use in the neighbouring German sees. But the oldest

Danish signet now known—that of the Abbot of Om (Peterson's, fig. 788)—is from the year 1219, while in the thirteenth century, these vouchers spread to all classes. The oldest Swedish sigillum is that of Archbishop Stephan of Upsala, between 1164-67 (Hildebrand's Ser. 2, pt. 1, fig. 1). The oldest Norwegian stamp, Bishop Henrik's, of Stavanger, is between the years 1208 to 1224.

Of course few of these Danish seals belong to the Romanesque period. Mostly they are Gothic in style; their material as a rule copper or brass, a few of lead. One, the Roskilde Chapter stamp, is of walrus bone. Almost all were of Danish workmanship, well executed by native goldsmiths. The round seal rapidly gives way to the almond-shaped. The oldest impressions are on loose parchment slips let in on the document. First, at the close of the fourteenth century, when paper deeds appear, is the stamp on the script itself impressed on thin paper over the wax. Sometimes the signet of the deceased was not broken or thrown into the grave. In that case the name of the bearer was re-cut.

The curious types and their gradual changes offer a most interesting study, as do the figures of local saints. We also often find the contrasigillum or secretum. In one instance (Archbish. Esger, 1324, fig. 15) it is an antique gem, Antinous. The oldest episcopal type is a sitting bishop, which we see in France as early as 1067.

Here, as in other lands, a crowd of valuable details as to costume, arms, pastoral staff, canopy, the marks gradually adopted for sees, the shape of the shields and mitres, the transition from majuscules to minuscules, and so on, offer food for wide research, often of great importance as to the testing of dates and documents. The majuscules die out in the first half of the fifteenth century, but re-appear with the Renaissance at the beginning of the sixteenth.

The mass of these Danish seals give only the name, with or without the office; but some of high antiquity add Leonine verses, or now and then a short prayer. The earliest stamps date from the Augustinians, Cistercians, and Benedictines; thereafter come the Dominicans and Franciscans. All the monastic seals are round. In the fifteenth century Birgittine and Carmelite seals come in, with minuscule letters. The sigilla of the Knights of St. John naturally stand apart, as having a secular character.

The publication of this beautiful monumental work, printed by Thiele in his best style, commenced in 1883 and ended last year. The whole volume contains 1,039 carefully drawn and delicately lithographed examples, executed by Th. Bergh; to these are added in the text thirty-six others, drawn and chemityped by Prof. Magnus Petersen. Not only is every seal carefully described by the learned and hardworking Danish archaeologist, who has devoted many years to this special study, but in a long introduction he enters into fruitful details as to the various historical bearings of these characteristic productions of the olden time.

That so costly a contribution to Northern seal-lore could be produced in Denmark is owing to the large grant in aid from the princely fund so generously endowed by the well-known patriotic Danish Mæcenas, Capt.

Dr. S. C. Jacobsen, and called the Carlsberg Fund, from the name of his world-famed brewery in the Danish capital.

Ere I close, let me add the hope that Dr. Henry Petersen may be enabled to add yet a second volume exhausting the subject. In that case he will work out, doubtless with the same care and minuteness, the secular seals of Denmark, from the earliest period to the Reformation. GEORGE STEPHENS.

NOTES ON ART AND ARCHAEOLOGY.

WE hear that M. Vereschagin, the Russian painter, has taken the Grosvenor Gallery for a general exhibition of his works during the coming winter. M. Vereschagin is, perhaps, best known for his series of historical pictures representing the conquest of Central Asia; but it will also be remembered that his "Nativity of Christ" fell under the ban of the Archbishop of Vienna, when exhibited there last year, on the ground of its realistic irreverence.

A SELECTION of the antiquities found in the excavations of the Egypt Exploration Fund at Tell el Yehudiyeh, Zagazig, and other sites in the Delta, is in course of arrangement at Oxford Mansion, Oxford Circus, W., in rooms kindly lent for the purpose by the Archaeological Institute. The exhibition will be open to subscribers to the fund and to members of the Institute and their friends on presentation of card, every Monday, Wednesday, and Friday for three weeks, from next Monday, August 8.

It is long ago now since we called attention to Mr. Frederic Shields's fine designs for the decorations of the Duke of Westminster's Chapel, at Eaton Hall. He had then completed the cartoons for the stained glass windows of the chancel and north wall. The south wall is unlighted, and is to be decorated with marble mosaics, for which Mr. Shields has just finished the last picture. The whole of the designs for the chapel are in illustration of the Te Deum; and these last represent the series of the prophets—twenty-six in number—figures all little short of life size, each with a mosaic beneath, representing some incident memorable in connexion with the prophet above. The limited and very broken scale of colours afforded by the marbles have required the exercise of much ingenuity on the part of the artist, and may be said to have developed in a remarkable manner his natural sense of colour. This is shown in nothing more than in his treatment of nude flesh, as in the Jonah, where the prophet is just released from the open jaws of the monster, and the pale yellows and greys at the artist's command are made to tell with the force of flesh and blood against the slate and pink of the whale's skin and palate. In most of the designs Mr. Shields has had no tradition to guide him; and where he might have borrowed from ancient art, as in the cases of the greater prophets, he has preferred to follow his own fresh invention. It is in some of these—such as the noble figure of Isaiah, the profoundly intellectual Ezekiel and the lordly ideal of David (with a nobly elegant Queen of Sheba in the panel beneath)—that he has achieved his greatest successes. Whether we regard Mr. Shields's decoration of the Eaton chapel from an intellectual or an artistic point of view, there can be little doubt that it is by far the greatest work of the kind ever executed by an English artist. The mosaics will be executed in Paris; but the cartoons are now on view for a short time at Mr. W. H. Burke's marble works, 17 Newman Street, Oxford Street, where they should be visited by all who care for art inspired by spiritual imagination.

MUSIC.

MUSICAL PUBLICATIONS.

Schumann's Symphonies, Quartets, and Pianoforte Works. (Leipzig: Peters.) All these six volumes have been edited by Herr A. Dörfel, who has been long and honourably connected with the publications of the Peters firm; and the general correctness of the music shows how conscientiously he has acquitted himself of his task. We ought also to call attention to the remarkably clear printing, and to the very cheap price at which these volumes are issued. There was a time, and that not so long ago, when full scores were luxuries; and now a student must be poor indeed who cannot afford to buy the principal orchestral works of the great masters. In noticing the present edition of the four Schumann symphonies in B flat, C, E flat, and D minor, and also of the symphonic work (Op. 52), entitled "Ouverture, Scherzo, Finale," we feel that there is nothing new to say about the compositions themselves. They have passed the ordeal of criticism, and already take rank among the masterpieces which the world will not willingly let die. And so also with two of the three quartets (Op. 41) which the composer dedicated "in inniger Verehrung" to his friend Mendelssohn. But it is different with the pianoforte volumes. Here we must say a few words about the fingering of Herr R. Schmidt. Chopin excepted, there is no great composer whose pianoforte writings present so many technical difficulties as Schumann. The music is written in an original style, demanding fingering of quite a peculiar kind. Herr Schmidt is of the Tausig-Bülow school. We perceive this in the changing of fingers on the repetition of a note, as in the simple "Soldaten Marsch" (Op. 68), and in the first Etude (Op. 13). For clearness of utterance this is often of immense advantage in such pieces as "Pantalon et Colombine" in Op. 9, or in No. 2 of the Novellen; but we think the system has been carried somewhat to excess in the "Traumes Wirren" and in No. 3 of the Etudes Symphoniques. Another modern feature is the fingering of many octave passages which formerly were played with the thumb and little finger. Herr Schmidt is fond of helping the player in difficult passages (as in "In der Nacht," "Vogel als Prophet," Präludium in B flat minor) by dividing a passage, intended for right or left hand, between the two. Such a method, however, except in the hands of a very expert pianist, is apt to result in a jerky rendering. There is a section in the Humoreske (Op. 20) which calls for notice. It is written on three staves, the middle one being marked as "Innere Stimme" ("Inner Voice"). We agree with M^{me}. Schumann, who says that this middle line should not be played; but Herr Schmidt, being of a different opinion, has fingered it. The latter is quite entitled to his opinion, only it must be remembered that M^{me}. Schumann must best know what her husband really intended. But, while mentioning one or two things which have struck us in looking through the volumes, we must cordially acknowledge the ingenuity and industry displayed. No difficult passage has been left to take care of itself; and, just as the skilled chess-player's move is the final choice of many mental moves, so here the marked fingering is the result of much deliberation. This is a very complete edition, for it contains the pianoforte part of the Concerto in A minor (Op. 54), of the Concertstück (Op. 92), and of the Concert Allegro (Op. 134), with many orchestral indications; and also the posthumous pieces—the interesting "Anhang" to Op. 13, the Scherzo which originally formed part of the "Concert sans Orchestre" (Op. 14), a Presto, and a curious little Canon, "An Alexis." J. S. SHEDLOCK.

G. P. PUTNAM'S SONS, Publishers and Booksellers, of 2 and 29, West Twenty-Third-street, New York, and 27, King William-street, Strand, London, desire to call the attention of the reading public to the excellent facilities presented by their Branch House in London for filling, on the most favourable terms, orders for their own Standard Publications, and for all American Books and Periodicals.

Their London Office is under the management of Mr. CHARLES THOMAS, who is thoroughly conversant with the requirements of English buyers of books, and who, in giving information and quotations as to American Books and Editions, will now have the benefit of the experience of an American firm which has for half a century been a speciality of the business of supplying Libraries. The attention of Bookbuyers is invited to the following Bibliographical Issues:

THE BEST READING. A Classical Bibliography for Easy Reference. With Hints on the Selection of Books, Formation of Libraries, on Courses of Reading, &c. Second Edition entirely rewritten and brought down to date, with the addition of Printed Lists of the Best Books in English, German, Spanish, and Italian Literature. Edited by F. PERKINS. 8vo, cloth extra, 6s. SAME, Second Series, comprising the publications for the Five Years ending December, 1881. Edited by LYNDSEY JOHNSON. 8vo, cloth, 3s. 6d. "A very useful guide to books in English is supplied by a work published in New York, entitled 'The Best Reading,' by F. B. PERKINS. E. A. BOND, Chief Librarian of British Museum."

HINTS FOR HOME READING. A Series of Papers by Edward Everett Hale, F. B. Perkins, H. W. Beecher, Charles Dudley Warner, Joseph Cook, Lyman Abbott, M. Sweetser, Cyrus Hamlin, H. W. Mabie, and others. Edited by LYMAN ABBOTT. Together with a New Edition of "Suggestions for Libraries," with First, Second, and Third Lists of suggested books, and a volume of the most important and desirable Forming Volume XVIII, in Putnam's Handy-Book Series. 32 boards, 2s. New and Cheaper Edition.

The BOOK LOVER: a Guide to the Best Reading. By JAMES BALDWIN, Ph.D. 12mo, cloth gilt extra, 3s. 6d. "It may safely be affirmed that those who take Dr. Baldwin's guide, philosopher, and friend will make the acquaintance of some of the best literature of all ages."—Book Lover.

PUTNAM'S LITERARY NEWS: a Monthly Bulletin of American Publications will be sent free for One Year on address on receipt of One Shilling.

Special attention will also be given to Orders from Foreign Colonial Booksellers, not only for American, but for all English Publications.

The new Classified and Analytical Catalogue of the Publications of Messrs. PUTNAM will be forwarded on receipt of penny stamp in postage. Other American Catalogues obtained as ordered.

LITERATURE.

A Life of John Colet. By J. H. Lupton. (Bell.)

"FRIENDS and scholars" of Dean Colet will open this volume with very special pleasure, for in it is summed up and completed the labour of many years. Mr. Lupton published the *De Sacramentis Ecclesiae* in 1867; and since then he has edited all the extant works of the dean, translating the more important, and prefixing to each of his five volumes a valuable "Introduction." These "Introductions" have acquainted us with the character of Mr. Lupton's work, and taught us its value. His care and patience in investigation, the conscientious thoroughness with which he masters his subject and accepts no information at second hand, inspire us with a full confidence in his guidance; and this confidence becomes only the more convinced when we find Mr. Lupton writing with a cautious diffidence and anxious humility, rare indeed among those who have earned the right to speak with authority. Mr. Lupton shrinks from rapid generalisation even after the most exhaustive collection of facts; he obstinately refuses to regard probable conjectures as quite proved; on matters as to which his own opinion is authoritative and valuable he has a knack of quoting someone else, and leaving us in doubt whether his own mind is quite made up; frequently, indeed, his mind is evidently not made up, and he has the courage and candour to say so. It would seem as if nothing but good could result to the public from such qualities as these; but till recently they threatened to deprive us of the Life which at last we possess. When Mr. Seebohm, in 1867, published his *Oxford Reformers*, Mr. Lupton declared that beside this "finished portrait" there was no room for another life of Colet; and apparently he held to this opinion down to 1883, when, in the preface to his translation of Erasmus's *Letter to Justus Jonas*, he said that "an entirely fresh biography" was "beyond my ambition." We are delighted that Mr. Lupton's ambition has at length prevailed over his humility; for although we love Mr. Seebohm's book on this side idolatry as much as any, it by no means tells us all we would like to know about Colet. It does not profess to be an exhaustive biography, and it leaves us very anxious to know whether an exhaustive biography would in any way modify its conclusions. It is the essential charm of Mr. Seebohm's volume that he presents his subject to us from a very modern point of view. We complain that men so exactly suited to guide us in the nineteenth century were most unprovidentially born in the fifteenth. We feel that Mr. Seebohm sympathises with

certain views of his hero, and we ask whether these views would be quite so emphatically the hero's if they were not also Mr. Seebohm's. The *Oxford Reformers* in short, needs to be complemented by just such a book as Mr. Lupton has written. The mental qualities which we have already noted fit him specially to be Mr. Seebohm's fellow-worker, and minimise the danger of rivalry.

Considering, therefore, Mr. Lupton's Life from this point of view, we find with pleasure that on the whole it entirely endorses Mr. Seebohm's presentation of Dean Colet's work and character; and yet by a careful filling in of the background of the portrait, and a treatment of the subject historical rather than philosophical, introduces us to a Colet more real even than Mr. Seebohm's. In two points Mr. Lupton distinctly modifies Mr. Seebohm's portrait. Colet, in his views on marriage and on the study of classical authors, was in Mr. Lupton's view almost reactionary, and certainly less advanced than his friend Erasmus. It is in the *De Sacramentis Ecclesiae* and the *Lectures on Corinthians* that Colet expresses most decidedly a contempt for the married state. But these were written before 1500; and, in 1505, we find Colet advising More to marry, and apparently aiding him in the choice of a wife. Moreover, in the *Right Fruitfull Monicion* he declares a good wife to be of God's sending, though the declaration is somewhat weakened by the addition—not quoted by Mr. Seebohm—that an evil one is of the devil's; and, finally, he chooses married men as schoolmasters, and leaves his school to the care of married citizens, because "he has nowhere found less corrupt morals than among married people"—this, at least, is Erasmus's explanation of the fact. Against this we have a passage by Colet in his *Collection of Statutes of St. Paul's Cathedral*, quoted by Mr. Lupton on p. 135, very plainly and definitely asserting the earlier views of the *Lectures on Corinthians*, and providing that vergers shall be celibate. This summary of the evidence will suggest to us that when Mr. Lupton and Mr. Seebohm disagree on a point it is a very knotty one, which, perhaps, even Dean Colet himself was not quite clear about. There seems no other explanation of the conflicting nature of the evidence. Mr. Lupton is at his best in his minute and loving description of Colet's educational work; elsewhere, notably in his account of the summaries of the *Hierarchies of Dionysius*, his book suffers somewhat from his unwillingness to say over again what he has already said in the above-mentioned "Introductions." Chapters 8 and 11, on the life at the deanery, and chapter 10, on the three great sermons, are nearly as good as the chapter on the founding of the school; and every page of the book shows how exhaustive, accurate, and patient has been Mr. Lupton's study of his subject, and of everything that could throw light upon it. The concluding remarks are excellent, but only too short.

It is impossible not to speculate on the reason of Colet's growing reputation, and to inquire what special charm or power in his work and character has led such men as Mr. Lupton and Mr. Seebohm to toil so lovingly and so assiduously in his service. Colet was the Socrates to two such Platons as

Erasmus and More; and Erasmus, whenever he speaks of Colet, makes it plain to us that it was the vehement reality of the dean's religious faith which gave him his influence. Erasmus's interest was at once aroused when he heard an Oxford scholar discussing religious questions, not with logical subtleties, and not merely for discussion's sake, but earnestly, and even passionately. Colet's devotion moreover was peculiarly a devotion to Paul and Christ—to the men rather than the doctrines of the New Testament. It is no Anglican Lutheran or Popish dogma that Colet is excited about, but the wonderful courage or pure love of Paul or Christ. This, we take it, explains in part Colet's influence to-day, and a further explanation is to be found in the alliance in him of fiery fervour with a peculiarly patient wisdom. The scene at the shrine of Thomas à Becket, described so excellently by Mr. Lupton, affords the best illustration of the stern common-sense which Colet possessed in common with other reformers of his time; but in his case it was guided and modified by a patience and humility which most reformers have lacked. As we read the history of his foundation of St. Paul's School, and note the immense pains he concentrates on the task, the care with which he considers every smallest detail, we receive a lesson in patience and thoroughness very rarely given us by the leaders of reformations, and specially impressive when it is so given. His rule,

"if your child after reasonable season proved be founde here unapte and unable to lernynge, than ye warned thereof shal take hym awaye, that he occupye not here rowme in vayne"; and his remark,

"for in the begynnynge men spoke not latyn bycause suche rules were made, but contrariwyse bycause men spake suche latyn upon that folowed the rules were made."

contain educational principles we have scarcely mastered yet. The exquisite tenderness of his feeling towards "lytel babys" indicates how thoroughly human-hearted it is possible for educational reformers to be. Faith and common-sense were the two things which brought about the Reformation both within and without the Roman Catholic Church; but the Reformation suffered in many ways, because the faith was too often dogmatism, and the common-sense brutality and impatience. As we find out the flaws in the work of more hasty, and more famous reformers, we become willing to listen to quieter and less clamorous voices, and the teaching and example of such men as John Colet finds resurrection in the minds of men.

Mr. Lupton has not given us in full the letters which passed between Colet and Erasmus, and artistically, perhaps, his book is the better; but, in considering Mr. Lupton's work as a whole, we cannot look upon it as quite finished till these letters have been rescued entire from the ocean of Erasmus's correspondence. Perhaps they could be added to a second edition of the *Letter to Justus Jonas*. In a second edition, too, Mr. Lupton should translate the *De Sacramentis Ecclesiae*. We make these suggestions only because Mr. Lupton has taught us to look for perfection. We ask for more because we appreciate so fully what we have had already. One large request we have kept till the end, but it must

be made. Where is the Hercules who shall do for Erasmus what Mr. Lupton has done for Colet? We know of none unless it be Mr. Lupton himself.

RONALD BAYNE.

For a Song's Sake, and other Stories. By Philip Bourke Marston. With a Memoir by William Sharp. (Walter Scott.)

IN the carefully written and excellent memoir which is prefixed to this volume, Mr. Sharp has told us all that we need to know of the short and terribly sad life of his friend its author. Philip Bourke Marston was born in 1850, the only son of Dr. Westland Marston, the dramatist. At the age of four his eyes began to suffer—as it was believed, from the effects of belladonna, which had been administered medicinally; and the mischief was further increased by a blow accidentally received at play. Soon symptoms of cataract manifested themselves; and, in spite of the best surgical treatment, blindness crept slowly but steadily upon the boy. The hours of his loneliness were solaced by literary pursuits; and before he was twenty Marston had produced much excellent and individual work in poetry, aided by his devoted mother and his younger sister, each of whom acted as his ready and willing amanuensis. He was fortunate, too, in his intercourse with the talented circle who frequented his father's house; and he seems to have drawn to himself, with quite a peculiar closeness, the friendship of many of the most gifted younger writers of the time. But fate had other terrible blows in store with which to smite the blind poet. The company of those who brought a measure of sunlight into his darkened days was thinned by death with startling swiftness. First came the death of his mother, then the death, by consumption, of his betrothed, then the death of his sister Cicely—

"More than any sister ever was
To any brother!"

and Oliver Madox Brown, Arthur O'Shaughnessy and his wife, Marston's elder sister, Rossetti, and James Thomson of *The City of Dreadful Night*, all followed on the dark way, till he came to believe that his friendship was a deadly thing. "Every friend," he bitterly wrote, "every friend whom I love seems to be brought within the influence of my unhappy fate." And day by day his own strength began to decline, till at length, early in the present year, he was seized by paralysis, and passed away into the rest for which, in his weariness, he had often longed.

After reading the pathetic record of their author's life, we turn with interest to his collected stories, which form the bulk of the volume, tales—composed at his type-writer during his saddened later years, and for the most part published in American periodicals—of which many will be new to English readers.

The story from which the volume is titled, one of the longest and best in the book, tells how Herbert Montague, a London painter, in a mood of irresistible pity, gave shelter to an Italian orphan girl whom he had found singing in the streets on a wild February night, tended her with parental care, and finally wedded her, keeping his marriage secret,

however, lest his wealthy father, who had been sufficiently scandalised by his son's Bohemian ways, should be hopelessly alienated. For three years all goes well; but at length Montague meets in society Mrs. Heather, a fascinating widow, a woman of wide culture and superb beauty, in whom he finds a fuller appreciation of his art and his aims in life than was possible to the poor little Mabel at home. Gradually the wife feels that his love has taken wing and fled. Montague struggles hard against his infatuation, finally discloses to Mrs. Heather the fact of his marriage—an announcement which is received by the lady with contemptuous scorn and astonishment—and then returns home to find that his wife has put an end to her life by poison, leaving a letter declaring that she has done so to free him from the irksome yoke of her presence and her wifely claims.

The next story, "The Lady of the Graves," is a weird piece in the manner of Poe; and in "Trapped" we have observant character-painting in the portrait of Albert D'Aurelles, the cruel and sensual French poet, whom the English heroine of the tale marries and endows with her fortune. In "The Actress and her Drama" the husband of Mrs. Brakehill, a popular *tragédienne*, is, with her connivance, murdered by her lover, and Featherstone, a young dramatist, is drugged and placed in circumstances which lead to his arrest as the assassin. Driven to frenzy, which ends in actual madness, by the infidelity of her lover, the actress denounces him from the stage as the murderer. Featherstone in the end is acquitted, and marries the bride who has believed in him and been faithful to him in his time of trial. "Her Price" is another wild tale of love and crime; and among the slighter pieces of the book are "Sir Charles Godfrey, Baronet," "Miss Stottford's Speciality," and "A Letter to Eva"—the last a particularly delicate and beautiful study of unwearied and self-forgetful affection.

It cannot be said that these stories contain their author's best work. Philip Marston was essentially a poet; and he has expressed himself in most fitting and final fashion in his verse, in the volumes entitled *Song Tide*, *All in All*, and *Wind-Voices*. But the stories are thoroughly readable, well worthy of republication, sufficiently good to make us regret that their writer was never able to undertake some such more sustained and lengthened effort in the direction of fiction as was often in his thoughts. These brief tales are skilfully composed, and the reader's interest is well sustained. They deal with the intense and passionate things of life, with the overmastering power of love, with the pathos and tragedy of death. They abound in telling and vivid situations; and, if they frequently verge on the sensational, the improbable, and even the whimsical, they are not wanting in touches of true poetic beauty.

J. M. GRAY.

TWO VOYAGES TO BROBADINGNAG.

Shores and Alps of Alaska. By H. W. Seton-Karr. (Sampson Low.)

The Queen's Highway from Ocean to Ocean. By Stuart Cumberland. (Sampson Low.)

THE student of the adventures of Mr. Lemuel

Gulliver, of Emanuel College, Cambridge, and latterly of the kingdom of Lilliput, may remember that when that veracious voyager, abandoning a "long lease of the Black Bull in Fetter Lane," shipped on board the *Adventure*, Captain John Nicholas, of Liverpool, commander, he came, after a series of nautical manoeuvres which have ever since puzzled seafaring men, to the land of Brobdingnag. In other words, the vessel which set out for Surat reached the north-west coast of America, in a mythical region occupied by what is now the territory of Alaska and the province of British Columbia. A good portion of this country is still not much better known than it was when Swift evolved it from the depth of his inner consciousness, and the entire stretch has undergone changes almost as strange in their reality as was the fictitious life which Gulliver described. Alaska, indeed, when I first sighted its rugged shores, was a fief of the White Czar. Since then a good deal has been written on that still half-explored territory, so that Mr. Seton-Karr's book has to bear the brunt of comparison with those of my old travelling companion, Mr. Frederick Whympster, Mr. Dall, Mr. Schwatka, and of Mr. Eliot, whose sumptuous volume was recently reviewed in the ACADEMY. The result is not unfavourable. It is possible that those who heard the author's paper at the Geographical Society on March 14 might have been led to expect a somewhat more substantial narrative than this rather "thin" journal of 243 pages. However, Mr. Karr's book is not very monumental, neither is it pretentious, which is a merit, in any case, and almost a phenomenon when one remembers the order of travel literature to which it belongs.

The writer is what I believe is known as an "Alpinist," though it is evident, from the modest manner in which he refers to his "insignificant mountaineering," he does not rank high in "climbing circles." He is, however, something of an enthusiast, for he left England for the express purpose of visiting the Alpine region of Alaska, and only learnt, after crossing the continent, that a small party, equipped at the cost of a New York newspaper, was at Victoria, bound for the same region, under the command of Lieut. Schwatka, of Arctic fame. Being permitted to join it, the expedition attempted to ascend Mount St. Elias, about 19,000 feet high, and with a snow line 4,000 feet above the sea. In this aim they did not succeed; but they brought back what was much better—a very useful account of the slopes they did examine of the vast glacier country in and about the mountain, and of the rivers fed by the sub-glacial streams of its gigantic ice-fields. Mr. Karr then went alone to the north and west, and supplies an interesting account of this coasting voyage, and of the immense glaciers which line the entire shore-line to Prince William Sound. One of these—the Bering glacier, near Cape Suckling—is of vast extent. However, with the exception of few areas of flat land covered with spruce and cedar, every other flat expanse is ice half concealed by stones and other moraines. In brief, between the St. Elias Alps and the sea—that is, from Cross Sound to the Copper River—the country consists almost entirely of glacier and nothing else. It is therefore evident that here is a

fine country for the study of glacial phenomena—one, indeed, almost as good as Greenland; and with this advantage over any portion of that country, that it is infinitely more accessible. Mr. Karr claims to have been “the first explorer in the footsteps of Cook to make the circuit of the coast northward from Cape Spencer, or the canoe journey from Kaiak to Prince William Sound.” Possibly he is quite correct in holding this belief. But it all depends on what is considered to be an explorer. Mr. Karr had no instruments; and his hint that Mount St. Elias is in British territory has been doubted by Prof. Davidson (*Kosmos*, No. 3) and by Mr. Dall (*Proc. R.G.S.*, 1887, p. 444), on the ground that this determination, in the absence of astronomical observation, can be only guess-work. I have, moreover, a distinct recollection of sealers, traders, and fishermen visiting these shores more than twenty years ago; and in Victoria I have met men well acquainted with all the stretch to which Mr. Karr refers, and who have described the land to me much as the author of the book does. However, Mr. Karr has the credit of giving us a pleasant narrative, which might have had greater literary merit had he chosen a method less hard to handle for effective purposes than that of the diary. His numerous illustrations are nearly all very good, and the same may be said for the maps, though awkwardly enough one of them puts Mount St. Elias in British, while others place it in United States territory. As a rule, the statements in the book are accurate. Here and there, however, we have noted one or two errors, which had better be corrected in a future edition. For instance, the Hydahs and Timpseans are not Indians of “the seaward”—or any other—“shores of Vancouver Island” (p. 23). The first belong to the Queen Charlotte Islands, the latter to the opposite mainland. Nor do they carve their canoes out of “a single Douglas fir.” Their vessels are of “cedar” (*Thuja gigantea*), or occasionally of *Thujaopsis borealis*. We may also point out that the Queen Charlotte Islands are not “almost entirely unexplored and unvisited.” When I visited them in 1866 coal was being—and is still—worked in Skidegate Sound, and a copper-mining venture had before that date been attempted. Still later they have been the theme of an admirable monograph by Dr. Dawson in the publications of the Canadian Geological Survey. It is also misleading to say that “the settled portions [of Vancouver Island] and those fit for agriculture lie round Victoria and round Nanaimo Mine” (p. 20). In reality, Comox is the chief agricultural district of the island. Nor is this island “semi-tropical” (p. 24) by any means. And, not to find fault needlessly with a book well worth reading and keeping, Mr. Seton-Karr will, perhaps, take the word of an “old zoological hand” who ranged the far Western forests before he was born for the statement that *Cervus columbianus* (p. 24) is not the “Virginian deer,” and that it and the “black tail” are not the same species. Again, “Shouswap Indians or Siwash” (p. 17) is apt to be confusing. “Siwash” is not the pseudonym of a Shouswap, but the Chinook jargon (not “language,” p. 44) word for an Indian, being a corruption of the French *savages*.

Mr. Stuart Cumberland does not affect to play the explorer's part. He is merely an humble tourist, who aimed to do no more than to see what is to be seen by a traveller passing from Australia by way of Vancouver Island and British Columbia across the Canadian Pacific railroad. He had, however, been among men and cities before undertaking this trip, and hence his remarks have more maturity than the raw observations of a less experienced visitor. It is true that he does not describe anything actually new. But, for the first time, the reader will be able to glean from his book a connected and, on the whole, very accurate account of the route which has been laid for the iron horse across British America. He also supplies some useful and often pertinent remarks on Vancouver Island, its delightful summer climate, and its everyday scenes, and on the coast of British Columbia, along which he seems to have sailed as far north as the Queen Charlotte Islands. His style is that of a practised writer, not without a spice of cosmopolitan slang, well suited to the subject of which it treats. Mr. Cumberland is not a specialist—at least not in the branches of science requisite for a traveller; accordingly his notes are generally superficial, and in many instances it would not be difficult to indicate the source whence he derived some rather peculiar bits of information. He has, for example, a provoking habit of saying “I believe” when by a little trouble he might have said “I know,” and ended the doubts of his reader. A passing traveller, jotting down what he hears from other passing travellers or residents, often notoriously ill-informed, cannot be expected to be always accurate. Nor is Mr. Cumberland. Here, for instance, to note a fact or two almost at random, Comox (p. 13) is not “a logging centre.” It is the chief agricultural district in the island of Vancouver. Nor, though deer are plentiful in the vicinity, are mountain goats (p. 15) found within a short distance of Victoria. I question if there is one in the island. Nor (p. 18) was Nootka “a small English settlement”; and, like Mr. Seton-Karr, Mr. Cumberland falls into the error of supposing that because the Tsimpseans visit Victoria they are (pp. 23 and 42) natives of that district. They come from the northern coast of British Columbia. The little tribe on the other side of Victoria harbour are the Tsongeisth—a very different race. Again (p. 39) the oolachon is not “of the sardine type.” It is a smelt (*Thaleichthys pacificus*). It is also quite erroneous to say (p. 133) that in 1789 Vancouver Island was “called Quadra Island by the Spanish.” At that date it was thought to be a part of the mainland. Vancouver met Quadra in Johnstone Strait; and, in memory of their joint discovery of its insularity, they agreed to call it “Quadra and Vancouver Island.” Nor, though at one time familiar with nearly every North-western tribe, did I ever hear of any “salting” their dead (p. 55). The collotype plates with which the volume is illustrated are, for the most part, very successful. But, why does Mr. Cumberland, throughout his very readable and instructive volume, insist on calling British Columbia “the province of the midnight sun”? It is scarcely possible to give it a less appropriate name.

ROBERT BROWN.

Maitland of Lethington and the Scotland of Mary Stuart. By John Skelton. Vol. I. (Blackwood.)

THIS is very pretty and very paradoxical, and it is written with a purpose; but it is a contribution to the history of Mary Stuart in the sense that *Quentin Durward* is a contribution to the history of Louis XI. Mr. Skelton has, in fact, three purposes, which the subsequent volumes of his work, rather than the one he has now published, are intended to give effect to. Like all his countrymen he has an ecclesiastico-theological creed, a Church, and a party (or coterie) within that Church, of which he is the lay champion. For has he not in his “Shirley” days, poked sarcasm at “ecclesiastical ladies’ doctors” and the like; and does he not tell us here that “the Church that is identified with the true social development of Scotland is the Church of Maitland and Spottiswoode, of Forbes and Leighton, of Carstares and Robertson, of Robert Lee and Norman Macleod and John Tulloch”? Mr. Skelton is a believer in what used to be known as Moderatism, and is now known as Broad Churchism in Scotland; and so he very naturally wishes to make out that William Maitland, of Lethington, who was the Moderate or Latitudinarian leader of his time, had a greater influence on the Scotland of the Reformation than his “revolutionary” contemporary John Knox, whose Church, it seems, “burnt itself out in Covenant and Cameronian”—a delightfully audacious assertion which, no doubt, Mr. Skelton is prepared to defend against Scottish Dissenters bent on Disestablishment and against Scottish Democrats bent on destroying all political and spiritual privilege. In the second place, Mr. Skelton intends to institute a parallel between his favourite Lord Beaconsfield and Maitland of Lethington, whom Buchanan styled a “chameleon” and Bannatyne “Mitchell Wyllie” (otherwise Machiavelli), and whom Albany Fonblanque would, no doubt, have properly described as “all-principled,” for the same reason that he so described Sir Robert Peel. Finally, Mr. Skelton has found a patriotic Scottish policy for Maitland, to which that “subtil” politician, in spite of apparent tergiversation and unquestionable tortuosity, adhered.

“How to diminish the power of an anarchical nobility, how to promote the union of the nations, how to secure the succession to a Scottish prince, how to establish a religious peace on tolerable conditions—these were the problems to which, as a Scottish Protestant and a Scottish patriot, Maitland addressed himself [and which Mr. Skelton emphasises with italics]; and it will be found, I believe, that the secular and ecclesiastical policy which he steadily and consistently pursued was, upon the whole, as just as it was reasonable.”

It will also fall to Mr. Skelton, in the course of his narrative, to rectify Mr. Froude's estimates of Mary Stuart and John Knox, and to justify his own estimates of Queen Elizabeth and Cecil.

Obviously, therefore, Mr. Skelton has his work before him. But it is equally obvious that he will experience no difficulty in or outside of himself in executing that work skilfully and successfully from the purely literary point of view. He gives his

authorities in an introductory chapter. They are respectable, and fairly numerous; but even Mr. Skelton will not claim absolute impartiality for the majority of them. Then he has a short and easy method of dealing with inconvenient "facts" as they present themselves to him. They are not facts at all. He distrusts the reporters of them as Hume distrusted the reporters of miracles. "The fact being in itself incredible," he says, "I would not believe it were it told me by Cato." Mr. Skelton's mind being the final Court of Appeal as regards some facts, it is by no means impossible that he may be found quite honestly making others square with his theories or justify his loves and his hates. There is no reason whatever why Mr. Skelton should not write history trenchantly and picturesquely and with a purpose. When one thinks of the uncertainty that, in spite of all that has been published of late years on the death of Darnley, still rests on the question of who were—and still more, of who were not—consenting parties to his murder, it may be believed that the history of this period cannot be written from any other standpoint than that of partisanship. That being so, the author of *The Impeachment of Mary Stuart* is entitled to his innings. It is but fair that, after Mr. Froude, there should be the anti-Froude. Mr. Skelton may not succeed in whitewashing Maitland, whose record he admits not to have been "clear"; and his attempt to make out his hero to be Knox's equal, if not superior, as a patriotic force has a Quixotic look. But the Knox legend has had, in many respects, a paralysing effect on the modern Scottish mind. If Mr. Skelton can do something towards separating the truth from the fiction in that legend, he will perform a service to his countrymen, although many of them will be slow to appreciate it.

This volume is strictly preliminary. The indictments of Knox and Queen Elizabeth that appear in it are in reality the opening speeches of a prosecuting counsel. Eminently readable, they have yet to be supported by evidence. But in spite of or in virtue of its being preliminary, this volume will in all probability prove the most enjoyable of the three that are to constitute Mr. Skelton's work. It consists essentially of a sketch of Scottish history and life up to the time when Maitland really became a force in both as secretary or minister to Mary Stuart. As such it can hardly be praised too highly as a sustained effort in picturesque description and narrative. Mr. Skelton has a quick eye for pictorial effects, and he has used it to good purpose in his descriptions of Scotland, more especially in the sixteenth century. His short studies in early Scottish literature—that literature in which Barbour, Dunbar, and Lyndsay were the leading lights—are somewhat slight and superficial, being inferior to the criticisms contained in the volumes of Prof. Minto and the late Dr. Ross, and in a forgotten series of lectures by James Hannay. Nor does Mr. Skelton contemplate the Scottish "people" from the standpoint of the late Mr. Green. There are no democratic interiors in this volume. But he has realised the romantic aspects of burgh and keep and monastery; he has photographed the outdoor life of

Borderer and Highlander; he is nearly as fond of a morion as Scott; and with the help of imagination he can reproduce the material prosperity of a buried past with a gusto almost equal to Macaulay's. But Mr. Skelton is most likeable when he relapses into the vein of "Shirley," as when he reproduces "the bleak charm" of St. Andrews—where, before the middle of the sixteenth century, Maitland studied "the humanities"—which within the memory of men still living "was a huge academic city—a dark, sombre, ruinous, mildewed, ill-lighted, badly-paved, old-fashioned, old-mannered, secluded place," where

"a few noble fragments of ancient ruin, which had resisted the fury of the Knoxian mob—the massive walls of a feudal castle, the great tower of St. Rule, the lovely windows and arches of the cathedral—rose above an old-fashioned street, not inconveniently crowded with old-fashioned houses, in which old-fashioned professors and old-fashioned ladies looked after keen-eyed, threadbare students, who here, in red and ragged gowns, cultivated the muses, like the early Edinburgh Reviewers, upon a little oatmeal."

Beyond question, Mr. Skelton has sacrificed or kept out of sight some of the stern and sordid realities of early Scottish life. Occasionally his pen or his memory makes a slip, as when he confers a bishopric on Sir James Inglis, who became abbot of Culross in 1528, and was murdered two years later, and whose curious antecedents may be gathered from Sir David Lyndsay's complaint:

"Who can say more than Sir James Inglis says
In ballads, farces, and in pleasant plays?
But Culross hath his pen made impotent."

Trifles like these do not spoil bright historic retrospect—a retrospect so rich in colour as to make one lose sight of Mr. Skelton's purposes, predilections, and polemics.

WILLIAM WALLACE.

Verses of a Prose Writer. By James Ashcroft Noble. (Edinburgh: David Douglas.)

WRITERS of indifferent verse almost invariably call their productions "poems," but here are genuine poems which the writer modestly calls "verses." And verses they are—short, simple, unambitious compositions, sometimes tenderly personal and domestic—but with the breath of true poetry in all of them. Here are no "Odes," either Jubilee odes or any other. I believe there is no mention of gods or goddesses; and I am sure there are no invocations to the sun or moon or the powers of the air. Affection forms the subject and certainly supplies the inspiration of many of these poems; but it never raves, nor does it indulge in language not generally used by plain men and women. Indeed, it is the first merit of these excellent verses that they are perfectly natural. That is unmistakably the quality of this "Invitation," with which the book opens:

"Come when Spring touches with gentle finger
The snows that linger
Among the hills;
When to our homestead return the swallows,
And in the hollows
Bloom daffodils.

"Or, if thou tarry, come with the Summer,
That welcome comer,
Welcome as he;
When noontide sunshine beats on the meadow,
A seat in shadow
We'll keep for thee.
"Or, if it please thee, come with the reaping,
When to safe keeping
They bring the sheaves;
When Autumn decketh with coloured splendour
And pathos tender
The dying leaves.
"Or come and warm us when Winter freezes,
And northern breezes
Are keen and cold,
With loving glances and close hand-pressings,
And fervent blessings
That grow not old.
"Nay! do not linger; for each to-morrow
Will break in sorrow
If thou delay:
Come to us quickly; our hearts are burning
With tender yearning:
Come, come to-day."

To treat of familiar things without exaggeration, and yet give effect to their highest charm, is a test of the true poet. How well Mr. Noble can do this may be seen from the following ballad, in which a lover owns that his mistress is not of the fairest, but reaches the full height of love nevertheless:

"SHE AND I.

"Why do I love my love so well?
Why is she all in all to me?
I try to tell, I cannot tell,
It still remains a mystery.
And why to her I am so dear
I cannot tell, although I try,
Unless I find both answers here—
She is herself, and I am I.
"Her face is very sweet to me,
Her eyes beam tenderly on mine;
But can I say I never see
Face fairer, eyes that brighter shine?
This thing I surely cannot say,
If I speak truth and do not lie;
Yet here I am in love to-day,
For she's herself, and I am I.
"It cannot be that I fulfil
Completely all her girlish dreams;
For far beyond my real still
Her old ideal surely gleams.
And yet I know her love is mine,
A flowing spring that cannot dry:
What explanation? This, in fine—
She is herself, and I am I.
"Mid all the cords by which two hearts
Are drawn together into one,
This is a cord that never parts,
But strengthens as the years roll on;
And though, as seasons hurry past,
Strength, beauty, wit, and genius die,
Till death strike us this charm will last—
She is herself, and I am I.
"She is herself, and I am I,
Now, henceforth, evermore the same,
Till the dark angel draweth nigh,
And calleth her and me by name;
Yea, after death has done his worst,
Each risen soul will straightway fly
To meet the other: as at first
She'll be herself, I shall be I."

The next extract is from a short poem called "The Brooklet." I quote it as being a really beautiful expression of natural sympathy:

"And often did I lie and dream
Beside that sparkling babbling stream;
Sun, stars, flowers, birds, and all the rest
I loved, but loved that brooklet best:
As if with life like mine endued
It had a voice for every mood
Of mirth or sadness, joy or dole,
It was to me a fellow soul.

“ A friend! 'twas more; it was the voice
Of my own soul—it did rejoice
As I rejoiced, and when I wept
It murmured low, and as I slept
It made fair dreams for me, and seemed
To sing strange music as I dreamed.”

I imagine that readers who have followed me through these extracts will want to read the whole book; and when they have read the book they will certainly regret that Mr. Noble—excellent “prose-writer” though he is—does not write more verses.

GEORGE COTTERELL.

Chance and Luck. By Richard Proctor. (Longmans.)

THE Romans raised a temple to the goddess Fors et Fortuna, and the Greek tragedians are stored with wise moralisings on the power of the demon Luck; but Mr. Proctor, being as great an arithmetician as Michael Cassio, has written a very amusing book to prove that no such thing as luck, in the gambler's acceptance of the word, exists at all, and that every form of gambling is not only highly immoral, but must always, in the long run, end in the ruin of every individual votary. The practical forms of gambling which Mr. Proctor takes the most pains to expose are lotteries, betting on races, and gambling in shares, which latter has the charm to many that, while the stakes can be increased to any amount, it is disguised under the name of a business transaction. Many a respectable old gentleman in the city, who would be shocked at the idea of risking a fiver on a race, or of playing whist for more than shilling points, will speculate for hundreds through his stockbroker, and is as anxious to be put upon a good thing as the *habitué* of the Heath, or the young lady who backs her fancy at Ascot on the faith of direct stable information. Mr. Proctor's exposure of the cover system, introduced by advertising outside brokers to enable the public to indulge in Stock Exchange gambling, without risking fabulous sums, is one of the neatest things on record. He carries his successful and unsuccessful speculator through a series of cover-transactions, and lands them with the following pleasant result. We omit the details by which the result comes out with arithmetical demonstration:

“ A has won £50 and paid £53 2s. 6d. in brokerage, being, therefore, minus £3 2s. 6d. B has lost £50 and paid £53 2s. 6d. in brokerage, being, therefore, minus £103 2s. 6d. A's broker R has gained £53 2s. 6d. B's broker S has gained £53 2s. 6d. So long as there are many idiotic As and Bs seeking their own ruin by the cover system, one need not necessarily assume that R and S stand appropriately for rascal and swindler. But when stockbrokers choose to join the ranks of those who advertise for clients of this sort, who confidently proclaim that speculation of this kind is a safe and ready way of making a fortune, and thus ensnare thousands of foolish persons to enter on a path which leads always to loss, and often to ruin and shame, they must be prepared to find themselves classed among creatures of prey” (pp. 80-181).

est Gambling in lotteries is pretty well out of fashion, and few require to be deterred from such ventures by Mr. Proctor's proof that they are always what he calls swindles—i.e., that being got up for profit, an open deduc-

tion is always made from the value of the prizes offered. The most interesting point in his chapter on this subject is an account of a proposed St. Petersburg government lottery, which was intended to despoil the public in a more fascinating way than any of its predecessors, and which had to be abandoned because it was proved mathematically that no price to be fixed on for a ticket could ensure the government from possible ruin. The idea was to set all the world tossing coins of the realm, the government pledging itself to pay two sovereigns if head was turned up at the first toss, four sovereigns if not turned up till the second toss, eight sovereigns if not turned up till the third toss, and so on *ad infinitum*. Mathematicians were set to calculate the value of one privilege to toss, so that the government might charge such a price as would ensure them from loss, and produce a handsome revenue on the principle of heads I win, and tails you lose. Of a truth, however, the lucky individual who were to throw tails, so that head would not appear till the twentieth toss, would have to be paid £1,048,576, and the more persons paid for the privilege of tossing, the more certain would be the chance of such long runs occurring. The experts, therefore, arrived at the paradoxical solution that, were the numbers who would be induced to join in such a lottery infinite, the value of a single ticket, to ensure against loss, must be infinite also, and that the value of each ticket rose in proportion to the numbers taken.

“ The fewer bought chances the greater would be the government's chance of gain, or rather their chance of escaping loss. But this, of course, is precisely the contrary to what is required in a lottery system. What is wanted is that many should be encouraged to buy chances, and that the more chances are bought the greater should be the security of those keeping the lottery. In the Petersburg plan, a high and practically prohibitory price must first be set on each chance, and even then the lottery keepers could only escape loss by restricting the number of purchases. The scheme was, therefore, abandoned” (pp. 150-151).

With betting on races Mr. Proctor takes a very high moral tone, which, I fear, would not have much effect on those who feel any interest in the sport of kings, though all its votaries gifted with humour would doubtless be amused at the onslaughts made on their proceedings.

“ There is not a particle of real distinction,” says Mr. Proctor, “ between what the better wants to do and what a gambler, with clogged dice or marked cards, actually does. The more knowing a betting man claims to be, the easier it is to see that he wants and expects to take unfair advantage of other men. Either he knows better than those he bets with about the real conditions of the race on which they wager, or he does not. If he does, he wagers with them unfairly, and might as well pick their pockets. If he does not, but fancies he does, he is as dishonest in intention as he is in the former case in reality. If he does not and knows he does not, he simply lies in claiming to know more than he does. In claiming to be knowing, he really claims to be dishonest and (which is not quite the same thing) dishonourable; and probably his claim is just” (pp. 105-106).

Rhodomontade like this can never persuade anyone that the Englishman who loves a

good horse, and, on his judgment, backs him against another, is like a gamester playing with marked cards or clogged dice. Such foolish exaggeration defeats the writer's own object. According to Mr. Proctor, the bookmaker's trade must, indeed, be a rosy one. He need never lay the fair odds, for he will always find fools who will take them short. He need never be troubled with bad debts, for his constituents would rather rob their till than leave a debt of honour unpaid. I fancy that many an honest bookmaker has a very different story to tell. He is forced to take his clients bets for “ponies” and “monkeys,” when the youthful swell has no means to meet a run of ill-luck, and no till to break into; and bad debts are probably the experience of every respectable professional who adopts this trade. Mr. Proctor's arithmetic is unimpeachable; but his experience of the subject is small, and he might be astonished to find that there are honest and dishonest bookmakers as well as stockbrokers, and that, in fact, without scrupulous honesty no bookmaker can thrive.

“ Notes on Poker” is one of the most characteristic chapters in the book. Indignant denunciations against gambling are as strong as in any other of the essays; but Mr. Proctor's love of calculation, and of the laws of chance, here lead him to give admirable instructions to the practical poker player how to make money by the most gambling of games—skill in which, as he justly states, consists in lying, and lying in wait.

Anyone interested in chance problems would be delighted with this most amusing book.

JAMES INNES MINCHIN.

A HISTORY OF NON-CHRISTIAN RELIGIONS.

Religiongeschichte. Erster Band. Von Chantepie de la Saussaye. (Mohr: Freiburg.)

THIS volume is the first half of a work forming one of a series of handbooks now being issued by the publishing establishment of J. C. B. Mohr, of Freiburg in Brisgau. It has been preceded by two others, of which the first, by Prof. Holtzmann, deals with New Testament criticism; while the second, which is shortly to be completed by another volume, gives us a history of Christian dogma by Prof. Harnack, well known to English scholarship as a contributor to the *Encyclopaedia Britannica* and the *Contemporary Review*. To judge from what has so far been published, a leading object of this series is to put before us the latest results and views of modern criticism in each of the branches dealt with, together with such older theories as still hold their ground. Of course the writers are not debarred from expressing their own views in a very decided fashion; and, in fact, Harnack's work, for one, is a piece of thoroughly original and vigorous research. But, on the whole, these handbooks seem less likely to deal at first hand with the raw materials of knowledge than with the elaborated products of criticism. As regards the general history of religion outside Judaism and Christianity—the task assigned to Prof. de la Saussaye—such a method was almost imposed by the existing state of the science. The present volume gives an account of primitive religious beliefs and practices so far as they have been

ascertained or guessed at; then of religion in its actual elementary manifestations all over the world, followed by a complete ethnography of the human race. Then come sections devoted to the special religions of China, ancient Egypt, Babylon and Assyria, and India, including Buddhism. The second and concluding volume is to embrace the faiths of old Greece, Rome, Germany, Scandinavia, and Islam. The bibliography prefixed to each section—itsself not the least valuable part of the work—proves that to collect and sift the printed sources of information on each subject was a process demanding such enormous learning and industry as to leave little leisure or inclination for the production of new theories. Accordingly, Prof. de la Saussaye has, so far, wisely limited his intervention to an occasional criticism on one or another of the conflicting theories passed in review.

Those who are accustomed to the ardent controversies which in this country have raged round the subject of comparative mythology will perhaps find the author's tone a little chilling, and his eclectic method of combining what is plausible in every theory a little colourless. On the other hand, they will be interested to find that the labours of English scholars in this field meet with a fuller recognition than is usually vouchsafed them in German circles. Something, no doubt, may be due to the fact that Prof. de la Saussaye, although he writes for a German audience and in German, is himself a Dutchman—a fact which may also have something to do with the admirable clearness and simplicity of his style. On the whole, while showing full acquaintance, and even sympathy, with the new school of "folklorists"—among whom Mr. Tylor and Mr. Andrew Lang are especially mentioned—he would maintain that there is a great deal more truth in the theories of Prof. Max Müller than they are disposed to admit. And, while doing full justice to the literary brilliancy of Mr. Herbert Spencer's style, he pronounces that philosopher's explanations of mythical stories to be "often as absurd (*abgeschmackt*) as those of the old Euhemerists" (p. 28), an opinion in which some of us will readily agree.

Another interesting topic dealt with in this volume is the alleged similarity between the biblical accounts of the Creation and Fall, and the Chaldean traditions, as ascertained from certain recently deciphered inscriptions, on the other. According to Prof. de la Saussaye, it is only with regard to the Flood that any resemblance between the two narratives can be demonstrated, the supposed account of a Creation and Fall in the Chaldean records being purely imaginary (pp. 341-345). On the other hand, he speaks of the ordinary view of the Exodus as being confirmed by the discoveries of M. Ed. Naville (p. 310), but without explaining in what the confirmation consists. Perhaps it amounts to no more than that "the bricks are alive to this day." *Apropos* of Egypt, one is surprised to find so learned and accurate a writer as our author repeating without a qualification the old story that "Cambyse made himself detested by slaying the sacred Apis" (p. 280), as if it had not been refuted by the monumental evidence of the tombs at Sakkarah.

It is possible that other mistakes may have

crept into a work of so comprehensive a character; but if so I have not been able to detect them. The thanks of all students are due to Prof. de la Saussaye for placing at their disposal, in a convenient form, such an enormous mass of valuable and well-timed information. No journalist, novelist, or popular preacher should be without a copy of the work; and it is to be hoped that an English translation will shortly be issued for the benefit of those who cannot consult it in the original.

ALFRED W. BENN.

SOME VERSE TRANSLATIONS.

Spanish and Italian Folk-Songs. Translated by Alma Strettell, with photogravure illustrations. (Macmillan.) This dainty volume contains a selection, with music added, of the *Cantes Flamencos*; or, Songs of the Spanish Gypsies, published at Seville (1881) by Demófilo (Don A. Machado y Alvarez). Then follow Italian folk-songs, also with music, chiefly from Tuscany and from Sicily, and the book ends with a specimen of the funeral songs, the *Voceri* of Corsica. By far the most beautiful are the Italian songs, especially those of Tuscany. In the Sicilian we have already that mark of Oriental exaggeration to which the Western ear can never wholly accustom itself. But the reader must not conclude from the specimens here given that Spanish song is always so inferior to Italian. The *Cantes Flamencos*, though curious, are decidedly the least poetical of all Spanish popular songs. They are excelled in tenderness, in play of fancy, in fire of passion, in delicacy of expression, and especially in beauty of rhythm and metre, not only by Spanish and Portuguese, but even by Gallegan and Catalan verse. It is the peculiar touch of the gypsies on the guitar, their wild singing and dance, which give them fame. As songs, their only notable peculiarity is their deep melancholy. Miss Strettell gives an admirable summary of Señor Machado's preface, and discusses the various forms of the songs, and of the names given to them. The origin of the title *Flamencos* is hard to divine. There seems some slight evidence that Flamand, or some kindred word, once meant "a vagabond"; but it is quite a mistake to suppose (p. ix.) that Gypsies were ever called Germans, i.e., Teutons, in Spain. Germania, Germanos, Agermanados, are only some of many names for associations or brotherhoods, derived from the Latin "germanus." Hermano, Hermanidad, in Castille, Armandat in the Basque country, Germania in Valencia, were first applied to ecclesiastical, then to lay and police, associations, descending finally to brotherhoods of thieves, with Germania as the name of their slang. In this last sense only is it applied to the Gypsies. The *Voceri*, or songs over the dead, of Corsica are but relics of an almost universal custom, found among the Kelts of Ireland and Scotland, which was common, until lately, throughout the Pyrenees. The present writer has spoken with many who knew Marie Blanc, the last *Aurist* singer of the Vallée d'Aspe, one of whose *Aurosts* is not at all unlike the *Vocero* given here. In the middle of the last century, P. Larramendi mentions the *plañideras* as somewhat of a nuisance in the Spanish Basque provinces in his day. The translations of this volume are correctly but somewhat stiffly done; those from the Italian flow more easily than those from the Spanish. The illustrations are ambitious, but not wholly successful. Photography exaggerates so much the brush-marks as sometimes to obscure the real subject of the picture. The original sketches, however, should be very pretty.

The Cid Ballads, and other Poems and Translations from Spanish and German. By J. Young Gibson. With Memoir by Agnes Smith. In 2 vols. (Kegan Paul, Trench & Co.) It is a sad task to review the posthumous collections of a favourite writer, to learn that the skilful hand will never wield pen more, that the final touches, the last polish, can never now be given to what has been left comparatively rough and unfinished. Not that this applies to many poems in these volumes. It is only here and there that we miss the *labor limæ* which Mr. Gibson, beyond most men, delighted to give. As a whole, these translations are of unusual excellence. Those from the German of T. von Bodenstedt, here published for the first time, show equal facility in handling German as in dealing with Spanish. The only pieces which somewhat disappoint us are the original poems. Judging from the translations alone, and thinking them to be, as it were, the product of leisure moments, and of lighter thought, we had often questioned what might be the play of fancy unfettered by translation, what the deeper thoughts of the man himself, expressed in his own way. The few pieces of original verse here given reach the level of, but are in no wise superior to, the translations. Few of them rise above the ordinary mark of occasional poems, or of *vers de société*. Is it that the powers of Mr. Gibson were really so limited, or is it that a constant practice of translation is in the end necessarily fatal to original work? But if we turn to these translations, and especially to those from the "Romancero del Cid," we think that the reader has here almost as perfect a representation of the originals as can well be conveyed in a foreign tongue. Those in the shorter ballad metre are perhaps generally better than those in longer verse; but one has only to compare this translation with its predecessors to show its superiority. It is needless to say that there is no misconception of the Spanish as in some of Lockhart's ballads, especially that entitled "Zara's Earrings," or in Byron's "Woe is me, Alhama!" It is only when sometimes the general is substituted for the particular in the simplicity and directness of the Spanish lines, that we feel that the picture is slightly blurred—e.g., of the Cid's new wedding sword-belt and sheath, "que costaron cuatro cuartos," "that cost a good round sum," instead of "that cost four pennies down"; but this feature of Spanish song is very hard to transfer to another medium. Though the romances are posterior to the "Poema del Cid," yet reading them as well arranged here in biographical order, it seems an easy task to weave the whole into a continuous poem without any flagrant inconsistency of character. This may have a possible bearing on the construction of the Homeric poems; but the same phenomenon meets us in Carolingian legend, where the "Chanson de Roland" seems also to be anterior to the ballads. Should a second edition be required, we would suggest that the *tour de force* of suggested rhymes in the poem of "Urganda the Unknown," printed on p. 385 of the "Journey to Parnassus," be added to the translations from Duffield's *Don Quixote*. This would match Mr. Ormsby's "To Sancho Panza and Rocinante," and leave Mr. Gibson still unvanquished as a translator from the Spanish.

The Nibelungen Lied (Lay of the Nibelung). Translated from the German by Alfred G. Foster-Barham. (Macmillan.) Mr. Foster-Barham is not, as he fondly imagines, the first person to translate the *Nibelungenlied* into English verse. Two previous translations, at any rate, are in existence: one by a Mr. Birch, published at Berlin about 1848, is known to us only in the extracts given by a reviewer in Herrig's *Archiv*; the other, by Mr. W. N. Lettsom, appeared in a second edition in 1872.

The three versions are curiously alike in their general character. They all aim at being very literal, and at reproducing the original metre, the native ruggedness of which they considerably exaggerate. We do not think Mr. Foster-Barham's work can claim to be in any respect superior to that of Mr. Lettsom, and it has the serious defect of being unaccompanied by either introduction or notes. There is a preface of three pages, but it contains no information respecting the sources of the poem or its literary history. The words "from the German" on the title-page leave it an open question whether Mr. Foster-Barham has translated from the original Middle-High-German, or from the modern German of Simrock. We would not venture to affirm the latter alternative; but from his use of such forms as "Haunolt" for "Hünolt," and other indications, we can hardly be wrong in inferring that Simrock's version was constantly at his elbow during the progress of his work. At all events, he has, so far as we can discover, followed implicitly the text adopted by Simrock, which a scholar acquainted with the researches of Bartsch would certainly not have done without attempting some sort of justification or apology. Mr. Foster-Barham's remarks on the character of the poem do not say much for his literary perception. "The narrative," he says, "has the very highest merit, is well and firmly knit together, and with a happy avoidance of anything that would have marred its beauty." The truth is, that the faults of construction in the *Nibelungenlied* are quite as conspicuous as its excellencies. "One of the great poems of the world" it certainly is not, but it is a good deal better than any of the English translations would lead their readers to suppose.

The Templars in Cyprus. By F. L. Zacharias Werner. Translated by E. A. M. Lewis. (Bell.) The chief impression left upon the mind by this translation is that Carlyle took, on the whole, a very sound estimate of the original poem, more than half a century ago. Amid many pages of indescribable dulness, twaddle, and credulity, there shines out here and there a fine thought, a pathetic farewell, or a certain power of presenting the supernatural, which redeems *The Templars in Cyprus* from that oblivion which otherwise it merits all too well. The situation is tragic enough. Molay and his Templars are summoned to France, not without suspicions of their impending doom. Molay himself, as a leader and hierophant, of stainless character, but conscious of a dubious position, amid followers deeply impugned by the ecclesiastical and political world, and undermined by the secret influence of "The Valley"—a mystical fraternity, neither in the body nor out of the body, but worthy of a place in Lord Beaconsfield's novels. Molay is a figure well fitted for tragedy; and, had Werner's genius owned the slightest touch of self-control or humour, a great opportunity was before him. As it is, we wish to speak with all respect that may be due to Templar mysteries in the past, or masonic ceremonial in Werner's time or our own; but it is hard to be serious over the aspect in which this drama presents them. It is a dark echoing hall of wild superstition, lit up at intervals by the visions of *delirium tremens*. As a specimen of the stage-direction, take the following (act v., sc. ii., p. 166):

"A colossal demon's head appears between the two skeletons; its countenance is horrible; it is gilt, as on a high golden crown, a heart of the same on its brow, rolling fiery eyes, serpents instead of hair . . . the whole bust rests on four gilt dragon-feet."

This, as is natural, nearly quenches the curiosity of Adalbert, the neophyte of the Temple rites. But no, he has to hear "the history of the

fallen master," Baphometus, who in the wickedness of his heart delayed to build the Temple of the Lord (pp. 167-9). The Lord melts the gold which Baphometus had taken as a bribe:

"Then in the crucible he dipped one finger
And stretched the finger out to Baphometus,
His brow, his chin, his right and left cheeks
daubing
With molten gold, the gold his purse had
yielded.
Then changed in countenance was Baphometus,
Like flames of fire his lurid eyes were rolling,
His nose became a hooked beak of vulture,
His tongue from out his throat protruded
bleeding.
. . . And from his hair came actual serpents
growing.
And from the serpents sprouted horns of devils,"
&c., &c.

The real miracle is that to Werner this sort of thing was a reality, and a deeply impressive one; so were the mummeries of Cagliostro to Luchet and others; and the valedictory words of Carlyle to Luchet might be spoken over Werner:

"O Luchet, what a taking! Is there no hope left, thinkest thou? Thy brain is all gone to added albumen; help seems none, save in that last mother's-bosom of all the ruined, brandy-and-water! An unfeeling world may laugh; but ought to recollect that forty years ago these things were sad realities in the heads of many men."

This fifth act is concentrated delirium; but the same lack of sanity defaces the whole play, showing itself almost as much in absolute trivialities as in spectral nightmares. If there be anywhere in literature anything comparable, for pure inanity, to the opening part of act ii., sc. ii. (pp. 52-55), where Philip and Frank discourse in the garden, one can only pray never to meet with it. Yet there are fine passages, though rather, perhaps, of rhetoric than poetry—witness the following (act iii., sc. i., p. 88) spoken by Hugo, the old Commander:

"In these dim halls a shuddering takes
This breast unused to fear, and then meseems
As though the antique columns which have
upborne,
Through ages, the dome's boldly curved concave,
Did call to me. *Be faithful unto death!*
When I sometimes at evening-tide survey
The ancient tower in Gothic pomp ornate,
And see its ball that in the moonlight shines
Like some small star high in the firmament:
Then seems it me, the earlier knighthood, like
A giant counterpart, peers down on me,
Immense and yet most comforting; then is it
As though one whispered in my ear: '*Twas men
Piled up this bulk stupendous, by their zeal
And courage, and their living faith that they
Must give some holy gift, to overlive
The dust.*'"

And the same Commander's hesitation (act vi., sc. ii., p. 251) is finely rebuked by Molay:

"Comm. I foresee
Much detriment from this beginning!
"Molay God
Begins, not we. When many cross-roads lie
Before us tending divers ways, and we
Doubt which to choose, He sends us Duty then,
A guide that ne'er misleads; and we will go!"

Thoughts of rhetorical force, like this, are not rare in the volume. But, on the whole, the essence of the advice given by Kingsley to some one who wished to read Proclus might be given to those who intend to try Werner. "Read Werner by all means; but first do everything else which it can possibly be your duty to do."

NOTES AND NEWS.

It is generally believed in Scotland that Lord and Lady Aberdeen mean to publish a book on their latest travels, which will not be without a certain amount of political interest.

THE Story of Zebehr Pasha's life as told by himself is about to appear in the *Contemporary Review*. The first instalment will be given in the September number.

THE latest project in the way of African exploration is one for an expedition from Tripoli to Cape Town, taking Lake Chad by the way. The originator of this idea is the relative of well-known Scotch peer.

THE Clarendon Press will shortly publish a volume of lectures on the Book of Job, by Dean Bradley, being a companion volume to his *Lectures on Ecclesiastes delivered in Westminster Abbey* (1885).

MESSRS. LONGMANS have in the press a new volume by Miss May Kendall, one of the authors of "That Very Mab." It will be entitled *From a Garret*.

MR. E. GERARD, the author of *Reata*, and other novels, has written a book on Transylvania, which will shortly be published by Messrs. Blackwood, under the title of *The Land beyond the Forest*. It will be in two volumes, with maps and illustrations.

MESSRS. MACMILLAN have in the press a volume containing four plays of Calderon, edited, with introduction and notes, by Mr. Norman MacColl.

THE fourth series of *Queer Stories from Truth* will be issued next week by Messrs. Swan Sonnenschein & Co. The volume contains thirteen stories by the late Mr. E. C. Grenville-Murray, and will be bound in a blue cover. The same firm announce two new shilling volumes: a series of stories by Mr. Richard Dowling, entitled *With the Unhanged*; and *Ben D'Ymion*, by Mr. H. F. Lester, which contains skits of well-known novels by Lord Beaconsfield, George Eliot, Thomas Hardy, &c.

A NEW edition of Mr. Blades's *Enemies of Books* is announced as to be issued very shortly in Mr. Elliot Stock's "Book-Lover's Library." It will have an additional chapter, and will be illustrated with new drawings.

AT the celebration of the 150th anniversary of the foundation of the University of Göttingen, which has been held during the past week, the hon. degree of Ph.D. was conferred upon Mr. S. R. Gardiner, the historian of the Stuarts, and upon Sir Monier M. Williams, Boden professor of Sanskrit at Oxford.

IT is proposed to form a new association to take over and work Cavendish College, Cambridge, of which the special object is to enable young men to graduate at the university at an age earlier than is customary at other colleges, and to do so at as little expense as possible. Students can enter the college at sixteen, and obtain the B.A. degree before they are twenty years of age. The unfinished state of the buildings, together with other circumstances, has hitherto hindered the success of the college; but an offer of £10,000 has now been made for the completion of the building, provided means be found to place the college, in other respects, on a satisfactory footing. To do this, £10,000 more is wanted; and for this sum an appeal is now made to the friends of education throughout the country. At a meeting of Cambridge residents held in Trinity College, the master presiding, the desirability of forming the new association under the "no profit" clause of the Companies Act, 1867, so that it will be able to receive benefactions, was affirmed; and a committee, of which Mr. J. H. Flather, bursar of Cavendish College, is secretary, was formed to obtain subscriptions.

THE results of the L.L.A. Examination for 1887 have just been issued by the University of St. Andrews. It appears that 597 candidates entered for examination at 20 centres, as

compared with 391 candidates in 1886, and 374 candidates in 1885. The centres were St. Andrews, Aberdeen, Arcachon, Barbadoes, Birmingham, Bristol, Brunswick, Cheltenham, Coblenz, Edinburgh, Leeds, Leicester, Lerwick, Liskeard, Liverpool, London, Paisley, Paris, Pietermaritzburg, and Sunderland. Taking a joint view of all the subjects in which candidates entered, there were 636 passes and 149 honours. In Latin, 17 passed; in Greek, 3; in mathematics, 10; in logic, 25 passed and 2 took honours; in moral philosophy, 4 passed; in natural philosophy, 1; in English, 70 passed and 64 took honours; in education, 113 passed and 12 took honours; in political economy, 34 passed and 1 took honours; in physiology, 95 passed and 2 took honours; in chemistry, 2 passed; in zoology, 2; in theology, 5; in church history, 4; in French, 100 passed and 18 took honours; in German, 41 passed and 26 took honours; in Italian, 2 passed; in comparative philology, 26 passed and 3 took honours; in history, 33 passed and 2 took honours; in botany, 29 passed and 12 took honours; in geology, 20 passed and 6 took honours; and in astronomy, 1 passed. Eighty-three candidates, having passed in the full number of subjects required, are entitled to receive the L.L.A. diploma.

ORIGINAL VERSE.

THE INFANT MEDUSA.

(By Poseidon.)

I LOVED Medusa when she was a child,
 Her rich brown tresses heaped in crispy curl,
 Where now those locks with reptile passion whirl,
 By hate into dishevelled serpents coiled;
 I loved Medusa when her eyes were mild
 Whose glances, venomous now, perdition hurl,
 As her self-tangled hairs their mass unfurl,
 Bristling the way she turns with hissings wild.

Her mouth I kissed when curved with amorous
 spell,
 Now shaped to the unuttered curse of hell,
 Wide open for death's orbs to freeze upon;
 Her eyes I loved ere glazed in icy stare,
 Ere mortals, lured into their ruthless glare,
 She shrivelled in her gaze to pulseless stone.

THOS. GORDON HAKE.

MAGAZINES AND REVIEWS.

In the *Expositor* for August, Prof. Wescott continues his instructive papers on the Revised Version of the New Testament. Most will agree that subtle differences of expression have been well reproduced in most of the cases here mentioned. Is it, however, accurate to say that *στέφανος* suggested to the Greek reader of the New Testament simply the victor's wreath (against this see 2 Sam. xii. 30 LXX.)? Dr. Blaikie sets before us St. Paul as a preacher; but his remarks imply that moderns have time to preach or to listen to sermons as long as the Epistle to the Romans. M. Godet (why be doct'or this charming French writer?) treats of "the most epistolary of all the Pauline epistles" (Philippians). Can the words "that he believed, &c., is false" be a faithful rendering of M. Godet's French? It has a truly German ring. Prof. Delitzsch instructs and delights us by a study on "The Royal Court of Adiabene"; but why should he say that the conversion of Helena and her children to Judaism "is a sight which possesses no sympathetic attraction for us"? The printer seems to have been puzzled by the name Yâkût. Prof. Beet explains the Pauline phrases, "Crucified and risen with Christ," &c. Dr. Maclaren continues "Philemon," and Dr. Dods notices a few English books on the New Testament.

THE HISTORY OF THE INVENTION OF
 PRINTING.

XV.

Summary.

AFTER having explained what I desire to say for the present on the invention of printing, I will endeavour to sum up the results, so far as I am at liberty to call them results, in somewhat modified form. In doing so I shall be able to state a few points more clearly than I could have done when I had to surround them with all sorts of explanations. While proceeding I will concentrate into a few words most of the arguments which I have ventured to advance at greater length before, always quoting in brackets (chaps. i., ii., &c., as the case may be) the number of the chapter or chapters in the ACADEMY (from April 30 onwards) where my views may be found. It is satisfactory to me to be able to say that my articles have already stood the test of an adverse, though rather unintelligent and rambling, criticism in the *Dutch Spectator* (published at the Hague), which has adopted the views of Dr. Van der Linde with great fervour and confidence. But as, to my great regret, I have not learned anything from this criticism that could affect my arguments in one way or the other, I need not take any notice of it in this place.

Let us suppose that circumstances lead us to study the books printed before 1500, not in a haphazard fashion, but thoroughly, and animated with a sincere desire to know all about them. We start with the idea of making catalogues of such incunabula as will come under our observation from time to time, not only by visiting European libraries and private collections, but by studying and examining the facsimiles published by bibliographers. We arrange and describe the books under their respective countries, towns, and printers as the only method by which we can learn ourselves and be instructive to others.

After having studied, described, and arranged a large number of incunabula, we have gradually separated from all other books a group of forty-five different works (chap. vii.), some of which we only know from fragments, and which we cannot ascribe to any other country but Holland, firstly, because certain peculiarities of their types (chaps. vii., xi.) are known to be indicative of a Dutch, rather than of a German, or Italian, or any other nationality (chap. xi.), and secondly, because one of the works (the *Spiegel*), printed in the same types as a good many of the others, is written in the Dutch language (chap. ix.). But as none of them bear a date, place of printing, or printer's name, we cannot assign them forthwith to any particular town of Holland, nor to any printer, nor to any definite year or period.

Our books are printed in eight different types (chap. vii.), of which i. and ii. belong together, because they are found in one and the same book; iii., iv. and v. belong together, but we cannot as yet prove that they are inseparably connected with i. and ii., though the family-likeness between them is so striking that we could not separate them without further evidence; and vi., vii. and viii. we link on to the types i.-v., for the same reason that we link the latter types together.

As regards the date to be assigned to the books, when we take them up one after the other, without comparing them together or with any of the other incunabula, we feel inclined to assign some of them provisionally to the rather conventional date 1470, and some to the rather conventional dates *circa* 1472 or 1473. But it strikes us that we cannot place any one of them later than the year 1474, as they are all, not one excepted, without signatures, without initial directors, without

hyphens, without catchwords—in short, without any of those characteristics which we see gradually, one after the other, come into almost general use from 1473 (if not earlier) to 1480. We even find (chap. ix.) that four editions of one and the same book (the *Speculum*) are wholly printed on one side (anopisthographic)* only, partly as a blockbook and partly with movable metal types, which is a unique feature in the whole annals of printing and certainly not easily explainable after 1470. And as regards the lines—the evenness, or unevenness, of which is in many cases a sure guide in the dating of books—we find that, in some of our works in types iv., v., vii., they show a tendency to be even (though not always), whereas in the others they are uneven. So that, if we subdivide the books into groups, according to their types and workmanship, the books in types iv., v., vii., show a certain advance over those in types i., ii., iii., vi., viii., which compels us to put the latter group in an earlier period than the former.

Examining further we notice that 4 (5) of the books in types iv. and v. (the later group) must have been printed after 1458, as they bear the name of Pope Pius II. (chap. ix.). On the other hand, type v. must have existed before September 13, 1474, as a copy of one of the books in that type was bought by an abbat who was abbat only from (the end of) 1471 till September 13, 1474 (chap. ix.). We observe, moreover, that one of the works in type v. commences on the verso of the last leaf of another book (*Ludovicus Pontanus*) in type iv. (chap. vii.), which not only connects these two types, but seems to prove not merely that type iv. existed before v. was used (before September 13, 1474), but that, when it was used in this connexion, it was on the point of being discarded. And, finally, we find that we have also correctly placed type i. earlier than iv. and v., as fragments of a *Donatus* printed in type i. are used, towards the end of 1473, as binder's waste, in the binding of a register or account-book for 1474 (chap. viii.)—a fact which naturally suggests a much earlier existence of that type than 1473.

Well, then, presuming that, on bibliographical grounds, we cannot place any of the books later than 1474 (or, if any, only a few in types v. and vii.), and that certain circumstances suggest an earlier existence of, at least, two of the types (i. and iv.), we are at once confronted with the fact that we have to deal, not with forty-five different works, but only with twelve different works, and that our number of forty-five books, or volumes, consists of several different editions of four or five of these works. For instance, we have four editions of the *Speculum*, nineteen editions of the *Donatus*, seven of the *Doctrinale*, &c., (chap. vii.). Now, if our group or groups of books consisted of forty-five different works, we might suppose them to have been set up the one immediately after the other, so that an active printer might have issued them all in two or three or four years, as the books are not voluminous. But editions of one and the same work, totally different (not in text, but in the setting-up), suggest intervals between each successive edition; intervals of waiting till the copies of the previous edition are sold. We have nineteen (!) editions of the *Donatus*. How long an interval shall we place

* I will not now refer again to the other anopisthographic fragments of which I spoke in chapter viii., as an Oxford student of the subject has suggested to me a different explanation of this anopisthographic condition than the one given by me. The subject will have to be inquired into, but neither of us are able to do so for the present. I will only now remark that the other suggestion does not affect my contention that the fragments in question are not printer's or binder's waste or discarded proof-sheets.

between each of them? Half a year? We then get nine and a half years for the successive issue of our nineteen editions, that is a period from about 1465 to 1474. Even such a period (based on a too modest calculation) would entirely alter the history of the introduction of printing into the Netherlands as it is propounded by the opponents of the Haarlem claims. But an interval of half a year between each edition seems rather short for that period. The *Donatus* was, indeed, a popular school book, and, therefore, much in demand; but the students of the Latin language were, perhaps, not numerous, and, no doubt, a good many MS. copies were still being prepared by the side of the printed copies. So, for instance, the 250 copies which Schweynheim and Pannartz printed at Subiaco, though they all appear to have been used up, seem to have been quite sufficient for the printers' purpose, as we do not find that they printed any more. Of the *Donatus* in the thirty-six-line Bible type three editions seem to have been sufficient. Of the Schoeffer *Donatuses* we know no more than four editions. Would it, then, be unreasonable to suppose that our Dutch printer printed a small number of copies of his first and second, but gradually more of his later editions, and that, in this way, we might, on an average, allow an interval of eighteen months between each edition? This would give us twenty-eight and a half years for the successive issue of the nineteen editions, that is from about 1446 to 1474.

It is, of course, possible to argue that, although types i. and ii. belong together, and also types iii., iv., v., it is as yet not proved that those two groups of type were both used in the same office, and that a similar objection may be made as regards types vi., vii., viii., between none of which any connexion, except that of a family-likeness, has ever been established. So that, if we split up the one group of eight types into five groups, and suppose that each group belonged to a different printer, the nineteen editions of the *Donatus* may all be supposed to have been printed in the space of a few years. It might even be supposed that the founders of the different types transferred some of their stock to another person to enable him to print *Donatuses*. This last supposition may be met at once by the fact that there is no trace anywhere, so far as we know, of any large stock of type from which portions could be transferred. Nor do we hear of such transfers before about 1480, except the two supposed transfers of Gutenberg to Pfister and Bechtermünctze; and these are both so doubtful that we had better build no speculations upon them. And, as regards disconnecting types i. and ii. from iii., iv., v., and these in their turn from vi., vii., viii., and the latter again one from the other, it is possible; but even then we retain six editions of the *Donatus* in type i., and of one of them fragments were used as binder's waste at the end of 1473, while in type v. (which was in existence before September 13, 1474) we have also six editions of the same work, while there are four editions in type iv., which must be assumed to have existed and perhaps to have been used up before type v. began to be employed. So that the net result of all these speculations would be the establishment of at least five new early printers in the Netherlands, all working a considerable time before 1474, and none of them leaving a trace of their existence behind. Such a supposition is possible of one, perhaps of two, but hardly of five or more printers. So that after all it seems better to keep the eight types together and see how the dates 1446 to 1474 will work.

At this point we think it useful to compare our forty-five incunabula with some of the earliest books printed in the Low Countries, at Utrecht, Louvain, &c. (circa 1473-1480); when we find that the latter have nothing in common

with them, but that, on the other hand, the types of our forty-five books remind us, in every respect, of the earlier period of the Dutch blockbooks and MSS. (chap. xi). We also find that they are all, so far as we know, without any colophon, which would be incompatible with a period after 1471, but not with the earlier period of the blockbooks and MSS. (chap. xi.). We see, moreover, that out of the forty-five books, no less than thirty-three are printed on vellum, which is incompatible with a period after 1471, but not with the earlier period of the blockbooks and MSS. (chap. xi.). It is true we hesitate for a moment to turn this vellum printing into evidence for an early period, because we observe that nearly all the later editions of the *Donatus* are also printed on vellum, even so late as 1500, and perhaps later, so that it looks as if there existed an idea of having this and similar schoolbooks printed on stronger material than paper. This idea, however, seems to have already existed before or about 1456, as the six or seven early Mentz *Donatuses* that we know of are also printed on vellum. But, of course, the idea, if it did exist, may just as well be supposed to have entered the mind of another, of a still earlier printer, who commenced, perhaps, in 1445 and left off in 1474. In such a case we may assume, not only that he commenced to print on vellum, because he was more accustomed to it than to paper, but that he continued to print on it by way of custom or tradition, and that other printers caught the habit or custom from him, or from seeing his products. But if we place this printer, with all his vellum products, say, in the decennium 1470-1480, there would seem to be a break in the vellum printing from 1456 to 1470, for during that period printing on paper was universal wherever printing had been introduced, and even *Donatuses* began to appear printed on paper. So that, after all, this almost exclusive vellum printing seems more compatible with a period before, than after, 1470. Nor do we find anything in the woodcuts of the *Speculum* inconsistent with the early period in which these books must be placed on account of the anopisthographic mode of their printing (chap. xi., ix.). Finally, we compare our forty-five Dutch with some early German incunabula, by preference the earliest of Mentz, to ascertain whether the workmanship in the two groups of books forbids us to place the former in the same or in an earlier period than the German books. But we can see no reason (chap. x.) why, for instance, the *Laurentius Valla*, in type iii., should not be placed in point of time by the side of the *Catholicon* of 1460, or why the four editions of the *Speculum* should not be placed a few years earlier than 1454-1460 (the Sexennium of the Mentz Indulgences of 1454, the Psalters of 1457 and 1459 and the *Catholicon* of 1460); nor why some of the Dutch *Donatuses* should not be placed a few years earlier than the Gutenberg and Schoeffer *Donatuses*. For, not only have we learned that from at least 1454, when the first printed date makes its appearance, till about 1477, all printers followed one universal plan of printing, that is, they simply imitated the MSS. of their time, so that there is scarcely any difference in the mode of printing books, and, therefore, hardly any difference in their look (chap. vi.); but we have seen that through this unaltered, and therefore uncertain and deceptive look, books have often been placed fifty, forty, thirty, twenty, or ten years backwards or forwards, in accordance with fresh evidence or new opinions (chap. vi., viii.).

Having now examined and weighed all the internal and external features of our Dutch incunabula, and every positive and negative argument that we can advance ourselves, or find advanced by others, for or against the period 1446 to 1474, and finding nothing against,

but everything in favour of it, we turn to history and are at once reminded (1) of the testimony in the Cologne Chronicle of 1499 (=Ulrich Zell) which declares not only that the *Donatuses* printed in Holland were printed before there was any printing at Mentz, where it did not commence before 1450, but that these *Donatuses* served as models (the first prefiguration, the beginning) for the printing at Mentz (chap. x., xii.)—a testimony which is all the stronger because it appears as a contradiction of the tradition or rumour that Gutenberg invented printing at Mentz. (2) Of the passage in the *Batavia* of Hadrianus Junius, claiming, very circumstantially, and independently of the Cologne Chronicle, the honour of the invention of printing for Laurens Janszoon Coster, of Haarlem (chap. ii., x., xii., xiii.), and basing this claim not merely upon the tradition which lived in Junius's time (1568) among the inhabitants of the town, but upon the *speculum* (the four editions of which we could not possibly place in the decennium 1470-1480) and the *Doctrinale*, two works printed in the identical types used in at least six of our earliest *Donatuses* which we may fit into Zell's account (chap. xii.). This account we find indirectly confirmed by the finding at Haarlem, four times over, of fragments of our books, and even one leaf which had been used as binder's waste by the very bookbinder whom Junius alleges to have been the servant of the inventor. And though we cannot as yet accept Junius's year, 1440, as that in which the invention of printing was made, much less his year (1442) as that of the transference of printing to Mentz (through Coster's types), we must not pin an author of the sixteenth century strictly to all his dates, even if we were sure that the text of the *Batavia* were correct as it stands. But we find that we cannot be so sure of this point. On the contrary, the date of Junius's preface (1575) and the 128 years of his text suggest 1446 as the date of the invention, and 1442 in the text might be an error for 1452 (chap. xiii.). (3) Of the assertions of Van Zuren and Coornhert, both living at Haarlem about 1561, and speaking publicly of the Haarlem invention. (4) Of a pedigree, said to be of about 1520, of the reputed Haarlem inventor's family, on which it is asserted that "Coster brought the first print into the world in 1446" (chap. xiii.). (5) Of two MS. entries of an Abbat of Cambrai that in 1446 (therefore, before there was admittedly any printing at Mentz) and 1451, he bought printed copies of the *Doctrinale*, of which we have also seven editions (the interval between each being undoubtedly greater than that between the *Donatuses*, as it was neither such a small, nor such a popular, book) printed in Holland, three of them printed in the identical types of the earliest *Donatuses* (which we may fit into Zell's account), and of the *Speculum* on which Junius bases his assertion.

At this point we examine the claims of Gutenberg and of Mentz (chap. xiv.), and find that the assertion of an invention of printing there about 1450 is rather contradicted by the perfection in which the art makes its appearance there all at once in 1454. We see, moreover,

* The term is, as we know, *gette en molle*, or *jettez en molle*; and the phrase is, as Bernard (*Origine* i. 97 sqq.) shows, by at least eight examples, applied from 1474 to 1593 to typographically printed books, while he adds that he could multiply his examples without end, the phrase being used in the north and south of France till the present time. It seems quite plain that the abbat is speaking of a new, not generally known, mode of manufacturing books. But in 1446 or 1451 neither MS. books nor blockbooks were unknown or new; therefore, it seems natural to apply the abbat's phrase to the new mode of printing.

† If Junius is correct, one of these editions was printed at Mentz, but with the types stolen from Coster.

that all the testimonies which speak of such an invention there are mere pieces of late gossip or rumours, all of which we can trace to Gutenberg himself, or at least to his servant, and two of his relatives, and which are in no case based, like the Holland and Haarlem claims, on distinctly and especially named books. They come to us, in the first instance, not from Mentz, nor from Germany, but in an offhand and suspicious way from Italy and France, and only much later from Germany itself; whereas, on the other hand, Gutenberg himself and all those at Mentz or in its neighbourhood—who ought to have known, and ought to and would have spoken, if an invention had taken place there—preserve the strictest silence in public, and seem to know nothing about it, though some of those men speak of the art of printing with consummate minuteness, and mention everything except the one thing needful, namely that the art of printing had been invented by Gutenberg or at Mentz. Under these circumstances it seems inexpedient to infer from this silence at Mentz and in Germany anything but that the invention was not made there.

Seeing then that there is absolutely no foundation for the claims of Gutenberg and Mentz to the honour of the invention, except such a one as would have to be rejected, even if we had never heard of any other claims, we turn again to the Dutch books. And, finding that the testimonies—the independent testimonies—of the Cologne Chronicle, Junius, etc., point to the *Specula*, *Donatuses*, *Doctrinales*, which we have examined above, as the first books ever printed, and that these books in their turn bibliographically agree with the testimonies and the dates mentioned in them, and that no other town nor any other printer ever laid claim to these books—we have hardly any choice but to ascribe, till the contrary has been proved, the honour of the invention of printing to Lourens Janszoon Coster of Haarlem, fixing the date provisionally not later than 1446 (the end of 1445).

Suppose now that we assume, for one reason or another, that Gutenberg invented printing with movable types at Mentz, we should at once feel puzzled what books to ascribe to him, for none bear his name; and those that are usually attributed to him (as the 31-line Indulgence of 1454, the 36-line Bible, &c., and three or four *Donatuses*) we have, while grouping our German incunabula, placed with those of Albrecht Pfister at Bamberg, who printed with these types in 1461 (chap. vi.). But certain considerations, as the early date (1454) of the Indulgence, and the small brief type in the Indulgence, which was never used by Pfister, lead us to think that perhaps Gutenberg may have printed the earliest works ascribed to him, and have afterwards transferred his type to Albrecht Pfister. And though this would be entirely against all that we see happen from 1454 till 1477 (chap. vi.), we assume its possibility, otherwise there would be no books at all that could be apportioned to Gutenberg, for the 30-line Indulgence of 1454, and the 42-line Bible (Mazarine Bible), must be put down to Peter Schoeffer, while all the other books, as the *Catholicon* of 1460, &c., ascribed to Gutenberg, are too late to serve as a basis for a claim to the honour of the invention of printing.

Suppose, then, that the early Mentz books must be arranged as in my work on Gutenberg (p. 150 *seq.*), we are again puzzled at the perfection in which printing appears at Mentz the moment that we hear of it (chap. xii.). Well, it is said, the experiments of the inventor may not have resulted in anything worth preserving, or, if they had any practical results, these may not have come down to us. Or we say that the *Donatuses* known to be printed in

the 36-line Bible type (chap. x.) are Gutenberg's first-fruits.*

When these answers have removed to some extent our doubts, we are again at our wit's end how to explain the profound silence preserved, for at least thirteen years (1455-1468), by every one at Mentz and in Germany about an inventor, the invention itself, and the place of invention, though elaborate attempts were made during that period to proclaim loudly and publicly that some new mode, some by-invention, had come into existence whereby books might be printed. There is, therefore, no secrecy about the art of printing itself; but that it was invented at Mentz, and that a German invented it, is carefully concealed. And even Gutenberg himself preserves this inexplicable silence on two occasions (the lawsuit of 1455, and the *Catholicon* of 1460) when he, if he had been an inventor, ought to have spoken (chap. xiv.). Well, it is said, Gutenberg was robbed of all that he had made and done to put his new art into execution, and remained, moreover, heavily indebted to those who had so robbed him; so that his own interest forbade him to say anything not only in 1455, but when he published a large folio volume (in 1460) with all the details of his new art carefully described, for if he had said anything his copies would at once have been seized, and his printing office too. Moreover, all those loud and public proclamations about the new art, omitting all details about the inventor, &c., were issued by the inventor's enemies, and it was in their own interest to omit such details; and, at any rate, Schoeffer (Gutenberg's enemy) speaks (in 1468) of Johan (Gutenberg) as one of the *prothocaragmatici librorum* of Mentz.

These answers, however, seem lame and unsatisfactory in every respect (chap. xiv.); and so we ask whether this silence is not much better explained by the Cologne Chronicle of 1499, which says, by the mouth of Ulrich Zell, the famous Cologne printer, and a disciple of the early Mentz school, that the *Donatuses* printed in Holland before there was any printing done in Mentz were the models, the beginning of the Mentz printing, and that all that the latter town could lay claim to was that it had perfected the art of printing? Oh no, it is said, Zell meant *xylographically* printed *Donatuses* (chap. x., xii.), and even these were not printed in Holland, but in Flanders (chap. xii.). Or even if Zell meant *typographically* printed *Donatuses*, and even if he did mean *Holland*, he was an enemy of Gutenberg (chap. xii.), and, therefore, invented this story in order to injure his reputation. We now begin to smile, for the very persons who charge Zell, in this particular case, with gross inaccuracy or ignorance, and even with deliberate falsehood, simply for the sake of venting a supposed spite against Gutenberg, tell us, in another place, that Zell is such a high authority on all matters connected with printing that, for instance, his testimony as to the date of Mentz printing (1450) must be accepted as Gospel-truth. Or they say that Zell did not suggest the passage about the Dutch *Donatuses*, forgetting at the same time that if Zell did not suggest it, some-

* It is rather dangerous to base Gutenberg's claim, as Dr. Van der Linde does (*Geschichte*, 813), on one or two *Donatuses* in the 36-line Bible type, and to place these about 1448-1450, and at the very same time to relegate another set of the same school book printed in Holland, and showing the same primitive workmanship as the Mentz *Donatuses*, to the decennium 1470-1480. It is true, the *Donatus* facsimiled in Dr. Van der Linde's last book has, if possible, more uneven lines than any of the Dutch *Donatuses*; but every one must see that this merely arises from the larger and broader size of the types of the Mentz *Donatus*, and is not due to any greater degree of skill or incompetence on the part of the printer.

body else must have done it, for it is printed in the Cologne Chronicle.

Still, we ask further what to do with the genuine entries in the Diary of the Abbot of Cambrai, from which it appears that he, in 1440 and 1451, bought copies of the *Doctrinales* which were printed *typographically* (*jette en molle*): Oh, it is answered, they were not printed typographically but from wooden blocks (*xylographically*)! But, we rejoin, the phrase "*jette en molle*" is exclusively applied, from 1474 till the present day, to typographically printed books. The reply is that in the particular case of the Abbot of Cambrai it must refer to xylography, and that afterwards this technical phrase was transferred to the language of typography. We ask again whether any xylographic *Doctrinales* are known to exist. The answer is no.

We have a few more questions to ask: (1) What is to be done with the account of Hadrianus Junius with respect to the Haarlem claims to the honour of the invention (chap. x.-xiii.): It is an independent and a very circumstantial account, every particular of which has been found to be accurate, except the wooden types of the *Speculum* the theft of Coster's types, and the precise date of the invention, three points as to which we have for the present no adequate information, but which have, as yet, not been proved to be inaccurate. The answer is: everything is a falsehood, a fiction, a fable, a myth. (2) What is to be done with the earlier allusions of Van Zuren and Coornbert to an invention of printing at Haarlem: All this is again a fiction, a falsehood. (3) What is to be done with the pedigree of 1520 (chap. xiii.), made for an inhabitant of Haarlem who gloried in being a descendant of Lourens Janszoon Coster, the Haarlem inventor of printing, on which we find inscribed, not bombastic phrases of family pride, but the simple and homely assertion that Lourens Janszoon Coster "brought the first print into the world"? The answer is: it is a fabrication, or if it is genuine (and most of the particulars are correct, though one or two we cannot as yet explain), the assertion inscribed on it is a fabrication, a falsehood invented for the sake of exalting the family of Gerrit Thomaszoon for whom it was made.

We might here again ask why any man should deem it a source of pride to descend from a person "who brought the first print into the world," more especially if the assertion were not true and might easily have been replaced by someone more ambitious. But we now know enough. We see that the tradition of Gutenberg being the inventor of printing is not based on any book or any trustworthy testimony; that it can be traced to himself only, or (chap. xiv.) to his servant, who settled at Basel and speaks (about 1460) of it as a rumour, and to two of his relatives, who do not speak of it before the end of the fifteenth century, nearly thirty years after Gutenberg's death; that neither Gutenberg himself, nor any of his German or Mentz contemporaries, when they speak in public, seem to know anything about it; that the earliest assertion of an invention of printing in Germany comes to us, not from Germany, but from Italy, and the earliest mention of Gutenberg's name from France; that the claims of Germany and Gutenberg are contradicted so early as 1499 by a work of considerable authority, especially in a matter of this kind; that if the tradition, in spite of all these damaging drawbacks, is to be maintained, it can only be done (1) by applying extraordinary modes of interpretation to the Cologne Chronicle, and to the entries of the Abbot of Cambrai; (2) by the violation of all rules of fair and reasonable bibliography, asserting that a set of German books are printed about 1454 and earlier, and that another, an entirely similar,

or rather more primitive set of Dutch books are printed about 1471 and later; (3) by wholesale imputations of falsehood, deceit, and bad faith on the part of those who believe or assert that the invention of printing took place at Haarlem.

On the other hand, the believers in the Haarlem claims need not cast the slightest imputation on those who were the first to think or suppose that the invention was made in Germany, or at Mantz, or by Gutenberg. They merely have to trace the tradition or the rumour to its origin, and its hollowness is exposed. At this point they need but gather up all the testimonies in Dutch and German (the Cologne Chronicle) history as to an invention of printing in Holland, and confront these testimonies with the books (the Costeriana) on which these testimonies are based, and they will find that these books contradict, neither by their internal nor external appearance, the assertion that they are the firstfruits of the art of printing with movable metal types.

Though my essay has run to much greater length than I expected, I have not yet touched a good many things which require to be cleared up. But they can be left alone for the present. Perhaps I have sorely tried the patience alike of the readers and the editor of the ACADEMY. If this should be the case, I can only plead that I had to deal with a controversy of nearly four hundred years' standing, and that we have nothing but circumstantial evidence to approach it with. However clear such evidence may appear to those who collect and explain it, it always has to be set forth with great care and minuteness, and even then it is very often rejected, because it is circumstantial only. I may again be permitted to say, what I said in my work on Gutenberg, that I have approached the subject without any passion, or any bias for, or antipathy against, persons or things. I have no particular love or fancy for Haarlem or Coster, nor any, even the smallest, hatred against Mentz, Gutenberg, or Germany. I have no other idea but that we all wish to know the truth if we can possibly get at it.

CORRESPONDENCE.

THE MYTH OF PERSEUS AND ANDROMEDA.

Settrington: Aug. 4, 1887.

My exposition of the tale of Cupid and Psyche as a Babylonian lunar myth has been so favourably received that I am emboldened to put forward an explanation of the Andromeda myth which has been suggested to me by the eclipse of the moon which took place last night.

Andromeda must be identified with Astarte, the Phoenician moon goddess, since in one version the bride of Perseus is Andromeda, while in another we are told that his bride was Astarte, the daughter of Belus. While Andromeda is Istar, Perseus is the son of Zeus, which identifies him with Bel Merodach, the son of Anu, who, like Zeus, is the firmament of heaven. At the time of the eclipse, the moon, bound to a lofty rock, is exposed to be devoured by the dragon of darkness, who creeps upon her, but is rescued by the god of light, who descends from the sky to slay the dragon, and take the moon goddess for his bride. This myth, like that of Cupid and Psyche, seems to have come to the Greeks from Babylonia through a Phoenician channel. The scene of the adventure is localised at Iope (Joppa) on the Phoenician coast, establishing beyond question the Phoenician source of the tale. The names of the personages point to an Eastern origin. Perseus is the eponymus of the Persians. Andromeda is the daughter of Cepheus, the eponymus of the Cephenees, who are identified by Herodotus with the proto-Persians, and by Hellanicus, more correctly, with the Chaldeans. Cepheus, we are also told, was the son of Belus.

Some of the details of the myth may also be noted. Andromeda, like Psyche and other lunar heroines, was famed to be the most beautiful of maidens. The rock to which she is bound reminds us of the lofty rock to which Psyche wanders. Andromeda, like Psyche, is condemned by an oracle to be wedded and devoured by a hideous serpent. The identity of Perseus and Bel-Merodach is shown by the sickle-shaped sword which Perseus carries, and which is also borne by Bel-Merodach in the well-known Assyrian slab in the British Museum on which the conflict is pictured. Perseus has the winged sandals which denote a solar hero. The Babylonian dragon has the

scales, the wings, and claws of the Greek monster. In the Babylonian legend, Bel-Merodach, like Perseus, is arrayed in "glistening armour," and has a helmet of "light like fire" upon his head. The lunar connexion is also indicated by the fact that during the conflict the dragon stopped the flowing of the tide, which was resumed after he was slain. Prof. Sayce recognises the Babylonian legend as describing in "thinly-veiled language the eclipse of the moon" (*Libbert Lectures*, p. 102); but he does not seem to have noticed that the Greek myth of Perseus and Andromeda describes still more plainly the same phenomenon.

In many mythologies a lunar eclipse has been explained as the moon being devoured by a dragon; and we see how the fight between Bel and the dragon, originally a Babylonian myth of lunar observation, became to the Greeks the story of Perseus and Andromeda, reappearing in later Christian hagiology as the legend of St. George and the dragon, which, like the story of Perseus, was localised on the Phoenician coast. It is very curious that Bel-Merodach, the patron and protector of the great empire of Nebuchadnezzar, should thus have been transformed into St. George, the patron saint of England and her vaster empire.

ISAAC TAYLOR.

"COLLATION OF FOUR IMPORTANT MANUSCRIPTS."

Clermont en Auvergne: Aug. 1, 1887.

I have only just seen the ACADEMY of July 16, in which Prof. T. K. Abbott complains that I have "brought a serious charge against him."

I am very sorry if I have misrepresented the case; and it is quite possible that I may have done so. As I have no books at hand at the present time to ascertain the fact, I admit it readily on the assertion of Prof. Abbott.

It is quite possible that, in writing my "Essay on the Four Important MSS." I remembered only, as I do even now, what Dr. Ceriani had told me about his collations in a few places, and that I did not sufficiently consider that the joint editors had caused a copy of cursive 346 (1) to be made, (2) to be revised by Dr. Ceriani. If this be so, it is evident that Prof. Abbott did his best to reproduce the MS. Only one other course would have been better—viz., to reproduce some pages by photolithography. I believe that I have, indeed, recommended such a reproduction in that particular case, because the minute details of accentuation, itacisms, and general orthography have a special value when one wants to decide in what relation these really important MSS. stand to each other. As we know now not four only but at least eight MSS. of the same class, I would advise the reproduction of a few pages of each MS. by photolithography.

ABBÉ MARTIN.

Lowestoft: Aug. 1, 1887.

In my note in the ACADEMY of July 16 I purposely confined myself to the contradiction of an injurious statement of the Abbé Martin. I should like, however, to be permitted to correct a misconception of the Abbé's of a different kind, and of some critical interest. He asserts that the principal reason alleged for holding that the codices of the Gospels 13, 69, 124, 346, are derived from a single archetype, is their agreement as to the position of the *pericopa de atultera*. This is entirely erroneous. The reasons alleged by Prof. Ferrar and myself are their coincidence in a very large number of minute particulars, not the least important for this purpose being manifest errors, and the absence of any serious difference, except such as can be accounted for by the natural disposition to substitute a familiar for an unusual

reading. As the four MSS. are not supposed to be immediately derived from the common archetype, such substitutions constitute no objection to the hypothesis of a common origin, which appears to be set beyond doubt by the fact that, whereas peculiar readings common to all the four, or to three of them, are very frequent, an unusual reading is rarely confined to one of the group. Thus, if an unusual reading occurs in cod. 346, it is pretty certain to be found in 13 also, and is even likely to be found in the other two. Cod. 124 has been more frequently brought into conformity with the common text than the other three, while cod. 69 often has peculiar readings, due to the perverse ingenuity of the scribe himself (or his predecessor). This is not mere conjecture, but is a deduction from the tendency shown by his readings in cases where there can be no doubt. And this exposure of the true character of the peculiar readings of 69 is not unimportant. It remains to be seen whether the fifth MS. added to the group by the Abbé Martin, or the others added by Prof. Rendel Harris, will stand the test referred to above.

T. K. ABBOTT.

SCIENCE.

BOTANICAL BOOKS.

Course of Practical Instruction in Botany. By F. O. Bower and S. H. Vines. Part II. (Macmillan.) In this second part, Drs. Bower and Vines complete their useful handbook to the laboratory student in botany. The present part is devoted to the mosses, algae, and fungi, and is marked by the same accurate description and careful instruction as the first part. The plan adopted of printing certain words and phrases on each page in thick letters is a very convenient and useful way of calling the student's attention to the salient points in the structure of the object he has before him for examination. If we might offer a criticism on the usually admirable selection of types, we might express our surprise at the omission of all reference to the Characeae—organisms, which, from their abundance and the ease with which the structure of the reproductive organs is made out under the microscope, are among those most frequently placed before the student in practical botanical examinations. More space might also, we think, have been given to the diatoms and desmids—organisms, again, of great abundance, and presenting many most interesting physiological phenomena. Seeing that the second part of the work is only two-thirds the thickness of the first part, there would seem to be no reason for this scantiness of treatment. These, however, are minor criticisms, and the work is one which should be in the hands of every practical botanist.

Handbook of the Fern-Allies. By J. G. Baker. (Bell.) This is essentially a work for the collector and herbarium-student. In substance, it is to a large extent a reprint of papers which have appeared in the *Journal of Botany*, but enlarged and brought down to date. In form, it is a companion-volume to Hooker and Baker's *Synopsis Filicum*, and consists of critical descriptions of every known species of vascular cryptogams outside the Filices or ferns, *i.e.*, of the Equisetaceae, Lycopodiaceae, Selaginellaceae, and Rhizocarpeae. Between 500 and 600 species are here described, considerably more than one-half belonging to the genus *Selaginella*. The special object of the book being to serve as a guide for the identification of living or herbarium-specimens, the author has not encumbered it with entering into those points of morphology and minute structure which will be found in text-books and monographs; and Mr. Baker's intimate acquaintance with

the class of plants of which he treats is sufficient guarantee of the excellence of the work. It fills a gap which has long been felt.

Illustrations of the British Flora: an Illustrated Companion to Mr. Bentham's Handbook. Second Edition, revised and enlarged. (Reeve & Co.) The publishers have now issued in a separate volume the wood-engravings which formerly appeared in the illustrated edition of Mr. Bentham's *Handbook*, adding thereto new cuts of recently admitted species. The engravings, which are accompanied by enlarged dissections of parts, are for the most part good and characteristic. The swollen leaves of *Sedum dasyphyllum* (fig. 363), with their feeble attachments; the blistered foliage of *Helminthia echioides* (578); the erect catkins of *Betula nana*—are very well hit off. And the *Romulea* (1019) is visibly *R. columnae*, not the *R. bulbocodium* of earlier editions. In fig. 979, *Malaxis paludosa*, the artist indicates—what Mr. Bentham omits among his characters—the cellular bulbils on the leaves developing into new plants. On the other hand, it is awkward to have a prostrate plant sketched erect, as *Genista pilosa* (229). *Arabis stricta* (61) is not drawn with its graceful curve of the stem, nor *Montia fontana* (174) with its incurved flowers and seed vessels. In *Lanunculus ficaria* we miss the bulbils in the axils of the leaves—the more needful to be noticed because the plant rarely seeds in England. But the book ought to stand on every botanist's shelf side-by-side with Sir William Hooker's new edition of Bentham's *Handbook* (noticed in the ACADEMY of April 2).

A School Flora: for the use of Elementary Botanical Classes. By W. M. Watts. (Livingtons.) A little trip undertaken in the company of this book through one of the most flowery parts of South England satisfies us that it will be an excellent aid to young botanists. With its assistance they ought to have no difficulty in identifying all the wild plants which they are likely to meet with. Its plan is to guide the inquirer to the right name by means of a series of keys, like those given by Babington and Bentham, but reduced to the utmost degree of simplicity. These indicate, by a series of alternatives, first the sub-class to which the plant belongs; then the natural order; then the genus; and, lastly, the species. If the student chooses a wrong alternative—*e.g.*, pronounces a corolla regular when it is really irregular—he will, of course, go astray; but he can only blame his own mal-observation, as the alternatives are quite clearly put. An earlier edition of the book was intended for the Giggleswick school only, and therefore included merely such plants as grow around that centre; but the *Flora* has now been extended to include all "common" plants, and the rarer ones which are within reach of several of our large schools. It will thus be found generally useful, and all school field clubs and natural history societies should add it to their libraries. At p. vi., where the Germander Speedwell is taken as an example of how to work the keys, we cannot make the instructions come quite right. Possibly they were printed for the first edition and have not been corrected to fit the paging of the second. This does not, however, affect the clearness of the keys themselves.

PHILOLOGICAL BOOKS.

An Arabic Manual. By J. G. Lansing. (Chicago: American Publication Society of Hebrew.) Prof. Lansing has produced a much-needed grammar of classical Arabic. We possess, indeed, a fair abundance of Arabic grammars; but they are either too slight and superficial, or else, like that of Dr. Wright, too

elaborate for the beginner. Prof. Lansing, who has spoken Arabic since he was a child, and whose experience has since taught him what it is that the Occidental student exactly requires, has achieved the happy mean. We have no hesitation in saying that for practical purposes his grammar is the best in existence. It is clear, well-arranged and compact; and, while doing full justice to the richness of Arabic grammar, does not confuse the learner with a multitude of details. The reading lessons and vocabulary at the end will be found particularly useful: while the fact that Arabic is almost his mother-tongue gives the author a practical mastery over the language which the Western scholar rarely attains. America is to be congratulated on having students to demand and a teacher to provide a book of the kind.

DR. AUGUST MÜLLER has brought out a fifth edition of the well-known *Arabische Grammatik* of C. F. Caspari (Halle: das Waisenhause). The editor acknowledges in his preface that the work, in order to bring it up to the standard of modern philological science, needed a thorough remodelling, which his other engagements have not permitted him to attempt. The new edition, therefore, corresponds paragraph for paragraph with its predecessor, though a great number of improvements have been made in detail. The volume is beautifully printed.

Acta Sancti Mar Abdu'l Masich aramaice et latine edidit nunc primum ex cod. Londinensi (Addit. MSS. 12,174) Josephus Corlyu, S.J. (Bruxelles: Société belge de librairie.) In a recently issued fasciculus of the *Analecta Bollandiana*, Father Corlyu, Professor of Holy Scripture at Louvain, has published the Syriac text with a Latin translation of the Acts of St. Mar Abdu'l Masich. The text is that of Codex No. 12,174 (Addit.) of the British Museum (see W. Wright, *Catalogue of Syriac MSS. in the British Museum, acquired since the year 1838*. Part iii., p. 1,132). The late Henry Matagne, one of the most distinguished among the new Bollandists, copied it in 1867, with a great number of other Syriac MSS, which he intended to use for the subsequent volumes of the *Acta Sanctorum*. Death prevented him; and this explains why this MS., copied twenty years ago, only appears now. Father Corlyu has accomplished with great care his twofold task as editor and translator. Moreover, his work is stamped with the authority of Prof. W. Wright, of Cambridge, who has revised the proofs and examined the version. The publication of the learned Belgian scholar deserves to be received favourably by all readers who are interested in the monuments of Aramean literature.

Manuel de la Langue Tigräi. By J. Schreiber. (Vienna: Hoelder.) The Tigräi language is the dialect of Central and Northern Abyssinia, and is the Tigrina of Praetorius, whose learned work upon it is well known to Semitic scholars. Father Schreiber's object is a practical, rather than a scientific, one; and he has compiled his manual not for the sake of scholars, but of missionaries and travellers. As it is based on the spoken language of the people, however, and not upon the literary language of European translators, the scholars also will give it a cordial welcome.

Lingua 'Afar nel Nord-est dell' Africa. By G. Colizza. (Vienna: Hoelder.) The 'Afar are an Abyssinian population, called Danakil by their Tigräi neighbours, who occupy the valley and some islands between the Bay of Adulis and the Gulf of Tejurah. With the help of Prof. Reinisch, Signor Colizza has compiled a grammar of their language, followed by a number of short texts and a vocabulary. His laborious work will prove very useful in these days of growing African trade, while

the philologist will find in it much to occupy his attention. We only wish that the author had remembered the weaknesses of human nature and added translations to all his texts.

PROF. REINISCH himself has just published the second volume of his work on *Die Bilitin-Sprache* (Vienna: Hoelder), which contains an elaborate dictionary of the language. He has thus laid the students of the African languages under a fresh obligation, and added another to the many services he has rendered to African philology. Whatever comes from Prof. Reinisch's hand is the work of a master.

Arische Forschungen. Part II. By C. Bartholomae. (Halle: Niemeyer.) Dr. Bartholomae continues his valuable researches into the language of the *Avesta*. His notes on its phonology and grammar are primarily intended to clear up the meaning of the Zend texts; but the comparative philologist will find much in them of interest and importance.

THE AMERICAN JOURNAL OF PSYCHOLOGY.

THE first number of the *American Journal of Psychology* will appear early in October, under the editorship of Dr. G. Stanley Hall, professor of psychology and pedagogics in the Johns Hopkins University, Baltimore. The journal will be devoted to—(1) original contributions of a scientific character. These will consist partly of experimental investigations on the functions of the senses and brain, physiological time, psychophysic law, images and their association, volition, innervation, &c., and partly of inductive studies of instinct in animals, psychogenesis in children, and the large fields of morbid and anthropological psychology, not excluding hypnotism, and the field vaguely designated as that of psychic research; and, lastly, the finer anatomy of the senses and the central nervous system, especially as developed by the latest methods of staining, section, &c. (2) Papers from other journals. Articles of unusual importance will be translated from other languages, or even reprinted from other publications, in full or in abstract, if not generally accessible. (3) Digests and reviews. An attempt will be made in each number to give a conspectus of the more important psychological literature of the preceding three months, and to review significant books, bad as well as good. While articles of unusual importance in the field of logic, the history of philosophy, practical ethics, and education will be welcomed, the main object of the journal will be to record the progress of scientific psychology, and special prominence will be given to methods of research. Among the readers whose studies the editor will bear in mind are these—teachers of psychology in higher institutions of learning, biologists and physiologists, anthropologists who are interested in primitive manifestations of psychological laws, and physicians who give special attention to mental and nervous diseases. The advancement of the science will be constantly kept in view, and the journal will be a record of the progress of investigations. The journal will be published quarterly, and with as much regularity as the supply of material warrants. Each number will contain from sixty to one hundred pages. The subscription price will be three dollars a year, in advance. English subscriptions may be forwarded through Messrs. Trübner.

CORRESPONDENCE.

PAINTED CUNEIFORM WRITING.

Oxford: Aug. 9, 1887.

The British Museum possesses among its treasures of Babylonian and Assyrian antiquities a fragment of a clay tablet, preserved in

the first tray of Table-case E in the Assyrian room, and marked *a*, which may, perhaps, possess some special interest. One of the two rather flat sides of the fragment is inscribed with seven small lines engraved with the common Assyrian cuneiform characters of the period of Esarhaddon, Sennacherib, or Sardanapallos. As only very few characters are left, I have not yet been able to make out whether the inscription to which the fragment belongs has been published or mentioned elsewhere. The other face of the tablet, however, bears a fragmentary line of signs, not engraved, but written on the clay with a kind of brick-red paint. On a first view, the characters look like cuneiform Assyrian signs, showing the same style of writing as that of the so-called *amulettes*, some of which will be found described in my *Babylonisch-Assyrische Literatur* (§106); and though only a few traces are left (*viz.*, the end of a character like the Assyrian *ig*, one upright wedge as if to indicate the name of a person, two wedges like the beginning of the Assyrian *an*, a mark like the end of *nu*, and a clearly written *bar*, *mash*), I have no doubt that the characters are really cuneiform writing, mainly because no other characters, Pehlevi, Phoenician, or Greek, would agree so well with what remains. The style shows that this was not a first attempt on the part of the scribe to draw the signs, but that he was well acquainted with them. Though I think it certain that the writing is no modern forgery, I would not venture to determine to what exact period the characters belong; very probably they are much later than the engraved ones on the other side of the tablet. Perhaps some of the readers of the ACADEMY will be interested in the fact I have stated; because it is, so far as I know, the first time that painted cuneiform writing has been discovered. CH. BEZOLD.

THE HITTITES AND PYTHAGOREANISM.

London: Aug. 8, 1887.

On a recent visit to Asia Mr. Greville Chester obtained a remarkable seal, found near Tarsus. The seal has been spoken of as "Hittite"; and there are reasonable grounds for accepting this designation. It must be remembered, however, that in our present ignorance we apply this name to monuments which, though presenting one or more points of resemblance, may be found by and by to belong to types or classes widely divergent. Though, so far as I am aware, the newly discovered seal gives no additional aid in the decipherment of the inscriptions, yet it is of great interest.

It may be described generally as of cubical form, with engraved figures on five sides. On the circular seal from Yuzgat in Asia Minor, which the British Museum obtained last autumn, there are numerous equilateral triangles, which seem intended merely to fill up vacant spaces. But the evidence of the Yuzgat seal, taken together with that of the new seal, leads to the conclusion that the triangle had anciently in Asia Minor a mystical significance, as we know was the case in India, where it was regarded as the source of all things. Here we may recall the curious statement of Plutarch (*De Iside*, c. 75) that the Pythagoreans called the equilateral triangle *Athena*, with the additions *Τριτογένεια* and *Κορυφαίτης* (Sprung-from-the-vertex),* both of

* It is here worthy of note that, together with a Phoenician inscription, there is a bas-relief on a stele of Lilybæum (figured in the *Corpus Inscriptionum Semiticarum*, and by Perrot and Chipiez in their *Histoire de l'Art*, vol. iii., p. 309), on which occurs, as an object of worship, an equilateral triangle, with a head and projecting arms at the vertex. This figure sheds, not improbably, a good deal of light on the myth of Athene springing from the head of Zeus.

these [names being connected with the triangle.

On the new seal a curious figure is found four times, always with divergent legs having turned-up toes, or the so-called "Hittite boots." These "Hittite boots" led me to conjecture that this figure is a sort of abstract symbol of human nature. The figure itself is in all probability a modification of the equilateral triangle. Once it occurs with rounded head and projecting ears. In two cases a sort of cap in the shape of an equilateral triangle covers the head almost completely—an arrangement which becomes tolerably intelligible when we recollect the Pythagorean connexion of the equilateral triangle with the goddess of wisdom. The three-in-oneness denoted by the triangle is represented also on the newly discovered seal by the trident, which occurs three times in varying form. In one case it seems to contrast, as held by one figure, with two parallel rods or spears held by another. On another face of the seal, on which is found the curious symbol above mentioned and the triangle, a standing figure holds vertically in the right hand a single rod, and two parallel rods, also vertical, in his left, reminding us of the Pythagorean doctrines concerning duality and unity, the even and the odd, as well as that two and one make up the mystical number three. Such indications of Pythagoreanism as are thus presented—and, perhaps, even the general cubical form of the seal, is to be taken in this connexion—are in accordance with the well-known traditions which tell of the travels of Pythagoras, and connect the Pythagorean doctrines with the East.

A short article of mine on the new seal, with two or three figures, appears in the *Babylonian and Oriental Record* for August; and I understand that the seal is to be fully engraved, and published together with, I believe, a paper from the pen of Prof. Sayce, in the *Journal* of the Royal Archaeological Institute.

THOMAS TYLER.

SCIENCE NOTES.

IN compliment to Prof. Clifton, of Oxford, the name of *Cliftonite* has been proposed by Mr. Fletcher, of the British Museum, to designate a new meteoric mineral. In examining the meteoric iron which was found in 1884 at Youndegin, in Western Australia, Mr. Fletcher has discovered a black mineral which he regards as an allotropic form of carbon, different from any known terrestrial mineral. From a preliminary description published in *Nature* it appears that Cliftonite resembles graphite in most of its physical properties, while it agrees with diamond in crystallising in the cubic system.

THE August number of the *Journal* of the Anthropological Institute, though rather thinner than usual, is noteworthy in that it contains a paper by Sir Charles Wilson descriptive of the Tribes inhabiting the Valley of the Nile north of Khartum. In the same number Prof. Ferrier and Dr. Lauder Brunton discuss the functional topography of the brain.

PHILOLOGY NOTES.

DR. J. A. CRAIG, of the Lane Theological Seminary, Cincinnati, U.S.A., has given the first complete translation of the Monolith Inscription of Salmaneser II. in the July number of *Hebraica*. The correction of the text of this inscription was the main object of a visit to the British Museum in 1885. Opposite each page of the translation Dr. Craig gives a transcription in syllables of the text; philological notes follow, and a list of corrections to the text in *W. A. I.* iii. 7, 8.

THE first twelve numbers of the *Diccionario Etimológico de la lengua Bascongada*, by the late Novia de Salcedo, have appeared (Guipuzcoa: Eusebio Lopez).

WE have received a leaflet of four pages of Volapük applied to Basque, by J. M. Schleyer, of Constance.

FINE ART.

Histoire de l'Art dans la Flandre, l'Artois et le Hainaut avant le XV^e Siècle. Par M. le Chanoine Dehaisnes. (Lille: Quarré)

THIS work, in three large quarto volumes, is divided into two parts. The first, consisting of xxiv. and 1,065 pages, forming two volumes, closely printed in small type, contains all the documents and every mention relating to art in Flanders, Artois, and Hainaut prior to the fifteenth century met with by the compiler during twenty-five years of work in the archives and public libraries of France and Belgium. M. Deshaisnes has examined 24,150 deeds, 454 accounts, 14 registers, and 4 cartularies in the archives of the department of the North at Lille, and an almost equal number in the archives and libraries of other towns enumerated in the Preface. He has also extracted from the *Acta Sanctorum*, the *Opera diplomatica* of Le Mire, the *Historiens de Gaule et de France*, the *Monumenta Germaniae historica*, many printed cartularies and the memoirs of learned societies, a considerable number of notes relating to art in the above-named provinces, all arranged in chronological order. These fill 920 pages, followed by a most useful glossary of words not explained in Ducange, Roquefort, de Laborde, or Gay. Two very complete indexes, the first of subjects, the second of artists, terminate this part, which will henceforth be a standard book of reference for all students of the history of any branch of art during the Middle Ages.

The third volume contains a history of the rise and progress of art in the district corresponding with the present Belgian provinces of East and West Flanders and Hainaut and the French departments of the Nord and the Pas de Calais, based on the documents brought together in the other two volumes, and on an examination of the works of art that have escaped destruction. This volume, which may be purchased separately, naturally appeals to a larger number of readers, and will be heartily welcomed by all who interest themselves in mediæval art. It opens with a brief sketch of early Gaulish and Gallo-Roman monuments and art-remains, and of the diverse influences which contributed to civilise and form the mixed race that inhabited this, in itself, rather uninteresting country prior to the invasion of the Normans and Huns, who spread devastation throughout the land. Indeed, the only construction dating from an earlier period now remaining is a portion of the ruins of the abbey of Saint Bavo at Ghent, of the seventh century. In chaps. iii to vi. the reader will find a brief account of the chief works in the different branches of art prior to the twelfth century of which we have any record, and a description of the few examples which have been happily preserved until now. A certain number of these, especially of the more portable class, and most of the precious stuffs,

were imported from the East; but there is no doubt that Labarte, in assigning a Byzantine origin to every work of art of any merit, was quite in the wrong. A passage in the chronicle of the abbey of Lobbes, cited by me in the *Beffroi*, vol. 3, and reproduced here, proves that, contrary to Labarte's opinion, the art of casting large works in metal was practised in Hainaut in the second half of the tenth century. The fact is, all the old foundations did not perish in the barbarian invasions. Several of the Lotharingian monasteries escaped altogether, and of many others in the provinces with which the present work deals the pious inmates sought refuge in flight; when the storm had passed they returned to their ruined homes, restored them, and resumed their life of prayer and work. We know that in the abbey of Solignac, in Saint Eligius's time, every monk practised some art, and that in the eighth century the nuns of the abbey of Valenciennes had a regular school for teaching embroidery and illumination. Harlindis and Reinildis, daughters of a wealthy lord named Adelhard, were brought up there. They founded a nunnery at Aldeneyck, where are still preserved a Book of Gospels, adorned with miniatures, and also some embroidery, the work of their hands. The larger monasteries were art centres ever ready to impart their knowledge not only to members of the same order, but to all who were willing to learn.

It is interesting to know that in the beginning of the ninth century the cathedral of Cambrai had a painter who, in the contemporary annals, is styled an excellent artist. His reputation spread beyond the province, and even into Normandy, whither he was invited by Saint Ansegisus to adorn the walls of the abbey of Fontenelle. In the second half of the tenth century the abbey church of Lobbes was decorated with wall paintings; and a coloured statue of our Lord, described as life-like, was set up at great cost before the ambo. It is said to have been incomparably finer than any other in that part of the country. The description of these works, and many passages in the chronicles of the abbeys of Liessies, Saint Bertin, &c., prove that not only the cathedral and abbey churches, but also their refectories and chapter-houses, were adorned with statuary and paintings.

Very little sculpture of this period has come down to us with the exception of a few fonts and tombstones. One example, the wooden staff of Saint Aldegundis, a little over four feet high, carved with nineteen subjects from the life of Christ, has escaped destruction owing to its being a relic. Although very rude, there is a good deal of expression in the figures. The number of ivory diptychs and plaques used for adorning Books of the Gospels, shrines and portable altars, must have been very great, not only in church treasuries, but even in private hands, as may be gathered from inventories, such as that of the objects bequeathed to his children by Everard, Count of Cisoing. Many of these were no doubt imported, but many more must have been carved by the monks. As to seals, to which sufficient attention has not as yet been given, there can be no doubt they were home productions.

Of the goldsmith's art of the Frankish and

Merovingian period many specimens have been dug up, the earliest and most interesting being the sword and decorative objects found in 1653 at Tournai, in the tomb of Childeric I. A gold cross in the treasury of the cathedral of that town, and a ring and jewel at Mons, may be cited as specimens of ecclesiastical work. The chronicles of religious houses abound with notices of them, and show that the production of works of art was constantly going on. But if for all these we have to rely chiefly on descriptions, there is one branch of art of which many specimens have come down to our time. The public libraries of Belgium and the North of France, notwithstanding the numerous and shameful acts of vandalism committed at the end of the last and commencement of this century, still preserve a sufficient number of specimens to enable us to follow and appreciate the influences at work, and the progress of the art of the illuminator. In the sixth chapter will be found descriptive notices of more than thirty illuminated MSS. In these early specimens we find examples of debased Roman art, imitations of Byzantine designs, as well as vigorous Scottish and Anglo-Saxon work. It was not however until the eleventh century that art in these countries ceased to be a mere servile imitation of antique or foreign work, and began to acquire a character of its own. A MS. in the town library of Valenciennes, the work of monks of the abbey of Saint Amand, contains several miniatures, evidently original compositions, representing the principal events in the life of the founder. These may be cited as early examples of the native school of art which, in the following centuries, produced so many exquisite works. Many writers, and among them Labarte, whom I am sorry to say, the author of this volume quotes without a word of protest, throw ridicule on what was a distinctive characteristic of the school—namely, the representation of events of earlier times as if contemporary. Now, this contention is most certainly incorrect. The principal persons, such as Christ, the Blessed Virgin, and the Apostles, have always a conventional costume; and if the minor figures were clothed in contemporary costume and the scene laid amid local surroundings, it was to make the people better realise the subject. The artist's aim was to tell a story in all its simplicity, and to convey a truth to the mind of the beholder; and he succeeded. And, after all, of the immense number of modern pictures the authors of which have aimed at archaeological correctness, there are very few which are free from gross anachronisms, and satisfy the antiquary, still fewer that interest the people.

In the twelfth century, here, as elsewhere, fresh life seems to have been infused into everything. Bishops set to rebuilding their cathedrals; abbeys and convents sprung up on all sides. The Cistercians in the country, the Dominicans and Franciscans in the towns, had all a great influence in the building up and development of the new feudal and Christian society, of which mediæval art was the outcome. From this period onward the progress of art in all its branches can be followed in each centre, thanks to the abundance both of monuments and of documents. In the earlier years the monasteries and cathedrals

drals were the chief seats of art; but their importance gradually diminished, and by the end of the fourteenth century the arts had acquired a settled home in most of the large towns. It must be borne in mind that during all this period there was a constant inter-communication between the different art centres which bore good fruit. Was any technical improvement discovered, or any remarkable work produced, the news was quickly bruited about; the former was learnt, the latter studied, copied, and imitated. In this manner the different local schools acted and re-acted on one another. Copyright, be it remembered, dates from the end of the fifteenth century, and for a long time after that was only applied to mechanical reproductions.

A separate chapter is devoted to the history of art from the twelfth to the fourteenth century in Tournai, Ghent, Bruges and Ipres, Lille, Douai, Valenciennes, Mons, Cambrai, Arras, and Saint Omer; these again being followed by notices of works executed for the Counts of Flanders, Artois, and Hainault, and lastly, for Philippe le Hardi, Duke of Burgundy. The amount of material brought together here ought to serve as a powerful stimulus to younger men to study the history of the different branches of art. Few people, I think, have any idea of its being possible to fix the authorship of any number of works, much less to classify in chronological order the productions of any one master. Thanks to Mr. Dehaisnes, we have now a fairly perfect acquaintance with Andrew Beauneveu of Valenciennes, the earliest mention of whom occurs in Froissart,* who, speaking of John, Duke of Berry, and his castle of Mehun-sur-Yèvre, says that in 1390

“ils’y tint plus de trois sepmaines et devoisoit au maistre de ses oeuvres de taille et de peinture, maistre Andrieu Beauneveu, à faire nouvelles ymages et peintures: car en telles choses avoit il grandement sa fantasia de tousjours faire ouvrer de taille et de peinture. Et,”

adds the chronicler,

“il estoit bien adressié: car, dessus ce maistre Andrieu, dont je parolle, n’avoit pour lors meilleur ne le pareil en nulles terres, ne de qui tant de bons ouvraiges feust demouré en France ou en Haynnau, dont il estoit de nacion, et ou royaume d’Angleterre.”

Of the many works executed by this distinguished sculptor and miniaturist for England none have as yet been recognised. The miniatures in the *Traité d’Amour*, offered by the chronicler to our Richard II., may perhaps have been his work. Twenty-four miniatures of a psalter executed before 1401, now in the National Library at Paris, and two others in a Book of Hours, now in the Royal Library at Brussels, are described at length, and the two last reproduced by the heliographic process of Dujardin. The remains of the royal tombs executed for Charles V. of France at Saint Denis, the exquisite statue of St. Katherine in the chapel of the Counts of Flanders at Courtrai, are all described; and documents as to other works destroyed during the Revolution of 1793 are reproduced. It may be well here to call attention to a recumbent effigy of an abess in the Premonstratensian Church at

* Ed. Buchon, Paris, 1825; tom. xii., p. 224. Jones’s translation, London, 1839; p. 460.

Laon, the execution of which bears considerable resemblance to the statue at Courtrai.

Of other artists of talent concerning whom much is here brought together are the sculptors John Pepin of Huy, Hennequin or John of Liège, the same perhaps as Hacokin de Liège, author of the exquisite tomb of Queen Philippa at Westminster Abbey, John de Marville, Nicolas Sluter and James de Baerse, and the painters John de Beaumetz and Melchior Broederlam, the works of the last of whom at Dijon are already well known. The archives of France and Belgium still contain many documents which have never been examined by the art historian. We may therefore hope that much may yet be discovered concerning these artists. In restoring them to history M. Dehaisnes has rendered real service. His work is also valuable as affording conclusive proof that during at least three centuries before the Van Eycks’ art flourished throughout these provinces, that their sculptors, painters, and miniaturists attained a high degree of perfection, and that the works of some among them were renowned throughout Central Europe.

W. H. JAMES WEALE.

THE EGYPT EXPLORATION FUND.

EXHIBITION OF MINOR ANTIQUITIES AT OXFORD MANSION.

THE small collection now on view at Oxford Mansion does not in any sense represent the result of the season’s excavations; neither is it to be regarded as an exhibition likely to interest the general public. It contains only the few small objects turned up in the course of the great operations at Bubastis, and such waifs and strays as were yielded by the excavations at Tell-el-Yahoodeh and Tukh-el-Karnus. At Bubastis, where large monuments were uncovered in such rapid succession that it taxed all the resources of the explorers to turn and move them in order to arrive at what lay beneath, there was literally no time to sift the soil for minor antiquities. The spoils of Bubastis are too large and too weighty to be shown in any private room, and will be exhibited later in the year, at some suitable place, when the colossal sculptures from Nebesheh shall also have arrived from Egypt. These last are already removed from Nebesheh to the banks of the Bahr Samana, ready to be embarked in canal-boats as soon as the Nile shall have risen sufficiently to carry those boats to Alexandria or Port Said. Subscribers to the fund may, therefore, expect the main exhibition to be opened about November. In the meanwhile, those who are interested in scarabs, flint implements, and pottery, will find something to reward them for a visit to Oxford Mansion.

The specimens of pottery, as arranged in dynastic series by Mr. Griffith, cannot fail to interest students of ceramic types. Here we see dated sets of food and water vessels of the XIIth, XXth, and XXVIth Dynasties, each series having its own strongly marked characteristics. A vase taken from one series cannot possibly be matched in any other series. Between vessels of the XXVIth Dynasty and those of Ptolemaic and Roman times there seems to be more continuity of style, although even in these the differences are sufficiently emphasised to enable an expert to decide between them. The subject of Egyptian pottery is still obscure, and as a science is yet in embryo; but of its importance as a chronological factor in determining the dates of objects discovered at

various levels in the course of excavations, there can be no question. Whether it may hereafter be possible to date mere fragments, such as are found by thousands in every mound, must depend on the results to be obtained from a closer and longer study of the subject. Painted ware carries its date upon the surface, and unpainted ware depends for date upon its form. When the form is gone, and only a potsherd of doubtful curve remains, will it yet be practicable to identify its place in history by the mere texture of the clay, and the way in which it is worked? If this question could be favourably answered, the gain to historical research would indeed be great.

Among the small antiquities in Mr. Griffith’s table-cases, I would direct special attention to the foundation deposits of Philip Aridaeus found at Tukh-el-Karnus, where M. Naville and Mr. Griffith, in the course of a few days’ excavation, brought to light the remains of a small temple; and also to the rectangular plaque of Rameses II. from Tell-el-Yahoodeh, which is inscribed on one side with the two cartouches of the Pharaoh, and on the other with that of his Khetan bride, Ra-ma-ur-neferu, of whom it is said in the celebrated Aboo-Simbel tablet that when the Khetan chiefs were taken prisoners, and waited upon the conqueror with gifts and tribute, the “royal daughter” came at the head of them. “She came to soften the heart of Rameses. Her beauties are marvellous.”

AMELIA B. EDWARDS.

CORRESPONDENCE.

ROMAN (?) PAVEMENT RECENTLY FOUND IN LONDON.

Liverpool: Aug. 8, 1837.

In the *Building News* for June 17 (p. 938) there are two or three lines to the effect that a Roman tessellated pavement had been found in Monument Yard during excavations for the new approach to Billingsgate. I have been in correspondence with the contractors (Messrs. J. Mowlem & Co.) on the subject, and the result is that only the following information can be obtained, though the discovery appears to have been very interesting. Messrs. Mowlem & Co. state that the pavement

“was at a depth of about 12 ft. below the surface, and in the immediate vicinity of a disused burial ground. It measured about 4 ft. by 2 ft. 6 in., and appeared to have formed a portion of a floor composed of a white ground with black letters. It had a border thus—, and letters somewhat as follows:

GO U MANI
NIINSTONATVS
IMNESSLSTRAT
SEMURFD

We were unable to get it out intact. It broke into very small pieces.”

The question arises, Is this a Roman pavement, or is it of a later date? Have we it entire, except the first line, or have there been previous lines, which were lost before it was discovered. In any event, some of the letters are wrongly given. Messrs. Mowlem & Co., indeed, only assert that the inscription was “somewhat like” the above. If it be Roman, and various things seem to suggest that it is (e.g., the depth at which it was found, the style of the border, and, so far as can be judged, its meaning), then there are various partial readings which have occurred to me. Is it possible that we have in the first and second lines DIS.MANIBVS EGNATIVS or . . . V . AN . I . M . III . S . EGNATIVS? The third line is curious. It almost suggests that the abbreviations TESSEL and STRAT. (for *stratum*) had been used; but why the last named word should occur instead of *pavimentum* is strange. But of course this may by no means be the

reading. Again the last four letters of the inscription seem very like a well-known Roman abbreviation generally found in the same position, i.e., D.S.P.D., or, expanded, *de sua pecunia dedit*.

In Messrs. Mowlem's copy of the inscription the letter before G in the second line is given as T, and that after A, in the same line, as a ligulate TI, the I being formed by the upward prolongation of the perpendicular stroke.

I am in hopes that by putting this inscription on record (for, apparently, if I had not done so, all trace of it would soon be lost) the attention of epigraphists may be drawn to it, and that other suggested readings may be given. If it be not Roman, it is difficult to say what it is. There appears to be nothing Christian about it.

But what are the "City Fathers" about, when so interesting an antique is allowed to be removed, and to perish in the removal?

W. THOMPSON WATKIN.

A MIS-READ ROMAN INSCRIPTION FROM HUNGARY.

New College, Oxford: Aug. 4, 1887.

The *Journal* of the British Archaeological Association, xl., 193, contains an inscription from the Danube, near Orsova, which is given incorrectly. It is quoted from Paget's *Hungary* (ii., p. 117); but a reference to *C.I.L.*, iii., 1698, will show that Paget misread TI CAESARE AVG. F into TR. CAESARE AVS. The writer in the *Journal* attributes the inscription to Trajan (whose name, however, is not usually abbreviated into TR.), but the correct text shows that it is much earlier.

F. HAVERFIELD.

NOTES ON ART AND ARCHAEOLOGY.

THE Clarendon Press will publish shortly a catalogue of the Mohammedan coins in the Bodleian library, compiled by Mr. Stanley Lane-Poole.

THE "grand prix biennial" of 20,000 frs. (£800), which is allotted in turn to each of the five sections that together make up the Institut de France, has been awarded this year by the Académie des Beaux-Arts to M. Antonin Mercié, the sculptor, in recognition of his "Tomb of Louis Philippe," exhibited at last year's Salon. The previous awards in this section were to M. Félicien David and M. Chapu.

WE have received from the Autotype Company five autotypes after pictures by Mr. Holman Hunt, lent for the purpose of reproduction by the owners. They comprise the famous scene from the "Two Gentlemen of Verona," "The Christian Priest rescued by a British Family from the Druids," "The Awakened Conscience," "The Tuscan Girl with the Dove on her Shoulder," and "Rienzi vowing Vengeance for the Death of his Brother." We miss, indeed, the clear, gem-like colouring; but we have everything else—the resolute accuracy and thoroughness of drawing, the unflinching adherence to nature, the dramatic vigour of gesture and expression, the rejection of everything conventional in type and feeling, indeed all those qualities which distinguish the Pre-Raphaelites, and especially Mr. Holman Hunt. If they did not convert the world to their creed, moral or technical, they did much to regenerate art by inspiring artists with the spirit of sincerity, by provoking them to a more careful and humble study of nature, and by creating contempt for all that was mean, conventional, or false. As specimens of successful reproduction from the pictures themselves these autotypes can scarcely be excelled,

and as illustrating a noble and fruitful art-movement in England they are worthy of a place in the portfolios of all students of English art.

MUSIC.

MUSICAL PUBLICATIONS.

J. G. Kastner. By Hermann Ludwig. (Breitkopf u. Härtel.) The three volumes—or to be quite correct, the first part and the two halves of the second part—of which this work consists, number over twelve hundred pages. True, the type is large and the margin wide, but there is nevertheless plenty to read. From the size and elegant manner in which the volumes are got up, and farther, from the portraits, the facsimile letters, the musical extracts, &c., one would expect to find that Kastner was no common hero. The life and art-work of this highly-esteemed musician could certainly be put into smaller compass; but Herr Ludwig either had not time, or, more probably, had no intention, to write a short book. An introduction of fifty-five pages on the *Nationalité morale* and *Nationalité politique* of Alsace; the home of Kastner; a "Glance at Paris" in the year 1835, filling sixty-nine pages; a mass of details, interesting, no doubt, to the composer's family and friends, but of little importance to the world at large—by such means is the work unduly prolonged. Not but that very often the subject-matter is in itself extremely attractive and well displayed by the writer, as for example in the above-mentioned "Glance at Paris"; but such digressions are only permissible in the case of stars of the first magnitude. Dr. Spitta, in his *Life of Bach*, Otto Jahn, in his *Life of Mozart*, each was more than justified in introducing matter not directly connected with the lives of those musicians. George Kastner was born of humble parents at Strassburg in 1810. At an early age he showed a love and talent for music. His parents wished him to devote himself to theology, but music gained the upper hand; and in 1835 a sum of money was given to him by the city of Strassburg, enabling him to study at Paris. There Reicha, the famous teacher and author of a treatise on composition, recognised his talent, and gave him considerable help. Kastner waited for some time for a letter of introduction to the great man. The promise, however, was not fulfilled. So Kastner, with a score of one of the operas which he had written at Strassburg under his arm, called on Reicha, who was in the act of being shaved. The interview is graphically described. By the advice of Reicha, Kastner wrote a work on instrumentation, which was accepted by Cherubini at the Conservatoire. It was also approved of by Meyerbeer, Paer, Cherubini and Berlioz. The young musician thus soon became a man of note. Cherubini, indeed, discovering a fault in one of his own early scores, is related to have said: "If at that time I had known the *Traité d'Instrumentation* of Kastner, I should not have made that mistake." In 1839 Kastner published a *Cours d'Instrumentation*, full of practical hints and of examples from the classic and modern composers. It is sufficient to say that it was praised by Berlioz. To this work, and to a "Supplément" published in 1844, Berlioz, indeed, is said to have been much indebted in preparing his treatise on orchestration. According to our author, when Kastner used to go and see him in his study, Berlioz would point to Kastner's books lying open on the table saying: "Vous voyez, mon cher Kastner, je vous ai là, et vous me servez beaucoup." If this be true, we fancy Berlioz in his preface would have acknowledged his obligation. The only time Kastner's treatise is noticed is in speaking of the Pavillon Chinois and other curious instruments. "We refer," says Berlioz,

"those of our readers curious to know more of them to M. Kastner's excellent treatise." The production of a comic opera by Kastner in 1841 was the cause of temporary estrangement between these two men. In a letter to Schilling the composer complains that Berlioz did everything to prevent the success of the work, and even spoke against the music before he had heard a note of it. It is difficult to know how far this was the case. Probably some expressions of Berlioz, not altogether favourable with regard to Kastner as a composer, got repeated, and of course exaggerated. It is now too late to discover the origin of the quarrel. Both the men concerned in it are dead; and it would have been better to have said nothing about it. It is not only the letter to Schilling, but also the statement of Herr Ludwig to which we refer. Our author writes about Berlioz's conduct; yet so far as we can make out he is not an independent witness, but merely echoes Kastner's words. In 1852 Kastner published the first of a series of works entitled *Liens Partitions*. It is entitled "Les Danses de Mort." The monuments of antiquity and of the middle ages; ancient music and musical instruments; dances—everything, in fact relating to the matter is treated in a manner which shows considerable research. Humboldt, in writing to the author, spoke of it as "un ouvrage savant et magnifique ouvrage." Victor Cousin also wrote about it in terms of the highest praise. The work, as the title suggests, is purely literary. At the end is the score of a tone-poem entitled "La danse macabre" for orchestra and choir. The orchestration is very elaborate; but of the music it appears, so far as we may judge of it from reading, to be skilfully constructed rather than imaginatively conceived. His next work was "La Harpe d'Bole et la Musique Cosmique." In a fanciful tone-poem the sounds of an Aeolian harp are imitated by means of harmonic notes from muted strings including the double-bass. In his "Voix de Paris" he gives musical examples of street cries from the time of the middle ages. The symphony into which these cries are introduced is a curious specimen of humouristic music. Kastner wrote besides treatises of various instruments, and contributed articles to the *Gazette Musicale*, and to Alsatian and other papers. In 1840 Schumann sent him a letter thanking him for the sketch of his (Schumann's) life, which Kastner had prepared for the *Gazette Musicale*. Kastner died in 1856. The history of his life teaches how much may be accomplished by industry and great patience.

Studies in Musical History. By Louis S. Davis. (Knickerbocker Press.) It would be absurd to ignore the services which the Christian Church has rendered to music; but our author surely goes beyond the mark in asserting that the "larger number of our greatest musicians have come to us through the doors of the sanctuary." One can scarcely say that of Haydn, Mozart, and Beethoven, and only in a forced sense of Bach and Handel. Mr. Davis's tendency to exaggerate is, however, well shown in his statement that "the Christian Church has been the guide and schoolmaster of Europe for upwards [sic] of two thousand years." His chapter on "The First Christian Hymn" is not a study, but a rhapsody. In the chapter on the "Transition Period" our author ignores Coussemacher's discoveries. He mentions only one Franco, and has nothing to say about the early French school which paved the way for that of the Netherlands. Some of the "Studies" are agreeably written, though nowhere very deep. The one on the "Mass" is decidedly superficial. Two of the most attractive chapters are those on "Folklore" and "The Common and Commonplace"; but these are not in any way musical studies. J. S. SHEDLOCK.

SATURDAY, AUGUST 20, 1887.

No. 798, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

"ENGLISH MEN OF LETTERS."

Keats. By Sidney Colvin. (Macmillan.)

A CRITICAL monograph on Keats, in which should be distilled all the new material that, since the appearance of Lord Houghton's biography, has been furnished by the industry of poetical students, has long been a desideratum. Indeed I remember hearing Lord Houghton himself say so at the very last interview I had with that most genial of men and most charming of biographers; and I well remember, too, that among the names of the critics who on that occasion were mentioned as being peculiarly well equipped for the task of preparing such a monograph that of Mr. Colvin was one. For surely the very ideal of the literary monograph is (if not Prof. Jebb's *Bentley*) Mr. Colvin's *Landor*. And with regard to the book before me, on every page will be found evidence of that care and that scholarly conscience for which Mr. Colvin is distinguished even among English scholars. Every kind of information from every source has been examined with an honest sagacity which nothing can escape. With regard to the letters to Fanny Brawne, Mr. Colvin's remarks on their publication are severe; but he says, and says truly, that a biographer "cannot ignore these letters now that they are published." I think, however, that as a real and trustworthy exposition of the passionate heart of a poet too much has been made of these letters, both by those who have read them with sympathy, and by those who have read them with unsympathetic eyes. The love-passion when most intense is not so voluble as we find it here. Perhaps, indeed, the mere impulse towards articulate expression must always be taken into account when we set about to judge of the expressed emotions of a writing man, whether in prose or verse. That it is possible for a man to become what Shakspeare calls "passion's slave"—possible for a man to melt in the grip of passion like wax in fire—is, of course, true. In real life we see it in the case of Nelson; in drama we see it in the case of Othello; but then the man thus enslaved is not one who writes such letters as Keats's. I do not, therefore, mourn over Keats's passion, as Rossetti used to do, nor get angry with it, as Mr. Swinburne does. Deeper than his passion for any woman was Keats's passion for poetry. This would soon have conquered the transient flame for Fanny Brawne—that very type of the hard-mouthed female Philistine of England, who, with a wisdom beyond her years, preserved and carefully labelled the bard's love-letters, "because," as she said, "they might some day be of value." That

other passion, however, the passion for poetry, was a serious matter.

Like Lord Houghton, and like all the writers upon Keats who have succeeded Lord Houghton, Mr. Colvin is inclined to speak of this passion as though it were *not* serious—to speak of the attacks of *Blackwood* and the *Quarterly* as though they had no serious effect upon Keats's life and happiness. Pleasant, indeed, must it be to an admirer of Keats if he can take this view of the matter. That there was in Keats's constitution a tendency to phthisis is, of course, beyond question; but those who have watched the progress of this disease must have observed that in the life of a young person of consumptive tendency there is a period, ranging generally in the case of a young man between eighteen and twenty-five, and in the case of a young woman between sixteen and twenty-three, when the chief remedy against the further advance of the foe is entire peace of mind. If, during this period, the consumptive patient can (besides being fostered by all those conditions of a physical kind which are now at the command of medical science) be shielded from mental troubles—from all those disturbances of the emotions to which young people at this period of life are peculiarly liable—disturbances which exhaust that nervous current which is so sorely needed at the very fount of life itself—if this can be compassed, it is astonishing what nature will do in her struggle against the most deadly of all her foes. But let there come upon the patient during this period any great calamity, or even any vexation of a deep kind—especially if insomnia should set in—and results will follow exactly similar to those recorded in the case of Keats. I have myself seen cases where young people whose constitutions had been struggling bravely with the foe were struck down and hopelessly shattered by a very short period of mental trouble. If there has been among English poets a man so proud as Chatterton it was surely Keats. That so proud a man as he would try to conceal his wound was of course natural and, indeed, inevitable; but that he suffered deeply—that he "bled inwardly," as Chatterton bled—there is only too much evidence existing. The alarming symptoms set in immediately after he read the two venomous and contemptuous articles that live in connexion with his name as a shame and a disgrace to the profession of letters. It is true that although at first he declared that he would "write no more poetry, but try to do what good he could in some other way," he soon "pulled himself together" (as the saying is) and treated the annoyance "as one merely temporary, indifferent, and external." But in order to realise what he suffered Mr. Colvin must remember how extremely ambitious was Keats—how proud, how courageous against every shaft of the "coarse world" but ridicule—and also how powerful for good or ill was in those days an article upon a young poet in *Blackwood* or the *Quarterly Review*. He must remember that the two poetasters who edited those journals—though their very names are now but faint echoes in the literary arena, while the name of the apothecary's boy they assailed is a growing music in the world's ear for ever—were then men of very great consideration, and spoke

through organs of so great influence and authority that when Keats's tragedy, "*Otho the Great*," was afterwards offered to the theatre, Keats's friend Brown advised that the author's name should be suppressed on account of the ridicule surrounding it. Certainly it is not pleasant to think that the premature death of a poet whom both Mr. Matthew Arnold and Mr. Colvin name in the same breath with Shakspeare should have been partly brought about by the low-bred insolence of a man like Gifford and the tippy vulgarities of a man like Wilson; but if it is true, we must accept the truth, however unpleasant, and hold it up as a warning to critics.

To Mr. Buxton Forman's exhaustive labours in Keatsian bibliography, and also to Mr. W. T. Arnold's admirable introduction to the one-volume edition of Keats, published in 1884, Mr. Colvin does full justice. It is a pity that Mr. W. T. Arnold's essay is not more widely known. Also, Mr. Colvin has had access to certain papers and correspondence left by the late Joseph Severn, which have been put into the hands of Mr. William Sharp, to be edited and published at his discretion. And it is interesting to know that these papers contain, in Mr. Colvin's judgment, "materials for what should be a valuable biography."

As to Mr. Colvin's remarks on Keats's poetry, the reader will, I think, find himself agreeing with most of them. Of the "*Ode on a Grecian Urn*," and the "*Ode to the Nightingale*," Mr. Colvin says that "both are among the veriest glories of our poetry." And few indeed are those who would gainsay him. In speaking, however, of the odes it should always be remembered that the difference between the elegiac odes of Keats and Wordsworth, and the impassioned odes of Shelley and Coleridge, is a difference not of degree but of kind. I have often thought, indeed, and have elsewhere suggested that a new name should be found for the elegiac ode, wherein the "fine frenzy" of the prophet is subdued by the pensive grace of the artist. To say which is the finer kind of ode, the ode of Shelley or the ode of Keats, might be difficult and even presumptuous. There will always be critics, I suppose, who, like Mr. Swinburne, set the "*Ode to France*" and the "*Ode to the West Wind*" above the "*Ode to a Nightingale*" and the ode on the "*Intimations of Immortality*"; and there will always be critics who, like Mr. Matthew Arnold, do the reverse of this. But here, as in all things, Mr. Colvin agrees with Mr. Matthew Arnold. To him, Keats's odes are evidently the very finest in the language; and I, for one, dare not with any great emphasis challenge his judgment.

Mr. Colvin does not, I think, over-estimate the damaging effect of Leigh Hunt's jaunty mannerisms upon Keats's earliest poems. Only upon the very lowest slopes of Parnassus, if at all, is jauntiness a poetic mood. Poetry is a sacred thing—as sacred to-day as it was when "*Job*" was written. Though science demonstrates ever so triumphantly the insignificance of the little human singer, the insignificance of the little planet from which he pipes to a universe where suns are thicker than the sands of Norfolk, poetry is still a sacred thing; and he who is not as

earnest as the martyr at the stake is but a sorry poet, though, very likely, a worthy man of prose. Hunt's pert familiarities are sufficiently irritating in his own work, where, at least, they are in a congenial jaunty setting: interspersed among Keats's verses—which, if not at any moment quite earnest enough, are at least rich and romantic and "beautiful exceedingly"—they become intolerable.

The rugged movements in which Keats so freely indulged are also commented upon by Mr. Colvin. These, however, were owing partly to the influence of Hunt's mistaken theory about the rhyme-pause, and partly to the fact that Keats's natural ear for rhythm was not, perhaps, so fine as to be entirely adequate to his other amazing poetical gifts. I have always thought that Mr. Swinburne's unrivalled rhythmic powers have made him less than just to "Endymion," where Keats, in his determined revolt against eighteenth-century canons and eighteenth-century movements, does certainly perpetrate some astonishingly inharmonious lines. In spite of this, however, not only in "Endymion," but also in such poems in Keats's first volume as "Sleep and Poetry," there are lines and even passages of some length which give full promise of all his future greatness as a poet. This, I am well aware, will be considered by many a rash saying, but I say it after much study of Keats and with a full recollection of all the puerilities in "Endymion."

I have touched already or shall touch upon so many points in this interesting volume that I have no space to discuss here so large a question as that of "Hyperion: a Vision" in its relation to the original "Hyperion"—a subject upon which Mr. Colvin has expended very great and very intelligent research and care. Yet I hope to say something about it on another occasion.

Upon the glorious fantasia "The Eve of St. Agnes" many good things have been written from the days of Leigh Hunt to the present time, but nothing better than the following:

"As this poem does not attempt the elemental grandeur of 'Hyperion,' so neither does it approach the human pathos and passion of 'Isabella.' Its personages appeal to us, not so much humanly and in themselves, as by the circumstances, scenery and atmosphere amidst which we see them move. Herein lies the strength, and also the weakness, of modern romance—its strength, inasmuch as the charm of the mediæval colour and mystery is un-failing for those who feel it at all—its weakness, inasmuch as under the influence of that charm both writer and reader are too apt to forget the need for human and moral truth; and without these no great literature can exist."

These last words are especially wise and true. Poetry must always, as I once said before, reflect the life of nature or the life of man, else it is "nothing worth"; and for this very reason I do not fully agree with the remarks that follow, where Mr. Colvin defends the astounding moonlight effects in "The Eve of St. Agnes":

"The painted panes in the chamber window, instead of trying to pick out their beauties in detail, he calls:

'Innumerable of stains and splendid dyes
As are the tiger moth's deep damask'd wings,'
a gorgeous phrase which leaves the widest range to the colour-imagination of the reader,

giving it at the same time a sufficient clue by the simile drawn from a particular specimen of nature's blazonry. In the last line of the same stanza:

'A shielded scutcheon blush'd with blood of queens and kings,'

—the word 'blush' makes the colour seem to come and go, while the mind is at the same time travelling from the maiden's chamber on thoughts of her lineage and ancestral fame. Observation, I believe, shows that moonlight has not the power to transmit the hues of painted glass as Keats in this celebrated passage represents it. Let us be grateful for the error, if error it is, which has led him to heighten, by these saintly splendours of colour, the sentiment of a scene wherein a voluptuous glow is so exquisitely attemper'd with chivalrous chastity and awe."

Here again, however, the subject is much too large a one to be fully discussed in a brief review; and I will merely say that, beautiful as are Keats's moonlight effects in this poem, they would have had a beauty of a far higher kind had they "reflected the life of nature." In "the seven-fold heaven of poetry," both fancy and imagination have, no doubt, a seat, yet, perhaps, in the seventh heaven, fancy hardly holds a place at all. It is the eye of fancy that sees the "warm gules" shed by moonlight through a stained glass window. Imagination knows no such effects, for imagination has the certitude of logic: she can never go wrong: she reflects the life of nature as surely as she reflects the life of man. To us of this scientific generation, whose eyes have been trained to look upon nature with faithful and loving eyes, it is almost incredible that Keats, and not only Keats, but a man of the highest objective power like Scott, could ever have given to moonlight a power which everyone in our time knows moonlight never could and never did display—in the northern hemisphere, at least; how it may be in Australia, where the moon is said to be half as powerful as the sun, let the critics of Australia tell us. The artistic growth of a true imagination is an organism as vital as any of the natural growths of the woods and fields; and even if Nature's own "violets" happen to be not "radiant" as fancy would have them, but "dim," Shakspeare calls them so. All Mr. Colvin's remarks upon the "Eve of St. Agnes" are so striking, however, that I cannot refrain from giving a second quotation from them:

"If the unique charm of the "Eve of St. Agnes" lies thus in the richness and vitality of the accessory and decorative images, the actions and emotions of the personages are hardly less happily conceived as far as they go. What can be better touched than the figures of the beadsman and the nurse, who live just long enough to share in the wonders of the night, and die quietly of age when their parts are over; especially the debate of old Angela with Lorenzo, and her gentle treatment by her mistress on the stair? A critic, not often so in error, has contended that the deaths of the beadsman and Angela in the concluding stanza are due to the exigencies of rhyme. On the contrary, they are foreseen from the first: that of the beadsman in the lines:

"But no—already had his death-bell rung;
The joys of all his life were said and sung";

that of Angela where she calls herself

"A poor, weak, palsy-stricken, churchyard thing,
Whose passing bell may ere the midnight toll."

Madeline is exquisite throughout, but, most of all, I think, at two moments: first, when she has just entered her chamber—

"No uttered syllable, or, woe betide:
But to her heart, her heart was voluble,
Paining with eloquence her balmy side":

and afterwards, when awakening, she finds her lover beside her, and contrasts his bodily presence with her dream:

"Ah, Porphyro!" said she, "but even now
Thy voice was at sweet tremble in mine ear
Made tunable with every sweetest vow:
And those sad eyes were spiritual and clear:
How changed thou art! how pallid, chill, and drear!"

The "critic" here criticised is myself. And if Mr. Colvin has misread my words, the fault, I can well believe, has been my own lack of perspicuity and not my critic's lack of perspicacity. Undoubtedly I did once quote the last stanza of the "Eve of St. Agnes" as an illustration of the very great pressure of rhyme-demands upon the wings of Keats's imagination:

"And they are gone; ay, ages long ago
These lovers fled away into the storm.
That night the Baron dreamt of many a woe,
And all his warrior-guests, with shawl and form
Of witch, and demon, and large coffin-worm,
Were long be-nightmar'd. Angela, the old,
Died palsy-twitch'd, with meagre face deform.
The beadsman, after thousand aves told,
For aye unsought for slept among his ashes cold."

And then I said what has aroused Mr. Colvin's displeasure:

"Now if we consider how fantastic (according to the law of association of ideas) are the conceptions of "coffin-worm" and "meagre face deform" in relation to the elopement of two lovers, and if we also recollect how few are the available rhymes to the initial rhyme-word "storm," we shall see that it was rhyme-necessity alone which caused the warriors to dream of 'coffin-worm'; and rhyme-necessity alone which caused poor Angela (who deserved 'to die on a feather-bed sipping a cup of spiced wine') to have such a miserable latter end, going off 'palsy-twitch'd, with meagre face deform.'"

Let me assure Keats's generous champion that I had in no way forgotten Angela's description of herself in the early part of the poem (indeed, who could forget a line of "The Eve of St. Agnes"?); and yet I feel that in this beautiful romance Angela would not—but for the tyrant, rhyme—have been allowed to leave behind her the uncomfortable memory of the "meagre face deform" of a disfigured corpse; and as to the jolly warriors, I feel sure they would have dreamt of hawk and hound, or else of the delight of battle, and not of the "coffin-worm," but for the same tyrant, who forced the hideous nightmare upon them. The beadsman, however, and his sleep among his ashes cold, I had, as my words show, accepted with as little demur as Mr. Colvin himself, whose "gentle wrath" on behalf of Keats I would fain appease.

On the whole, then, those who read this delightful little volume will admit that Mr. Colvin in his treatment of Keats is almost as happy as he was in his treatment of Landor. I say "almost" as happy, and yet not quite. Good as is the present monograph, it is not, perhaps, so vigorously written as the one on Landor, nor do the critical remarks seem to be quite so original or quite so ripe. If, however, in answer to these strictures it

should be argued that ripeness of poetical criticism is as rare as original poetry itself, I should hardly know how to find an answer to such an argument. Mr. Matthew Arnold has declared that this age of ours is the age of criticism, not the age of original artistic work. On such a subject he is naturally listened to with very special respect; for, not only is he himself illustrious both as poet and as critic, but he has been pointed at as "the most distinguished man of letters in England" by the finger of England's Lord Chief Justice—a finger that must be assumed to point with authority whenever it is so condescending as to point in the literary direction at all. Yet when one recalls Mr. M. Arnold's own splendid achievements in original poetry, when one recalls the splendid achievements of Lord Tennyson, of Mr. Browning, of Mr. Swinburne, of Mr. William Morris, one cannot but ask oneself, where is the contemporary criticism that can be set beside such a body of original work as these latter days have produced? I will not say that it is the thought of this—the thought that in no department of literature is there so little originality as in criticism—which makes the critics of our time so modest; for the acknowledged chief of contemporary poets has failed to discover any modesty at all in the judgment of critics and in the "chorus of indolent reviewers." But surely if ever there was a time when man's gregarious instinct for "following a leader" was seen in the critic rather than in the poet, it is seen in the present age of monographs and popular biographies. Only let one powerful or brilliant writer of recognised authority say a thing with brilliance or with power, and howsoever fantastic the thing said may be, it is taken up by hundreds of writers of whose brilliance and power the well-bred reader says as little as possible, until, at last, by mere force of reiteration it becomes an axiom. For instance, when Mr. Ruskin discoursed in his usual eloquent fashion of the "pathetic fallacy," if he had declared that to inform the unconscious universe with our own consciousness—our own passions and our own emotions, as the poets are wont to inform her—is to violate the laws of logic and common-sense, he might have been right; but when he tells us that the poet in so doing violates the sanctions of art and the laws of true imagination, he forgets that what logic and common-sense call the "pathetic fallacy" is part and parcel of the illogical soul of man—that without it there could have been no poetry at all, no language at all, no intelligence at all save that which belongs to the "pensive somnambulism of the lower animals." He forgets that every word in every tongue is charged with this "pathetic fallacy"—nay, is the outcome of this "pathetic fallacy." Nevertheless, Mr. Ruskin's phrase has been the central thought of how many critical utterances!

By these remarks I do not in the least mean to say a word against the brilliant genius of Mr. Ruskin, nor do I mean to insinuate that Mr. Colvin has been taken captive by it. Indeed, the reader of this monograph, for having been spared the usual talk about the "pathetic fallacy," will be delighted to give the writer of it all the gratitude that such self-abnegation deserves.

Yet there is another writer of genius whose every will-o'-the-wisp Mr. Colvin is ready to follow whithersoever it may lead. I allude, of course, to the discoverer, fosterer, and patron of the famous "Celtic element." Many a reader must, I fear, have fled from Mr. Colvin's book in alarm on coming upon these ominous paragraphs.

"In the gifts and temperament of Keats we shall find much that seems characteristic of the Celtic rather than the English nature. Whether he really had any of that blood in his veins we cannot tell. His father was a native either of Devon or of Cornwall; and his mother's name, Jennings, is common in, but not peculiar to, Wales.

"Was it that, along with what seems his Celtic intensity of feeling and imagination, he had inherited a special share of that inward gloom which the reverses of their history have stamped, according to some, on the mind of the Celtic race?

"The Celtic instability,' a reader may perhaps surmise who adopts that hypothesis as to the poet's descent. Whether the quality was one of race or not, it was proverbially inseparable from the peculiar complexion of Keats's genius."

For my own part, when I came upon "Celtic gloom" I really did flee from the book in terror, and that day I read no more. For, if Mr. Ruskin's "pathetic fallacy" has been a blessing to the word-joiner and a torture to the real student, what shall be said about Mr. Matthew Arnold's dreadful "Celtic element." I once knew a poet, and a great one, who for years dared not open a book of contemporary criticism, so great was his fear lest he should come upon the "dreaded name" of the "Celtic Titan" and his element. And this gives me an opportunity of once more imploring the critics to have mercy upon us, and to leave that discontented and sublime Titan alone for the next quarter of a century at least.

Everyone who has thought upon nature, the great dumb mother who bore us, knows that, although she usually gazes out upon man with frank and open eyes, she sometimes will fall into another mood, and seem to be a beautiful spirit, dreaming of man's destiny—seem, in short, to be gazing at him with eyes of wonder, or else of mysterious joy, or else of a prophetic sorrow whose very greatness has made her dumb. And the recognition of this aspect of nature is, we may be sure, as old as the human race; the expression of it is, we know, as old as the very earliest poetry that has come down to us; for the expression of the "witchery and fairy charm" of nature, is the expression of the great religious heart of man. And because this quality of nature was to be found everywhere, and was essentially no more Celtic than it was Scandivanian or Finnish or Polynesian, Mr. Arnold called it the "Celtic element." In that delightful spirit of poetic whim which is one of his most charming characteristics he chose to call it so, and made us all—"Celts" as well as "English"—happy, especially the "English." That there was any reason for calling this quality the "Celtic element" or that Mr. Arnold had any special knowledge of matters Celtic entitling him to talk as sweetly and glibly

about the "Celtic element" as Mr. Ruskin talked about the "pathetic fallacy," there was no need to enquire, any more than there was need to enquire what was Mr. Arnold's special knowledge of Shelley's poetry that enabled him to declare that the author of "Prometheus Unbound" would go down to posterity not as a poet, but as the most elegant and accomplished polite letter writer of his time. So fascinating a writer is Mr. Matthew Arnold, so all conquering is his own wizardry and fairy charm, that had he chosen to call it the Maori element, the Timbuctoo element, or the element of the Cloud-cuckoo Townians, he would still have delighted us English Philistines, who are, it seems, the only people without the "fairy charm," and love to be told so. No one in this Philistine island would have had the courage or the hardness of heart to ask Mr. Arnold how the Celts first obtained their "element," and how, after so many changes, they managed to keep it, and transmit it through English poets to us. For, true as well as charming as Mr. Arnold's utterances mostly are, it is his privilege to hold a place in English criticism like that of the reigning beauty in English society, the lady who knows that the value of her words depends not so much upon the things said as upon the rosy curve of the lips that say them. But, just as the reigning beauty has thousands of imitators, who, in order to be reigning beauties themselves, vex their fallow skins with pigments, or dye their swart locks with "liquid gold," so Mr. Arnold has imitators who wax eloquent about the "Celtic element," about the Titanic temper of the Welshman, the lofty Hibernian's "gloom" and sublime discontent, and the porcine element of the pure, thick-fingered John Bull—wax more eloquent, indeed, than Mr. Arnold himself had waxed, who, when he mounts a hobby horse, generally lets us know by a wink or a gesture that the creature he rides is not really a flesh and blood steed, or at least is only equine in the Arnoldian sense.

The best examples of the "Celtic element" in poetry were, of course, from Shakspeare and Keats. Obviously, therefore, Shakspeare and Keats ought to have been Celtic Titans; and if the discoverer of the Celtic Titan did not attempt to base his "racial theory" upon "racial facts," and find a line of ancestral Celtic Titans for each English poet, it was, we may be sure, because Shakspeare's father being a sturdy Warwickshire yeoman, and Keats's father a sturdy London ostler, it was well to leave the "racial facts" alone. Mr. Arnold's followers, however, knowing that it is the privilege of genius alone to make bricks without straw, are more modest, and look around them for the "racial facts" which the discoverer of the "Celtic element" despised. While taking for granted the assumption of their master about the "Celtic element" in Shakspeare and Keats, and while accepting the undoubted Stratford yeoman and the undoubted ostler of the Swan-and-Hoop, they account for the "Celtic element" in these thoroughly English poets by Mr. Colvin's theory of the "alternation of generations" in the Titanic variety of man—a theory akin, it seems, to that which the students of the entozoa have formulated in regard to the tape-worm. Between tapeworm and tapeworm there is a

series of what the Danish biologist calls the "nursing generations," who, though not tapeworms themselves, hold the tapeworm "element" in suspense. Even so it is between Celtic Titan and Celtic Titan. This being established, why should not these nursing generations of the Titans be Warwickshire woolstaplers or London ostlers? Now the paternal ostler who begat and "nursed" Keats, though he groomed in Finsbury, was born in Devon. What are the counties adjoining Devon? Are they not Somerset and Cornwall? Somerset may be English, un-Titanic, and without the "fairy charm"; but is not Cornwall—the land of Cornish giants and the killers of Cornish giants—Celtic and Titanic to the core? Who shall deny this? Far be it from me to deny it. Yet I would remind Mr. Colvin and the innumerable critics of the "Celtic element" school that, fine as is the element in question, thick-fingered John Bull is becoming weary of it, and is just now longing to hear the last of it, and also to see the back of the Celtic Titan—at least in the field of poetical criticism. I would remind them that there was a certain French Republican who, during the despotic reign of "Liberty, Equality, and Fraternity," exclaimed, "Brother Citizens, for Liberty, Equality, and Fraternity, I am most willing to die, but I will not be bored by them."

THEODORE WATTS.

Manchester. By George Saintsbury. (Longmans.)

THE latest historian of Manchester differs from his predecessors in more than one respect. Hollinworth, Whitaker, Wheeler, Timperley, and Reilly, however much they vary in style and erudition, were all local men, and wrote chiefly for a local public. Thus when the present writer re-edited the *Annals of Manchester* he found it necessary to include a thousand details which were essential for local purposes, but could have little or no interest for the "general reader," whose very existence the sceptical are beginning to doubt. An exception ought, perhaps, to be made in the case of Whitaker's *History of Manchester*, which, in spite of its author's immense learning and imaginative power, contains little of history and less of Manchester, and was certainly addressed to a wider audience than Lancashire could then supply. Although but a fragment, it is a massive monument of perverse ingenuity and misapplied literary power. Mr. Saintsbury has an advantage in his detached position which prevents any suspicion of local prejudices or local bias, while his two residences in Manchester give him that amount of familiarity without which the satisfactory execution of his task would have been impossible.

The work was undertaken for Prof. Freeman's "Historic Towns"; but owing to differences of opinion between the author and the editor it has been withdrawn from the series, and is now issued independently. No hint is given as to the nature of these "differences," but they may probably be looked for in the treatment of the later history of Manchester, and the strictures upon *Manchesterism*—a body of doctrine which

Mr. Saintsbury surveys from a somewhat Conservative standpoint. The earlier annals are scanty and obscure, but Mr. Watkin's labours have enabled us to form an adequate idea of Roman Manchester. Between the foundation of the military station and the Norman Conquest the only certain fact is that the town was re-built by Edward the Elder after its destruction, more or less complete, by the Danes. From Doomsday we know that the hundred had received the name of Salford—a conclusive proof that Manchester was then of smaller importance than its twin-town. Mr. Saintsbury omits, in his quotation from the Conqueror's survey, to say that the men of Salford and the men of Leyland—both royal manors—"were not found by the custom to work at the King's hall or to work for him in August." Salford, in 1230, and Manchester, in 1301, received charters by which some municipal privileges were granted, although each town nominally remained a manor. Practically they were self-governed, but many inconveniences arose when these two towns, grown into great modern communities, were still enveloped in the mediaeval swaddling-clothes of their infancy.

Although a mass of additional local detail may be expected from the Public Records now gradually being made accessible, it is not at all likely that any evidence will be forthcoming to disturb the conviction of the unimportance of Manchester in relation to the national history in the middle ages. It was the growth of the woollen industry that brought wealth and increased population. It is not a little curious that long before that vegetable fibre was really used the products of the Lancashire looms were known as "Manchester cottons," by which, in the reign of Henry VIII., the town had already attained wealth and reputation. The early history of the textile manufactures in the north of England is very obscure. Of the supposed establishment of Flemish weavers in 1363, Mr. Saintsbury very well says: "But Queen Philippa did many things which we should all be sorry to give up as art and literature, and which yet are somewhat dubiously history." It is not until Tudor times that we reach historic certainty, and then we find the town a scene of struggle between the forces of the Reformation and of Rome. Mr. Saintsbury, by a slip, includes Manchester among the places visited by James I. in his Lancashire progress. None of the Stuart kings visited the town, which took an active share for the Parliament in the struggle with Charles I., but, curiously enough, was distinguished in a later generation by its Jacobite sympathies. When the Manchester rebels of 1745 had expiated their mistaken loyalty on the scaffold, Manchester entered upon that course of industrial development which has made it what it is to-day.

With the advance of wealth and the increase of population came discontent with its imperfect local government and the political impotence arising out of its exclusion from parliamentary representation. Commercial distress quickened this discontent, and the mass of the people were largely under the influence of the democratic feeling born of the success of the French Revolution. A

meeting called to petition for parliamentary reform in 1819 was dispersed by the yeomanry and military with a barbarity which Mr. Saintsbury appears disposed to minimise, if not to extenuate. "The local and contemporary accounts of the matter," he says, "are for the most part very highly coloured, and must be examined with caution." Having examined with caution practically all that has been written on the subject, and having heard the statements of some who were in the Peterloo massacre, it seems to me one of the most shameful pages in our history. Although the chief leader in the atrocity, the Rev. W. R. Hay, a man of tyrannical temper and grossly indecorous manners, was rewarded with the rich living of Rochdale, it may be doubted if it compensated him for the hate and detestation which followed him to the grave. The working classes looked to parliamentary representation as the instrument by which to obtain the changes they desired; and if they were disappointed with the results of the changes made in 1832 it was because they were not sufficiently far-reaching. The Chartists, although despised, feared, persecuted, and imprisoned, had no revolutionary programme. Charter are now law. They looked with disfavour upon the Anti-Corn Law agitation, not because they were opposed to Free Trade, but because they believed that the same strength necessary to carry that would secure a democratic system of government, which would involve, as a necessary consequence, that and other needed reforms. Their theory was of constitutional one of representative government; but in English politics the Anti-Corn Law League initiated a new departure, in which Parliament merely registers the result of discussions carried on outside its walls.

Mr. Saintsbury's account of the Manchester school, although written in no sympathetic spirit, is a brilliant specimen of criticism and exposition. It is sometimes supposed that the Factory Acts were opposed by the entire weight of *Manchesterism*, yet they had no warmer advocate than Mr. Joseph Brotherton, M.P. for Salford. With regard to the cotton famine, Mr. Saintsbury says: "The oft-repeated assertion that the operatives, despite suffering, were for the most part steady in favour of the North, whose action caused those sufferings, would probably be difficult to verify in detail." A Northerner would be difficult to convince that it was the action of the North that caused the Slaveholders' Rebellion; and a Lancashire man who has lived through the "hard times," when the machinery was silent and the mills were stopped, and when the fire was extinguished in many a cottage hearth, will have no doubt as to the sympathies of the factory folk. That the Southern sympathisers, for the most part, contented themselves with disturbing the Union and Emancipation meetings without venturing to hold public gatherings of their own, is a significant fact.

If I do not profess to look at Manchester history from Mr. Saintsbury's point of view, or to agree with all his verdicts, the circumstance will not lessen my gratitude for his vindication of the city from the gross caricature of Dickens's poorest work—*Hard Times*, nor will it prevent me from recognising the

judgment with which the salient points have been selected from the vast mass of detail, the skill with which they are described, and the brilliance of style which makes many pages equally valuable as literature and as history.

WILLIAM E. A. AXON.

The Poems of Giacomo Leopardi. Translated by F. Townsend. (Putnam's Sons.)

THE task of translating a classic is generally admitted to be desperate; yet the fascination of the task, the difficulties to be overcome, the semi-creative attitude which is required in the translator, will always insure recruits for the army of translation. Translation will continue to be a delightful exercise for the translator, but it will "come back more to him than to his readers." In the case of historians or philosophers, where the matter rather than the form is of paramount importance, translations have a better chance of succeeding; but in the case of poetry, where form is of equal value with matter, the task is well-nigh hopeless. It is as impossible to render in English

"Che fai tu, luna, in ciel? Dimmi, che fai,
Silenziosa luna?"

as it would be to render

"And the sun went down, and the stars came out
far over the summer sea,"

in Italian. The value of the lines, the emotion that created them, the image that they raise, the effect they are intended to produce, are all locked up in the very sound of the words themselves. At the outset the translator from Italian into English is met with a radical difficulty. How can our monosyllabic English compete with or adequately render the sonorous cadences of polysyllabic Italian?

Of Italian classics, Leopardi is certainly one of the most difficult to translate. The causes of this difficulty are various. In the first place, the very nature of his subject—cosmic misery—its vastness, its rigidity, its lack of detail, yields so little that is positive to the grasp of the translator. Leopardi is essentially a subjective poet. His theme is himself, his own individual unhappiness projected beyond himself until it fills the whole circumference of being. This is a magnificent subject for the poet; but in dealing with it Leopardi is cold, reserved, rejecting externals, concentrating his gaze upon his central emotion. Again, Leopardi is, as he himself said of Monti, essentially "un poeta dell'orrecchio." He is a rhetorical poet. His cadences, the structures of his sentences, are governed by the demands of the speaking voice and the ear that hears it; and this leads the poet to adopt his extremely intricate, and sometimes arbitrary, systems of rhymes, the only parallels to which in English are the choruses in Milton's "Samson Agonistes." In Leopardi's poetry, more than in that of almost any other poet, a union has taken place between the sound and the sense so intimate that to sever them means to destroy. Leopardi used words as an architect uses stones, or a sculptor his marble; and, as what Leo Battista Alberti called "la musica" of architecture vanishes if the stones are touched, so with Leopardi the passion of his thought

seems to disappear upon the alteration of his words.

In spite of these great difficulties in the way of a translation of Leopardi's poems, we must say at once that Mr. Townsend's renderings are very good. Of the two possible methods of translation—the close or literal and the free or "impressional"—Mr. Townsend has, in all cases but one, to which we shall presently refer, chosen the literal method. The very nature of his original compelled him to this choice. Free translations of Leopardi could not well be anything else than a new series of pessimistic poems. Mr. Townsend is faithful to the words, and also in a remarkable degree to the rythmical structure. The opening poem, "All' Italia," does not seem to us so successfully rendered as many of the others; but its patriotic compeers, "Sopra il Monumento di Dante" and "Nelle Nozze della Sorella," as well as the splendid "Consalvo," "Silvia," and the exquisite "Canto Notturmo" are as happily translated as we should suppose was possible in English. Space will not allow us to quote at any length; but as an admirable specimen of Mr. Townsend's powers we cannot resist giving this exquisite, free not literal, rendering of Leopardi's lyrical fancy called "Imitazione." It is the best translation in the volume, and has something of the feeling of Blake about it.

"Wandering from the parent bough,
Little trembling leaf,
Whither goest thou?
From the beech, where I was born,
By the north wind was I torn.
Him I follow in his flight,
Over mountain, over vale,
From the forest to the plain,
Up the hill, and down again.
With him ever on the way:
More than this I cannot say.
Where I go must all things go,
Gentle, simple, high and low:
Leaves of laurel, leaves of rose;
Whither, heaven only knows."

The translator has not attempted to preserve the *terza rima* of "Il Primo Amore," and his choice of a simple four-lined stanza for the rendering of "Il Risorgimento" is most unfortunate.

Leopardi is so great a master of language that a minute study of his works is as valuable an exercise as the study of an ancient classic. We will take a few of the difficult passages, and see how Mr. Townsend has dealt with them. In the "Ultimo Canto di Saffo" the passage

"Alle sembianze il Padre,
Alle amene sembianze eterno regno
Diè nelle genti,"

is translated thus:

"To idle shows Jove gives eternal sway."

We are inclined to think that *sembianze* here does not mean idle shows, but outward beauty. It is quite true that, as Mr. Townsend translates the passage, the meaning is Leopardesque; and, further, that in the "Tramonto della Luna" Leopardi talks of "le sembianze Dei dilettoni inganni," where *sembianze* means idle shows. But in the passage under discussion we cannot help feeling that *sembianze* is in antithesis to *disadorno ammanto*; and the whole point of the passage is that valour, learning, song are valueless in an ugly body.

Again, in the same poem, the passage
"Morremo! Il velo indegno a terra sparto,
Rifugirà l'ignudo animo a Dite."

is translated

"I die! This wretched veil to earth I cast."

It seems clear from the future "rifugirà" that *sparto* is the past participle of *spargere*, used absolutely, not the present indicative of *spartire*. In the poem "A se Stesso," "or poserai" means "Now shalt thou rest," not "Nor wilt thou." This must surely have been a slip. In the following lines,

"Peri l'inganno estremo
Ohe eterno io mi credei,"

is rightly taken as "perished is the last illusion that I thought eternal in me." The three ultimate lines of the same poem, however,

"Omai disprezza
Te, la natura, il brutto
Poter," &c.

translated by Mr. Townsend

"Still, Nature, art thou doomed to fall," &c.

seem to us in his rendering not only to be a violation of the actual meaning of Leopardi, but to show a neglect of the very essence of Leopardi's philosophy. With Leopardi nature is the ultimate fact. He never presses beyond nature. In the parable of the Icelander, Nature, the Sphinx of Sahara, is left alone upon the scene. It is man who is destroyed. It seems to us impossible that Leopardi should ever have said that Nature herself was "doomed to fall, the victim scorned of that blind, brutal power that rules and ruins all." Again, the phrase, "father's balcony," as a translation of "i verroni del paterno ostello," gives, in its colloquialness, a shock to the reader, and is a violation of Leopardi's rigid purity and correctness of style.

But, in spite of these and other points of disagreement, which it would have been pleasant to discuss with Mr. Townsend, we repeat again that these translations are very good, and in proof thereof we recommend to our readers the "Night Song of a Wandering Shepherd in Asia." H. F. BROWN.

NEW NOVELS.

The Government Official. In 3 vols. (Bentley.)

Weeping Ferry. By George Halse. In 2 vols. (Hurst & Blackett.)

Miss Gascoigne. By Mrs. J. H. Riddell. (Ward & Downey.)

Cradled in a Storm. By Theodore A. Tharp. (Maxwell.)

In his Grasp. By Esmé Stuart. (W. H. Allen.)

99, Dark Street. By T. W. Robinson. (Maxwell.)

A Twice-Seen Face. By F. Stewart Isham. (Bristol: Arrowsmith.)

Hatred is Akin to Love. By Ptolemy Houghton. (Sonnenschein.)

THERE are obvious reasons for the anonymity of the clever, though by no means faultless, novel which is entitled, *The Government Official*. Guessing, like prophecy, is hardly safe unless one knows. But it is really impossible to avoid guessing that one, at least, of the portraits of Her Majesty's civil servants

in the Inland Revenue Office at Liverpool is drawn from the life; and if so, the original is hardly likely to feel amiably disposed towards the wielder of a very realistic and eminently unflattering brush. There may be more than one, but one there must be. For it is clear that the author, unlike his character, the luckless Trosdale, is not an inventor but an observer; and the scene in which we make the acquaintance of the official, Mr. Cramsey, who is engaged in acting as an amateur laundress, could hardly have been invented by anyone. Those who know Liverpool at all will be impressed by the vivid accuracy and realisableness of the topographical sketches; and these will tend to inspire belief in the human portraiture, some of which would be otherwise a little incredible. If such persons as Trosdale, Thistlewaite, Holt, and Kerry are fair specimens of the representatives of Somersset House in provincial cities, the fact that the business of the country continues to be carried on rises almost to the dimensions of a miracle. Of course, there must be a strong dash of caricature in the sketch of the way in which things are managed at "third Liverpool," but one feels that there is some body of truth behind it; and had the author possessed not merely quick observation but some of Dickens's power of incisive humorous delineation, he might have given a companion to the memorable picture of the Circumlocution Office. Not that the author is deficient in humour, but he demands for its exercise a theme which brings its fun with it. The impudent, feather-brained, but loyal-hearted Irishman, Daniel Kerry, is really amusing, and is a success from first to last; while his office companions, whom Dickens would have made equally amusing, though in a different way, are here simply disagreeable. There is not much story in the book, but the characters and scenes are so tellingly realised that we do not feel the lack of it. The author can write well; whether he can invent well it is impossible to say, for in *The Government Official* he is obviously drawing upon his personal experience. I, for one, shall look out with some curiosity for his second book.

Weeping Ferry begins well, and a good beginning is a good thing. It is also, however, a very exasperating thing when, as in this story, it is a solitary goodness—a disappointing prelude to a great deal that is anything but good. Perhaps this is to speak a little too strongly, for the greatest faults of *Weeping Ferry* are the absurdity of its story and the utter unreality of two or three of its characters; but the worst of these disappointments is that they make one give way to bad tempers and extravagant language. The atmosphere and general tone and treatment of the opening chapters reminded me very strongly of some of the novels in the *Caxton* series, and I quite thought that in the mysterious "moth-hunter" Mr. Halse was going to provide one of those intinerant combinations of the philosopher and the guardian angel for whom Lord Lytton had such a kindness. Unfortunately the *Caxton* note is not heard for long, or, at any rate, is only heard intermittently; and the promising "moth-hunter" vexes the soul of the judicious reader by developing into an amateur detective of such preternatural penetration that we soon

cease to be surprised at any discovery, and only wonder that so remarkably endowed a being should allow himself to be half killed by one of the villains of the plot. These villains are the flies in the ointment. Were they removed, *Weeping Ferry* would not be a bad novel; but then it would be a novel from which the story had escaped through the gaps. There are some charming descriptions; and all that portion of the tale which relates to Peter Ray, the ferryman, and his adopted daughter Effie, is a delightful idyll. If Mr. Halse will stick to pastorals and abstain from plots he may yet do well.

Mrs. Riddell is still improving, and to say this of a writer who has been so many years before the public is to pronounce a distinctly favourable verdict. She has certainly never written anything more artistic than *Miss Gascoigne*, though the book is simply a sketch, or at most the story of an episode, rather than a novel of the ordinary kind. That it is wholly a cheerful book cannot be said. Mrs. Riddell seems to have made a vow never to let herself go in the direction of unadulterated cheerfulness, and we bid farewell to our latest hero and heroine in a rather uncomfortable frame of mind; but, apart from this, the volume is simply admirable both in conception and execution. One thing Mrs. Riddell has done which I am inclined to think has never been done before by any English novelist: she has told the story of the mutual passion of a young man of one-and-twenty and a woman more than ten years his senior, without any deviation from perfect imaginative truthfulness, and has yet managed to prevent either from being for a moment ridiculous. Both the beginning and the ending of this love-story are treated with real freshness; but no details shall be given here. Readers will enjoy the book all the more for not knowing too much about it beforehand.

The next two novels on this week's list are obviously intended for people who like strong stimulants. Mattie Freith, the heroine of *Cradled in a Storm*, never really escapes from her cradle, for her whole life—at any rate the whole of Mr. Tharp's record—is one long tempest. Indeed the storm, which frequently rises into a hurricane, begins before she is born, as a few hours previous to that event Mattie's mother, who has been driven mad by the belief that she has murdered her husband, is all but worried to death by a young mastiff, who tears her throat open, and leaves her in a most undesirable plight. As soon as she has recovered, the unfortunate woman, impelled by remorse for her supposed crime, commits suicide by drowning herself in a neighbouring river; and Mattie is adopted by her grandfather, General Crutwell, who has been alienated from his daughter by her marriage to the scoundrel, Walter Freith, and who is the possessor of the dog which for once has guarded his house not wisely, but too well. Unfortunately, Mrs. Freith's attempt at murder, though well intended, has been unsuccessful. Walter Freith turns up again in the flesh, and, failing in his endeavour to obtain pecuniary help from the general, leaves the house vowing vengeance. To the story of this vengeance Mr. Tharp devotes a volume which is a simple treasure-house of absurdities. Improbabilities need not be too harshly treated

when they are made to hang together in a workmanlike manner; but Mr. Tharp's manner is certainly not workmanlike. Incidents and characters are alike incredible; and it is not the kind of incredibility which inspires interest.

Miss Esmé Stuart, who has done some good, honest, solid work, has taken a new departure; and it is not one on which she is to be congratulated. From *Muriel's Marriage* to *In his Grasp* is a great descent; and the pitiful consideration is that the author has probably been induced to take it by a suspicion—which, it may be feared, is only too well founded—that the shoddy "psychology" of the latter work may prove more widely attractive than the careful character-painting of the former. *In his Grasp* is "respectfully dedicated to the Society for Psychological Research"; but, though the members of that society have been a good deal laughed at, it is impossible to believe that the weakest of them could possibly be taken in by the sham mesmerism which provides the subject-matter of the tale. If people will write stories dealing with themes of this kind, the least that can be expected is that they should, at any rate, familiarise themselves with the facts; but this preliminary seems to have been omitted by Miss Esmé Stuart. Her villainous mesmerist meets the heroine at an evening party, and by making a few passes over her brings her so completely under his power that for years afterwards she is at his beck and call. The young doctor, Leo Winterton, who falls in love with Aletta Templeton and marries her, is determined to discover the mesmerist and compel him to release his victim, and of course he is finally successful; but the *dénouement* is brought about by a chain of incidents which are just as extravagant as the primary conception. Miss Esmé Stuart always writes well, because she cannot write otherwise; but even her style suffers from being dragged into the service of a form of art—if art it can be called—which is altogether beneath her.

Mr. F. W. Robinson is another victim of the popular craving for strong stimulants. He has done such creditable and careful work that it is little less than painful to see his name on the title-page of a book like *99, Dark Street*, which is a mere pot-boiler, and, as the Yankees say, "poor at that." In a "shilling shocker" one does not expect lifelikeness, but one may fairly expect workmanlike construction; and this reasonable expectation Mr. Robinson disappoints. The story is of meaningless mysteries all compact. Mr. W. M. Rossetti has remarked of a famous poem that it lacks "a core of common-sense," and this lack is the one link between *99, Dark Street* and *The Ancient Mariner*.

A Twice-seen Face deals with artist life in Munich, and is rather a sentimental and unreal piece of work; but it has something of picturesqueness and something of pathos. Here, however, as in the book last noticed, there is a total deficiency of solid construction, of coherence, of inevitableness; while the meaning of the title is an insoluble mystery, as the face referred to is seen not twice only, but many times.

Authors, I believe, are wont to accuse reviewers of not reading their books. So far as my knowledge goes the accusation is, as a rule, unfounded and cruel; but it must be admitted that there are books which are unread for the simple reason that they are unreadable. Such a book is the story entitled, *Hatred is Akin to Love*. The perusal of one chapter suffices to prove it fearfully and wonderfully ungrammatical, but even absence of grammar may be atoned for by presence of interest. Having waded half way through the book, I can testify to the absence of both; and for this double lack no atonement is possible.

JAMES ASHCROFT NOBLE.

RECENT THEOLOGY.

Chrysostom. A Study in the History of Biblical Interpretation. By Frederick Henry Chase. (Cambridge: Deighton & Bell.) This is a scholarly little treatise, being a revised and enlarged edition of an essay which gained the Kaye Prize some few years ago. It treats of Chrysostom not as the eminent statesman-prelate, nor yet as the brilliant preacher, the aspects under which he is usually regarded, but as an interpreter of Scripture, and a representative of the School of Antioch at a certain point in its development. Those who are familiar with Chrysostom's homilies are aware that amid all their ornate imagery and rhetorical flights, there is a clear and sane exegesis, which Theodoret almost alone rivals in patristic literature as a commentator on Scripture, and which the greater genius of Augustine does not always observe. The first chapter briefly sketches the position and character of the Antiochene School, and outlines Chrysostom's life, showing how he was not influenced merely by its general atmosphere, but specifically by two of his teachers, the pagan sophist Libanius, and one of the earliest of Rationalists, Theodore of Mopsuestia. We are also reminded that it was John Cassian, the chief founder of Western monachism prior to Benedict of Nursia, who did most to make Chrysostom's teaching, imbibed by himself from personal intercourse, familiar in the West, and (what Mr. Chase does not add) the much-needed counterpoise to Augustinianism. The next chapter deals with Chrysostom as an interpreter of the Old Testament, by which Mr. Chase explains that the LXX. is to be understood. It is concerned less with noting textual exegesis than with defining Chrysostom's attitude towards the Old Testament as a whole—his general principles of interpretation—rather than the special application of those principles to individual cases, though examples are given of some of these too. It is in the third chapter that his claims as critic and scholar are considered; and the point chiefly urged throughout is that while Chrysostom—as preaching to the general public, and dealing with books written in a still living language, that of his own land and race—naturally had little call to deal with textual questions, yet he is a careful discriminator of grammatical niceties when attention to them is important for bringing out the truest meaning of a passage. Chap. iv. discusses his interpretation of the Gospels and the Acts, rather accumulating a number of typical examples than endeavouring to press any specific view concerning their character upon the reader; for in truth there is no very definite picture afforded by them, since they rather exhibit the faculty of historical common-sense than any more subtle quality. More is said, however, in the closing chapter, dealing with Chrysostom's own favourite study and subject, the Pauline Epistles; and it is here that Mr.

Chase indicates his own estimate of the excellencies and defects of Chrysostom's exegesis as a whole, the verdict being generally favourable, though admitting certain drawbacks. A useful bibliographical appendix and an index of Scripture texts close the volume.

Saint Augustin, Melancthon, Neander. Three Biographies. By Philip Schaff. (Nisbet.) In his dedication of this little volume to the theological students under his care in New York, Prof. Schaff characterises the divines about whom he writes as "Three of the best among the great, and of the greatest among the good." But his admiration of their many excellent gifts and graces has not made him a mere panegyrist, and, especially as regards St. Augustin, he seems to be at once warmly appreciative and strictly impartial. Where Dr. Schaff fails is in his attempt (if it be his) to render into English the quotations which he makes from the great father's *Confessions*. We admit the difficulty. The point of an epigram is not likely to be preserved in its perfection after passing through what is, in effect, a double translation. Dr. Schaff, however, is to be commended for making St. Augustin, so far as possible, his own biographer, and quoting, largely and boldly, from that record of a soul's conflict which makes the *Confessions* a work of priceless value. The biography of Melancthon is a brief sketch of the reformer's life and opinions. Dr. Schaff regards him as a connecting link between the Lutheran and Reformed Churches, and finds, in the honour conceded to him by both, a realisation of that desire for unity and peace by which he was distinguished. To the reminiscences of Neander a larger space is allotted. Dr. Schaff was his pupil and friend, and it was at his recommendation that he accepted the chair of Church History and Exegesis which he now occupies in America. Among his last letters was one addressed to Dr. Schaff, and dated October 28, 1849. In it occurs the following passage:

"We stand on the brink of an abyss, the downfall of the old European culture, or else on the confines of a new creative area, to be ushered in through manifold storms—another grand act in the world-transforming process of Christianity. From the mercy of a long-suffering God we will hope for the last."

These words of the modern father of Church history have not yet lost their significance.

Three Anti-Pelagian Treatises of St. Augustine, translated with Analyses by F. H. Woods and J. O. Johnston (Nutt), is meant to help candidates for honours in the Theological School at Oxford, where the writings chosen—viz., "De Spiritu et Littera," "De Natura et Gratia," and "De Gestis Pelagii" are set as part of the doctrinal subject-matter. The version is fluent, and commendably close, without committing the faults of baldness and Latinised English which make the translations from St. Augustine in the "Oxford Library of the Fathers" actually repellent to a scholar; and the analyses usefully point out the train of Augustine's reasoning, not always easy for a young student to follow unassisted. But the volume lacks an index.

The Elements of Canon Law. By Oswald J. Reichel. (Bosworth.) That the study of the Canon Law, purposely discouraged by Henry VIII., and much neglected in England ever since, is likely to be revived may fairly be augured from the appearance of no fewer than four works upon the subject within the last four years. And Mr. Reichel's, the latest of them, is also the best. It is orderly and methodical in arrangement, lucid in diction, and contains the results of considerable reading within a moderate compass. No student who reads it attentively can fail to learn a great deal from it. But for all that, it is not the

manual that has been waited for so long. A really satisfactory book must be more severely historical and scientific in treatment, and must bring into far more prominence than does Mr. Reichel the Eastern Canon Law, and distinguish carefully in the West between Conciliar and Pontifical Law. It is enough to say upon the former head that he does not so much as mention the *Pedalion*, or text-book of Eastern Canon Law, nor the *Nomocanon* of Photius, nor the names of such eminent Oriental canonists as Balsamon, Zonaras, and Alexius Aristenus; and upon the latter, that he makes himself in some degree the apologist of the False Decretals, accepting without qualification the specious and illusory defence set up for them by Walter in his *Lehrbuch des Kirchenrechts* and by Möhler in his *Symbolik*. Nor does he appear to have consulted the more temperate and trustworthy Latin writers of later times. We have Reiffenstuel, but not Rauttenstrauch; and, though the great Van Espen is named, it is only to cast a theological slur upon him, while there is not a word of Justellus, of Zypaeus, of Richer, of Tostatus, of Hermant, of Almain, or of Hericourt. Nor is he always accurate in matters of legal fact. Thus, he lays down that in England a Canon is repealed by any contravening statute, not recognising that this applies only to statutes down to the year 1533, not to any and every statute which Parliament may please to enact. Again, he loosely applies the term "Roman Patriarchate" to the whole of Western Christendom, whereas very important issues of Canon Law turn on the fact that the Roman Patriarchate was limited to the ten suburbicarian provinces of Italy, with the adjacent islands. And he is also inexact in more recent matters of law, being, for instance, in conflict with a late decision of the courts in part of his section on the resignation of benefices. The book requires entire recasting in all that relates to the confusion between Pontifical and other Canon Law, which is its principal defect; but the general framework and much of the actual matter are sound and commendable, deserving to keep a place in a revised edition.

The Church of the Early Fathers, by Alfred Plummer (Longmans), is a volume in the series of "Epochs of Church History" which is under the general editorship of Prof. Creighton. It deals exclusively with the external history, being distinguished in this wise from treatises such as those of Neander and Cardinal Newman, which are more concerned with questions of internal Church life and habit. In a brief preface, explaining that no more than a mere sketch of part of the Ante-Nicene period is attempted, Dr. Plummer supplies a list of the original sources to be consulted, and of larger works than his own, wherein the student can pursue more fully the subject upon which he has been once fairly started. Ten chapters survey successively the general situation at the entrance of Christianity into the world, its rapid spread, the fortunes of the Syrian, Asiatic, Greek, Egyptian, Italian, North African, Gaelic, and British Churches, the literary contests of Christians with Jews and heathens, and the persecutions, in which last chapter a longer period is treated than elsewhere, as it brings the narrative down to the final victory of the Church under Constantine. The book is executed with competent knowledge; and while the brief compass does not allow of much digression for picturesque purposes, the style is clear and straightforward, so that Dr. Plummer has given us a useful handbook.

The Church and the Roman Empire, by the Rev. Arthur Carr (Longmans), is another volume of the same series, dealing with one aspect only of the complicated narra-

tive to which it belongs: namely, the relations between Christianity and the Empire during the period lying between the death of the Emperor Carus and the Pontificate of Leo I., together with the gradual spread of the Church in this same time, while little is said concerning its internal annals, and the secular side of the whole matter receives the chief attention. The story is told in clear and readable fashion, so as to be genuinely helpful to the student, though, of course, there are many problems which cannot be so much as glanced at in the brief space available, and which he must search out in the larger works recommended by Mr. Carr.

Saint Teresa's Pater Noster, a Treatise on Prayer, by Joseph Frassinetti, translated from the Italian by William Hutch (Burns & Oates), is a religious manual based on the writings of the celebrated Teresa de Cepeda, and often expressed in her very words. It is doing the Italian author only justice to say that he has used his materials skilfully, producing a book which is free from the literary and practical defects of too many volumes of the kind, especially those of recent French origin; while the translation is English, and not that peculiar dialect which might be called Alban-Butlerese. But what does Dr. Hutch mean by styling the late F. Faber "a matter-of-fact Englishman"? Of all the epithets he could possibly have employed, none is so grotesquely inapposite.

The Lesser Imitation. Being a Sequel to the "Following of Christ." By Thomas à Kempis. (Burns & Oates.) This is a translation of one of the minor religious treatises of the famous author of the *Imitation*, smoothly rendered, and containing many pious thoughts in few words. But the reader must not look for the level of the *Imitation*. Therein Thomas à Kempis culminated, and none of his other writings comes even second or third after it. From any other pen they would have won more esteem; but his own fame has been their literary foe, and few have cared to print or study them in the four centuries since they were penned. Yet anyone desiring to form a collection of pregnant aphorisms could cull many from this single booklet.

NOTES AND NEWS.

WE hear that Mr. H. F. Pelham, the newly appointed Reader in Roman History at Oxford, is well advanced with a history of the Roman empire, which will probably fill some three volumes.

THE Hon. Roden Noel has written an article for the *Contemporary Review* upon "Mrs. Browning," in which he takes occasion to animadvert upon Mr. Swinburne's recent criticisms on Byron and Walt Whitman.

PROF. SKEAT has just finished his edition of the Anglo-Saxon Gospel of St. Matthew in parallel texts, like his edition of the three other Gospels. The work has taken him five years. The prospectus for doing these Anglo-Saxon Gospels was issued in 1837. The late J. M. Kemble produced his first edition of the St. Matthew in 1837. After his death, Prof. Skeat edited successfully Mark, Luke and John, and now finishes his work with St. Matthew in 1887.

THE article on "Tibet" in the forthcoming number of the *Encyclopaedia Britannica* has been written by Prof. Terrien de Lacouperie for the history, ethnology, and languages; and by General J. T. Walker, late surveyor-general of India, for the physical geography.

MESSRS. DULAU & Co. will shortly publish a volume of *Travels in Tunisia*, the joint production of Mr. Alexander Graham and Mr. H. S. Ashbee, who have more than once visited

that country. In addition to numerous illustrations, the volume will be furnished with a map, a glossary, and a comprehensive bibliography.

MR. ELLIOT STOCK announces a volume entitled *Ballads of a Century*, illustrating the life of this country in its various aspects during the seventeenth century. It will be illustrated throughout by facsimile woodcuts, by Mr. John Ashton, and will have a short introduction to each section.

MR. F. S. ELLIS is still hard at work at his Shelley Concordance for the Shelley Society. All the poems are done, and the 120,000 slips sorted into forty boxes of 3,000 each, and thirty-five of the boxes have their slips sorted alphabetically, each box having taken, on an average, five days to sort. Then will come the amalgamation and resorting of the forty boxes of the alphabetically sorted slips, the classification of the quotations for every word under each of its meanings, and the final preparation for the press. If all this leaves Mr. Ellis able to work, when the Shelley Concordance is completed, he looks forward to making a Shakspeare Concordance and Lexicon combined, Schmidt's Shakspeare Lexicon with full concordance quotations—a book which Miss Teena Rochfort Smith meant to compile had her life been spared.

PROF. NAPIER, of Oxford, is preparing for the Early English Text Society an edition of all the hitherto unprinted Anglo-Saxon Homilies. He is determined to make the whole of our Anglo-Saxon documents accessible to students in fairly cheap editions.

PROF. SKEAT has in the press for the Early English Text Society the third part of his edition of Aelfric's Metrical Homilies.

MR. W. H. S. UTLEY, of Owens College, has sent to the printers, also for the Early English Text Society, the prose romance of *Melusine*, from the unique MS. in the British Museum, and the sixth and last part of the works of Sir David Lyndesay, which the late Mr. Small's mortal illness obliged him to resign before completion.

MR. F. HORSLEY of Owens College, Manchester, has undertaken to edit for the Early English Text Society the series of Anglo-Saxon and early English Psalters, which the many Shakspeare and other calls on Dr. Aldis Wright's time have compelled him to give up. Mr. Horsley will also re-edit for the Early English Text Society the collection of Anglo-Saxon poetry known as the "Exeter Book," the MS. being in the Exeter Cathedral Library. The first edition was by the late Benjamin Thorpe.

MR. HORSLEY is, moreover, engaged on a new edition of the Homilies of Aelfric, for which he will collate all the known MSS. He has been for some time at Cambridge working at the Corpus and other MSS.

MR. A. W. POLLARD has undertaken to edit for the Wyclif Society the Reformer's treatise, *De Officio Regis*, which is Book viii. of his *Summa Theologiae*. It will be issued this year, with part ii. of Wyclif's Latin Sermons, edited by Prof. Loserth.

MESSRS. CASSELL & COMPANY have in preparation a revised edition of *Old and New London*, by Walter Thornbury and Edward Walford. A large map of London, brought down to the present date, will accompany Part I., to be published next month.

NEXT week, Mr. Quaritch promises to issue the last fasciculus of his continuous catalogues. It will close the wonderful series of "Monumenta Typographica," and complete his catalogue of MSS. in a final supplement, containing some articles of extraordinary

English interest, such as the Mendham and Clare Psalters, and a *Missale plenarium* of Sarum use and great age. Persons who have been in the habit of looking forward to the arrival of Mr. Quaritch's successively numbered catalogues must in future learn the record of his acquisitions from his "Rough Lists" only.

MR. GEORGE REDWAY'S ANNOUNCEMENTS.

MR. PERCY ROSS, author of "A Comedy without Laughter," has written another work, which will be shortly issued by Mr. Redway. It is a curious study of character, the type chosen being an alchemist of the sixteenth century. *A Professor of Alchemy (Denis Zachaire)* is the title of the book.

Theosophists have hitherto been obliged to satisfy their cravings for periodical literature at some disadvantage, the *Theosophist* being issued in India. In the course of a few weeks, however, the first number of *Lucifer: a Theosophical Monthly*, edited by Mdme. Blavatsky, and Miss Mabel Collins, will be published by Mr. Redway.

Yet another branch of "the occult" has been opened up to the English reader. Mr. S. L. Mathers has translated the *Kabbala Denudata* of Baron Knorr von Rosenroth. The work will be published in the autumn by Mr. Redway, under the title of *The Kabbalah Unveiled*.

The two stout volumes of the Psychical Research Society, called *Phantasms of the Living*, will soon be supplemented by a work on the phantasms of the dead. Mr. Redway has in the press a translation of M. Adolphe d'Assier's *Posthumous Humanity: a Study of Phantasms*, the translator being Colonel Olcott, president of the Theosophical Society.

Mr. Hargrave Jennings is well known as an authority on the Rosicrucians; his work, of which the third edition was issued by Messrs. Nimmo & Bain last spring, being the only one on the subject. A new writer, however, has arisen in Mr. Waite, the translator of and commentator on Eliphas Levi. His book, *The Real History of the Rosicrucians*, will be published by Mr. Redway at the beginning of the autumn season.

ORIGINAL VERSION.

A CLOUD-INVOCATION (AUGUST, 1887).

Come, prythee, cloud with thy dark
Once more our heavens o'erhang
shroud.
Sun-stricken, we are languid, limp, and cow'd,
To earth quite bowed.

Day after day,
The sun hath flashed on us with steel, white ray,
And men, birds, flowers, for thy scorn, are grey
Devoutly pray.

Of cloudless shine
Like that which scorches dwellers 'neath the line,
Wearied we are, and for thy rainfall sigh
Panting we pine.

Fierce torrid heat,
For England's clime and people all unmeet,
Too long upon our drooping heads both beat
—Thy shade were sweet

Spring's vesture new
On woods and fields hath lost its lustre due,
Ravished and merged in the unvarying hue
Of heaven's bright blue.

The shrunken brook
That creeps, faint whispering by each quiet nook,
Doth toward thee—as child by nurse forsook—
Wistfully look.

Sadly and lean,
Browsing the arid pasture—no more green—
The kine gaze heavenward plaintively: they mean
To implore thy sreen.

We are not made
For ceaseless brightness unrelieved by shade.
We parch and shrink, as flowers left of thy aid
Droop down and fade.

So, prythee, cloud!
With moisture and with coolness sweet endowed
Encompass us: so lifting heads now bowed
We'll laud thee loud.

JOHN OWEN.

OBITUARY.

RICHARD JEFFERIES.

It is with much regret that we record the death of Mr. Richard Jefferies, which took place at Goring on the Thames, on Sunday last, August 14.

Mr. Jefferies was the son of a Wiltshire farmer, in which county his most successful studies of rural scenery may be localised. About 1870 he came up to London, to devote himself to literary and journalistic work. The first book, we believe, that bore his name was *Practical hints for Reporting, Editing, and Authorship* (1873). In the following year he published his first novel, *The Scarlet Shawl*. But it was not until 1878—when that remarkable series of sketches of natural history and country life, afterwards collected under the title of *The Gamekeeper at Home*, appeared in the old *Pall Mall Gazette*—that his writing attracted attention. This success was followed up within a year or two by *Round about a Great Estate and Hodge and his Masters*; and henceforth articles by Mr. Jefferies were in great demand with editors both of newspapers and of magazines.

If he cannot be ranked as a naturalist with Gilbert White, nor as a man of science with Mr. Grant Allen, nor as a novelist with Mr. Thomas Hardy, it was his peculiar merit to seize and reproduce with photographic minuteness the physical aspects of the country and the characters of country people just at the time when the towns seem to be concentrating upon themselves all the life of the nation. In insight into the obscurer sights and sounds of the forest and the field, and in analysing their mysterious influence upon mankind, Mr. Jefferies stands without a rival. Beasts and birds revealed to him their inner secrets; even the vegetable world became inspired with a conscious life; while the sky and the winds and the waters played upon his responsive imagination as upon an aeolian harp. As is often the case with self-educated men, his style of writing—when at its best—was a vivid transcript of what his mental eye conceived. But he seems not to have been aware of his own limitations. Undoubtedly he wrote too much—even on his own special subject; and it is particularly to be regretted that he should have wasted his energy upon so many novels. But every one must be pained to hear, not only that he suffered from wasting illness for several years past, but that he has been unable to leave behind him any adequate provision for his wife and children. We feel assured that his many admirers will gladly contribute to a subscription for that object.

MAGAZINES AND REVIEWS.

In No. 3, tomo v., of the *Revista de Ciencias Históricas* Fernandez y Gonzalez tells the story of the first appearance of the small-pox in Arabia at the siege of Mecca, obscurely alluded to in the Koran. Father Juan Segura commences a series of notes and extracts from his common-place book on the customs of the mediæval ages in Cataluña. The Conde de la Viñaza continues his additions to the Dictionary of Ceán Bermudez, covering the whole of letter B. Fr. Manuel Cundaro gives a spirited account of the second siege of Gerona, doing full honour to the assistance received from the

English frigates, and especially from Lord Cochrane. The works of Mr. Percy Gardner, and of other English numismatists, form the chief material of an article on the antiquity of coins by José Brunet. There is also a description, with photographs, of the tomb of an Angur lately found at Cadiz.

The *Revista Contemporánea*, for July, has a notice of a young Valencian painter, J. Sorolla Bastida, whose chief picture—"The Burial of the Saviour"—is highly praised. D. Domingo Gascón defends Mariano Nifo, a publicist of the last century, from the strictures of Menéndez y Pelayo in his *Historia de las ideas estéticas en España*. Sanchez Toca considers the position of Spain as exceptionally favourable in the present crisis; her poverty, and not having exhausted her agricultural resources, will save her. Perez y Oliva prints his thesis for the degree of Doctor in Law at Bologna, arguing against the capture of private property at sea. The continuations are those of Sanroma's "Memoirs," of Jiménez de la Espada's "Notes on Juan de Castellanos," and of Lorenzo D'Ayot's "New Ideals in Art," exemplified by a fragment of his tragedy "Dánoscar."

DOMESDAY COMMEMORATION.

UNDER the collective title of "Domesday Studies," a record will shortly be published of the Domesday commemoration held in London last year. There will be two volumes, each consisting of upwards of 550 pages quarto; and the first volume will be ready for issue in October. The contents are as follow:

The Book.—"The Official Custody of Domesday Book," by Hubert Hall; "Materials for re-editing Domesday Book," by W. de Gray Birch; "An Early Reference to Domesday Book," by J. Horace Round.

The Land.—"The Study of Domesday Book," by Stuart Moore; "The Turkish Survey of Hungary, and its Relation to Domesday Book," a Study in Comparative History, by Hyde Clarke; "Domesday Survivals," by Canon Isaac Taylor; "A New View of the Galdable Unit of Assessment of Domesday"—embracing the divisions of the *Libra* or Pound of Silver and the Weights and Measures of Uncoined Metal, Flour, Cloth, &c., as made by the Angli, Mercians, Danes, Normans, and Celts, and their connexion with the true understanding of the words *Hida*, *Carucata*, *Virgata*, *Villanus*, *Anglicus numerus*, &c., by O. E. Pell; "Domesday Measures of Land," by J. Horace Round; "Domesday Land Measures"—the Plough and the Ploughland, by Canon Isaac Taylor; "Wapentakes and Hundreds," by Canon Isaac Taylor; "Danegeld and the Finance of Domesday," by J. Horace Round; "The Order of Domesday Book," by Hyde Clarke; "The Scope of Local Elucidation of the Domesday Survey," by Frederick E. Sawyer; "The Domesday Survey of Surrey," by H. E. Malden; An Alleged Error in Domesday Book with regard to Ancient Domesne, by Sir Henry Barkly.

The Church.—"The Church in Domesday Book," with Especial Reference to the Endowments of the Dioceses, by James Parker; "Parish Churches omitted in the Survey," by Herbert J. Reid.

Bibliography of Domesday Book; Notes on the MSS. exhibited at the Public Record Office; Notes on the MSS. exhibited at the British Museum; Notes on the Printed Books exhibited at the British Museum.

CORRESPONDENCE.

GOLD IN WESTERN ARABIA.

Rohitsch-Bauerbrunn: Aug. 5, 1887.

After an unconceivable delay, the following letter was received by me dated Jeddah (Red Sea), from Mr. A. Levick, son of my old friend, the ex-postmaster of Suez, whose name is known to a host of travellers. It will show that even without action on the part of Europeans the cause of discovery is thriving; and the public will presently ask why, in our present condition, when there is almost a famine of gold, England pays no attention to these new fields. "From enquiries I have made at Jeddah, I learn on good authority that gold quartz has been found in great quantities at Tâir [the famous summering-place among the highlands to the east of Meccah], or rather on the mountain-range between that place and Meccah. The person who gave me this information added that specimens of this quartz were forwarded at the time of the discovery to Constantinople and sundry other capitals, but that the results obtained were not very encouraging. I was also told that Mr. Noel Betts (of the defunct company, Betts, Wylde & Co.) has at Suez specimens of this quartz which he took away with him from Jeddah when he went North. All this information is trustworthy, and you may thoroughly rely on its being correct, as I got it from a man in whom I can confide. An old oriental traveller like yourself can understand how hard it always is to arrive at the truth in a place like this. However, I am assured that the government engineer of this

district (Jeddah), a certain Sâdik Bey, can also give me valuable details regarding the specimens found and the results obtained. Meanwhile you can confidently rely on the details which I have so far managed to obtain. I should also add that the person who so kindly gave me the news has further promised that he will do his utmost to provide me with specimens when he goes to Meccah. I have seen Mr. Consul Jago, and asked him if he could help me with anything he may have learnt on the subject; but he said that beyond hearing of a find of gold quartz he knows nothing. Mr. Consul Zohrab had left Jeddah before the discovery, and he never used to hear of anything. I shall be very glad to learn from you that the gold mines of Midian are likely to be coming on again, and I should think this a most favourable time to bring forward your most wonderful discoveries near Al-Muwaylah."

So far Mr. Levick. I am not astonished to hear that the results of the gold quartz were "unsatisfactory." These specimens were probably picked up from the surface, or broken off from some outcrop. But the fact of their being found is all important. And the outcome of the work would be very different were it carried out by a scientific engineer, or, better still, by a practical miner from the gold diggings. I have heard now of auriferous discoveries extending from between the mountains of Northern Midian, along the line of the West Arabian Ghâts, until they meet the volcanic region about Aden. They have been reported to me from behind Yambu, and Meccah, Mocha, and Hodaydah; and I have a thorough conviction that some day they will be found exceedingly valuable.

RICHARD F. BURTON.

THE EVANGELISTARIUM OF ST. MARGARET OF SCOTLAND.

Walton Manor, Oxford: Aug. 13, 1887.

The account given by Mr. F. Madan of the valuable recent addition to the treasures of the Bodleian Library in the little gospel-book of Queen Margaret, sister of Eadgar Aetheling, and its identification with the volume described by Theoderic of Durham or Bishop Turgot of St. Andrews, is so full and satisfactory as to leave but little to be said by either palaeographer or artist.

Small copies of the gospels, or such portions of them as were generally used in the service of the church, were evidently not uncommon in the latter part of the Anglo-Saxon period: such, for instance, are the gospels of Wadhams College, Oxford, ascribed by Dr. Waagen (*Treasures of Art in England*, vol. iii.) to between 1020 and 1030, and the very beautiful little gospel-book of Bishop Ethelstan of Hereford, 1012-1056, preserved in Pembroke College, Cambridge (both described in my book on *The Miniatures and Ornaments of Anglo-Saxon and Irish MSS.*). From these and other contemporary MSS., written, probably at Winchester, in the style which has been ascribed to the time of King Canute (to the development of which St. Dunstan most probably greatly contributed), our little MS. differs in the almost entire absence of ornamental details, while it agrees with them in the peculiar granulated appearance of the gold, applied liberally in the headings of each gospel, and in the redder tint of the gold, so entirely unlike the burnished gold of the MS. illuminations of the twelfth century, especially to be observed in the entire backgrounds of the latter drawings.

The text of the MS. is written in a beautiful minuscule hand, divided into the different lections, each commencing with the usual "In illo tempore." The "Passio Domini" of each gospel is written entire. It will be very interesting to compare the passages given in this MS. as cited by Mr. Madan (*ante*, p. 88) with the lectionaries given in various copies of the

gospels from the eighth to the eleventh century—a subject which has not hitherto received the attention it deserves. There are no marginal references to the Eusebian canons, capitula, prefaces, or other introductory matter to each gospel; and it is to be observed that the introduction to the historical part of St. Matthew's gospel, "xpi. autem generatio," is written in the small text of the remainder of the gospels.

Each of the four evangelists and the commencement of each gospel is represented within an oblong golden framework, entirely destitute of ornament, except a small plain golden trefoil leaf at each of the outer angles of each of the frames, which are of gold, about a quarter of an inch wide, having a narrower strip of orange red, pale green, or light blue attached to it, generally on its outer edge. In the miniature of St. John there is a second narrow strip of pale blue attached to the inner side of the gold one.

These borders are quite destitute of foliage or other marginal ornament, thus differing from all the "Canute" MSS. The only ornamental design occurring in the initial "L" of St. Matthew's gospel, "Liber generationis," which is 2½ in. high and 1½ in. broad, shaped like the lower half of a reversed s, the lower angle of the L being rounded off, and each end terminating in a dilated knotwork of gold of commonplace design; the outer angles of each are covered with flesh-coloured dog's heads, with open mouths (no eyes being visible). Down the middle of the body of the letter runs a bar of red lead a quarter of an inch wide, edged with lake colour, and having eighteen lake-coloured round dots down the middle, each surrounded with a slender white circular line.

The commencement of the text of each gospel is written in golden letters of various shapes, each preceded by the "Incipit euangelium secundum Mattheum," and written in small pink uncials in two or three lines. Here the A has the first and the cross strokes forming a large oval loop, attached to the middle of the second oblique stroke, ending below the line in a fine curved line, and finishing in a little knob; the D is circular, with a thin line extending from the top to the left above the line horizontally; the E is rounded or rustic-shaped; the G is nearly circular, with a slender tail extending below the line; the M has the first part nearly circular, the middle stroke curved below to the right, and the second portion rounded and carried rather below the line; the N has the first stroke carried below the line and turned upwards ending in a little knob, the cross bar (slightly oblique) joining the first below the top and the third before the bottom, where it is extended a little below the line; the U has the right-hand stroke carried below the line like a cursive x.

The commencement of St. Matthew occupies more than half the fourth page.

L IBER (1).
Gene- (2).
ratio- (3).
nts ihu xpi filii david filii (4).
Abraham A[braham] (5).

The first line is in fine Roman capitals, the second in round uncials (the E being both of the angular and rounded form), the third line is in finely formed rustic letters, the fourth and first half of the fifth in minuscule letters, the s of the f form carried below the line, and the A of good rustic form.

The commencement of St. Mark occupies half the page in 4 lines:

INTIVM
euangelium (sic) ihu
xpi filii di sicyt
scriptum est en isaia ppheta.

The commencement of St. Luke

Q UVIDEM
multi conati
sunt

occupies two lines of rustic capitals, and that of St. John

"In Prin
cipio erat
uerbum et uerbum erat apud
dm̄ et d̄f erat uerbum

occupies four lines.

The evangelists are drawn with much spirit. They are engaged in writing or holding their individual Gospels, and are seated on stools and cushions (*more Byzantino*). Each has a plain circular golden nimbus. Their Gospels are either book-shaped or in the form of a long scroll or roll, their feet rest on footstools most inconveniently placed in slanting positions, and their dresses (each consisting of an inner robe visible on the breast and over the feet) and body-covering of various colours, each being strongly relieved with dark shades of the local tints, and with the sides of the garments much angulated, the edge of each being relieved by bright lines of white or of the local tints, agreeing in this respect entirely with the treatment of the dresses in such of the Canute-period MSS. as have come down to us.

Sts. Matthew and Mark have curtains suspended from the top of the golden frame work. Sts. Luke and John are seated under rounded arches, with buildings in the upper angles of each picture. St. John is seated in a large square-backed chair, and Sts. Matthew and Mark's Gospel books, which are of gold, rest on the top of tall slender tripods. St. Luke holds a long golden scroll, and St. John's Gospel book rests on his left knee.

I. O. WESTWOOD.

THE HISTORY OF THE WORD "GHERKIN."

Oxford: July 14, 1887.

In the *Glossarium mediae Graecitatis* of Ducange, and in the *Dictionary of Byzantine Greek* compiled by Sophocles, we find recorded a word of mysterious origin—*ἀγγούριον*, also spelt *ἀγγούριον*. It seems to have been used in place of the old Greek *κίβανος*, and to have meant the common cucumber or gourd. The word occurs in various glossaries, and is found in the writings of Greek authors of the tenth century, such as Constantinus Porphyrogenitus and Leo Grammaticus. No doubt this new name for the cucumber came from the East; but, so far as I know, it has not been hitherto discovered from what language it was imported into the Greek of Byzantium. It is quite uncertain whether *ἀγγούριον* is of Indo-European or of Semitic origin. Hehn, in his work on *The Wanderings of Plants and Animals*, p. 239 (ed. 1885), calls it a Persic-Aramaic word—a description which leaves the question of ultimate origin undecided. Hehn says that the word seems to have been applied to those sorts of cucumber that we now use for salads and pickling. In course of time this mysterious Byzantine word, with its derivatives, spread from nation to nation through Europe. The modern Greek word for cucumber is *ἀγγούρι*, the name of the plant being *ἀγγούριδι* (see Byzantium). The Latin Ducange (see ed. Favre, 1883) cites *angurium* "melon," as occurring in a small Latin-Saracenic vocabulary found at the end of the *Opusculum sanctarum peregrinationum*, published, 1486, by Bernard de Breydenbach, the well-known German traveller to the Holy Land. In this glossary the Saracenic (*i.e.*, Arabic) *Bathich* (whence Portuguese *pateca*, French *pastèque*) is rendered by *Anguria*. The word was introduced into the Romanic languages—*cf.* Italian *anguria*, a kind of cucumber good to eat raw (Florio, ed. 1611); Spanish

angúrrias, a kind of pompion (Minsheu, ed. 1623), also, *angúrria*, a water-melon, a word not in use (Stevens, 1706); French *angourie*, a kind of cowcumber, somewhat longer than the ordinary one, also *angurie*, the great long pompion (Cotgrave, ed. 1673). In the New English Dictionary *anguria* occurs with a citation from Coryat: "Anguria the coldest fruite in taste that ever I did eate." In Basque *angurria* is the word used for a water-melon, see Fabre (s.v. *melon*) and de Aizquibel.

Hehn says:

"From Byzantium the cucumber reached the Slavs, and became a favourite and common food of all the nations of that race, as well as of the neighbouring Tartars and Mongols. The Great and Little Russian cannot live without cucumbers. He eats them salted through the winter, and with their help endures the long and strict fasts of the Eastern Church."

That the cucumber was introduced into Slavonic countries through the influence of Byzantine civilisation is clearly proved by the evidence of the common name for this vegetable among Slavonic peoples—a name representing the Byzantine *αγγούριον* with some diminutive suffix.

In the Russian Bible the word *сиквос* in Numbers xi. 5 is rendered *ogurét*, the Church Slavonic form of which was *ogourets*, so with another suffix Polish *ogórek* and Bohemian *okurka*, hence no doubt the Hungarian *ugorka*. From the Western Slavs the word (with the Slavonic diminutive suffix *k*) came to Scandinavian countries, and appeared under the form *agurke* in Denmark, whence Swedish *gurke*. Compare, also, Dutch *agurk* (later *augurk*), and German *gurke*, in older times also *gurchen* (see Weigand). This *gurchen* (probably a diminutive of *gurke*) seems to be the continental form corresponding to our "gherkin." Another account of "gherkin" is given in Skeat's Dictionary and in Palmer's *Folk Etymology*, p. 576.

A. L. MAYHEW.

APOLLO.

Settrington: Aug. 16, 1887.

Prof. Max Müller puts his finger on the greatest existing blot in the science of mythology when he states that "comparative philologists have not yet succeeded in finding the true etymology of Apollo." Till this is done, the meaning and origin of the cult of the great Hellenic Sun-god must remain obscure.

So large a portion of the Greek mythology has now been traced to Babylonia that it may be worth while to examine whether Apollo, like Artemis, Aphrodite, Ares, Dionysos, Semele, and Adonis, may not also prove to be ultimately of Babylonian origin. If so, we should seek for his probable prototype in Tammuz, the chief Syrian and Babylonian Sun-god. Now, in the Assyrian records, Tammuz, the eldest son of the Sky-god, bears the title of Ablu, "the son." The oldest form of the name of Apollo is Aplu, which occurs on six Italic or Etruscan mirrors. (Fabretti, *Corp. Ins. Ital.*, Nos. 478, 2054, 2474, 2480, 2481, 2499.) This would seem to identify Apollo with Tammuz, and to yield the long-sought etymology.

Tammuz was the "the son" of Ea, the heaven, and of Allat, the goddess of the unseen world; and, in like manner, Apollo is the son of Zeus, the Sky-god, and of Leto, the dark underworld. That Leto was also the mother of Artemis connects her distinctly with the Babylonian mythology, and it is not impossible that Leto may be an echo of the name of Allat.

ISAAC TAYLOR.

THE MYTH OF ANDROMEDA AND PERSEUS.

London: Aug. 15, 1887.

Without starting on a critical examination of Canon Taylor's theory of the Andromeda story, it may be enough to say that the facts do not

confirm it. Canon Taylor thinks that the story of Andromeda, the sea monster, and the rescue of Perseus, is a Babylonian nature-myth. Andromeda (the moon) is fastened to a rock (I don't know what the rock is) to be devoured by the dragon (of darkness), but is rescued by Perseus (a solar hero). But nature-myths give a superficially correct account of the phenomena for which they supply an unscientific explanation. The Andromeda myth, if it be a lunar myth, does not give a correct account of the phenomena. The dragon, in the story, never gets at the girl. In an eclipse the moon is actually swallowed. In the story, Perseus rescues the girl. Who ever saw a lunar eclipse in which the sun appeared to help the moon? As to the rock, there is no phenomenon in an eclipse at all resembling it. When Canon Taylor observes that Andromeda is tied to a rock, that Psyche "wanders to a lofty rock," and that Psyche is the moon, the argument reminds one of the analogies between Monmouth and Macedon. The reason given for thinking that Perseus = Bel Merodach would make any son of Zeus who used a scimitar identical with Bel Merodach. Perseus, again, must be a solar hero because he has "winged shoes." Like the young prophet, Perseus may say, "Alas, for they were borrowed!" Besides, Hermes has winged shoes of his own; and yet he is as often taken by mythologists for the twilight, or the wind, as for a solar hero. Many critical objections might be urged. In fact, an examination of the sources and dates of evidence for the Perseus saga (a complex saga) would be valuable. But, to be brief, if the Andromeda incident is derived from a nature-myth, that nature-myth gave an unusually inaccurate account of phenomena. When does "the God of Light" descend from the sky "to take the moon goddess for his bride" in a lunar eclipse? That phenomenon would hardly be introduced even into a boy's book of adventures in Kukuanaaland, where very odd eclipses notoriously occur.

A. LANG.

"COLLATION OF FOUR IMPORTANT MANUSCRIPTS."

Lowestoft: Aug. 13, 1887.

I enclose a letter which Dr. Ceriani has kindly written and given me permission to publish, in correction and explanation of the Abbé Martin's statement quoted in my note in the ACADEMY of July 16.

T. K. ABBOTT.

Mediolani: 9 Augusti, 1887.

"Dilecte mi Domine

"Ab urbe Brighton accipi his diebus the ACADEMY, July 16, 1887, in qua (p. 41) lapide scriptorio notata erant tum 'Collation of Four Important Manuscripts,' tum 'The Stowe Missal.' Primus locus te et me respicit, et libenter rescribo.

"Apprime sentio quanta te molestia et dolore verba Domini Martin afficere debuerunt; sed spero me posse aliquantulum dolorem tuum lenire, et indicare unde error Domini Martin ortus sit.

"(1) Quod de collatione integra Evangelii S. Matthaei cod. minus. 346, et de exemplari trium aliorum Evangeliorum integre ab eodem descripto, et de mea posteriore collatione pro locis de quibus eram interrogatus, asserit tum in libro *A Collation of Four Important Manuscripts &c.* (p. xv.) tum in the ACADEMY (July 16, 1887, p. 41), est omnino verum in omnibus et singulis. Adhuc vivunt et sunt professores publici Mediolani et qui contulit Evangelium S. Matthaei et qui tria reliqua descriptit.

"(2) Verba Domini Martin, quae referuntur libro *A Collection of Four Important Manuscripts &c.*, allata in the ACADEMY:

'Quant au Manuscrit de Milan, au cursif 346, il

est certain qu'il a été examiné seulement dans quelques passages: nous tenons le fait de la bouche même de celui qui aurait dû faire la collation, au dire des éditeurs Anglais."

non sunt vera ut patet ex jam dictis, quoad primam partem. In secunda parte ipse certe indicor; sed quantum quisque potest de se testari, nihil omnino hujusmodi dixi unquam Domino Martin.

"(3) Sed nec Dominus Martin malae fidei insimulandus est. Lapsu memoriae erravit, quantum ipse video; quod iis qui abundantissime scribunt accidere solet. Quando Dominus Martin ante libri sui scriptionem venit in Ambrosianam Bibliothecam, ut codices N. Testamenti inspiceret, et codicem 346 pertractavit; tunc, ut in lapsu temporis subobscure memini, librum Domini Scrivener *A Plain Introduction &c.* (3rd ed.) ei obtuli, in quo correctiones ipse et additiones opposueram locis de codd. Ambrosianis. Jam vero pag. 215 Scrivener habet '*346 . . . collated by Ceriani for Prof. Ferrar.' His ego adscripseram: 'Partly collated, partly copied by others, not by Ceriani, who collated only select passages after.' Ut res ferebat, debuimus de iis quae erronee scripserat Scrivener colloqui; sed quae ego de Scrivener vere dicebam, Dominus Martin ad ipsum librum *A Collation of Four Important Manuscripts &c.* lapsu memoriae transtulit calamo currenti, cum librum suum scripsit. Ista videtur mihi simplicissima et verax rei explanatio.

"ANTONIO CERIANI.

SCIENCE.

GEIGER'S HOME AND AGE OF THE AVESTA.

Civilisation of the Eastern Iranians in Ancient Times. Vol. II. "The Old Iranian Polity and the Age of the Avesta." Translated from the German of W. Geiger by Darab Dastur Peshotan Sanjana. (H. Frowde.)

THIS concluding volume of an English translation from the German by a Parsi priest is likely to be as useful as its predecessor (noticed in the ACADEMY of June 19, 1886) to the well-educated Parsis and to any English reader who may feel an interest in the subject. The translator's English is good, and rarely differs in meaning from the original text. The two volumes contain the whole of Geiger's work, except its earlier chapters on the geography and natural history of the country of the Avesta people, and a few passages in other places. The second volume also contains a translation of a later essay by Geiger on the "Home and Age of the Avesta," extracted from the *Proceedings of the Royal Bavarian Academy of Sciences*; as well as translations of long passages from Spiegel's *Iranian Antiquities* regarding Gushasp and Zoroaster, Iranian art, and Iranian alphabets.

Geiger's essay on the "Home and Age of the Avesta" is a timely protest against the modern attempts to underestimate the age of the Avesta and to trace its origin to a Western source. The conclusions he comes to, after carefully eliminating all the more modern statements which are inconsistent with those of the ancient documents, are that the original home of the Avesta civilisation was Eastern Iran, and that this civilisation flourished before the period of Medo-Persian history. M. de Harlez has attempted (in the *Journal of the Royal Asiatic Society*, vol. xvii., pp. 339-350) to disprove these conclusions; but, with due respect for his

extensive knowledge of the subject, it may be hinted that he is likely to require much stronger arguments, and rather less reliance upon dogmatic assertions, before he can shake their foundations. If Zarathushtra was a Mede who lived between 600 and 700 B.C., if he obtained his religious views from still more Western sources, and if the Avesta was written during the first seven centuries B.C., let these conjectures be clearly established by all means. But, until this is done in a really satisfactory manner, we ought to recollect that Avesta scholars of the present generation have practically the same documentary evidence to rely upon as their predecessors who arrived at very different conclusions. These original documents contain no chronological history; but, where the names they mention can be identified, they present points of contact only with the prehistoric times of the Veda. Their language is also closely related to the Vedic Sanskrit, which has not yet been traced to Media. The use of the title *Ahura* for the sacred being in the Avesta points to early Vedic times, before the Sanskrit *asura* had become a term for an evil spirit; and the contrast between the meanings of the Avesta *daéva*, "a demon," and the Sanskrit *deva*, "a god," has to be properly accounted for. In the older parts of the Avesta we find *Ahura* and *Masda* used as two distinct titles of the sacred being, generally occurring separately or in reverse order, and always separately declined. Even in the latest Avesta, where *Ahura* always precedes *Masda*, they are still declined as independent words. But when we turn to the Persian cuneiform inscriptions of Darius we find that *Atramasda* has become a compound name, declined as a single word—an alteration that seems to indicate a considerable lapse of time, as well as a change of language. As for Zarathushtra, we must still consider him a prehistoric personage. All that we know about him is derived, directly or indirectly, from his own writings and those of his disciples and early followers, but these writings seem to have no point of contact with any historical fact known to Western nations. That Darius did not mention him in his inscriptions need not surprise us, when we consider that the Sasanian inscriptions are equally silent; the word *sardasht*, on a detached stone at Pâi Kûli, being too corrupt and doubtful to be relied upon.

These are merely a few of the facts we ought to remember. What we ought to avoid is any temptation to accept the statements of the later Pahlavi literature as equal in authority to those of the Avesta itself. The Pahlavi books give much invaluable information, far more than has yet been extracted from them; but they always present a Sasanian, or post-Sasanian, view of Avesta facts, and every statement they contain requires Avesta confirmation before it can be accepted as an Avesta fact. The Avesta mentions all the personages who were afterwards converted into the Peshdadian and Kayanian dynasties of the Persians, but it knows nothing of the Achaemenian kings. Even after the Nasks had been revised by the Sasanians we find no mention of the Achaemenians in the summary of the Chidrashtô (Chitra-dâto?) Nask, as given in the Dinkard, although it contains an allusion to the Sasanians. It seems as though

the Persians, long after accepting the Avesta religion from some more primitive race to the eastward, prefixed the Avesta history to the little they knew of their own, thus producing that perplexing patchwork known to us as the historical basis of the Shâhnâmah.

On the supposition of a prehistoric connexion of the people of the Avesta with those of the Veda we can readily explain the statements of the Avesta, but whether we can do so on the modern supposition of a Medic origin for the Avesta remains to be proved. At present I am not aware of the existence of any satisfactory evidence on the subject. It is, perhaps, needless to add that these remarks have no pretension to be considered as arguments. They merely indicate a portion of the basis for argument; but this is not the place, nor do I feel myself qualified, to argue the question. E. W. WEST.

SOME BOOKS ON BIRDS.

Bird Life in England. By Edwin L. Arnold. (Chatto & Windus.) Little actual observation, but a good deal of literary and anecdotic information from various sources, is here supplied. Ten chapters of a peculiarly "scrappy" style are devoted to as many families of birds; but foreign birds and bird-life are quite as largely discussed as English birds, so that the name of the book is misleading. Its scientific value may be estimated from Mr. Morris's *History of British Birds* being styled "a charming and invaluable work," which "could hardly be better." By the way, it is more than thirty years since this work appeared, instead of "only some fifteen years ago," as Mr. Arnold says. These essays are full of irritating misprints, too, of proper names. Thus Yarrell and Gray, *nomina veneranda*, become "Yarrel" and "Grey"; and "Sylvidae," "Tetras" and "Perciceidae" are not likely to appease bird-lovers. In the list of useful books on British birds we should like to see Johns's excellent little history (S.P.C.K.) named as invaluable for beginners. A sensible essay on "Grouse Moors and Deer Forests," by Mr. J. W. Brodie Innes, is added, and an Appendix of fifty pages gives the Game Laws of the different European kingdoms. This cannot fail to be useful to travellers. Mr. Arnold's chapters have appeared in different periodicals from time to time, consequently the book possesses a miscellaneous and popular flavour. His articles on shooting game and wild duck are such as sportsmen never tire of.

Our Bird Allies. By Theodore Wood. (S. P. C. K.) Mr. Wood holds a brief for the birds, and, like many other special pleaders, occasionally injures his clients by indiscriminate advocacy. Even the jay becomes in his pages a respectable member of bird society. The injuries it commits are "chiefly theoretical, brought about by its destruction of young game." These apparent contradictions to most men are easily reconciled by Mr. Wood, who holds the view that game is of small or no account, and any destruction of it is amply recompensed if the destroyer at other seasons lives on cockchafers and grubs. In fact he is an ornithological radical, and speaks of the "slaughter of a small number" of pheasants and other game birds as inflicting no injury whatever upon the majority of mankind. If we turn to his account of the sparrow, however—one of the most mischievous and destructive of British birds—Mr. Wood says "that even its partial extermination would be little short of a national calamity." He has a good word, too, for the hooded crow—a bird which in Scotland destroys annually many thousands

of eggs and young grouse. Because Bird Acts have been passed, and a sentimental reaction in favour of birds has set in, there is no reason to deem bird-life sacred. Birds become vermin at times, and must be shot as such. Sparrows, rooks, hooded crows, jackdaws, even wild ducks we have known to be dreadful plagues to farmers and preservers. Nothing is gained by overstating a case. If Mr. Wood wished to benefit his favourites we should heartily agree with him did he attempt to point out to ladies the cruelty and shocking taste involved in wearing stuffed birds and plumes in their hats. And he will still more merit our suffrages if he could procure a short act declaring illegal the abominable pole-trap, which kills everything that lights upon it—the most beautiful and innocent of birds, as well as the marauder. Some of the cuts in this little book are old friends.

Eighth Report on the Migration of Birds, 1886. (Edinburgh: M'Farlane & Erskine.) The compilers of this interesting report are still feeling their way to lay down laws on the migration of birds. A large mass of information, moreover, on the movements of British birds during 1886 is here systematised from the notes of the different lighthouse keepers round the coasts. Every bird-lover should consult the lists of arrival and departure of the birds from the coast nearest to him, and in this way he might be considerably aided in his studies on the migration of the species common in his neighbourhood. Mr. Cordeaux points out that the line of passage which birds coming from the East to Ireland take is from the Wash and the river systems of the Nene and Welland into the centre of England, and thence, probably, by the Severn and Bristol Channel, so as to enter Ireland by the Tuskar Rock to the Wexford Coast. There was a great immigration of chaffinches along the east coast of England in the early part of October, and also of thrushes. At the Pentland Skerries a large body of robins appeared on April 19 with a south-east wind, but Mr. Harvie-Brown confesses that the "migration record for 1886 is a very poor one." At the Rhinns of Islay, however, at Lamlash, and other stations on the west of Scotland, a great rush of small birds to the South occurred on the 5th and 6th of October. Among the curiosities noted by the lighthouse men was a large arrival of moths at Fidra in September, while at Unst in November, sixty bottle-nosed whales were captured. Many great spotted woodpeckers appeared along the east coast of Scotland during the autumn. This report increases in attractiveness year by year, as the observers become more enthusiastic and intelligent. It may be hoped that an early future report will contain a succinct account of the information and laws already obtained by the exertions of the committee.

CORRESPONDENCE.

THE INSCRIPTIONS FROM NAUKRATIS.

Koenigsberg: July 30, 1887.

I have read with the greatest interest the statements of Messrs. E. A. Gardner and W. M. Flinders Petrie in the ACADEMY of July 16; and I am anxious to assure the latter, first of all, how thoroughly I am satisfied, and indeed impressed, with the exactness of his observations upon matters of fact. As an excavator also myself, I can the better appreciate the vast care and pains required in preparing so detailed and reliable an account as that of Mr. Petrie. I am pleased, however, that, as regards epigraphic evidence, Mr. Petrie leaves the case entirely in Mr. Gardner's hands; for I am glad to find that, after all, the views of this scholar are nearer to my own than I had ventured to suppose. My present object is to endeavour to make this approximation somewhat closer still.

Mr. Gardner will perceive that, by mistrusting the evidence of No. 305 of the Naukratis inscriptions, he damages the evidence not for two but for three forms of letters which he regards as important—viz., the twined ε, the μ resembling an old π *prorum*, and the six-stroked σ *pronum*. In this case Mr. Gardner seems inclined, if I do not mistake him, to impute these forms to the unskilfulness or negligence of the writer. But as of these forms the σ, and still more the ε, bear a striking resemblance to the other forms, which we are asked to regard as really authentic, Mr. Gardner is bound—at least *a priori*—to admit the possibility of all those forms being due to the fault of the scribe, as had been supposed by Kirchhoff, Bechtel, myself, and many other scholars in Germany whom I know of. Mr. Gardner now quotes the case of that curious vase found in Attica with “geometric” patterns, on which is incised a very archaic inscription. I think Mr. Gardner will agree with me that the importance of that inscription would be considerably diminished, if there had been found a fragment of later make inscribed with the same characters. Besides, Mr. Gardner will see as well as I do that the two cases are not quite identical. As for the rest, Mr. Gardner has stated the point at issue pretty clearly. The kernel of the discussion is, in fact, whether the inscriptions do, or do not, witness to the existence of a Greek city of Naukratis before Amasis, and, therefore, to the most important remains of all kinds being more ancient than that king. In deciding this question, very much depends on what idea we form as to the early state of the Ionic alphabet. And here I may be allowed to give our discussion a new turn.

Mr. Gardner, in his first letter to the ACADEMY, very truly said that his view of the Abu-Simbel inscriptions stands or falls with his view of the Naukratis inscriptions. I think he will not object to my inverting this thesis, and saying that, if it can be proved that the Abu-Simbel inscriptions, or part of them, are really specimens of the early Ionic alphabet, let us say of the seventh century B.C., Mr. Gardner's theory about Naukratis must be abandoned.

I regret that I published my first paper on Naukratis in Germany, for my task would be easier if I could assume English readers to be as familiar with my views as they are with Messrs. Gardner's and Petrie's. However, I must do the best I can, and will give an extract or two from my paper in the *Rhein. Mus.*, 1887, p. 221 foll. I think we are entitled, nay obliged, to divide the Abu-Simbel inscriptions into two different groups. In both groups the closed form of η is used (which letter in this discussion remains by far the most important); but one group employs that sign both for the aspirate and also for eta, while the other group employs it only for eta. The first group can be proved to be Rhodian; not only No. 482 c (Röhl, *Inscript. Antiq.*), but No. 482 i also, is of undoubtedly Rhodian origin, the writing of an Ialysian (cp. my paper *l.c.*). On the other hand, the two inscriptions which profess expressly to be written by Ionians—viz., a Teian and a Colophonian (Röhl, *Inscr. Ant.*, No. 482 b and e), give to the same sign only the signification of long ε. I consider this fact as established beyond doubt, and, at the same time, as decisive evidence of the early state of the Ionic alphabet. There is not the least reason to suppose that Teos and Colophon employed in the seventh century B.C.* an alphabet es-

* As to the date of the Abu-Simbel inscriptions, the only discrepancy between Kirchhoff and myself is that he assigns them to the latter half of the reign of Psammetichos I.; whereas I see no difficulty in supposing a Greek to have assumed the name of the king long before, as soon as ever friendly relations had been established between the Greeks and that monarch.

entially different from that of Miletus. A Naukratis inscription (I., pl. xxxv., No. 700) is enough to prove that in the sixth century Teos shared in the general development of the Ionic—i.e., the Milesian—alphabet. Accordingly, I hold that these two Abu-Simbel inscriptions establish the three-stroked ε, and the use of ο for ω, as elements of the early Ionic alphabet. This fact is one with which Mr. Gardner's theory of the earliest form of the Ionic alphabet cannot possibly be reconciled.

I cannot conclude without assuring Mr. Petrie that I too am open to archaeological evidence, in this case as well as in others (cp. my paper, p. 214); accordingly, it will, perhaps, be of some use to renew the discussion after the results from Daphnae have been published. I am glad to learn that this will be accomplished with the same promptitude which has already, in the case of Naukratis, won for Mr. Petrie the heartiest thanks of every scholar.

GUSTAV HIRSCHFELD.

THE ETRUSCAN NUMERALS—“SEVEN” AND “NINE.”

Barton-on-Humber: Aug. 13, 1887.

The Toscanella-dice supplied the Etruscan numerals 1-6, and investigation confirms me in the opinion that the order in which they are given by Canon Taylor, in his *Etruscan Researches*, is correct. I have, however, carefully considered the views of other Etruscologists, and any suggestions here made are tentative and undogmatic. The general result gives max, “1”; maxs, “1st”; ci, “2”; cis, “2nd”; cizi, “twice” (e.g., cizi zilaxnce, “was twice magistrate”; cf. Ak. silik, “strong protector”; Lapp silok, “unwearing”); esal, zal (abraded form, zl), “3”; esals, “3rd”; eslz, “thrice”; sa, “4” (so za-thrum, 4 x 10 = 40); sas, “4th”; θu (abraded form of θun, cf. the Tungusian tun-ya, “5,” and the Samoied much-tun = 1 + 5 = 6, = Et. max-θu, as pointed out by Canon Taylor), “5”; θunz (variant θun-est), “5 times” (e.g., purtsvana, Lat. Porrena, θunz, “Lord-protector 5 times”); hut, huth, “6”; huds, “6th.” Hence, and from what has been previously said (ACADEMY, May 21, 1887), we can resolve the form cealxls (abraded celxls, for cealxals) which = “20th,” i.e., ce (= ci)-a(= enclitic conjunction)-lx(10)-l(for al = “of,” = belonging to)—vide Sayce, in *Altital. Studien* ii. 127; a gen. form, joined with avils, = anni-s (= ordinal suffix, abraded form of ac, e.g. Et. mealxsc. But sc is itself an abraded form; cf. the Karagass Tatar ord. suf. eske; Buriat a-eki, abraded thi; Ak. ka-m). With ci is connected ciem, “8,” of which, and of ciemzabrms, “80th,” I have spoken. The variant forms—zabrms, zabrmisc, and [z]aθrumis, “40th,” require no further notice (vide ACADEMY, November 27, 1886).

We next seek the Etruscan words for “7” and “9,” and find three groups of undoubted numerals to choose from—(1) muvalxl, muvalxls, mealxsc; (2) cezpa, cezpz, cezpalxals, “70th”; and (3) semφs, semφalxls. Pauli (*Altital. St.* ii. 14) gives the numbers thus—“7. meu, 8. cezp, 9. semφ.” We may be sure, therefore, there is no internal evidence against the meaning of “9” for semφ, or rather sem-φa (by analogy with cez-pa); and Canon Taylor also concluded that semφalxl would = “90.” But Pauli's word meu, “7,” I regard as imaginary; and “8” we have already found in ciem. We are, therefore, left with cez or cez-pa for “7,” in which case we may render cezpz “7 times” (e.g., zilxnu cezpz, “was magistrate 7 times”); cezpalx, “70” (e.g., max cezpalx avil svalce, “he lived 71 years”); and cezpalxals, “70th” (e.g., lupu avils esals cezpalxals, “died of year third seventieth,” i.e., “aged 73”).

There is nothing arbitrary in science, and internal evidence must be checked by external, to which I now turn; and in word-comparison

we may remember (despite the “Yoho-theory”) that man can have as many different names for anything as he has distinct ideas about it (vide my *Language and Theories of its Origin*, sec. x.), and that words alter almost infinitely beneath the force of letter-change and abradation. The validity of any comparison is, of course, simply a question of evidence.

Prof. Sayce and Mr. Pinches have recently kindly furnished me with the latest readings of the Akkadian numerals. These, from 1 to 7, are:

1. As (abraded form a, cf. Ostiak i, ei), older form gais (cf. Arintzi kuisa, “1,” vide ACADEMY, November 27, 1886), whence gis, dis, das, gi, ge. And ikd, id (Lenormant);
2. Kas, gas, min, mina, minna, mimma.
3. Vis, bis, uvus, umus, is, esse.
4. Sav, siv, san, sana, saba, simu, nin, ninga. And limmu (Pinches).
5. Vas (abraded forms ia, a), var, bar, para.
6. As, assa (= a + as, = 5 + 1).
7. Imina, iminna (= ia + min, = 5 + 2), sisinna.

A general concept-basis of many Turanian number-words 1-5 appears to be:

1. = Finger, hand.
2. = The two hands.
3. = (Hand + hand) + foot.
4. = (Hand + hand + eye) + eye. Lim, liminu, = As. enu, “eye.”
5. = The hand as having five fingers.

The Ak. 7-form si (= ia, “5”)—sinna (= mina, “2”) may be fairly compared with the Finnic zei-tzeme, the (older) form given by Strahlenberg (see *cecemîn*, Lenormant), who gives Esthonian zsesem, Mordvin zsisim, to which we may add with Lenormant (*Chaldean Magic*, 300), the Lapp c'ec (otherwise kietja, tjetje), Zyrianian sizim, and Tcheremiss (further abraded) sim. Still clearly connected are the Vogul siv, the Samoied siv, sea, sei-ba, the Kanskoï seig-be, and the Mantchu szy-gae, whence the Chinese ts'heth. A variant form appears in the Yakut satta, the Magyar set, het.

The Etruscan, with its love of a z-sound has preserved the sis in sisinna as CEZ (cf., particularly the Lapp and Zyrianian forms), and added the suffix pa (cf. sup, sei-ba, szy-gae; Et. sem-φa, “9”; Basque zaz-pi, “7”). With reference to this suffix, it is interesting to find that in Ostiak pa = “Endung zur Bildung der Iterativzahlen” (cf. Et. Cezpz).

In Ak. “8” is ussa (= ia + vis, vus, esse, = 5 + 3), and “9” isimmu (= ia + simu, = 5 + 4), these numbers not being formed by subtraction. But, if 10 - 2 = an Etruscan form of 8, we may expect to find 10 - 1 as an Etruscan form of 9. As noticed, the Etruscan 9-word is sem, with the suffix sem-φa, semφs, “9th”; semφalxls, “90th.” Prof. Lacouperie has remarked to me that in the Arintzi 1-word kuisa (cf. Ak. gais) the ku is a prefix, and isa (Ak. as) = 1. This 1-word appears in very numerous variants—e.g., Finnic yksi, Lapp akt, Esthonian uks, &c., &c. As we have seen, 9 in Arintzi is kuisa-minschau (10 - 1), and the decade min is at times abraded to m (vide ACADEMY, May 21, 1887, p. 365). Hence, we might expect to meet with such an abraded form as (ku-i)-SA-M(minschau, sa for isa, as Et. zal for esal) = Et. SE-M-φa = 1 from 10 = 9. Similarly, in Yemisei-Samoied δ (cf. Ak. a) = 1, and esd, probably originally a 1-form, and the remains of an e-sa-m, &c. (1 from 10), = 9.

ROBERT BROWN, JUN.

SCIENCE NOTES.

THE “Treatise on the Animal Alkaloids, Cadaveric and Vital,” on which Dr. A. M. Brown has been so long engaged, is now through the press, and will be issued by Messrs. Baillière in the course of the present month. This work, which is prefaced by an introduction by Prof. Armand Gautier of Paris, discusses the

ptomaines and leucomaines as the cause of disease, and opens up to the English student a branch of pathology which, through the fashion for Pasteurism, has been almost entirely neglected.

MEETINGS OF SOCIETIES.

ROYAL BOTANIC SOCIETY.—(Anniversary Meeting, Wednesday, August 10.)

J. P. Gassiot, Esq., vice-president, in the chair.—The annual reports from the council and auditors congratulated the fellows on the satisfactory condition of the society, the elections of new fellows being 36 above the number joining last year, and also in excess of those for 1884 and 1885. The total receipts, £6,581. 11s. 8d., also exceeded those of last year. The visitors, not only on ordinary days, but at the fetes, &c., were also much in excess; this might be due to the number of foreigners and strangers in London during this special year. One of the acts of the council to mark the year was the offer of a prize of a gold medal for the best essay treating of plants and vegetable products introduced into economic use during the reign of the Queen. In the more purely scientific work of the society the same progress is noticeable. The collections of trees, shrubs, exotic and other plants have been maintained in perfect health and vigour, while many new and rare plants, fruits, seeds, &c., from various parts of the world, have been added thereto, the whole forming a series of immense value and interest to the botanist and lover of plants. Belonging naturally to this part of the society's work are the facilities it offers to students and others engaged in botany, medicine and the arts. 684 free orders of admission to the gardens for terms of from three to six months have been given (51 of which have been given to artists), and 40,362 cut specimens of plants and flowers have been distributed for outside study and research. The quarterly journal of the society, now in its seventh year, contains many valuable notes and papers on plants and subjects connected with botany and floriculture, besides serving as a means of communication between the society and its fellows and correspondents in all parts of the world, eliciting thereby many new facts and discoveries of interest. In the meteorological department, the favourable situation of the station and the general reliability of the instruments are making the readings of greater value and more sought after each year. More particularly is this the case with the figures given by the very complete series of earth thermometers, ranging from three inches to 20 feet in depth, in solving the question of soil temperature and its effects upon the roots of plants.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REEB, 115, Strand, near Waterloo-bridge.

Abraham, Joseph, and Moses in Egypt. By the Rev. A. H. Kellogg. (New York: Randolph; London: Trübner.)

If Dr. Kellogg has attempted the impossible, he has at all events gone nearer to success than any of his predecessors. The identification of the Pharaoh of the Exodus is one of the most fascinating of Egyptological problems; and, although Dr. Kellogg's researches extend over a wider area and include an elaborate scheme for the reconstruction of the chronology of the earlier dynasties, the Exodus problem is the central feature of his book. The solution which he proposes is so ingenious, so plausible, and so original, that it at all events deserves to be carefully stated and considered.

Without discussing Dr. Kellogg's chronological hypothesis (which no Egyptologist, I imagine, will accept), it must first be noted that he starts from a solid historical standpoint with the identification of Rameses II.

as the Pharaoh of the oppression. The monumental evidence of Pithom having, as he justly observes, "settled that point beyond dispute," he goes on to assign the birth of Moses to a date coinciding with the thirty-eighth year of the life of Rameses II. If this synchronism is accepted—and there is no reason against it—the king would be seventy-eight years of age when Moses, at forty, fled into Midian; and the flight into Midian would occur just six years before Rameses associated Menephtah with himself upon the throne. Allowing eighteen more years for the reign of Rameses II. (including twelve for the joint reigns of father and son), and eight for the sole reign of Menephtah, thus making up the twenty traditional years assigned to the successor of Rameses, we arrive at a date which falls many years short of the time when Moses, at eighty, returned to Egypt to work out the deliverance of his people. Menephtah is thus excluded from identification with the Pharaoh of the Exodus; and so, according to Dr. Kellogg, are his immediate successors, Seti II. and Amenmeses, and perhaps even Siphthah, to whose reigns, in whatsoever order we place them, he assigns an aggregate of fourteen years. By this calculation the close of the career of the last of these three would correspond with the eightieth year of Moses; that is to say, with the return of the law-giver to the land of Egypt. Thus, either Siphthah or his successor would be the Pharaoh for whose intimidation marvellous things were done "in the field of Zoan." But that successor is the missing link in Dr. Kellogg's chain of evidence. After Seti II., Amenmeses, and Siphthah, there ensued a period of anarchy, during which the country was at the mercy of local chiefs, the one warring against the other. It is of this period that we read in the Great Harris Papyrus how "for many years there was no ruler"; and, in point of fact, the monuments yield not a single royal cartouche till the advent of Setnekht, the founder of the XXth Dynasty. Dr. Kellogg meets this difficulty with great ingenuity. He first discusses that perplexing historical puzzle—the succession of Seti II. and Siphthah, or of Siphthah and Seti II.—which has so keenly exercised the wits of Champollion, Chabas, Eisenlohr, and Lefébure; and he does so fairly and lucidly. Upon this controversy I have no space to enter; but it may be said that the evidence of Manetho's lists, and of various extant monuments, would undoubtedly show Seti II. to have preceded Siphthah, were it not for certain usurpations and obliterations of cartouches in the tomb of Siphthah, which seem to prove that Seti II. was its latest occupant. Hereupon Dr. Kellogg asks if there may not be some possible hypothesis whereby we might be justified in accepting the monumental evidence, while, at the same time, accounting for the superimposed cartouches of the tomb. If the name of Siphthah was actually plastered over, and the name of Seti substituted (a fact now obscured by the almost total disappearance of the fragments of stucco in question), may it not, after all, be possible that the usurping Seti was not Seti II? With this, Dr. Kellogg points out that

"there was at this time another Seti, who was a prince of Cush, and who bore numerous other

titles, proving that he was at least a scion of the royal house. He was, moreover, not only contemporary with Siphthah, but acted as a courtier under him. It is neither said nor intimated that he was Siphthah's son. In fact, nothing further is known of him. He simply appears on two monuments—one found at the island of Sekel and the other at Assouan; and in the pictures he is represented as a youth rendering homage to Siphthah, who is crowned. As he bore the titles referred to, and occupied the usual position of a prince of the blood, it may be inferred that he had some claim to the succession. Who was he? Now, curiously enough, there is a Manetho tradition that one of the Menephtahs of this dynasty, on occasion arising, sent his son Sethos, but a child of five years, into Ethiopia for safety, and himself fled thither subsequently. This Menephtah could not very well have been the Menephtah who was father to Seti II., for, as Chabas has shown, he died in peace, and was peacefully succeeded by his son; nay, the son had been already associated with the father before he died. Also, the very young age of the child Sethos of the tradition could scarcely be harmonised with the relative ages of Menephtah and Seti II., as they are ordinarily conceived. But Seti II. himself was also a "Menephtah," and could easily enough have had a son Seti, who, as hereditary prince, would be prince of Cush. Further, while there is monumental evidence that the reign of Seti II. began peacefully, there is evidence that would point to its having been suddenly cut short, so that it is altogether probable that his reign ended disastrously. . . . It follows that the Seti who was a prince of the blood, and afterwards Siphthah's courtier, may well enough have been a son of Seti II., Menephtah, the child Sethos of the tradition, sent to Ethiopia for safety amid the troubles that harassed the close of his father's reign (pp. 137 et seq.)."

Having thus stated the claims of his candidate, Dr. Kellogg suggests that Queen Tauser, the wife of Siphthah, was possibly the mother of this third Seti, married to Siphthah, who is generally regarded as in some sense a usurper. The whole situation, in fact, as Dr. Kellogg arranges it, may be described as an Egyptian edition of "Hamlet"; and of this edition, whatever objections may be made to it on other grounds, it must at all events be said that it reconciles the hitherto conflicting evidence of the monuments and the tomb.

If Dr. Kellogg has supplied us with a successor to Siphthah, he nevertheless hesitates to identify him with the Pharaoh of the Exodus. He inclines to make Siphthah the last Pharaoh of the XIXth Dynasty, whose reign ended disastrously, and was followed by anarchy; and he conceives that the third Seti may have attempted "to stem the tide of confusion that ensued," and that he may have had time to dishonour the empty tomb of Siphthah before he was himself swept out of sight by the convulsions that rent the fabric of the state. In other words, he is evidently disposed to conclude that Siphthah was drowned with all his host. It is, however, not said in the Bible that Pharaoh was himself overwhelmed by the returning waters, and that inference is now generally rejected.

Finally, Dr. Kellogg not only believes, with Prof. Maspero, that the Hebrew Exodus took place during the anarchical period, of which we possess a contemporary record in the Great Harris Papyrus; but, taking the translations of Chabas and Brugsch for the basis of his argument, he holds that the

anarchy was caused by that great migration, and that the papyrus makes express mention of the event. The passage in question occurs near the beginning of the historical section, at the end of the second column. The people of Egypt, it says, "had fled out beyond," and those who were left in the interior were for many years without a ruler. Meanwhile, the cities were governed by overlords, who fought and slew one another. At last one Arisu, a Syrian, rose to supreme power, and exacted tribute from the whole country. His followers plundered the Egyptians of all their goods. "The gods, meanwhile, were treated as the people, and offerings were no longer made in the temples." This reign of terror lasted till Setnekht expelled the Syrian hordes and founded the XXth Dynasty. It is in the above narrative that Dr. Kellogg recognises a distinct reference to the Exodus. The crucial sentence upon which his argument hinges is the first. According to Chabas, it reads thus: "Egypt had fled out beyond. For all who stayed in the interior there was no ruler." The same sentence, according to Brugsch, runs as follows: "The people of Egypt lived in banishment abroad. Of those who lived in the interior of the land, none had any to care for him." Or, in French, "Il est arrivé que l'Égypte s'était jetée au dehors;" and in German, "Das Volk von Aegypten lebte in der Verbannung im Auslande." Of the two, Chabas has rendered the sense with greater literalness, and with most scrupulous care. The expression "s'était jetée" (in Egyptian, "Khaa") is remarkable. It implies a headlong flight; such a flight as we might imagine would be prompted by the terror of a great multitude seeking to escape, not only from plague and pestilence, but from a land which the gods might seem to have doomed to destruction. When it is remembered that not only the Hebrew population went out, but that a great "mixed multitude" went with them, the movement may fairly be described in the words of the papyrus as "Egypt had fled (or 'flung itself') out beyond;" and such an exodus would, as Dr. Kellogg argues, "leave the north-east part of the Delta comparatively empty." To this he adds that

"the destruction of Pharaoh and of his chosen captains and horsemen would sufficiently account for the land of Egypt being left without a head; rendering it needful, in the first instance, that each nome should look out for itself—a condition of things that would inevitably lead to the jealousies and ambitions of which the papyrus also speaks (p. 111)."

I have endeavoured to state Dr. Kellogg's contention as fully as space will permit, and so far as possible in his own words. Students of Egyptian history will judge his theory for themselves. Few, perhaps, will accept it unreservedly; yet none, I think, will deny that it is well conceived and closely reasoned, and that, given the thirty-eighth year of Rameses II. as the date of the birth of Moses, it very skilfully synchronises the Exodus of the Hebrews with the Egyptian Exodus of the Great Harris Papyrus.

Of Dr. Kellogg's reconstruction of Manetho's data for the XIIth and five following dynasties, and of the Procrustean process by which he cuts down the four Hyksôs dynasties to

six reigns (making Salatis the leader of the invasion!) the less said the better. The whole scheme is purely fanciful, and can only be classed as another honest and futile attempt to square the vague chronology of the Bible with the still more vague chronology of the early ages of Egyptian history. To the same hopeless endeavour must be attributed the unquestioning faith with which he accepts the famous "Tablet of 400 years" as "a monumental time-period of the Shepherd Era," maintaining that "the Set-neb-pehti from whose reign the era dates can be none other than a Shepherd king." And this, he says, "is conceded by all Egyptologists" (p. 24). But Dr. Kellogg should surely know that the late Dr. Birch, who translated the tablet for *Records of the Past*, was always doubtful of this inscription, which he characterised as "in some respects peculiar, if not suspicious"; and that Maspero, comparing the tablet-date with a purely mythological date at Edfoo, recording the "363rd year of Horemkhu" (Horus on the horizon), is of opinion that the 400th year on which Dr. Kellogg erects his elaborate superstructure of chronological synchronisms refer to the 400th year of the mythical reign of the god Set, and not to any human ruler. Dr. Kellogg, by the way, writes of the tablet as being at the Boolak Museum, whereas it still lies in the sands of Tanis, where Mariette reburied it; and so well is it hidden that Mr. Petrie failed to find it during his extensive excavations in 1884. Dr. Kellogg follows Mr. Lund's lead in identifying Khoo-en-Aten with the Pharaoh of Joseph. Not having Mr. Lund's paper at hand, I do not feel sure whether he does, or does not, go farther than that gentleman when he hints that the Ka-em-ha of the Tell-el-Amarna basrelief might possibly be identified with Joseph himself; but this really is to consider the question too curiously.

I must add, and with regret, that Dr. Kellogg has not invariably verified his quotations from original sources. This laxity has led him into some minor errors, and has caused him to commit one act of serious injustice. In a footnote to p. 54, he cites a passage from Brugsch's history, which represents Prof. Maspero as having stated that Rameses II. was but ten years of age at the time of the battle of Kadesh. If Dr. Kellogg had referred to the passage in question, he would have found that M. Maspero has never said anything of the kind. What M. Maspero actually did write is this:—"Dès l'âge de dix ans, Ramsès fit la guerre en Syrie, et, s'il faut en croire les historiens grecs, en Arabie" (*Hist. Ancienne des Peuples de l'Orient*, p. 218, 4^{me} ed.). But this is simply a reference to the campaign of Seti I., in which Rameses, as crown prince, received his "baptism of fire." If Dr. Kellogg had turned to the original work, he would not only have found no mention of Kadesh at p. 18 (which he gives, also, it is to be presumed, from Brugsch); but on p. 220, *sqq.*, he would have seen how Rameses II. is described as being in the prime of life and surrounded by a numerous family, at the time of his father's death; and how, *four years later still*, there broke out in Syria that very revolt of the petty princes which was crushed, though but for a short time, by the battle of Kadesh. Dr. Kellogg

cites Brugsch's misquotation "as an instance of the mistakes that may sometimes be made by the most exact of men"; but as Rameses is depicted in the basreliefs accompanied by several grown-up sons at the battle of Kadesh, not even the most inexact of men could have been guilty of so gross an error. It is to be hoped that the author of *Abraham, Joseph, and Moses in Egypt* will henceforth be less ready to accept adverse criticisms at second-hand, and so cultivate that exactness which he very properly regards as a *sine quâ non*.

It should in justice be added that Dr. Kellogg's book is throughout distinguished by a spirit of wide toleration, and a strict fairness of argument which orthodox controversialists in general would do well to imitate.

AMELIA B. EDWARDS.

THE ART MAGAZINES.

IT does not surprise us to find the articles in the *Magazine of Art* on "Current Art" and "The Salon" vigorously written and admirably illustrated, but it is disappointing to learn that the editor allows the exploded fiction of Palma's daughter to be perpetuated in his pages. It has long been known that Palma had no daughter, whether called Violante or by any other name. But the most remarkable thing in the number for August is an article by Mr. Richard Jefferies called "Nature in the Louvre." The well-known lover and admirable describer of nature has found her for once in art, in the mutilated statue known as the Venus Accroupie. He found in this figure the human impersonation of that secret influence which in old days beckoned him on in the forest and by running streams. "She expressed in loveliness of form the colour and light of sunny days; she expressed the deep aspiring desire of the soul for the perfection of the frame in which it is encased, for the perfection of its own existence." He draws from it the hope of some moral good greater than the best now known to man. As we read this astonishing outburst of enthusiasm engendered by the contemplation of a mutilated statue, we wonder whether any work of art has ever stirred the depths of any man's nature like this, and whether this particular work from the day when new and perfect it left the master's hand has ever roused the like emotion in Pagan or Christian, and whether it will ever do so again.

THE *Portfolio* has an unpretending but excellent etching by Mr. Colin Hunter of "A Banffshire Harbour," full of light and colour; and, besides a continuation of Mr. Walter Armstrong's "Scottish Painters," an appreciative article by Miss Julia Cartwright on Signor Costa and one on Boucher by Mr. Selwyn Brinton.

IN the *Art Journal* Mrs. Meynell employs her pleasant pen in writing of Heidelberg, and Mr. U. Forbes tell us much that is interesting about Old Cromer. MM. Villars and Myrbach continue their clever partnership of pen and pencil. They have reached Betws y Coed, and have much to say and to draw about that shrine of English artists and tourists. The accounts of the exhibitions, the Royal Academy, the Grosvenor, &c., are done in a somewhat summary manner; and, besides a number of other illustrations, the number contains a bright and dexterous etching by Henri Lepnd after "The Grape Harvest" by E. Debat-Ponsan;

Zeitschrift für Bildende Kunst, and its accompanying *Kunstgewerbeblatt*, for July contain their usual variety of interesting matter. A powerful etching by F. Krostewitz, after a picture by Wilhelm Diez ("Im Hinterhalt"), is one of several illustrations of an article on that

artist by H. E. von Verlepsch. The gabled houses at Rostock furnish Th. Royce with a subject for one of those interesting articles on old domestic architecture which are a constant feature in this periodical. An autotype of an unfinished engraving by the late French engraver Gaillard (portrait of Pope Leo XIII.) also deserves notice.

The new volume of *L'Art* has at present dealt only with the Salon, the account of which is profusely illustrated with sketches by the artists themselves, and written by M. Paul Leroi with his usual frankness and force; but each part has contained an etching, including an admirable one by M. Ramus after a picture of a girl by Rembrandt.

CORRESPONDENCE.

EXCAVATIONS AT CHESTER.

Liverpool: August 15, 1887.

In 1886 the Royal Archaeological Institute, at their meeting at Chester, made a minute inspection of the walls of that city, with a view of determining whether any Roman work remained in them *in situ*. A sub-committee of experts was formed to analyse each point adduced, and the result was announced, by the Rev. J. Collingwood Bruce (historian of the *Roman Wall*), that nothing Roman remained visible *in situ*. This confirmed the view (first suggested by Mr. G. W. Shrubsole) which I expounded at great length in my *Roman Cheshire*; and it was endorsed by such antiquaries as Rev. H. M. Scarth, Prof. E. C. Clark, Mr. R. S. Ferguson, Mr. Walford, Sir Charles Newton, of the British Museum, Sir James Picton, &c.

It, however, proved unacceptable to the veteran antiquary Mr. C. Roach Smith, who in 1849, during the meeting of the British Archaeological Association in the city, had pronounced three different portions of the wall to be of Roman construction. Excavations made two or three years since, had, however, shown that one of these was the base of a mediæval ruined wall; another (that on the Roodeye) was no wall whatever, but a mass of large stones erected in front of the bank of the former estuary, with the view of keeping it from sliding forwards and thus ruining the wall on its summit; and the third, though faced with undoubted Roman stones, taken from some large buildings, was found to be a poor and late wall, much decayed.

In order to still further test the question, the British Archaeological Association arranged when holding its annual Congress (now proceeding) at Liverpool, to devote a day (Monday next, August 22) to Chester; and in the meantime, taking advantage of a slight settlement in the wall, the Corporation of Chester caused a portion of it, previously indicated by Mr. Roach Smith, to be taken down and rebuilt. This operation, now in progress, has revealed the fact that the wall at this point is composed of a mass of huge stones without mortar (and nearly all Roman) bedded simply in earth at their base and resting on the natural rock. Among these stones are large fragments of cornices, friezes, columns, capitals, tombstones, stones with sculptured figures, the upper half of a small altar, and what is probably a mediæval tablet with the figures of an ecclesiastic and a female sculptured upon it. The exact age of this last-named stone, will, however, I think, be difficult to determine. The whole of these (some twenty-five in number) were obtained from a length of about ten feet of the wall, which is seen to be composed similarly on either side of the excavation. The writer having descended a shaft some seventeen feet deep, and gone beneath the wall, can verify this.

With the exception of its having no mortar, the wall seems to be very similar to the

mediæval bastion of the wall of London, laid bare in Camomile Street in 1876, which was also composed of a mass of Roman sculptured stones; and another portion of the same wall laid bare on Tower Hill in 1852 still further resembles it. There is not a trace of the usual concrete foundation of a Roman wall; but on the south side of the city in Bridge Street, a part of the foundation of the destroyed south wall was found in March last, remaining eight feet wide, and standing two feet high, composed of boulders set in concrete, which was, with the greatest difficulty, cut through for the purpose of laying a gas main.

The new excavation, which is a little to the west of the Phoenix tower, and in the north wall, seems to point to the fact that the existing wall was built at the time the breach made by Sir W. Brereton's guns during the siege was repaired. It is impossible that it can be of any great age. Had it even been of the Edwardian period strong mortar would have been used.

The refutation of the idea that the wall close to the Northgate is Roman by no means affects Mr. Roach Smith's reputation as an antiquary. He judged by the stones on the outside, which are of Roman origin. He knew nothing of what was behind.

Among the new discoveries are five inscriptions, but so fragmentary that it is useless to reproduce them here. All have been sepulchral. W. THOMPSON WATKIN.

PREHISTORIC TOMBS IN SILESIA.

New College, Oxford: Aug. 15, 1887.

Readers of the ACADEMY may care to hear of an interesting discovery recently made at a village called Sacrau, a little east of Breslau. Three graves of stone have been found, with remains of weapons, wooden and earthenware jars, ornaments in bronze and silver, &c., especially some curious fibulae. In the grave last opened were a golden necklace, some small rings, a gold fibula, and a gold coin IMP CLAUDIVS AVG. The graves have been ascribed to "the Romans." A trade route of imperial times certainly ran across Silesia connecting the Baltic and the Mediterranean, and Roman coins, &c., mark it all the way. F. H.

NOTES ON ART AND ARCHAEOLOGY.

MR. PERCY GARDNER has been elected to the chair of archaeology at Oxford, vacant by the transfer of Prof. Ramsay to Aberdeen. We understand that Mr. Gardner will resign not only his post in the medal room at the British Museum, but also the Disney professorship at Cambridge, which he has held since the resignation of Prof. Babington. The department of coins in the British Museum has recently suffered another loss in the withdrawal of Mr. C. F. Keary.

MR. W. DIERKEN, following the example of last year, has now on view in the Continental Gallery, New Bond Street, a selection from the pictures exhibited at the Salon of 1887.

A CORRESPONDENT begs leave to notice one or two inaccuracies of statement that have crept into Sir Henry Layard's *Handbook of Painting*—a work described on the title-page as "based on the Handbook of Kugler." In the Introduction to the present edition it is stated that in 1851 an English translation of that part of it which relates to the Italian schools was edited by Sir Charles Eastlake; and this is followed up by the statement in the current number of the *Quarterly Review* that the translation referred to was the work of Sir Charles Eastlake. The facts are that the first and only translation into English of Kugler's work appeared in 1842; and this, though edited by Sir Charles Eastlake, was

made by the late Mrs. Hutton, of Dublin—lady of singular gifts, whose accurate knowledge of German was only equalled by her command of the English language. Readers of the work in its present form—while acknowledging the boon conferred on students of art by the labours of Sir Henry Layard in his reconstruction of, and additions to, the original—will not fail to regret the inequalities that have crept into a work which when it left Mrs. Hutton's accomplished hands was as perfect in the harmonious elegance of its style as it was remarkable for the faithful rendering of the original.

THE STAGE.

STAGE NOTES.

WE are requested to state that Miss Calhoun may be expected to arrive in London during the course of next month.

MR. OSWALD CRAWFORD is engaged, in collaboration with Mr. William Poel, in dramatising his novel, *The World we Live In*.

MUSIC.

MUSIC NOTES.

THE prospectus of the approaching Festival at Worcester (September 4 to 9) contains a goodly array of works. With "Elijah" on the first, and "Messiah" on the last day, the festival may be said to open and to end well. Schubert's fine Mass in E flat, and Spohr's "Last Judgment," if not novelties, are not heard too frequently. "The Redemption" is of course, thoroughly suited to a festival in a cathedral city. At the miscellaneous concerts in the College Hall, Sullivan's "Golden Legend," Stanford's "Revenge," and other pieces, will be given. The novelty of the week—for such things are now the rule, and not the exception—will be an oratorio by Mr. F. H. Cowen, entitled "Ruth." The words have been selected from the Bible by Mr. J. Bennett; and, as in "The Rose of Sharon," so here, he has provided the composer with a book in which a simple Eastern tale is skilfully turned into a drama for music. The reapers and gleaners in the harvest field at Bethlehem naturally suggest singing and dancing; and Mr. Bennett, in filling up his outline, and arranging his figures, evidently remembered Mr. Cowen's strong points. The "Harvest" scene, with its quaint themes, its charm and fancy, and—as we expect to be able to add after hearing it—graceful orchestration, appears to be one of the composer's happiest efforts. There is some solid writing in the oratorio: for if at times Mr. Cowen shows his fancy at other and appropriate times he shows his scientific knowledge, as in the closing chorus of the second scene, and in the "Praise Him" of Part 2. The *Leit-Motif* is introduced, but not on an extensive scale; and for this Wagnerites and non-Wagnerites may be both thankful. The composer will conduct his own work. Mr. Carrodus will, as usual, be leader of the orchestra during the festival, and Mr. Done and Mr. Williams conductors. The principal vocalists will be Mme. Albani, Miss Hope Glenn, Mr. Lloyd, and Mr. Barton McGuckin.

THE twenty-second Norfolk and Norwich Festival will be held at St. Andrew's Hall, Norwich, on October 11, 12, 13, 14. Mme. Albani, Miss Hilda Wilson, Messrs. Lloyd and Santley, are the principal vocalists announced. Mr. A. Randegger will be conductor. The novelties of the festival will be two oratorios—both expressly composed for the occasion: the one is entitled "The Garden of Olivet," written by the renowned double-bass player, Bottesini; the other, "Isaiah," by Signor Luigi Mancinelli.

SATURDAY, AUGUST 27, 1887.

No. 799, *New Series*.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Calendar of State Papers, Domestic Series, 1641-43. Preserved in H.M. Public Record Office. Edited by W. W. Hamilton. (Eyre & Spottiswoode.)

THE present volume has been long delayed—as it is understood through no fault of the editor—and will be all the more welcome to those who study the national history. Mr. Hamilton's regret at the sudden falling-off of his documents at the opening of the Civil War will be shared by many, especially as the kind of information which was to be found in earlier volumes of the series cannot easily be replaced. The more official documents of 1640-41 may, no doubt, pair off with the Letter-books of the Committee of both Kingdoms, which will be noticed in the next volume of the Calendar; but where are we to supply the lively personal correspondence of persons of lesser note whose letters, addressed to a secretary of state, were swept into the State Paper Office on the death or resignation of that high official? Yet, even the scantiness of the collection for 1643 is in some degree instructive. It is only one more evidence of that which is always before the investigator of MS. sources for the Civil War history—namely, of the fear which those who took part in the struggle always had before them lest they might furnish matter of accusation against themselves. How little of personal record do we possess of Pym, of Hampden, or of Fiennes? A few letters written by Vane to his father in September, 1645, will, no doubt, be calendared by Mr. Hamilton before long. Unfortunately, young Vane, even in his domestic correspondence, took care not to be too effusive, and these letters tell us little which might not be discovered in the newspapers. This significant reticence appears even in the letters of the lesser members of the party. Sir Ralph Verney went into exile at the close of 1643; and, while he remained abroad, received almost weekly communications from his attached friend, Sir Roger Burgoyne, a member of Parliament. Yet, though Burgoyne made use of cipher, he rarely, if ever, has anything of the slightest interest to tell. It was evidently well understood that, even between friends, matters of state were not to be committed to paper.

For easy communications we must turn to the Royalists; but their letters, except when they were intercepted, did not find their way among the state papers. Unfortunately for themselves, and fortunately for us, their letters were intercepted pretty frequently; and towards the end of the war Hyde carefully preserved this correspondence. Neither of these sources, however, is of much avail during the first sixteen months of the war,

which alone are covered by the present volume.

Mr. Hamilton has given in his preface a sketch of the events to which his papers refer. Though he has tried to keep the balance even, he is somewhat hampered by a natural tendency to magnify his office, and to pass over documents not in the custody of the Master of the Rolls, because his official engagements prevent him from making himself familiar with those which are preserved elsewhere. His description of D'Ewes's diary as contained "in five separate volumes of rough notes" would never have been given by anyone in the habit of consulting those volumes; and it obscures the fact that D'Ewes's rather malevolent attacks on the character of Hampden and other leaders of the Parliamentary party were not jotted down at the time, but were added several months afterwards, in the clear hand of a third person.

The omission, in so full an account of the affair of the five members, of any reference to the remarkable document recently published in the Nicholas papers is certainly to be regretted, while the argument against the supposition that Lady Carlisle warned the five members is far from conclusive. It may be quite true that "the information which the Commons acted on . . . was obtained through the French ambassador and the Earl of Essex"; but why may not the French ambassador have learnt the secret from Lady Carlisle? Her relations with the French Embassy are notorious; and even as late as 1646 she was actively engaged in promoting the understanding between the French agent Montreuil and the English and the Scottish Presbyterians, which ended in the fatal surrender of Charles to the Scottish army.

After all, however, it is not from his preface but from the Calendar itself that Mr. Hamilton must be judged; and, unless his work in this volume is inferior to that which he has hitherto produced, he has done that which well entitle him to the gratitude of many generations of students.

SAMUEL R. GARDINER.

"Great Writers."—*Life of Thomas Carlyle.*
By Richard Garnett. (Walter Scott.)

DR. GARNETT's contribution to the series of "Great Writers" is an interesting volume on Carlyle. No doubt the contents of it are for the most part tolerably familiar to readers of the work which Mr. Froude has edited and written, and of the numerous other works, good and bad, that have appeared since Carlyle died. But the object of the series, as I understand it, is, while not excluding criticism, to give facts rather than critical estimates, and to bring these facts before a public whom the larger volumes might not reach. If so, Dr. Garnett has performed his task well. Even the student of the more elaborate books has reason to thank him for gathering the pith of them into so convenient a compass. His work throughout is clear and concise, and shows him to be a master of such good English that, in a book written for English readers, it was not necessary for him to resort to three or four other languages in order to express his meaning.

Dr. Garnett lays stress, but not too much stress, on the tenderness in Carlyle's nature: "Thomas Carlyle had an immense fund of spiritual tenderness, but it was so far passive that it did not go forth freely of itself; it needed to be evoked, and then the fountains streamed. Towards the weak and helpless it flowed freely, but the strong could only elicit it by themselves displaying the like."

Carlyle was certainly a man of affectionate nature and deep, though not over keen, sympathies. When aroused he could appreciate others' needs and minister to them perfectly. If few men could strike harder, few were ever able to touch more gently. But his sympathies needed, as his biographer says, "to be evoked." When they were evoked Carlyle was seen at his best. Read the letter he wrote to Emerson on the death of John Sterling, or that other when Emerson's little son had died. Witness his treatment of his wife, not as he described it in his *Reminiscences*, nor as she too often represented it to her friends, but as it really was. That he frequently failed to penetrate her outer reserve is not to be denied, and a more keenly sensitive man would have appreciated her needs more swiftly than Carlyle did. But when, occasionally, she threw off her reserve, or when she broke down in health, or when some great trouble, such as the death of her mother, came upon her, and it thus became manifest to him that sympathy was needed, assuredly he gave it abundantly. The depth and richness of his nature in this particular places him in striking contrast with his wife. Dr. Garnett refers rightly to Mrs. Carlyle's "sympathising helpfulness in misfortune," and distinguishes it from the "tenderness of spirit" which he says was "potential; circumstances might have aroused it, but the circumstances never arrived, and the tenderness never awoke." What she might have been, who can tell? Carlyle's exaggerated estimate of her virtues—revealing as in a mirror the depth of his own tenderness—seems so far to have prevented a just estimate of her character. Dr. Garnett perceives that the pair were, "in a sense" (whatever that may mean), ill-suited to one another; but he is kind enough to think that this sharp-tongued, coarse, and spiteful woman would have made a good helpmeet for Edward Irving—a man whose spirit was far more finely strung than Carlyle's. "Had I married Irving," Mrs. Carlyle once said, "the tongues would never have been heard." No! but there were once worse possibilities in store for Irving than "the tongues." "When poor Irving," says Dr. Garnett, "oblivious of his Kirkcaldy vows, sought Miss Welsh's hand, he was probably guided by a sound instinct of his real needs." That there was a small flirtation between these two need not be questioned. It does not seem to have been Irving's only flirtation after his engagement to Miss Martin. In the *Reminiscences* Carlyle notes respecting Miss Margaret Gordon: "Irving, too, it was sometimes thought, found her interesting, could the Miss Martin bonds have allowed, which they never would." Mrs. Carlyle's vanity would, in later years, easily make a mountain out of such a mole-hill. Carlyle took her word for it, as might be expected, so did Mr. Froude, and so, apparently, does Dr. Garnett. The Carlyles said

ill-natured things about Mrs. Irving. Her "ill-qualities," as a girl, "came out in her afterwards as a bride [an engaged young lady] and still more strongly as a wife." So wrote Carlyle; but contrast the opinion of Mrs. Oliphant, who knew Mrs. Irving personally, not merely from the report of a self-constituted rival:

"She stood by her husband bravely through every after vicissitude of his life; was so thorough a companion to him that he confided to her in detail all the thoughts which occupied him . . . received his entire trust and confidence, piously laid him in his grave, brought up his children, and lived for half of her life a widow indeed in the exercise of all womanly and Christian virtues."

Let us also read the opinion of the victim himself of Miss Martin's resolute determination to marry him, despite his opportunity of an alliance with that superior person, Jane Welsh. Irving's letters to his wife abound in such affectionate praise as this, written when she had gone to visit her parents:

"I suppose, by the time this arrives in Kirkcaldy you will have arrived . . . and because I cannot be there to welcome you in person to your father's house, I send this, my representative, to take you by the hand, to embrace you by the heart, and say welcome, thrice welcome, to your home and your country, which you have honoured by fulfilling the duties of a wife and mother, well and faithfully—the noblest duties of womanhood. And while I say this to yourself, I take you to your father and mother and say unto them: 'Receive, honoured parents, your daughter—your eldest-born child—and give her double honour as one who hath been faithful and dutiful to her husband, and brings with her a child to bear down your piety, faith, and blessedness to other generations, if it please the Lord.' Thus I fulfil the duty of restoring, with honour and credit—well due, and well won—one whom I received from their house as its best gift to me."

Who can suppose that if Jane Welsh had become Mrs. Irving and had succeeded in stopping "the tongues" she would have received or deserved such a tribute as that? Probably Irving and Miss Martin knew their business best, as people who marry often do, despite the opinions of kind relatives and friends. At any rate, if Irving ever felt any disappointment about Jane Welsh, the time must have come when he could say with Carlyle, "'Ill luck,' take it quietly, you never are sure but it may be good and the best."

That Mrs. Carlyle was bitter against Mrs. Irving is not strange when we remember she had not the tenderness, not even the grace, to avoid giving vent among her friends to her complaints and sarcasms about her own husband. Calling one day on a friend, an eminent physician, and being asked, "How is Mr. Carlyle?" she answered, "Oh, its weary work living with a man who always has hell-fire in his stomach." No doubt it was weary work; but how much more weary for the man afflicted thus, and afflicted also with this unsympathetic wife. Carlyle must have been "gae ill to deal wi'." Wisely at the outset of his career did Miss Margaret Gordon advise him to

"cultivate the milder dispositions of the heart. Subdue the mere extravagant visions of the brain. G-ness will render you great. May

virtue render you beloved! Remove the awful distance between you and ordinary men by kind and gentle manners. Deal gently with their inferiority, and be convinced that they will respect you as much and like you more. Why conceal the real goodness that flows in your heart?"

Assuredly Carlyle was "guided by a sound instinct of his real needs" when he desired the woman who wrote that for his wife. But men too often maintain their amiability and secure goodwill by weak compliances. Their good temper costs them their integrity. If Carlyle was not good tempered let us not forget what a sea of sham and pretence he had to face; and that neither fortune nor flattery, nor any other bribe could induce him to say "yes" when he meant "no," or even to leave the "no" unsaid.

Mr. Froude has made many blunders in his time, and his action in the matter of Carlyle may have been his latest and greatest. A difference of opinion remains after a good deal of discussion. Has not enough, and more than enough, been said on the subject already, and may not those who differ still, agree to differ? Dr. Garnett seems to think not. He takes up more space in scolding Mr. Froude than can well be spared. On other points he is so instructive and interesting that we grudge the waste. He is not content with one rebuke, but returns to the attack again and again. "If indignation must have course," writes Dr. Garnett, "it will not die away for want of an object." That object is the unhappy Froude! Dr. Garnett's indignation must "have course." He demands to know how "Carlyle's trusted friend and literary executor" came to publish the *Reminiscences* "with hardly any retrenchment or alteration, in defiance of Carlyle's most positive injunctions." The riddle has been asked before and not solved, and Dr. Garnett does not solve it now. His remarks would have been in place in a newspaper controversy, but they could have been dispensed with here. After all, Mr. Froude has done his worst or his best, and it cannot be undone. Even Mr. Eliot Norton's brilliant re-editing cannot undo it. And what is the result? Simply that we must thank either Mr. Froude or his blunder for enabling us to understand how great Carlyle really was. "Most autobiographies," as Dr. Garnett remarks, "have been written or coloured for effect. Carlyle's is the most artless of all his writings." To be given possession of it, in the case of such a man as this, may well cover a multitude of literary sins on the part of the man who gave it. Carlyle, as we know him now, is more real, and immeasurably more impressive than the Carlyle we knew before. The literary small-talkers may say the idol is shattered; but those to whom Carlyle was never an idol, but an instructor and inspirer, must be glad and not sorry that he has become so real to them.

This book will add to Dr. Garnett's reputation as a clear and careful writer and critic. His statement of facts is accurate, and his estimate of Carlyle shows insight and understanding. His conclusion is that

"it is not as a man of letters that we would chiefly think of Carlyle, nor is it in his study that we would part with him. Great and deathless writer as he was, he will be honoured

by posterity for his influence on human life rather than for his supremacy as a literary artist."

That is true.

WALTER LEWIS.

Greeko-Slavonic. Hohester Lectures on Greeko-Slavonic Literature and its Relation to the Folklore of Europe during the Middle Ages. By M. Gaster. (Trübner.

Dr. GASTER has done good service by calling the attention of scholars to an interesting but long neglected branch of literature—the numerous works which were, during a considerable period of time, translated from the Greek into Slavic languages, and which have to a marked degree affected, not only the folklore of the Slaves, but also that of the whole of Europe. The romances which formed a considerable portion of that literature are in themselves by no means devoid of merit, although some of them were merely adaptations of Oriental fictions; and the account of them which Dr. Gaster has given will be found of great use and value. But what renders his work of special service to folklorists is the description it contains of the remarkable "heretical movement known under the name of Bogomilism, which ruled Bulgaria for not less than five centuries, and left indelible traces in the spiritual life of the Slavonic nations." For it was to the fondness of these ill-starred heretics and their religious teachers for tales and fables, and to their zeal in circulating the fictions in which their doctrines were presented under an universally attractive form, that the diffusion was due of many a story which might otherwise never have reached the ears of the unlettered peasants, in many lands, among whose descendants it is now current.

At the time of the conversion of the Bulgarians to Christianity, says Dr. Gaster, there were to be found at the Bulgarian court envoys from the Paulicians or Manichaeans of Asia Minor. These Paulicians had settled in Thrace before that time, a number of them having been transported from Asia Minor in the eighth century; and in their new home they flourished, gaining over many adherents to the doctrines of Manichaeism in the modified form introduced by Constantine of Samosata. One of their priests, Jeremiah, having taken, about the middle of the tenth century, the name of Bogo-mil, answering to Theo-philus, his followers were styled *Bogomili*, and during many centuries Bogomilism "kept a foremost place in the history of the Balkan Peninsula." These sectaries called themselves "Good People," "Good Christians" and "Christian Poor"; but various other names were bestowed upon them by their opponents, who were ultimately able to crush their religious movement. They underwent the hard fate which befell others who, like them, "threw over the doctrines of the dominant Church, based their faith more upon Holy Writ, excluded the cross from their religious symbols to advocate freedom from the domination of the Catholic Church and of the nobility." But although they were reduced to silence, so far as any public utterance of their doctrines was concerned, yet they retained to a great degree their hold upon the minds of the common people.

The Bogomils trusted to a large extent to oral teaching, their missionaries wandering about from hamlet to hamlet, talking with the peasants in simple style, and engaging their attention by means of tales and parables. But their doctrines were also embodied in a written literature, which, as Dr. Gaster says, "travelled through Europe and left permanent traces of its influence on literature, poetry, painting, and sculpture." Of this literature the main sources were Greek texts, founded on works which travelled to Constantinople from the East, and were thence transferred to the Bogomils. Much recourse was had also to Jewish legends found "in the Haggadical writings, and in particular in a book called *Sephor Hayashar*"—a kind of Biblical history, in which the books of Genesis and Exodus are supplemented by a number of ancient legends. The Bogomils, it may be remarked, prided themselves upon their intimate acquaintance with the Bible, "and at one time their bishop in Bulgaria boasted that there was not a *single one* among his 4,000 disciples who did not know the Scriptures by heart." Implicit belief need not be given to this statement; but there is no doubt that the fantastic supplements to the Old and New Testaments, contained in the great mass of Apocryphal writings to which the perverted ingenuity of Christianity gave rise, were carefully studied by those fanatical ascetics. Of one of their favourite works Dr. Gaster gives, in an Appendix, a detailed account. It is the Old Slavonian Bible-story "called *Palaea* (i.e., Παλαιά Διαθήκη), which "may have been originally copied from a Greek model, but in its existing and perhaps extended form contains several legends which are almost literally translated from the *Sephor Hayashar*." It probably belongs to the tenth century, and is, therefore, much older than the corresponding works in Germany and France. It may be described as "an embellished Bible," which has a definite tendency, being apologetic and polemic, as well as exegetic and homiletic, its fundamental idea being that "there is no event mentioned in the New Testament which has not been adumbrated and typified in the Old Testament." The New is but the fulfilment of the Old, "hence the truth of the former; and hence, on this theory, also the unavoidable acceptance of the New Testament by the followers of the Old."

It is to be hoped that Dr. Gaster may meet with the early opportunity to which he looks forward of publishing a complete translation of the legends and apocryphal tales contained in this extensive but little known work.

W. R. S. BALSTON.

THE TEACHING OF ENGLISH.

On Teaching English. By Alexander Bain. (Longmans).

English Composition and Rhetoric. By Alexander Bain. Enlarged edition. Part I. (Longmans.)

ANYTHING that comes from Dr. Bain's pen calls for respectful attention. He speaks with the authority rightly attaching to one of the ablest of English psychologists, and a teacher of long standing; and we may well hesitate before we differ from him wherever

his ripe and acute learning is placed at our service. In this spirit we approached the two books before us, and with all diffidence we toiled through them; but we never knew before how mighty a chasm separates anatomising power from insight and sympathy.

We should say at once that the chief object that seems likely to be served by Dr. Bain's two books is that they should be examples to the end of time of how "English" never should be "taught," and never could be "taught." We are altogether unable to follow our author in what seems to be his view of the purpose of English teaching as practised in our schools. It is *not* merely or chiefly "to assist the pupil in mastering the English tongue." That is only a part, and not the larger part of the teacher's duty. His first business is to see that his pupil understands and knows well at least one great work of literary art; for the intelligent knowledge of one is the best guarantee of the power to rightly understand another. We are heartily in accord with our author in deprecating such criticism as begins and ends with "discussions of antiquarian grammar, idiom, and vocabulary; changes in the use of particular words; explanation of figurative allusions; interpretations of doubtful passages," and so forth. But all these things are necessary in their degree, before we can get to the heart of the writer's mystery, and see the things he makes somewhat as he saw them. Shakspeare and Milton—"we cannot work them," says Dr. Bain, "into the tissue of our familiar discourse. What, then, is to be gained by dwelling on them, say, in an English lesson?" And Bacon—his "essays do not interest this generation, because, apparently, 'his maxims on the conduct of business are completely superseded by Sir Arthur Helps's essay on the subject.'" Accordingly, in chap. iv., Dr. Bain tells us, as he says, "How not to do it" with Bacon's essays; and his method is very instructive. It is Dr. Bain's psychological "bias," perhaps, that makes him see all knowledge lying in strips. He, therefore, condemns the essays as subjects of teaching for their incoherence, desultoriness, and the like. We follow him into the lecture-room, and see how he would himself use the essays. They are to be, in fact, shocking examples. As an instance of Dr. Bain's insight, what shall we say of the following inspiring extract from the first book before us? (*O. T. E.*, p. 42):

"Take first the Essay on 'Truth.' The first sentence—'What is truth?' said jesting Pilate, and would not stay for an answer"—might be cited as an interesting way of announcing the topic of an essay, while the phraseology would be open to improvement. For 'said' he ought to have used the word 'asked'; but the remark is superfluous, because no one would now commit the impropriety. The 'and' should clearly be 'but.' 'What is truth?' asked jesting Pilate, but would not stay for an answer."

Now what are we to think of this for criticism? As for us, we sincerely believe that Bacon did not write the famous sentence as his critic has written it, simply because he did not mean what Dr. Bain apparently means. Bacon meant *said*, and he meant *and*. On the face of it, Pilate, so far from asking any question, is actually uttering a jest; and his waiting for no answer is in no sense an anti-

thesis to his jest, but merely a further indication of the indifference which the story illustrates. We get this meaning out of Bacon, not by anatomising him and saying that here we should find this and there that, but by taking his words as they stand, and asking What *do* they mean?

In fact, Dr. Bain's books would not seem to us so little worthy of him if it were not that he passes beyond his own scheme for "teaching English" to pronounce literary judgments, where his authority is no more and no less than that of other intelligent persons, and where most people will hold themselves free to differ from him. It may be safely said that most people *will* differ from him.

His examination of Shelley's Skylark ode tallies exactly with his general remarks on Milton and Shakspeare as materials for teaching English. He begins "reluctantly" with this *caveat* (*O. T. E.*, 117):

"There can be no doubt of the eminent value of a composition that adorns within the limits of truth, or with a very slight departure from those limits. But when a poet accustoms his muse to exaggeration in small matters, there come occasions when the effect is seriously perverting."

We seem to have heard in the dim and distant past of some famous hard knocks delivered over the ever glorious third stanza. And this is Dr. Bain thereon (*O. T. E.* 119):

"The golden lightning' seems a doubtful conjunction. The epithet is not applicable to lightning. The meaning is made more consistent, if we read 'lightening,' an emendation actually adopted by Chambers. 'The sunken sun' scarcely contributes to a picture of glorification; the word 'sink' is associated with depression and pathos. . . . The concluding line is one of Shelley's gorgeous similes from the feelings. An effort is required to realise the meaning; and, when we do realise it, we must acknowledge that there is some straining. We understand a 'joy' by itself; but the embodying of it rather puzzles us; and we are not accustomed to materialise our feelings by first putting them into a body, and then making them run a race, all which has to be done before we apply the combination to illustrate the flight of the lark."

The further criticisms are equally unhappy. To cap all, commend us to the judgment passed on the stanza, "What thou art, we know not" (*O. T. E.* 121):

"The poet now invests his subject with the charm of mystery. This attribute, however, applies to so many things, and is so well worn that it scarcely stirs our feelings. The question, 'What is most like thee?' might have been earlier, there being already a whole string of comparisons provided. The start is not new, and the images are from sources already drawn upon. The drops from rainbow clouds have the brightness due to sunshine; and the poet thus adds something to the ordinary image of a rain-shower. Still, we may hesitate about the intrinsic force of the comparison of the lark's song to a *rain* of melody."

It is quite true that English scholarship may be taken to mean "the power of expressing ourselves adequately on every occasion requiring us to employ our native tongue." But, if Dr. Bain will pardon us, we think it means that only in a secondary sense. To us it primarily means the knowledge and understanding of the great Englishmen *who have*

recorded in our tongue the impressions made on themselves by the universe, that is, feels, knows. To this end Dr. Bain's book will in no way help us. Every lesson that he would teach can be best learned from the daily newspapers, which are at least quite as rich in shocking examples as Milton, Shakspeare, Bacon, Shelley, or Keats; and they have the additional advantage that we can "weave them into our familiar discourse." Nearly as useful for this purpose are Macaulay's essays and speeches, which "should be in the hands of every student in the higher composition classes." Macaulay's great reproach is that he is what has been called a "stylist"; at any rate, we have often been told that he is admirably suited to the purpose of a model in essay-writing. But Macaulay himself was made by such a knowledge of, and memory for, a large range of English classics as few men can hope to have; and no men may hope for it if they are to be "taught English" on Dr. Bain's method. He was not starved on a diet of elegant extracts. Teachers are sadly aware of the uninspiring character of most of the editing of the English classics from which they themselves were taught, but there are abundant signs of improvement. We might commend to Dr. Bain's notice, as an example of what editing should be, Mr. Beeching's "Julius Caesar," for instance; the introduction to which is a model of enlightening criticism, and inspiring too.

We cannot praise Dr. Bain's books for anything beyond their complacency and honesty. He is, without doubt, quite in earnest; but if some Martinus Scriblerus of a hundred years hence takes his book up, not knowing him for a famous logician and psychologist, he will regard him probably as the Mr. Labouchere of literary criticism, and decline to take him seriously at all.

P. A. BARNETT.

Records of Service and Campaigning in many Lands. By Surgeon-General Munro. In 2 vols. (Hurst & Blackett.)

DR. MUNRO has much to tell, and very well he tells it. He joined the 91st Regiment at the Cape in 1845, served afterwards in Nova Scotia, and on the breaking out of the Crimean War was transferred to the 93rd Highlanders. He joined the army just as it was embarking at Baltaik Bay for the Crimea, was present at the battle of the Alma, and continued with his regiment till the following March, when he succumbed to an attack of fever; and for five weeks was disabled, the only time during the thirteen years he served with the 93rd in which he was unfit for duty.

His account of the Crimean War is full of life, and the more interesting as coming from one in the double capacity of soldier and doctor. The description of the sufferings of our troops and the heroism with which they were borne is exceedingly good. The 93rd had suffered more than any other regiment during the previous summer in Bulgaria; but as soon as it was believed that they were going to attack the enemy the health of the men improved. Dr. Munro found from experience that

"the excitement caused by the presence of an

enemy, by a successful attack, or spirited pursuit—in fact, by the presence of any danger which required the exercise of moral or physical courage, are preservatives against disease."

That the sufferings of our soldiers was caused by the most disgraceful incapacity is now an established fact. Dr. Munro adds that they were aggravated by the prevailing ignorance in sanitary matters. He writes:

"In January the climate was very variable; at times we had rain, sleet, and heavy drizzling fogs, at other times the cold was intense, with high piercing wind. Sickness and mortality were on the increase. Deaths occurred every day from scurvy and from typhoid fever, the latter caused by the filthy state of the ground in and around our camps, and by the number of dead men and animals that were lying on and close under the surface; and so ignorant were we at that time of the science of sanitation that few medical officers knew anything about it, and those who proposed anything in that way met with no support.

"Towards the end of February there was a decided improvement in the health of the 93rd. The hospital was, indeed, full during the month of cases of scurvy and fever, but the number reported sick were fewer every day, and there were fewer deaths, and occasionally a jest and laugh might be heard in camp. But though throughout the whole of that terrible winter (till the end of February) mirth and laughter were never heard, still complaints or grumbling were never heard, and the men not only bore their miseries patiently and silently, but never by word or sign allowed it to be thought that they were not determined to carry the siege and the war to a successful end. Never before or since have I seen men reduced to such straits as the British soldiers were in the Crimea; but in spite of their rags and their gaunt and wretched appearance, there was a majesty in their bearing which inspired respect, and a display of lofty courage and endurance which drew forth the admiration of all who witnessed it. It was wonderful; and if the people of England could only have seen their soldiers battling against the elements, against starvation, against the extreme of bodily discomfort and misery, and holding their ground, as if they were masters, against enormous odds, their compassion for them, great as it was, would have been a thousand times greater, and their pride in their heroism and their gratitude for their noble devotion would have known no limit."

Dr. Munro was invalided to England, but returned after the fall of Sebastopol. So great were the changes and improvements that he could hardly believe he was again in the Crimea. It was like a wonderful transformation scene. What guarantee have we now that if we were again embarked in a war on the same scale and of the same duration as the Crimean war we should not again witness the same mismanagement, folly, and indifference to suffering on the part of officials at home? At least in the Crimea there were no complaints of cartridges that jammed and bayonets that bent like hoop-iron. One instance of brutal red-tapism in the Crimea must be quoted.

"The day before the Alma a circular was issued by the principal medical officer of the army cautioning regimental surgeons against the use of chloroform, the caution almost amounting to a prohibition of its use—at least, no surgeon could have been blamed if, with that circular before him, he had declined to use chloroform."

To this caution Dr. Munro paid no attention,

but administered chloroform in each operation after the battle, and in every one he has since performed; and he never had a case in which chloroform proved in any way injurious; on the contrary, he always found a blessing both to the patient and the operator.

The Indian Mutiny followed on the heels of the Crimean War. The 93rd embarked for India early in 1857, and first heard of the mutiny at the Cape; but it was not until they reached Cawnpore and entered the building in which Nana Sahib murdered the women and children, with its walls and floor still stained with blood, and saw the well into which the bodies were thrown that the men really understood what the mutiny meant, and then they determined on revenge. The 93rd formed part of the little army with which Lord Clyde relieved the residency at Lucknow. That splendid achievement has been often told before. It bears telling again; and the present narrative, by one who took part in it, is in a high degree heart-stirring. We repeat that the author's being a doctor adds to the interest of his story. He adds, besides, a number of thrilling and touching anecdotes. We are almost tempted to quote one relating to Lord Clyde's coolness under fire; but we leave it to the reader to find for himself. For that great general Dr. Munro has a profound veneration, and justly so. The next commander he served under was of a different stamp, and his inefficiency caused unnecessary suffering and loss of life. He was, however, a rare exception; for one of the most striking things in the history of the Mutiny is the way in which almost everyone who was placed in a position of any responsibility, however unused to it, rose to the occasion.

Dr. Munro remained in India for nearly fifteen years. He has some useful observations on the climate and physical conditions of that country. Among other things, he remarks on the little inconvenience suffered from reptiles, especially snakes, by the Europeans. Though he spent so many years in India he never knew of a case of snake-bite among the soldiers.

The doctor has a tender affection for his old regiment. Certainly the 93rd was one of the grandest in the service. Its history has been written elsewhere; but the account of it in the present work is by no means superfluous. Dr. Munro is very far from being either bigoted or prejudiced, but he knew the soldiers of the old long-service system too well not to see the weakness of the system which succeeded it. He writes:

"In those far-off days the ranks of all regiments were filled with men, big, strong, well-set-up fellows, whom it was a pleasure to a military eye to look at. These were the sort of soldiers that fought at the battle of the Alma. What splendid men they were! not a weed among them. We have not had anything like them in a body since, and have nothing nowadays to be compared with them. I do not mean to say that our young soldiers of the present day are not brave, noble fellows; but they want the bone and muscle and the splendid carriage of the grand old soldier of the long-service army, who was a soldier for life—that is, for all the period of his vigorous manhood—and thought of nothing during all his service but his regiment and his duty."

We feel confident that Dr. Munro's work, especially the second volume, will give much pleasure to many of our readers.

WM. WICKHAM.

NEW NOVELS.

A Modern Circe. By the author of "Molly Bawn." In 3 vols. (Ward & Downey.)

The Ring of Gyges: some Passages in the Life of Francis Neville. Edited by Charles Wentworth Lisle. (Bentley.)

Storm-beaten and Weary: a Novel. By Evelyn Burne. (Griffith, Farran & Co.)

Boys and Masters: a Story of School Life. By A. H. Gilkes. (Longmans.)

Harlette. By the Countess of * * *. (Frederick Warne & Co.)

Digia, her Love and Troubles: a Story of Venice. (Glasgow: Wilson.)

Love and Pride on an Iceberg, and other Tales. By the Earl of Desart. (Sonnenschein.)

We have become so accustomed to expecting work of the highest class from the lady who veils her identity under the style of the author of "Molly Bawn" that there is some little difficulty in opening our remarks upon a new work of fiction from her pen—the commonplaces of criticism, to which the best of us must be reduced at times, are exhausted, and we scarcely know how to begin. The task is made a little easier by the fact that the author has, to some extent, made a new departure in the present instance. While still dwelling upon those phases of Irish domestic life among the cultivated classes which no living writer portrays more truthfully, the author—who might just as well give us some name that would obviate periphrasis and tautology—has introduced a novel feature in the person of her evil heroine, Donna Dundas. Here is a beautiful woman of good family, who has deliberately married a rich elderly suitor, while loving another with all the passion of which her selfish nature was capable. The rejected lover, the Lord Varley of the story, has also married a woman a great deal too good for him. When these two *ci-devant* lovers are brought together in a slightly dull Irish country neighbourhood, what could be expected except that they should renew their old relations, seeing that both were utterly without principle, neither cared a jot for the legal partner, and that the woman was as physically fascinating as the man was morally weak? And so the tragedy goes on until Yolande's heart is nearly broken—we think it would have been quite so in real life—and Varley dies the death in a chivalrous way which makes one almost forgive him, and old Dundas goes to meet his judgment all too hurriedly, and the beautiful siren is left to her horror of misery and confinement. It is a ghastly plot, but a powerful one. That last scene in the lamp-lit library reminds us in the opening of nothing so much as Rawdon Crawley's intrusion upon Becky's interview with Lord Steyne—the key-note is the same, only that Donna, with all her sin and frailty, was the truer woman of the two. It is terribly pitiful when she tries to shield her lover with her own body. That is the main plot. There

is an underplot of comedy, sometimes of farce, which is charmingly tender in the episodes of Constantia's love-story, and wildly funny when her awful old aunt and the household generally come in question. Constantia is a sweet and pure Irish maiden as could be wished, and we all feel glad when she chooses the right lover; never mind which of them it was—that is for each reader to find out! On the whole, we think we like handsome, bluff Garrett best, but Andrew Strange was a fine fellow too. The scene of the masked ball is well-imagined and well-worked out; but not the least dramatic, or the least humorous, of the various episodes is the terrific appearance of old Miss MacGillicuddy in the midst of the surreptitious tea (and champagne) party. Really Constantia ought to have pensioned old Mrs. Mulcahy for getting so opportunely tipsy on that occasion. Perhaps she did! Without more words, this is a good novel, and everybody ought to read it.

It is not a new expedient on the part of a novelist, when introducing a tale in which the mystical element preponderates, to attribute his narrative to the discovery of some secret MS.; and, naturally, the success or failure of the result depends in a great measure upon the amount of ingenuity with which this device is employed. In the case of the author of *The Ring of Gyges* we may at once say that he has used it to good purpose, and the story may be frankly recommended to all who can enjoy a thrilling romance with a spice of *diablerie* and rather more than a spice of horror. The plot turns upon the doings of a young Englishman, well-born and wealthy, who becomes possessed of the traditional talisman, which bestows upon him that power which our forefathers attributed to the possession of fern-seed—a most objectionable neighbour this, as, indeed, Mr. Francis Neville proved himself to most people with whom he came in contact. We will not enter into the tissue of horrors attendant on his career, as this would be to forestal the reader's curiosity; but will briefly say that it surpasses anything which one would have thought that the most vivid imagination could conceive, culminating in a *finale* which is, perhaps, the most horrible thing in the book. One thing has struck us specially—viz., the clever way in which Mr. Lisle has traced the gradual deterioration, in the case of his hero, of a naturally fine and trusting nature. We are not many of us likely to possess the fatal ring, otherwise this would be an awful warning not to make use of it. At least two of the subordinate characters are well drawn—the unhappy Lady Charlotte and Villiers's treacherous friend, Gaston Ferrers. One would have liked to know that such a fiend as the last named met with his deserts at last; and it strikes one, as regards the lady, that Mr. Neville was rather addicted to jumping to hasty conclusions. But the romance is a good one of its kind.

From internal evidence we should suppose Miss Burne to be a rather young lady, holding strong religious views, who has read *Jane Eyre* too much for the benefit of her literary style. *Storm-beaten and Weary* is the history of a young girl from the time she left her convent until she went back to die a broken-down woman—whether a nun or not seems

doubtful. Miss Duval's life was not without its vicissitudes, as before her end she was, alternately, a companion, a milliner, and a governess; but it can excite only a feeble amount of interest. It strikes one that, if D'Eynecourt and Captain Cunninghame had no matrimonial intentions, neither acted in the most gentlemanly manner in pursuing a course of conduct which must almost certainly have compromised any girl in Marie's position. And on future occasions it might be well to pay more attention to the proofs.

It is not given to every man to enter keenly into the life of boys; but we should have thought, notwithstanding, that everybody who had ever been to school at all would have known more about them than Mr. Gilkes seems to do. His story is written in what we should call a grandmotherly spirit: e.g., in speaking of two boys who had an honest, stand-up fight, Mr. Gilkes remarks:

"Upon the floor of the shop for two minutes there was an improper sight to be seen—these two boys standing up to each other, while the others stood round!" Did he never have a fight himself at school? As for the episode of Appleton and his friends, it is mawkish, and does not strike one as particularly original.

A very pretty story, whether original or translated does not appear, is that of Mdlle. Harlette de Noirmont, the impoverished Breton heiress, who had the courage and good sense to take the only apparent means of restoring her shattered fortunes by adopting the rôle of a public singer. Her life, with its brave struggle against obloquy and misconception, is well described, and all must rejoice in her ultimate triumphs and return to her ancestral chateau. The sketches of French provincial life, with its petty jealousies and prejudices, are particularly good. But surely it was unnecessary to make the heroine so unforgiving at the last. We think, after all, the novelette must be a translation—some of the sentences are worthy of De Florac!

Digia also is written in rather Frenchified English, and is not a particularly engrossing account of the quarrels and reconciliations between a gondolier and his mistress, which ended in wedlock. The stingy patrician family strikes us as distinctly unpleasant in conception.

Lord Desart's little collection of stories is unequal in merit. Some of them are amusing, notably the first one, and "A Lady and the Lords"; "Why Harry cuts Tom" is painful and ghastly, while there are several others that may serve to pass an idle hour. But through some there runs an element of vulgarity—we had almost said of coarseness.

B. MONTGOMERIE RANKING.

SOME VOLUMES OF VERSE.

The Legend of Saint Vitalis, and other Poems. By Alfred J. Church. (Oxford: Blackwell; London: Seeley.) It is given but to few to find the dream of early life fulfilled in after years. Mr. Church is happy in that the desire of winning a place among the English poets has been gratified. No one can read the little book before us without feeling that it is a true poet that is speaking to us, not one who merely possesses the common, but by no means enviable,

faculty of imitation. Mr. Church is in no sense an imitator. We hardly ever come across a passage which calls to mind the verses of his contemporaries or predecessors. The style, indeed, calm and reserved as it is, has little in common with the more popular works of our own time. Every sentence is clear and lucid. The faculties are never strained in trying to comprehend, and there is none of the alliteration which is so attractive to many. The tone is deeply religious throughout, but there is hardly anything of a partisan character to be discovered. One passage alone shows that Mr. Church is not a member of the Roman communion; or all else might have been written by any one who receives the traditional interpretations of that life which are common among Christians. "The Sea of Galilee" is the most attractive piece in the collection. It must take an assured place among modern devotional poems. To quote any of the separate verses would be something akin to sacrilege. In their union, they approach near perfection; separated, their charm is lost. "Saint Vitalis," the poem from which the little book takes its name, is a legend how a certain hermit devoted himself to the holy work of endeavouring to rescue unhappy women from the terrible lot which has been theirs wherever civilisation, old or new, has had unrestrained growth. At first the hermit struggles against his mission, but

"He read the Gospel—how the woman stood
Behind the Christ, and washed His feet with
tears,
And wiped them with her hair; and all the
night
Christ seemed to walk beside him in his dreams
Through the great sinful city."

Long he struggled against the "call"; but it was at length obeyed, and he reaped calumny and death for his devotion. We should be sorry for anyone who can read this sadly beautiful tale without deep emotion.

Bruce: a Drama. By John Davidson. (Glasgow: Wilson & McCormick.) There is much immature power in this work. It is an endeavour to return to the Shaksperian method of interweaving history and romance in what is both the skilful and the strong treatment of a great historical subject. There is much clever invention in the plot and in the author's manipulation of history, e.g., in his bold stroke of making the trial of Wallace form the third act and the climax of the drama, or again in Edward's letter to Bruce—a liberty with history which recalls the tragic use made by Swinburne of Mary's letter to Elizabeth—or, again, in the parts assigned to James Crombe and the Countess of Buchan. The *dénouement* of Bannockburn is worked out with an impetuous rush that betokens more than mere skill. There is this weakness in the character-drawing, viz., that except in the really powerful third act, we find too little differentiation. The author's women are all one and the same, and even his men are pretty much alike. All are men and women in misfortune, strength supported by tenderness; but in life misfortune develops latent differences of character instead of toning them away. Yet the Scottish band is strongly drawn—Bruce and the rest; and above all, the indomitable Lamber-ton, with his "scornful death-defiance." The subject itself contains the inspiring *motif* of "Goetz von Berlichingen" and "Die Räuber"—a strong fight against misfortune and a final victory; and in those characters the high *motif* is vigorously sustained. This imparts to the present work an ethical quality which we are glad to welcome in a young author—ethical in the broadly artistic sense that the work is more than a mere effort at dramatising, and in its portraiture of brave superiority to the numbing influence of destiny is a study of life of no mean scope. The romantic element, repre-

sented chiefly by the women, reveals in the author a poetic power of a really rich, if sometimes extravagant, order. The woman is always a source of poetry as well as purity, and once she sings a song which is well worth quoting:

"Love, though tempests be unruly,
Blooms as when the weather's fair;
If she love me truly, truly,
She will love me in despair.

"Is there aught endures here longer?
Can true love end ever wrongly!
Death will make her love grow stronger
If she love me strongly, strongly.

"Can scorn conquer love? Can shame?
Though the meanest tower above me,
She will share my evil fame,
If she love me, if she love me.

The style of the drama is very unequal. The language, which at times rises to a fiery strength, and is always vigorous and full of poetic nerve, sometimes betrays mere waste in a hurricane of words. Young men too often mistake violence for strength; but here even the occasional fits of violence indicate a capacity for something better if Mr. Davidson will consent to break himself in. The weakest point of the work is its blank verse. This is the most difficult form of verse to write well, and requires a training which the present author has not yet completed. It is hard and in-harmonious, and affords only in an unsustained flash at a time a specimen of that strong full form which, if sustained throughout, would have entitled the drama to higher praise than most now produced. Let the author read his Shakspeare and see.

The Purpose of the Ages. By Jeanie Morison. With Preface by Prof. Sayce. (Macmillan.) Miss Morison has attempted the impossible, and it is no reproach to her to say that she has failed in the execution of a scheme which no amount of genius could render tolerable. "The Purpose of the Ages" is an archaeological, theosophic, dramatic poem, delineating, as Prof. Sayce says in his preface, "the divine education of the human race, and the unity of God's dealings with man." It is in three books, dealing respectively with the childhood, the youth, and the manhood of the world; an outline, derived from the Hebrew records, being filled in with local colouring supplied by the results of Babylonian and Egyptian decipherment. Inevitably, it reads like the *Transactions* of the Society of Biblical Archaeology done into blank verse. The attempt to introduce correct archaeological detail, even under the skilled guidance of Prof. Sayce, does not always result in metrical success. Miss Morrison has failed to see that cuneiform texts do not supply fit material for the resonant names which are introduced, with such magnificent effect, into "Paradise Lost." The Babylonian names themselves are harsh; while it is fatal to the enjoyment of poetry if the reader has constantly to turn to a voluminous appendix in order to understand the allusions in the text. Thus the introduction of such a name as Rag-mu-serina-namari savours of pedantry rather than of poetry, and requires the explanation that she was the "female Being" by whom the windows of Heaven were opened, when Noah, who figures as "Ubaratutu's son, Surippakite," had entered the ark. Nor does the Book of the Dead supply fitter materials than the Descent of Istar for harmonious verse.

"Back, Crocodile of the West!
Living off those never at rest!
What thou hatest is in my belly,
I have eaten the limbs of Osiris,
I am Set.
Back, Crocodile of the West!
There is an asp in my belly,
I am not given to thee. Do not burn me,
Back, Eastern Crocodile.
I am the Soul in his two halves,
Let him explain it!"

This translation might satisfy M. Naville, but it cannot be called a melodious or pleasing lyric. Nor is the archaeological detail always so correct as in the foregoing instance. Kitto's *Cyclopaedia of Biblical Literature* is not a very modern or high authority; and in face of recent discoveries, Prof. Sayce, who has acted as Miss Morison's archaeological mentor, should not have allowed her to adopt Brugsch's exploded theory that the route of the Exodus was by the Serbonian bog. The religious purpose of the book is so excellent, the pains lavished upon it have evidently been so great, and the poetic merits of isolated passages are so considerable that it is a matter for sincere regret that the author should have abandoned the homely lyrics, in which she has already achieved no small success, for a theme more hopeless than that which Southey vainly essayed in "Thalaba," and with which even the mighty genius of Milton must inevitably have failed.

A Trilogy of the Life-to-Come, and other Poems. By Robert Brown, jun. (Nutt.) Mr. Robert Brown is well known to many readers of the *ACADEMY* as a learned and ingenious investigator of ancient mythologies, but probably most of those who are familiar with his former writings will be surprised to hear of him as a poet. We do not think that the present volume is likely to achieve any great degree of renown. Mr. Brown is often extremely felicitous in single lines, and is seldom chargeable with falling into absolute bathos; but there are few of his pages that do not contain two or three examples of feeble or inappropriate expression, resulting from inability to cope with the difficulties of rhyme and metre. The rhymes, too, are often audaciously loose. Even Mrs. Browning would hardly have ventured to make "more" answer to "awe." Perhaps the best thing in the book is the translation of a chorus from the "Antigone" (1115-1154), which is flowing and spirited, while keeping very close to the original. But the headings "strophe" and "antistrophe" might as well have been omitted, as the sections so headed are not made to correspond in metre, or even in number of lines. The first chorus from the "Clouds" is also cleverly rendered. A translation from Homer (*Iliad*, xii. 1-252) is novel in style, the metre being varied according to the character of the passage. Perhaps this may turn out to be the true solution of the problem of metre in Homeric translation. But Mr. Brown carries a good idea too far when he uses half-a-dozen widely different metres in the course of 250 lines; and certainly it would be impossible to imagine anything less like Homer than the following Macaulayish jingle:

"Thus spake he, and Patroklos
In glittering armour dressed;
He clasped the greaves upon his legs,
The corslet on his breast—
The corslet of Aiakides,
Star-studded in the field—
And from his shoulder hung his sword,
And next the mighty shield."

The translation, as a whole, is not very satisfactory, but it contains several good passages, and is interesting as a metrical experiment. The original poems please us less than the translations; the first piece of the "Trilogy," however, is graceful. "A Balaide of Treasures Wyfe" is written in a pseudo-archaic spelling which does not in the least resemble the real spelling of any period of the English language. In this respect it is like Miss Ingelow's ballad, "The High Tide on the Lincolnshire Coast"; but the latter will stand the test of being transcribed into plain English, which Mr. Brown's "balaide" will not. The longest poem in the book, "The County Member," is better in conception than in workmanship. The shorter pieces read smoothly enough, but

the sound too often gives the law to the sense. On the whole there is enough of interest in the volume to justify its publication, but the author's true vocation is certainly not that of a poet.

The Castle of Knaresburgh, a Tale in Verse of the Civil War in Yorkshire in 1644; and *The White Mare of Whitestonecliff*, a Yorkshire Legend of the Fifteenth Century. By Richard Abbay. (Kegan, Paul, Trench & Co.) This book is not poetry, whatever be the meaning which we give to that much overtasked word. The author has, however, read Sir Walter Scott, and caught something of his manner. He imitates the great Scottish balladist about as successfully as the "poets" of local newspapers do the verses of Mr. Swinburne and Lord Tennyson. Scott was not over careful of his rhymes, but he would never have made terrible rhyme with *swell*, *sky* with *joy*, *rode* with *God*, or *views* with *Ouse*. Mr. Abbay seems to have great local knowledge. He uses place-names with as unsparring a hand as the author of *Marmion*, though not with the same dexterity. We do not think Sir Walter would ever have told us, unless writing a parody, that anything whatever

"Broke many a wearied sleeper's dream,
"Twixt Hessay waste and Bilton Bream."

We suppose books of this sort have a certain kind of interest for people who live in the villages whose names occur in their pages. We should not, therefore, be surprised should the less instructed people of the neighbourhood of Bilton Bream, How Stean, Swardcliffe, and Oulston Pool, find beauties in it which we have been unable to discover.

RECENT THEOLOGY.

Catechisms of the Second Reformation. Part I. The Shorter Catechism of the Westminster Assembly and its Puritan Precursors. Part II. Rutherford's and other Scottish Catechisms of the same Epoch. With Historical Introduction and Biographical Notices. By Alexander F. Mitchell. (Nisbet.) It may be said, without fear of contradiction, that few, if any, men living are better acquainted with the ecclesiastical antiquities of Scottish Presbyterianism than Prof. Mitchell, of St. Andrews. Questions connected with the history and results of the Westminster Assembly of Divines (for it was this gathering of English Puritans that has dominated Scottish theology for the last two hundred years) Prof. Mitchell has made peculiarly his own. We may not be able to enter into Prof. Mitchell's ardent enthusiasm at the thought of even Druse and Maronite children in recent years learning in Arabic the answers to "What is effectual calling?" "What are the decrees of God?" and such like abstruse points of divinity; but we are sure that if he were not very enthusiastic the minute labour bestowed upon tracing the genesis of this antiquated Calvinistic formulary could never have been undertaken or endured. In the volume before us, Prof. Mitchell exhibits in a very convenient form under each question of the Shorter Catechism the parallel passages from earlier or contemporary documents which afford illustrations or supply clues to the sources of the answers. Then follow careful reprints of Gouge's *Short Catechism* (1635), Rogers's *Chief Grounds of the Christian Religion set down by way of Catechising* (1642), Herbert Palmer's *Endeavour of making the Principle of Christian Religion plain and easie* (1644), Archbishop Ussher's *Principles of the Christian Religion* (1645), and other similar works. Part II. contains the *Catechism* of Samuel Rutherford, printed for the first time in this collection, from a MS. in the library of the University of Edinburgh. An examination of this document

entirely justifies Dr. Mitchell in asserting (contrary to what has been sometimes supposed) that the influence of the three Englishmen—Palmer, Tuckney, and Wallis—is far more apparent upon the Westminster Catechism than is Rutherford's. Indeed, we doubt whether any single point can be traced to the work of Rutherford. Students of the history of religion in Scotland will thank Dr. Mitchell for the loving labour he has bestowed upon this unattractive, but not unimportant, branch of the subject.

The Divine and Sacred Liturgies of our Fathers among the Saints—John Chrysostom and Basil the Great. Edited, with an English Translation, by J. N. W. Robertson. (David Nutt.) This pretty little book is well fitted to make better known to English readers the beauty and glory of the Eucharistic services at present in use in the holy Eastern Church. The Greek text is clearly printed; and the translation aims, as it should, rather at faithfulness than elegance.

The Liturgy of John Knox. Received by the Church of Scotland in 1564. (Hamilton, Adams & Co.) The only excuse for the issue of this reprint is that Dr. Sprott's masterly edition of the *Book of Common Order* has been for some years out of print. Few books of its kind need more comment and illustration than the *Book of Common Order*; and no one who has any hope of securing a copy of Dr. Sprott's edition need trouble himself to possess the volume before us, which is indeed without note, comment, or historical introduction. We may observe that the calendar is not reproduced.

Geschichte des Christlichen Gottesdienstes. Von H. A. Koestlin. (Freiburg: Mohr.) This book contains a course of lectures which the author delivered at the theological seminary of Friedberg. It is a most useful compendium for students. The author gives at the beginning, in full, all the passages which illustrate the Christian worship of the post-apostolical age, Clem. Rom. I. cap. 59-61; Ignatius, *Ad Smyrn.*, cap. 8; *Didache*, cap. 7-12; Justin M. *Apol.*, cap. 65-67. For the services of the early Catholic Church he quotes in a very convenient manner the classical portions of the *Apostol. Constitut.*, lib. ii., the Aethiopic Liturgy ed. Ludolf (1691) and the *V. mystagog. Catech.* of Cyril. He proceeds then in due order to the Greek, the Roman, and the various Protestant liturgies. The advantage of Prof. Koestlin's historical method is that he does not weary us with a dry collection of liturgical forms. He is at great pains to show throughout the development of the different parts of the church services. He defines most accurately the *Lehrbegriff* of each church, and shows that its liturgy is the outcome and reflection of that doctrine. Especially good is the chapter on the Greek Church (p. 63-90). Prof. Koestlin is a stout Lutheran Protestant; but he is at the same time a good historian. It is only occasionally, in the more distant portions of his subject, that his native Protestantism asserts itself vigorously. He endeavours, e.g., to show that in the apostolical age there existed no regular order of teachers. He asserts that the *ἐπισκοποι* and *διδασκοι* in Epp. Rom. Corinth. and Philip. were "not in any sense preachers and clerics" (p. 14). He cites, among other passages, 1 Thess. v. 12. This verse, however, states expressly that one of their functions—in fact, their main function—was *σοφειν*, that is to "admonish" the church. He says, "only at the close of the apostolical age (Ephes. iv. 11) were the *σοφειν*, that is the bishops and the *διδασκαλοι*, placed in the same rubric." But what authority has he for drawing, in an age of which so little is known, a hard and fast line; and for saying that the bishops became the teachers only towards the close of that age? Again, it seems strange to hear the Prayer

Book spoken of as a "liturgia lutheranizans" (p. 213), on account "of the piety with which it has maintained the ancient forms of Divine Service." The author's remarks on the English Communion Service (p. 217) overlook the significance of the "prayer for the Church militant," which closes the *missa communis*. They could have been only written by one who has never taken part in an English service. They are, moreover, disfigured by the unpardonable misprint in *hearth* (p. 216) for *in thy heart* by faith.

NOTES AND NEWS.

MESSRS. MACMILLAN & Co. will publish early in the autumn a *Life of William Barnes*, the Dorsetshire poet, written by his daughter Mrs. Baxter.

It is now quite certain that Baron Nordenskjöld will, owing to the work he has at present in hand, be unable to undertake any exploration for the next two years.

THE Rev. Dr. Edwin Hatch's "Essays on Biblical Greek," recently delivered by him at Oxford as Grinfield Lecturer, will shortly be published by the Clarendon Press.

THE next volume in the series of "Canterbury Poets," published by Mr. Walter Scott, will be *Ballades and Rondeaux*, selected from English and American writers by Mr. J. Gleeson White. Among those who have permitted their verses to be here reprinted are Mr. Swinburne, Mr. Austin Dobson, Mr. Andrew Lang, and Mr. John Payne. This is, we believe, the first collection of the English ventures in these Old-French metrical forms.

M. CALMANN LÉVY will publish in Paris, on September 7, a new book by Max O'Rell, entitled *L'Ami Mac Donald: Souvenirs anecdotiques de l'Ecosse*.

The History of Famous Books and Poems will be the next volume issued in Mr. Elliot Stook's "Book Lover's Library." It is written by Mr. Saunders, the librarian of the Astor Library, New York.

FOR more than three hundred years the writings of Giordano Bruno have been caviar, not only to "the general," but to a good many students as well. Recently, however, a good deal of interest has been taken in this strange personality and stranger philosophy; and, in a few weeks, *Gli Eroi Furori*, the most characteristic of Bruno's works, will appear for the first time in an English version, translated by Mrs. Louisa Williams. It will be issued by Mr. George Redway.

THE text of the Greek New Testament, based on ancient authorities, as given by the late Dr. Tregelles in his quarto edition, will be issued immediately, in a manual form, by Messrs. Bagster & Sons. The text and alternative marginal readings only are given, the list of authorities and MS. variations being omitted.

MESSRS. BICKERS & SON will publish in October a book entitled, *Elocution and the Dramatic Art*, by Mr. David J. Smithson.

MESSRS. SAMUEL BAGSTER & SONS have arranged to take over the publication of the *Cambridge Examiner*, which they will issue from September next. The character of the magazine and the staff of examiners will remain unaltered.

WE are requested to state that the *British Mercantile Gazette* has been purchased by Messrs. Smith, Greenwood, & Co., of Ludgate Hill.

FOLLOWING the example of their Edinburgh brethren's *New Amphion*, the St. Andrews students have issued a little volume, white-clad and stamped in gold with effigies of their

patron saint and his cross saltire, in aid of their "Students' Union." This *Alma Mater's Mirror*, which has been edited by Prof. Lewis Campbell and the late Prof. Spencer Baynes, opens with a charming poem by Robert Louis Stevenson, "The House Beautiful"—the "naked house," on "a naked moor," which is made lovely by the changeful seasons, by

"The incomparable pomp of eve,
And the cold glories of the dawn."

Andrew Lang follows with his "Old St. Leonard's Days," a paper of college memories; and Sheriff Campbell Smith gives reminiscences of Profs. Duncan, Ferrier, and Spalding; while the quotation of a page or two from Dr. Johnson's *Journey to the Western Isles*, and from the Rev. D. McNicol's caustic "Remarks" on the same, furnishes an occasion for Prof. Campbell's records of the professors of an earlier generation who entertained the lexicographer; and such more recent worthies as Principal Tulloch, Prof. Shairp, Prof. Baynes, and Patrick Proctor Alexander find fitting eulogy. The book, which is issued from the Edinburgh University Press, is illustrated by Mrs. Lemon, J. F. Paton, H. Riviere, and T. Hodge.

LADY BURTON writes to us as follows:

"In 'Mr. E. Gerard,' author of *Reata*, and other novels (ACADEMY, August 13), few except ourselves will recognise M^{me}. de Lazonska, née Gerard, of a Scotch family, the wife of an Austrian general, now domiciled at Vienna. *Reata* was, I believe, her first work, before her pen was in thorough training; but now she has written a tale full of local colour and clever description, called *The Baths of Heroules*. Let me express my astonishment that the omnivorous Tauchnitz has not long ago annexed all 'Mr. Gerard's' works."

A CORRESPONDENT writes:

"Were there two spinsters named Ann, both after 'William Shaxpere' in November, 1582? The entry of the marriage license (November 27, 1582), lately found by Mr. Wadley in the Worcester Register, is of 'William Shaxpere' to 'Ann Whateley,' whereas the long-known bond about Shaxpere's marriage, dated November 28, 1582, is of 'William Shagpere' to 'Ann Hathway.' Is it possible that the young William in his wild-oat days had got into a scrape with two women named Ann, each of whom procured the issue of an ecclesiastical document about herself? A young widow of twenty-six might well take in a younger poet of eighteen and a half, or fall in love and lose her way with him, as the case may have been."

FORTHCOMING MAGAZINES.

The venerable Principal Brown, of Aberdeen, will contribute to the *Expositor* for September and October "Personal Reminiscences of Edward Irving." Principal Brown was Edward Irving's assistant in Regent Square at the most critical period of the great preacher's life; and these reminiscences will contain much of interest, especially in regard to Irving's prophetic views, which has never before been published.

The following are some of the novelties announced for the fifth year of Messrs. Macmillan's *English Illustrated Magazine*, which will commence with the October number:—A monthly article of criticism on matters literary, social, and artistic, from the pen of Mr. H. D. Traill; a historical novel by Prof. Minto, entitled "The Mediation of Ralph Hardelot"; "The Story of Jael," by the author of *Mehalah*; besides works of fiction by Mrs. Molesworth, Mr. B. L. Farjeon, and J. S. Winter; a number of letters by Charles Dickens, with personal reminiscences of the novelist by Mr. J. L. Toole; poems by Mr. Swinburne and Mr. George Meredith; a series of papers on "Coaching Days and Coaching Ways," by Mr. W. Outram Tristram, with illustrations by Mr.

Hugh Thomson and Mr. Herbert Railton; and illustrated papers on "The Sea of Galilee," by Mr. Laurence Oliphant; "Antwerp," by Mr. Thomas Macquoid; "Heligoland," by Mr. Hamilton Macallum; "La Morte d'Arthur," by Mr. H. Ryland; and "The Youth of Goethe," by Mr. James Sime. Arrangements have also been made for the reproduction in wood-engraving—the special feature of this magazine—of designs by Sir Frederic Leighton, Sir J. E. Millais, J. Sant, E. Burne Jones, C. Napier Hemy, E. F. Brawnall, &c.

WITH the October number *Every Girl's Magazine* will appear in a greatly enlarged form, with L. T. Meade joined as editor with Alicia A. Leith, and under the new title of *Atalanta*, the emblematic meaning of which will be embodied in a cover designed by Mr. Walter Crane. The following serial stories are promised: "Neighbours," by Mrs. Molesworth; "A Tale of Three Lions," by Mr. H. Rider Haggard, illustrated by Mr. Heywood Hardy; and "The White Man's Foot," by Mr. Grant Allen. A special feature of the magazine will be the "Atalanta Scholarship and Reading Union," the object of which is to encourage a systematic habit of reading in English literature, by means of a plan which seeks to combine guidance, criticism, and reward. Each number of the magazine will contain a short article on some great English author, accompanied by questions; and the answers to these questions will be examined, classified, and rewarded with prizes. For example, Mr. Andrew Lang will lead off in the October number with a paper on "Scott."

THE September number of *Chambers's Journal* will contain a poem called the "Great North Sea," by Miss Florence Peacock.

CASSELL'S *Saturday Journal* is about to be enlarged to twenty-four pages weekly, and illustrated. The first number of the new series will be published on September 28.

ORIGINAL VERSE.

THE ALDEBARAN SPIRIT.

To Prof. Minohin (after reading his "Naturas Veritas.")

"ALL ye who seek the golden clime,
Go, mount with Death his caravan!"
So sang of old the rhythmic clan,
The bards whose numbers rang sublime—
Ah, now, methinks, some truer chime
Must charm us through life's little span;
Once more we'll read thy lofty rhyme,
O wise, O true, Aldebaran!

Full well we learn'd, and long ago,
Thy truth that from eternity
What hath endured that still shall be,
And that alone—'tis even so!
Eternal forces deathless reign;
We work with them, or work in vain.

SAMUEL WADDINGTON.

MAGAZINES AND REVIEWS.

THE *Antiquary* for August opens with an article by Mr. James Hilton, the great authority on chronograms. This strange fancy of indicating dates by letters occurring in sentences long or short is of much older date than many of us suppose. It flourished most luxuriantly in the fifteenth, sixteenth, and seventeenth centuries. Mr. Hilton's paper is a useful introduction to the subject, though it by no means supplies the place of his great book, which is a mine of learning on everything relating to chronograms. The second part of Mr. Frederick Hodgetts's "The Smith and the Wright" is as interesting as the previous one. The subject cannot, however, be adequately treated in magazine articles. Mr. A. Stapleton's "Crosses of Nottinghamshire" pro-

misses to be a valuable series. We trust that no desire for economy of space will hinder him from giving a complete catalogue of all the crosses of the county which time has spared. Mr. Brailsford's paper on the "Statue of Lord Bacon" is interesting. The opening paragraph especially so, as it treats of a point where most of our contemporaries go blundering or in the most serene contentment. It can never be too often impressed on the minds of those who write that to speak of Viscount St. Alban as Lord Bacon is as stupid a blunder as it would be to call the Duke of Norfolk Duke Howard.

THE *saison des eaux* makes even more impression on French than on English periodicals; and its influence is manifest in the *August Livre*, if only in the fact that the "current" portion contains a lengthy review of minor poetry. Now, they are not very tolerant of minor poetry in France. M. Uzanne, however, has got a very decent number together. The chief original articles are one on some unpublished writings (decent apparently) of that cleverest of scamps, Casanova; and another about Jules Noriac, the still not quite forgotten author of *Le 101^{me} régiment*. Also there is, in the editor's monthly article, a good deal about Balzac, with two full-page portraits to illustrate it. This is not bad for August.

THE INTERNATIONAL SHORTHAND CONGRESS.

THE programme of the International Shorthand Congress, which will occupy the last week in September, is now nearly settled.

The Earl of Rosebery will deliver an inaugural address on the first day's meeting at the Geological Museum, Jermyn-street, and will call attention to the origination of the Congress by Dr. Westby-Gibson, whose paper on the subject will be the first read on the second day. The Wednesday's proceedings will be entirely devoted to phonography, and in the evening there will be a presentation of the bust of Mr. Isaac Pitman to his family. The remainder of the week will be taken up with conferences on Parliamentary reporting, the history and literature of shorthand, legal and official shorthand writing, &c. The dinner of the Congress, in conjunction with the Shorthand Society, will be held on Tuesday. There will be a *conversazione* on Thursday, and a luncheon on Friday at the Mansion House by invitation of the Lord Mayor.

Books and objects of interest will be exhibited daily at St. James's Hall, Piccadilly, and there will be a special exhibition of books and MSS. at the British Museum library.

Dr. Westby-Gibson has completed his elaborate Bibliography of Shorthand, which will be published in a few weeks, before the Congress.

SELECTED FOREIGN BOOKS.

GENERAL LITERATURE.

- CHOUZEL, A. *Etude historique, économique et juridique sur les coalitions et les grèves dans l'industrie*. Paris: Rousseau. 10 fr.
LIBRI quatuor de imitatione Christi ad litteram codicis Gæsdoncani an. 1477 manuscripti, adiectis locutionibus variantibus eoditum Roodii an. 1481 et Thomæ an. 1441 eoditum. Münster: Regensberg. 1 M. 30 Pf.
SCHAFHÜTTL, K. E. v. Abt Georg Joseph Vogler. *Sein Leben, Charakter u. musikalisches System*. Augsburg: Literar. Institut. 8 M.

THEOLOGY.

- BAMBERGER, S. *Lekach Tob (Pealkta Sutrata), Ein aggad. Kommentar zu Megilat Ruth v. Babbi Tobia ben Eliezer*. Einleitung. Frankfurt-a.-M.: Kaufmann. 1 M. 30 Pf.

HISTORY, ETC.

- DONAN, C. *Cartulaire de l'abbaye de Saint-Sernin de Toulouse (844-1200)*. Paris: Picard. 40 fr.
GESCHICHTE QUILLLEN, hantsche. Hrsg. v. Verein f. hantsche Geschichte. G. u. 5. Bd. Halle: Walzenhaus. 10 M. 30 Pf.

MONUMENTA Germaniæ pædagogica. Hrsq. v. K. Kehrbaach. 3. Bd. Geschichte der mathematischen Unterrichts im deutschen Mittelalter bis zum J. 1525 v. S. Günther. Berlin: Hofmann. 12 M.

PHYSICAL SCIENCE.

 WANDSCHNIDER, W. Zur Syntax d. Verbe in Langley's Vision of William concerning Piers the Plowman. Leipzig: Fock. 1 M. 30 Pf.
 WEISS, W. Untersuchungen zur Bestimmung d. Dialekte d. Codex Teplensis. Leipzig: Fock. 80 Pf.

CORRESPONDENCE.

MR. BOASE'S MONOGRAPH ON "OXFORD."
 Clevedon : July 22, 1887.

When I lately presumed to differ from the authorities by offering you my proposition that Oxford, like other places, had derived its name from its neighbour the river Ock, I was unwilling farther to hold myself in contact with the cloud of supercilious and irrelevant positivisms raised by my revolt against infallibility. I am now reminded, by the kind gift of a copy of the above mentioned book from the author, that desertion is not a generous treatment of a sound historical induction; especially seeing that it has been also neglected in a solid book in which it might have claimed a place—a book which may become the received manual of initial reference for its subject. I will, therefore, venture to restate it from a point of view in which it does not seem to have been noticed.

The names of our rivers, except the few that have been changed by some comparatively recent accident, are most remotely prehistoric, and are among the most ancient of all the parts of our speech that are still current in living mouths; and even the obvious reflections of their names, that are also preserved in the names of places on their banks, are among the most ancient among place-names. Written documents, whether charters, chronicles, municipal records, or even that sheet-anchor of "some people," Domesday itself, although, as we shall see, of some use as far as they go, only cover a short and late portion of the history of such names. The main stream of their tradition is prescript or prehistoric, and quite independent and antecedent to this later sort of evidence.

Those who have amused themselves by the habit of observing the evidence that really concerns this matter—the geographical distribution of the names of rivers, and the remarkable way in which they have survived the great ethnical changes that have surrounded them, not only in Britain, but all over Europe and beyond, of which changes only the later ones have found their way into documentary evidence—need only be reminded that, whatever may have been the prescript voice-names of the rivers now written "Ook," they might just as easily have passed into letters as "Ox," or "Ooh," or some other combination of letters by which their vocal sounds might be afterwards transferred to the writing of any of the ethnical occupants of their districts.

Again, such observers will have seen reason to believe that the several branches or confluences of rivers had originally one primeval name common to some of them, possibly to all. A river, to the first namers, approaching by the main trunk, like a tree, was one object, with one name, until social needs caused variations of the names of different branches or reaches of it. Of this many evidences might be found. I will be content with an indisputable and typical one which I have already (ACADEMY, August 28, 1886, p. 139) mentioned. Eurauch = York is situated on that part of the river Eure which had already, even in prehistoric times, become the "Ouse." I will not enter upon the question whether the change was merely dialectal. I only state the fact, which is decisive.

The Ock—Leland wrote it "Ooh"—joins the river on which Oxford stands, a few miles below that city. This last branch has been commonly called the "Isis," with a reputed *alias* "Ouse." By some of your correspondents this has been denied to be the real name, but said to have been an "artificial" name. They do not say what is the real name. Three hundred and fifty years ago Leland incidentally—i.e., without philological motive—called it "Isis." This would, as far as I know, cover the entire range of "documentary evidence." How long should the customary usage of a name for a river continue in order to qualify it as the real name? I believe some of us can remember when the clever discovery was first made that this name was "artificial." No doubt this discovery ranks among the "philological conquests of the last fifty years."

But we are told that "Ox," the root syllable of the name "Oxford," as found in "all early documents," has carried its inflection with it into the name. Various forms of this inflection are given, some of which seem to contradict each other, and so would defeat its testimony, decisive as it is claimed to be. However, it is "Oxenford" in Domesday, and the most constant form seems to be "Oxenford"; and being thus inflected, we are told, it must be named from oxen = cattle, and cannot be from the river.

Indeed! Then in that case "Cheltenham," in which the inflection is still alive and active, cannot have got its name from the river Chelt, which passes by it. "Leamington," on the Leam, is no doubt another such case, with the inflection slightly varied by caprice of tradition.

What again do objectors think of "Exeter"? Like Oxford this has now lost the inflection, but the "conspiracy" "of all the early documents" in the retention of it was of much longer continuance. Like "Oxenford" it was "Exancester" down into the seventeenth century; but if "Oxenford" begins with Domesday, the other began at least three centuries earlier than that "surely the first book a local etymologist should turn to." In a Life of St. Boniface, written by one of his personal disciples, in the eighth century, the name appears as "æt Escancastre"; and in the margin of Pertz are three other readings of the name, which, although some copies may have enjoyed the "valuable" privilege of "being a foreigner's representation of the sound of the name," all "conspire" in having already fossilised the inflection. Here is a persistence of the inflection in "documentary evidence" for a millennial succession. Will this show that Exeter was not the godchild of the river Exe? This early form, "Escancastre," is also an instructive example, which seems to have lately become a want to some others of your correspondents, of the commutation of *x* with *i* equivalents.

* Being separated from my books and maps, I write the name from memory, but am sure of it for the present questions.

In stating this matter, I have laboured to be concise and clear, not being any longer disposed to minute controversy, especially when it takes the form of contemptuous and irrelevant verbosity. The whole matter lies within the limits of our speech and the shores of our own land, and is not concerned with any importations of "O. H. G." ("A. H. D." would be still more scholarly). The facts themselves, in the native matrix of their own surroundings, need no far-fetched support from ultramarine lands, nor seek a treacherous footing in the shifting quicksands of misapplied phonology.

It is not here intended to undervalue written evidence, nor even what have assumed the name of "Laws." These would not be without their value if limited to their proper use. But "some people" seem to have met with new tools, and are so fond of handling them that they use them for wrong purposes. This use of the word "Laws" seems to have been adopted from Natural Science. But in Natural Science these Laws mean the regular recurrence of the results of a single or constant Agency. Whether or not this Agency is Intellectual has much divided the world of thought or controversy. It is, however, certain that we have always been calling the ripple images of it "intellects" and "geniuses"; and, when these reflecting ripples have approached the magnitude of waves, we have called them "great intellects." But whatever the influence of their Prototype may be, in the objects of Natural Science, its rule has there been undivided, and, therefore, uniform and constant; but whatever of its influence may have survived in the tradition to us of names and words, has been greatly disturbed by their transmission through many thousands of independent wills, some of which may be intellectual, but many of them no more than mere volitions. This does not seem to have been discounted by our philological conquerors of "the last fifty years." They have assumed these "Laws" to have been as constant in the one case as the other, and positively predict results which sometimes are in perverse conflict with facts that afterwards come into view. The frequent occurrences of occasional regularities in speech that have thus been called "Laws" have, however, no right on the bench, nor even in the jury box. Their proper place is the bar, and sometimes, being duly sworn, the witness box. They may be useful servants, but as masters are usurpers. They have been called "The philological conquests of the last fifty years" by those who chiefly use them to forbid the conquests of the next fifty, and would seal up the very sources of knowledge for the future. I have myself encountered several very imperative administrations of these philological certainties—including one in the phonetic system of Domesday—that were totally wrecked by collision with actual facts. But "it is as well not to argue" with those who assume that Englishmen have been tongue-tied for a thousand years by "Laws" which their dictators have enacted for them within the last fifty.

Indeed, since the above was written, Mr. Boase's book has, itself, already provoked an additional example, besides those just alluded to, of the disastrous conflicts of phonetic certainties with actual facts; and in this case the certainty, as usual, seems to have survived the contact with the fact. Although the place at Oxford, where the four main streets meet, is usually called "Carfax." Mr. Boase quotes four past examples—including Hollar's plan—of its being written "Quatervois." Upon this, Prof. Skeat (ACADEMY, July 2, 1887, p. 10) maintains "that the same place had two distinct names," for that it "is simply impossible" for "Carfax" to be another condition of "Quatervois." To this, however, I am able to add a third variety, which may serve for a stepping-stone between

the two. The corresponding spot in Exeter, down to a recent date, has always been called "Carfoix"; and a memory long enough to be "pre-scientific" attests that it was traditionally believed to mean "four ways." How many are there, besides the learned professor himself, who will be found to maintain that these three words, "Quatervoix," "Carfoix," and "Carfax," that have interchangeably come down to us from past generations as names for the same thing, and for no other thing, are not merely three variations of the same word? Really, it has become time that a little of the popular or jury principle should be infused into these matters, that our birthright in our own speech may not be adjudicated from us by the capricious despotism of judge-made "Laws."

If it should not be anti-proverbial to look too curiously into the mouth of a gift, I would say that the remark of Mr. Boase on the name "Oseney" from "Ouse" (p. 21)—that it is not "likely that one island out of many in the river" should be called from it, "as if it was the only one"—betrays an unexpected deficiency of comparative observation. Nothing is more common than this sparsity of the names derived from their river. But how much more strongly would this apply to the cattle origin of Oxford! There must be many hundreds of fords for oxen, yet we have only one Oxford.

Mr. Boase (p. 211) speaks of "the conical mound of earth raised by Alfred's dynasty." Is he not here putting his neck between the teeth of the chartists—stepping beyond "documentary evidence"? Besides, there are those who will not tolerate Alfred's name along with that of Oxford. The Mercian interpolations of the Anglo-Saxon Chronicle give a catalogue of the castles of Alfred's daughter, but Oxford is not among them. Neither is Windsor, for that matter, though probably a part of the same chain. As to these conical mounds that have been ascribed to Æthelfleda, it is almost likely that they existed already, and that she adopted those that served her purpose. They are found in many other places, even extending into Cornwall. Sometimes her castles are strong; natural positions, increased by art, such as Chirk (Cyrlic-byrig) and Shrewsbury (Scergeat).

In another place also (pp. 5 and 6) Mr. Boase rather dangerously approaches, or indeed treads upon, forbidden ground. He actually dares to specify Celtic survivals not only near Oxford, but within the city itself. Two of the churches, he says, bear the names of Celtic saints—St. Aldate (= Eldad) and St. Budoc. He curiously omits St. Ebbe = Abban, although, also curiously, "St. Ebbe" appears in his index with a reference to p. 6. On that page appears his early traces of Abingdon, with its relics of Damnonian saints—Winwolaus, Judocus, Samson, and the Cornish St. Columba. No doubt he thought, but does not say, that, when the relics were enshrined there, their names must have been held in local veneration. So also, when certain prejudices, in which the learned and the vulgar or lay seem to be for the present allied, shall have exhausted themselves, it will no doubt be recognised that ancient racial dedications of churches could never have taken root otherwise than in such ages, and among such peoples, as were in sympathy with them. The author also quotes the Charter of Egbert (Cod. Dipl. No. 236) granting to Abingdon the lands of Welshmen and Britons and such as them. Strangely enough, however, the St. Ebbe of his index does not appear on the page referred to, which is where it belongs. Had it been deleted from a proof sheet? His manner of treating this part of his subject seems to betray a consciousness of passing near sleeping dogs.

I trust that nothing I have written above is inconsistent with my thanking Mr. Boase for his very pleasant and useful handy-book.

THOMAS KERSLAKE.

THE MYTH OF ANDROMEDA AND PERSEUS.

Scrayingham: Aug. 22, 1887.

Instead of "starting on a critical examination of Canon Taylor's theory of the Andromeda story," Mr. Lang lays down a universal proposition by which this explanation (and, therefore, also all other explanations) must stand or fall. "Nature-myths," he says, "give a superficially correct account of the phenomena for which they supply an unscientific explanation."

To be brief, this proposition is only a trap or snare. We have had one trap already, which we have been now many times invited to enter; and this is the proposition that no relations are predicated of mythical beings which have not previously existed among human beings. Thus, if Helios or Oedipus, or anyone else, is said to be married to his mother, this is because the people who framed the myth were familiar with the marriage of mothers and sons. Here we have another trap of the same sort. If we say that the people among whom myths grew up described or figured something which they thought that they saw, heard, or felt, we may, perhaps, be not far wrong. But if the account of the phenomenon is so far superficially correct, it is not superficially correct in the sense in which Mr. Lang would have us infer that it is—i.e., according to our conceptions, modified as these are by the experience of millenniums. Thus tested, Canon Taylor's explanation, in Mr. Lang's opinion, fails.

"The Andromeda myth, if it be a lunar myth, does not give a correct account of the phenomena. The dragon, in the story, never gets at the girl. In an eclipse the moon is actually swallowed. In the story, Perseus rescues the girl. Who ever saw a lunar eclipse in which the sun appeared to help the moon? As to the rock, there is no phenomenon in an eclipse at all resembling it."

None, it may be, according to our common way of looking at (some) eclipses; and yet the blackness against which sun or moon stands out may serve very well as a rock for those who do not look at eclipses quite as we do. This being so, Mr. Lang's work is done. The Andromeda story has nothing to do with lunar eclipses or anything else in the sky or anywhere else.

The truth is that mythical representations of phenomena are not superficially correct. Kalypso is the moon; so are Kirke, Artemis, Selene, and many more. The incidents related of them are happening constantly; in the myth they happen only once. The same people will tell the same story a thousand times, with changes of name and of local colouring; and yet in each tale the thing happened only "once upon a time." "Mythologists" (as, perhaps, they must be called) commonly take the Sisyphos story as describing the ascent of a ball to the zenith and its descent to the horizon—in other words, as relating to the sun. But "who ever saw a forenoon in which the sun appeared to be shoved upwards by a man pushing it from behind?" Therefore the Sisyphos story has nothing to do with the sun. "Mythologists" take the story of the marriage of Krishna to the multitude of maidens separately at the same moment as a picture of a fine dewy morning. But the sun is reflected in the dew-drops every day. In the myth it happens only once. Therefore the description of the myth is not "superficially" correct, and so it has nothing to do with the sun or the dew. "Mythologists" commonly see in the Tantalos myth a picture of drought. Tantalos is the sun, trying to wet himself in waters which

shrink away from him, or with fruits which are scorched at his touch; but who ever saw the sun chained to a rock? (Here is the rock itself which we know in the Andromeda story. Therefore the story of Tantalos has nothing to do with either sun or drought.)

But the incorrectness in explaining myths which Mr. Lang imputes to Canon Taylor sometimes lies, perhaps, rather with himself. He assures us that "in an eclipse the moon is actually swallowed." Not always, or even generally, but only when the eclipse is total.

I have, however, no intention of starting upon a critical examination of Mr. Lang's proposition; nor do I write with any notion of convincing him. My purpose is only to say that some of those who do not agree with his regard his proposition as a snare, and that they and others may resent it as a throwing of dust into their eyes.

GEORGE W. COX.

ARNAULT'S "PAUVRE FEUILLE."

Springwood Park, Kelso: Aug. 20, 1887.

In the review, in to-day's *ACADEMY*, of Mr. Townsend's translations from Leopardi, surely the phrase "Leopardi's lyrical fancy called 'Imitazione'" is rather an inexact designation for the translation by the above-named poet of the French original beginning:

"De ta tige détachée
Pauvre feuille desséchée,
Où vas-tu?"

This poem is to be found in the works of Antonie Vincent Arnault; but (as I learn from Mr. W. M. Rossetti) it has also been attributed to Millevoye.

I believe attention has already been called to the fact that the late Dante Rossetti would appear to have made his unequalled translation from the Italian version rather than from the original.

GEORGE DOUGLAS.

[See a letter in the *ACADEMY* of March 19, 1887.]

SCIENCE.

SCHOPENHAUER.

The World as Will and Idea. By Arthur Schopenhauer. Translated from the German by R. B. Haldane and T. Kemp. Vols. II. and III. (Trübner.)

THESE two volumes of Schopenhauer's great work, rendered into excellent English, contain, besides a criticism on the Kantian philosophy, dissertations supplementary to the discussions in the first volume, reviewed by me in the *ACADEMY* (April 19, 1884). There are here, as there, weighty truths admirably and incisively expressed. Thus (vol. ii., p. 15): "It was reserved for Kant to enable the idealistic standpoint to obtain the ascendancy in Europe, at least in philosophy; the point of view which throughout all non-Mohammedan Asia, and indeed essentially, is that of religion. Before Kant we were in time; now time is in us." Yet I fear that the crude and chaotic philosophy, which prevalent science pitchforks at us rather than builds up, simply reverts to what Schopenhauer justly characterises as "realism undisturbed in its illusion by any reflection, the raising of the fleeting appearance to the position of the real being of the world, for Kant is ignored as though he had never existed." But it is curious to hear Schopenhauer, after he has clearly stated that the objective existence of things is conditioned through a subject whose ideas they are, then substitute *the brain* for this knowing subject! Though he himself sometimes bids us observe that the brain is as much an object as a table, and, therefore, as much

implies a prior thought of some subject. And then Schopenhauer, as well as Kant, believes in a "thing in itself." But what is true in and of the realm of conscious ideas cannot be proved true out and independently of that realm, which seems fatal to this doctrine of a "thing in itself"—i.e., apart from and removed from conscious ideas. Yet it is another matter to discredit the primary truths and first principles, which reason attests, on the ground that they are of subjective origin, *a priori*. This was formerly held to be their best guarantee! We may surely be satisfied that the principle of causality—by which I mean that no change can take place without an efficient power adequate to produce it—is valid for all rational beings; that is, given a rational creature *aware of a change at all*, we may safely assert that he seeks a cause for it in this sense. But, I believe, the only legitimate conclusion from idealism is that no other than a conscious sphere of existence is even conceivable, that no other is of any assistance in thought, either as deliberate induction or as working hypothesis. It is confessed that there is no bridge from "thing in itself" to percept or concept. Therefore, it remains an undigested foreign obstacle, to be eliminated as quickly as possible. What philosophy is wanted for is to explain experience, which consists of these very percepts and concepts. For only in consciousness can there be discrimination of qualities, and their identification through memory in a one implicitly self-identifying subject, who is able to compare and remember. Any *focus of unity must be conscious*. Hence an unconscious real being is inconceivable, a chimera, a mere word. And certainly it is no adequate efficient cause, or even concause, of consciousness in us. An impassable chasm yawns between. And yet Schopenhauer says, truly enough: "The being in and for itself of everything, must necessarily be *subjective*," and, again, "since even lifeless bodies have activity, they must have inscrutable qualities—a being in itself of some kind" (vol. ii., p. 403). But how can an existence be *subjective*, which is unconscious of itself? How can that be "in and for itself"? When, however, Schopenhauer follows Kant in excluding "things in themselves" or realities from knowledge, on the ground that phenomena (that is, things as we know them) are, *ipso facto*, unreal, unobjective, because conditioned by our faculties of knowledge, I must dissent from them both. That always seems to me to amount to this assertion—that *we cannot know anything, because we do know it*, which is, perhaps, rather perverse. Of course, if we know it, our faculties of knowledge condition what we know; but does that disagree so much with the poor thing in itself that it annihilates, or causes it to vanish? I do not see why philosophers insist on making our knowledge into a sort of *Boojum*. This is one of those things that almost excuse writers like Ruskin for gnashing their teeth at the "troublesomeness of metaphysicians." Thus Schopenhauer says, "becoming known is itself the contradictory of being in itself." And "things exhibit themselves in a manner which is quite different from their own inner nature" (vol. ii., chap. 18). Why ascribe this perversity, or *cussedness* to things in general? And why ascribe, as Hutchinson Stirling somewhere asks in a similar reference, this "Gorgonizing" effect to our poor understanding? One can well conceive that we know things *insufficiently*; but that we "put a mask" over them, and falsify them utterly by knowing them, is rather too much to ask a plain man to believe.

It is, indeed, quite true that we do not know their subjectivity, which, so far as I can see, must necessarily be conscious. But, on the other hand, though I do not know fully your subjectivity, or you mine, does anyone doubt

that practically we have a very fair idea of one another from analogy and sympathy? We have, indeed, a still less adequate knowledge of the subjectivity of animals, plants, and inorganic nature; but the thing in itself or reality, which Schopenhauer confesses we do know in our own case, may fairly be inferred to be conscious individualities also in these other instances, by us imperfectly comprehended. (After all, the higher animals have pretty evidently the same external world before them as ourselves.) That is to say, the material phenomena of our private subjectivity cannot be outside it also, except they be in some other subjectivity like ours; so far like that it shall be self-identifying, uniting, comparing, differentiating. And yet what common-sense demands is that these sensible phenomena which we name "things" shall be still outside when not perceived by us, and outside even when perceived. Common-sense, as Berkeley showed long ago, does not in the least want a quite imaginary unqualified "matter," or (as it was called later) "a thing in itself" outside us, which, if it could be conceived, would be of no possible use. But then common-sense does demand that there shall be time and space, as well as colour, form, resistance, and the causal law outside, in these other subjectivities; because these do not present themselves as private whimsies of our own at all, but as necessary, objective, and real, universally valid. And here is the justification of Fichte, Schelling, and Hegel. On the other hand, these thinkers are quite unwarranted in their bold and tremendous assumption that we are at the standpoint, not of the individual, but of the universal ego, and that human logic exhausts the universe. The antinomist paralogisms of human thought are quite enough to prove that there is something beyond and beneath it. And, moreover, any thought we know or can conceive is necessarily individual, idiosyncratic, personal. But what is beyond and beneath our actual present thought? Whence is it? Surely that can only be a more perfect thought. Shall we say, then, that the Harmony of all individualities in their perfection, including their past, present, and future, includes by transcending them? Here would be an adequate Thing in itself. For Thought has originating activity, emotion, and infinite potentiality of differentiation, therefore also will, affection, moral sense. And these could not be conjured into us from an origin, substance, or spring, where they are not. But they may be in that source and substance as the white light, which the prism of unfulfilled personality divides into its component colours. There must be moral elements, but our good and evil may be absorbed into a higher. Yet good, not evil, love, not hate, must be the keynote, the clue to Divine character.

Schopenhauer attributes all organic structure and contrivance, as well as all adaptations in the corresponding inorganic environment we behold and admire in external nature, to our private mode of apprehending things, to the constitution of our thinking faculty, which again depends on our brain! Yet we are also bidden to observe how infinitely the works of nature transcend the works of human art—e.g., in that preposterously long sentence on p. 70, vol. iii. Now, surely if these works themselves are the mere creation of human thought, that is rather strange! However, Schopenhauer ascribes a blind unconscious intelligence to the forces of nature, which he says the unqualified will assumes in these, its first manifestations. But in my review of Hartmann (ACADEMY, May 9, 1885) I remarked that this is only a verbal proposition without real content or meaning. Unconscious intelligence is indeed a self-contradictory notion. And, moreover, this conception of blind intelligent forces contradicts also his other view, that our brain, or thinking faculty,

gives all the structure and organised order which we suppose ourselves to behold in nature. The two views are inconsistent. In the chapter on "Teleology" he talks of the tendency of the will to produce this rather than that. What, then, is this *tendency in a blind will*? *Tendency to produce a rational order is only another way of saying reason!* Schopenhauer, however, is not so absurd as to pit efficient against final causes, as some philosophers of reputation insist on doing among ourselves, as if they were *alternative* explanations, and you could not adopt both. Yet, surely, if it is not anthropomorphic to see laws, an order of efficient *force*- or *will*-operations in nature, consonant to reason, it is not unduly anthropomorphic also to find design there. If certain means be uniformly adapted to certain ends, it cannot be accidental; some thought must have adapted them. Remember, Idealism insists that all is a process in thought. Now, in the case of instinct, perhaps the animal itself does not foresee the end to be fulfilled. Then here may be a superintending thought giving it the requisite impulse to act, as a mesmerist does to his entranced patient. But, again, in the Supreme Spirit, or Divine Harmony of individualities, if time and space intuitions be transcended, design would no longer be as ours, which implies a successive adaptation of means to ends; but the means and ends would stand before it in some transcendent—not to us fully intelligible—manner, all at once, mutually involved and transfigured; while to minds knowing under the category of time this would present itself as design. When I speak of thought, I include will, for thought always implies some attention, and is always active.

There is a striking chapter on "Death" (vol. iii.). What survives in death is said to be that abstraction which has arbitrarily been christened *will* (or unqualified force), while the individual perishes. But one cannot, as I have said, acquiesce in the divorce of will from its individual character, acquired habits, and intellectual quality, so airily proposed by Schopenhauer. If it were proposed to consider north immortal and leave south to perish, or elect west and reprobate east, what should we think? If anything survives, it must be something a little more concrete and distinctive, some elements essential to, therefore characteristic of, that individual who has already been identified and distinguished by himself and by others, say for seventy years. Philosophy will not understand that the real is not abstract, but concrete. What the will seeks, however, says our author, is the *Species*, the *Idea*, caring nothing for the individual. In his cynical, yet pregnant chapter on "The Metaphysics of the Love of the Sexes" (vol. iii.), he enforces this thesis. But he has no right to identify the Platonic Idea with the *Species*; for the first is timeless and spaceless, while the latter is in time and space, and its permanence is only a little more than that of the individual, one made up of the durations of successive individuals. The Will, if it seeks the permanence of the species, must be singularly disappointed! What "the will" really seeks is the Ideal of the individual and species both, which involves each other; but that implies other lives besides this present one of sense. How could Solomon have appeared, asks Paracelsus, without the sin of Bathshebah and David? When two young people are in love, according to Schopenhauer, the will deludes them into supposing that their own happiness is the goal to be attained; yet the procreation of offspring best fitted to make the species strong, healthy, and beautiful is the real end. Hence, I suppose, Trojan wars, and the slaughter of many heroes for the sake of some desired Helen; hence murders through jealousy of Othello, or Medea—with disenchantment, misery, tragedy without end! These give little

pause to the great-ended, fanatical will. There is farseeing truth in this view, though the quiet love of friendship, comradeship, and pederasty are left out of account. But however a philosopher may wish to show his contempt for individuals, he ought really to reflect that the type, the race, must necessarily be made up of these very same pariahs of philosophy, and contain nothing else! So that a strong and beautiful race (goodness and happiness are also, to some degree at least, herein involved), with contempt poured physically and spiritually on all the constituent members of it, is a conception difficult for the "plain man" to entertain, however anxious for philosophic emancipation from theological prejudice and selfish or provincial views. Why will people always assume that the truth must lie only at one corner of an alternative? Why may not the real ultimate good of the individual be bound up with the well-being of the race to which he belongs? One would suppose, if one were not assured otherwise, that it must be so. His apparent and immediate advantage may seem to consist in such or such a gratification or course of conduct, whereas his substantial and ultimate advantage may consist in the opposite. Is not that a commonplace of the moralist and preacher, who bids us lose the world and save our souls? Schopenhauer himself has a very fine passage in the chapter on "Death," which, indeed, implies this. "Death is the great reprimand which the will to live, or more especially the egoism which is essential to this, receives through the course of nature, and it may be conceived as a punishment for our existence. We are at bottom something that ought not to be; therefore we cease to be. Egoism consists really in the fact that man limits all reality to his own person, in that he imagines that he lives in this alone, and not in others." "Death teaches him better." Quite true. We are here isolated and selfish; our very conditions of existence imply it. Hence I can assent when the author says "death is a punishment for our existence." But our true life is in others, in our harmony with the whole. To that true life or harmony, the Ideal of Humanity (which must be identical with the ideal of all the men constituting humanity) impels us, and must impel through all experiences, painful or pleasant, until we have attained it. And then, shall we be—nowhere? while only a scholastic negation in a philosophical exhausted receiver remains—Will=Force=Being=Nothing? Our ideal cannot consist in the elimination of ourselves, and yet, if humanity consists of selves, the two ideals must coincide. Though, indeed, Nature—or rather God—may see that ideal, and the necessary steps to it, involving error and imperfection, otherwise than we do, with our limited knowledge. What we are being taught is renunciation of our exclusive self-assertion, and difficult is the lesson. We are not being taught the negation of Nature, annihilation. The fulness of our being in harmony with other intelligences of the Kosmos is not an end always incompatible with the gratification of private affections, or the consummation of private aims, intellectual, aesthetic, sympathetic, even sensual, though in any particular case it may be so; and, if it is, Nature will refuse without scruple, we not being in her secrets. But Asceticism, and especially Buddhism, exaggerates. The welfare of the whole is also the true welfare of the parts—though not always their apparent welfare. But it is quite true, as our author says, that, if we are immortal, it is because we are above and beyond the category of time; time is our idea; it is in us, not we in it. Why do we not then remember our state before birth? That is impossible to answer; but one may remark that illnesses often cause oblivion of certain periods of our present life,

the remembrance of which, however, is, on fitting occasion, restored. And, if it were true that we have come upward from the lower animal stage, the conditions might not be favourable to remembrance. But the great point is that our true individuality is in a fuller and higher intuition transcending the time-consciousness, though necessarily involving it as a condition of perfection, therefore, above and beyond all particular and successive spheres of life, while entering or falling into these.

It is difficult to conceive how this unconscious unqualified abstract Will of Schopenhauer "allures us into life," as he says p. 294 (vol. iii.), "by the wholly illusory inclination to sensual pleasure, and retains us here by the fear of death." How should it have any such "inclination" at all? And, again, how should the conscious repudiation of existence on account of suffering and failure influence the Will, in its unconscious state, not to repeat the same mistake, since consciousness is a mere accidental effect of the brain, and does not belong to the essence of will at all? Of course, pessimism is the most mischievous and paralyzing of all philosophies—that of chronic weakness, decadence, and failure. But I need say no more on this subject. In the West, hitherto, it has been but a fad of disappointed and dyspeptic persons, or else an affectation. How morbid and invincibly ignorant must a man be who can affirm "the evil can never be annulled, and consequently can never be balanced by the good which may exist along with it, or after it," quoting the sentimentalist, Petrarch, "Mille piacer non vagliono un tormento"! For the rest, the chapter on "The Vanity and Suffering of Life" (vol. iii.) is written with that sombre and eloquent power, which often characterises this saturnine, long-unappreciated, acid, Mephistophelic writer, who sometimes resembles Heine.

The essay on "Genius" is very remarkable. How far is it true that "if the normal man consists of two-thirds will, and one-third intellect, the genius has two-thirds intellect and one-third will"? By "will" our author here means personal interests, as distinct from impersonal absorption in the life of disinterested contemplation, or artistic creation for its own sake—that is, not for private ends of greed or ambition. In that sense, according to him, genius is always objective, impersonal; and in that sense doubtless even lyrical, very personal poetry may be so designated. For the admirable things here said Schopenhauer's pessimism may almost be forgiven.

"Only the exceedingly rare and abnormal men, whose true seriousness does not lie in the personal and practical, but in the objective and theoretical, are in a position to apprehend what is essential, and reproduce it in any way. Such a seriousness of the individual falling outside himself in the objective is correctly foreign to the nature of man, correctly supernatural; yet on account of this alone is the man great, and therefore what he achieves is then ascribed to agencies different from himself, which take possession of him. To such a man his painting, poetry, or thinking is an end; to others it is a means. The latter thereby seek their own things; and, as a rule, they know how to further them, for they flatter their contemporaries, ready to serve their wants and humours. They are small, but he is great. His work is for all time, but the recognition of it generally only begins with posterity; they live and die with their time." "These men of talent come always at the right time; for as they are roused by the spirit of their age, and called forth by its needs, they are also capable only of satisfying these. The genius flings his works far out on the way in front (as the dying emperor flung his spear among the enemy)."

In the man of talent the intellect is far more effective for immediate success. It is the docile yoke-fellow of self-interest. But the hypersensibility and passionate vehemence of tempera-

ment associated with genius are ill-controlled by the virtuous prudence of respectability. Hence the extravagance, waywardness of mood, absence of mind, isolation, and unworshipable inability so often associated with rare faculty. "The man of talent can achieve what is beyond the power of achievement of other men, but not what is beyond their power of apprehension; therefore he at once finds those who prize him." "Really every child is to a certain extent a genius, and every genius a big child," as Herder said Goethe was. There is a certain *naïveté* and sublime simplicity about both. The world to both is as a wonderful play. But then how paradoxical is it to make intellect a mere passing accident easily extinguishable, and will essential?

Yet, of course, his glorification of the more and affectionate qualities at the expense of the intellectual, which occurs elsewhere, proves nothing in favour of his thesis about the essentiality of the bare "Will," for these imply the intellectual element, though not its predominance; besides, as much harm has been wrought by well-intentioned folly as by clever wickedness, if not more. Finally, I may quote his beautiful comparison of the lofty soul to Mont Blanc, the summit of which is usually lost in clouds; but sometimes in the early morning the veil of clouds is rent, and the mountain looks down from its height in the heaven, a sight at which the heart of each swells from its profoundest depths. So the brighter intellect more distinctly perceives our misery. But at times this melancholy gives place to a peculiar serenity, which is possible only for genius, and springs from the most perfect universality and disinterestedness. "*Tristitia hilaris, in hilaritate tristis.*" I can only mention the very pregnant chapter on "The Inner Nature of Art." RODEN NOEL.

SANSKRIT AND COMPARATIVE GRAMMAR AT JOHNS HOPKINS.

The advanced instruction in Vedic Sanskrit during the session of 1887-88 at the Johns Hopkins University, Baltimore, will be given under seminary organisation. The subject of the year's work will be the literature of the Atharva-Veda. The order of subjects will be somewhat as follows: (1) The position of the Atharva in Vedic literature. (2) Survey of the contents of the published form of the Veda. (3) The *śākhās* or schools of the Atharva-Veda. (4) The ritual of the Atharvan.

Prof. Bloomfield has at present in his possession, as loans from the British Government in India and from native scholars, about twenty MSS. bearing upon the ritual practices of the Atharvan. These are open to inspection and study, and afford a somewhat unusual opportunity for handling native materials, before they have passed through scholarly criticism. Some of these texts are to be edited by members of the seminary.

The less advanced work in Sanskrit will embrace an introduction to the Rig-Veda; interpretation of the *Hitopadeśa*; interpretation of a Sanskrit drama, including an introduction into Prakrit; a beginner's class (grammar, reading of easy texts).

A class in Greek grammar will be introduced into the comparative and historical treatment of selected chapters of Greek morphology. The material treated will probably comprise the subjects of noun-formation and noun-accent.

A course in general comparative philology will be carried on throughout the year. It will embrace on the one hand an encyclopaedic introduction into the entire domain of linguistic science, on the other a special discussion of the leading principles and theories

involved in the pursuit of modern comparative grammar. Prominent among these will be the doctrine of phonetic law; the character and scope of analogy; the attitude to be taken towards the theory of agglutination; questions attaching themselves to the relationships of languages, &c. This course furthermore includes a discussion of the relation between ethnology and language, and the ethnological grouping of nations, so far as discernible by the light of language.

In general there are offered in this department courses of instruction in Sanskrit, in the comparative grammar of the Indo-European languages, and in general linguistic science. These courses aim at meeting the wants of two classes of students: (1) Those who wish to devote themselves to the study of these branches exclusively and for their own sake, i.e., those who wish to become Indian philologists, or comparative grammarians; (2) Students of philology in general, who wish to obtain a broader linguistic basis for special studies in other departments of philology.

A prolonged course in Sanskrit, involving two lectures a week during two years, is planned so as to furnish a good knowledge of classical Sanskrit, and to include an introduction into the dialect of the Vedas. This should be supplemented by the course in general linguistic science (one lecture a week during one year; cf. above), and these two courses represent an amount of material sufficient for a subsidiary subject for the Degree of Doctor of Philosophy.

The advanced work aims especially at meeting the wants of those who wish to make Indian philology or comparative philology their special study. Instruction is given by practical exercises, lectures, seminary work, and where possible the use of native Indian manuscripts.

CORRESPONDENCE.

THE INSCRIPTIONS FROM NAUKRATIS.

Gonville and Caius College, Cambridge:
Aug. 20, 1887.

I fear that the approximation between Prof. Hirschfeld's views and my own is hardly at present likely to become much closer, though I am as anxious as Prof. Hirschfeld that an agreement could be reached. But in any case our discussion will have made clear the grounds upon which we rest our opinions, and will enable me to give his arguments their due weight. In *Naukratis*, Part ii., I shall have to consider the whole question; but, meanwhile, I may give a brief answer to Prof. Hirschfeld's last letter.

Prof. Hirschfeld does not impugn the evidence of the facts adduced both by Mr. Petrie and myself, which prove beyond a doubt that there were Greeks at Naukratis before the time of Amasis. Prof. Hirschfeld's theory, that the series of Greek antiquities from Naukratis begins only with the reign of that king, cannot, therefore, be maintained by anyone who is "satisfied, and indeed impressed, with the exactness of" Mr. Petrie's "observations." But it is with the inscriptions that I am now concerned; for, of course, it may be argued that they are not as early as the foundation of the colony in which they are found.

In the first place, I do not quite agree with Prof. Hirschfeld as to the extent to which the existence of No. 305 of the Naukratis inscriptions damages the evidence of the really authentic examples. To return to our analogy of the inscribed "geometric" vase from Athens. I agree that "the importance of that inscription would be considerably diminished, if there had been found a fragment of later make inscribed with the same characters." But even in such a case its importance would not be entirely destroyed; much less, if, as at Naukratis, there were several such inscriptions on early

ware, consistent in the forms of their letters, and one only on later ware, which bore not "the same characters," but one letter closely, another distantly, resembling the earlier forms. The third form on the later vase, that of μ , has no resemblance to the form found on the early vases. I am ready to acknowledge that I should perhaps have done better to omit 305 as evidence of early forms; but I do not think it can be used as evidence against me. I may add that it is one among many; while no other forms, except those which I regard as really early, occur upon the early pottery on which they are found.

I have no wish to attack Prof. Hirschfeld's ingenious distinction between the Rhodian and Ionic inscriptions at Abu-Simbel. At the same time, I must observe that the customary use of the term "Ionic" alphabet assumes its identity in the various cities that used it; an identity which cannot be proved, and is very improbable. A closed H need not necessarily be earlier than 590 B.C.—much less a three stroke Σ ; both forms are found occasionally, even in the East, till the fifth century—at Naukratis, for instance. The closed form of H does not affect my arguments, as I do not claim for any inscription containing an open H an earlier date than 590, the date I still assign to the Abu-Simbel inscriptions. As to four stroke Σ , if it is not primitive Ionic, how can Prof. Hirschfeld explain its origin? There was no similar form of another letter to necessitate the addition of a fourth stroke to avoid confusion, if the three-stroke form was original. A character is often curtailed; but that it should be arbitrarily amplified is incredible, and contrary to all laws of development.

I hope that the publication of Mr. Petrie's *Daphnia* and of my *Naukratis II.* may supply material for a final decision of these problems. Meanwhile, I thank Prof. Hirschfeld for the help his suggestions and arguments have afforded us. ERNEST A. GARDNER.

THE ANTIQUITY OF THE AVESTA.

Louvain: Aug. 22, 1887.

I was not a little surprised to read in the last number of the ACADEMY that, in Dr. E. W. West's opinion, I have only "attempted" to disprove the conclusions of Dr. Geiger's interesting essay on *The Home and Age of the Avesta*, and relied upon "dogmatic assertions." Till now I had supposed the contrary. Dr. West seems to have read but a short *résumé* of the debate in the *Journal of the Royal Asiatic Society*.

The age of the Avesta is too vast a question to be discussed on this occasion. May I, however, be allowed to bring forward a specimen of my argumentation?

To demonstrate the high antiquity of the Avesta, Dr. Geiger says that the Avestic folk knew neither salt nor iron, nor money; that their civilisation was that of the most remote times. I show that the learned scholar himself finds vast plains of salt in the Avestic country, and in the Avesta itself a huge mountain which contains iron; that money was not used in North-Iran before Darius I.; that the Avestic civilisation was altogether similar to that of many Asiatic tribes in the Middle Ages and in more recent times. These arguments are, I hope, neither worthless nor dogmatic.

Dr. West compels me to say that he, like Dr. Geiger, has totally misunderstood my assumptions and my position. He fails to distinguish between the origin and the propagation of the Avesta, between the Avesta and Zoroastrianism, although many parts of the former may be very much older than the latter. He forgets (1) that the Asura, devils, are a very late deformation of the

primitive idea; (2) that there is no opposition between the Avestic *daeva* and the Vedic *deva*. Some contrast is to be found only in two lines of the Vendidad, the sense of which is very obscure, and which, moreover, betray a recent date. Compare the unique *nâsatya* of the Harivaṅṣa (the possible *nâsonhâitya* of the Vendidad) with the two *nâsatya*, the twin-brethren of the Veda. Many of the Hindu *devas* are still good spirits in the Avesta—viz., Mitra, Aryaman, &c.; (3) that between the customs, creeds, &c., of the Avestic and Vedic peoples there is more contrast than similitude (see my *De l'Exégèse et de la Correction des Textes avestiques*. Leipzig: Gerhard); that the relations which unquestionably exist between the two sacred books are sufficient to prove probably the antiquity or the East-Iranian origin of the Avesta—that is a mere dogmatic assertion, as well as the assumption that the Avestan language has been found in East Iran.

Dr. West seems to know nothing of the numerous pages written by several scholars to establish clearly what he calls mere conjectures. I can hardly believe that so distinguished a scholar can be ignorant of these many works; nor can I repeat here all what has been written upon this subject. I will only add that nobody is tempted to accept the statements of the later Pahlavi literature as equal in authority to those of the Avesta itself. For myself, I have always fought a battle to defend the pre-eminent authority of the Avesta. C. DE HARLEZ.

SCIENCE NOTES.

DR. MEROIER is about to publish, as an introduction to the scientific study of insanity, a work on the nervous system and the mind. It will contain an exposition of the new neurology as founded by Herbert Spencer and developed by Hughlings Jackson; an account of the constitution of mind from the evolutionary standpoint, showing the ways in which it is liable to be disordered; and a statement of the connexion between nervous functions and mental processes as thus regarded. Messrs. Macmillan & Co. will be the publishers.

THE *Journal of the Geological Society* for August is specially notable for Prof. Prestwich's paper on "The Date, Duration and Conditions of the Glacial Period." His conclusions are of much interest in their bearing on the antiquity of man. Supposing palaeolithic man to be of so-called pre-glacial age—a supposition which the author is disposed to entertain—we need not assign to him an antiquity of more than 20,000 or 30,000 years; but if, as some authorities argue, palaeolithic man did not appear in this part of the world until post-glacial times, his antiquity becomes reduced to about 15,000 or even 10,000 years. In either case the estimate is much less than that usually accepted by geological anthropologists.

FINE ART.

A Catalogue of the English Coins in the British Museum—Anglo-Saxon Series. Vol. I. By Charles Francis Keary. Edited by Reginald Stuart Poole. With thirty plates. (Longmans.)

THE scope of this first volume of the Museum catalogue of Anglo-Saxon coins may be most concisely described by saying that it includes the coins of all the kingdoms of the so-called "Heptarchy" with the exception of Wessex. The number of pieces described is 1,166, and the specimens represented in the beautiful

autotype plates are between four and five hundred. The Northumbrian coins catalogued, including those of the Danish kings and of the Archbishops of York, come down to the middle of the tenth century; the remaining series end from fifty to a hundred years earlier. With regard to the method of classification, the coinage of each of the kingdoms is treated separately, the pieces being arranged in the chronological order of the reigns; while those of the same reign, where they are not classified according to the type of design, are enumerated in the alphabetical order of the names of the moneyers. Besides the coinages bearing royal names, there are the anonymous silver coins of early date conventionally known as *scattas*, the two important series bearing the names of archbishops of Canterbury and of York respectively, the East-Anglian coinage bearing the name of St. Eadmund, and the Danish Northumbrian coins marked with the name of St. Peter. In the catalogue a transcription of the legend of each coin is given, with a brief description of its design, and figures indicating its size and weight. The introduction, occupying 94 pages, deals not only with the history of the monetary system of early England, but also, in outline, with the political history of the kingdoms whose coinage is included in this portion of the catalogue.

The study of early English coins presents some peculiar difficulties, one of which arises from the extraordinary prevalence of blundered legends. Even the names of the moneyers themselves are given with a variety of spelling which can hardly be accounted for otherwise than by supposing either that the "moneyer" whose name was inscribed on the coin was not in all cases the actual artificer who engraved the die, or that many of the extant coins are counterfeits. Mr. Keary, indeed, does not look with favour on either of these hypotheses. He remarks that "we know the extraordinary ways in which uneducated people of the present day spell their names, and, therefore, this argument is not of great weight." The theory of forgery he considers to be disproved by the fact that "the coins of fullest weight and purest metal are often most distinguished by these eccentricities of spelling." It appears to me, however, that the probabilities are decidedly against the view that these extraordinary varieties of spelling can have proceeded from the persons to whom the names belonged. So long as it is a question only of such insignificant variations as Degemund, Dagemond, Daiemond for the name which, in classical West Saxon, would be written Dægmond, or as the alternation of Aæðlred and Aeilred, there is no difficulty at all. These differences are perfectly accounted for by what we know of Old-English pronunciation; and there is no reason for doubting that the same man may have written his name sometimes in one of the forms and sometimes in another. But it is utterly impossible that such combinations of letters as OTIBVINRO ME, OTIBVINIO ME (and still more diverse forms, which I do not quote because they are not represented in the autotypes), can be variant modes adopted by the same person in writing his name. They must be blundered repetitions of some widely different original: in this case possibly of the legend OIBERT MO,

which appears in the same series of coins.* The hypothesis of forgery need not be pressed; but Mr. Keary's argument does not seem quite decisive against its being in some instances the true one. There is every probability that in the early Old-English period there was a good deal of private coining, not for the sake of fraud, but as a regular branch of trade, which the kings ineffectually attempted to suppress. The customers of the private moneyers would take care that they received coin of good intrinsic value, but they would be by no means averse to its having the additional attraction of a well-known stamp, even if counterfeit. It is quite conceivable that the imitation of the designs, and even the inscriptions, of official coins may have sometimes been adopted rather from a desire to give a workmanlike appearance to the issues of private mints than from any intention to deceive. However this may be, it is evident that the names of moneyers are quite as often blundered on the Old-English coins as are the names of the kings, and that it is needful to exercise caution in using Mr. Keary's list of those functionaries as a means of adding to our vocabulary of Anglo-Saxon personal names. In one or two instances Mr. Keary has inserted impossible forms when the true reading of the coin-legends would have yielded names that are already well-known. He names "Wintred," for instance, as the moneyer of several Northumbrian and one or two Mercian coins. The name is really the familiar Wihtrud. On one of the coins the name appears, as Mr. Keary says, "partly in runes." In fact it is wholly in runes, the character π being a not uncommon form of the runic λ . A still more common form of the λ rune is the π with the oblique stroke doubled; and on one of the Wihtrud coins the name is written with this character, while on three others it is actually found with the Roman π . It is difficult to guess why Mr. Keary has chosen to print the unmeaning form "Wintred" when the evidence so decidedly pointed the other way. Even if all the examples had had the Roman π , it would still have been justifiable to read it as λ , as Mr. Keary himself has in other instances very frequently done. The name which Mr. Keary catalogues as Wertnið I should read, somewhat doubtfully, in *boustrophedon* fashion as Bertwih. On the whole, it must be said that the author's remarks on personal nomenclature do not show adequate knowledge of the subject. It is suggested that Wineberht and Wendelberht may have been the same person. The names are as distinct, and both as genuine, as Jeroboam and Jeremiah. Another suggestion is that Guðhere (for which an alternative reading "Guðner" is proposed, without sufficient reason) may stand for Gunther. No doubt Gunther is the Frankish form corresponding to the English Gú here; but why should a correctly-spelt native name be treated as a mis-spelling for a foreign name? Two names of Northumbrian moneyers, Alfheard and Adulfere, are printed in italics in the catalogue, as not occurring in the coins of the Museum.

* Mr. Keary does not seem to have noticed that the inscriptions which he assigns to "Otibuinro" are identical, except for the initial letter, with the legends TIBVINIO ME R, TIBVINIO ME, &c., which he has headed as corruptions of "Tedwinus me fo."

Mr. Keary thinks that these two forms are variants of the same name. Strange to say this is actually the case, though in a different manner from that which he imagines. They are misreadings of the name Heardwulf or Heardulf, which occurs written in a circle, on several Northumbrian coins autotyped in this volume. Some persons unknown seems to have evolved both the possible Alfheard and the impossible Adulfere out of Heardulf by beginning to read at the wrong point in the circle. To show how it was done, I will copy the legends of two of the coins, premising that on the second of them the μ is represented by an inverted V (Δ):

Plate XXI., No. 10, EDVVLPHEA
Misread as *Adulfere*
Plate XX., No. 13, ALPHHEARD
Misread as *Alfheard*

A glance at the plates will show how easily the misreadings might happen in the case of a slightly defaced specimen. What renders the matter still more curious is that the Heardwulf who becomes "Alfheard" seems to have been king of Northumbria, while his namesake was simply a moneyer. It is a pity that the proofs of the volume were not submitted to some competent Anglo-Saxon scholar. If this had been done, the list of moneyers would have been purged of a good many impossible forms of names. Such a revision would have been useful with regard to some other points—*e.g.*, the notion that the two spellings *scat* and *scat* correspond to different meanings is philologically untenable.

Mr. Keary is puzzled by the character resembling sometimes a three-branched V and sometimes a three-branched Y, and seeks to obtain light by comparing it with the runic character of similar form. He finds, however, such an uncertainty about the value of this rune that he says "We cannot determine whether the name [in which the letter in question occurs] was Canwulf, Cunwulf, or Cynwulf, or even Coenwulf." It seems to me clear that this letter is not a rune, but simply the Roman V, modified by inserting an additional stroke, in the same manner and for the same purpose as the Anglian rune for μ was modified into that for the umlaut y . Afterwards this character was identified with the Roman y . It seems possible that the dot over the Anglo-Saxon cursive y may be a survival from the middle stroke of the character which the y replaced. The moneyer's name will, therefore, be Cynwulf. It is hardly necessary to say that "Canwulf" is an impossible form.

In the remarks on the palaeography of the coins there are a few points which strike me as open to strong objection. Mr. Keary sees "Greek influence" in the form of the letter g resembling Γ , and in the use of Σ (turned sideways) as equivalent to S . Both cases are at first sight so startling as to excite a suspicion that there must be some mistake about the facts. On examination it proves that the Γ occurs only on a single Danish Northumbrian coin, in a name which Mr. Keary reads Baciager, but for which he himself offers the alternatives of Bactaler and Baciasser. None of these forms can stand for any possible Danish name without assuming some blundering; but, at any rate, there is no ground for thinking that the Γ is a Greek

gamma. The allegation that μ is used for σ turns out to be equally unfounded. The only ground produced is that "the same moneyer's name is spelt $\beta\omega\mu\epsilon\iota\kappa$ and $\beta\omega\sigma\epsilon\iota\kappa$." So it is; but this phenomenon occurs in the frightfully-blundered "St. Eadmund" series of coins, in which (according to Mr. Keary—who may be right or wrong) $\beta\tau\upsilon\iota\eta\eta\sigma$ MEID is equivalent to *Tedwinus me fo*, and the legend $\epsilon\lambda\omicron\phi\omicron\epsilon\delta$ RN is a variant of ERATINOFINO. There is, therefore, no real foundation for the intrinsically improbable conclusion that the Anglo-Saxons were in the habit of using Greek letters on their coins. While speaking of the alphabet I may mention that the name which Mr. Keary reads Risleca or Sisleca should certainly be Gisleca, and the peculiar character with which it begins in Plate xviii., No. 1, should be added to the list of forms of *g*.

The first coin in the present catalogue has the interest of an unsolved enigma. It is a gold piece, bearing an unskilful imitation of the design and the legends of a solidus of Honorius, and, in addition, a runic inscription which seems to read *Scanômodu*. There is some doubt even about the transcription, for the forms of *s* and *k* are not exactly paralleled, and in all other English runic texts the omega-rune (if it may be so designated) has the power, not of δ as in continental examples, but of the umlaut \ddot{a} . The final letter, moreover, is (in the autotype at least) not distinctly legible. Prof. Wimmer, however, says with confidence that the transcription is correct, that the language is English, that the date is about A.D. 600, and that *Scanômodu* is a man's name in the nominative case. With all respect for such high authority, I must confess that I retain some doubts on every one of the points. Before yielding my full assent I should like to know what evidence there is for saying that the substantive *môd* was a -*u* stem; how it happens that the long δ comes to appear as a thematic vowel in the middle of a compound; and what is the etymology of the first element in the supposed proper name. Somebody (I think the late Dr. Haigh) has made a wild guess that *Scanomodu* might be the name of the person commemorated in the place named Scammonden, near Halifax. The true interpretation of the inscription remains to be given, or at any rate to be philologically justified. It is at least quite certain that the meaning is not, as has been suggested, "Scan owns this coin."

Of the value of this catalogue for purposes of historical illustration many examples might be given. The coins struck at Canterbury with the names of Mercian kings are especially noteworthy as throwing light on the somewhat obscure relations between Kent and Mercia in the eighth and ninth centuries. One of the coins of Ceolwulf, by the way, is inscribed *Dorobrebis civ*. Mr. Keary may be right in considering this a mere mistake for the usual *Dorobernia civ*. (Canterbury); but it seems worth while to suggest that it may possibly stand for Rochester, the Roman *Durobrivæ*, and the *Hrofi Brevi* of early Anglo-Saxon documents.

On the more technical portions of Mr. Keary's work I am not competent to offer any criticism, but the evidences of the author's wide knowledge and careful research

are manifest. I can only regret that my own limited acquaintance with the subject has compelled me to confine my remarks almost entirely to what are obviously the weakest parts of the book.

HENRY BRADLEY.

NOTES ON ART AND ARCHAEOLOGY.

WE are requested to state that the exhibition of minor antiquities from Tell-el-Yahodeh, &c., in connexion with the Egypt Exploration Fund (see ACADEMY, August 13) will remain open until September 9—a fortnight later than was first announced. Mr. Griffith will be present on Mondays, Wednesdays, and Fridays, to explain the objects. The place is Oxford Mansion, Oxford Circus; the time, from 10 a.m. to 4 p.m.

THERE is now on view, at the Fine Art Society's, in New Bond Street, a collection of drawings of Mr. Hugh Thomson. The most important are his original illustrations to "Sir Roger de Coverley," which appeared last year in the *English Illustrated Magazine*, and subsequently in book-form. The exhibition will remain open until October 8.

THE Society of British Artists has received authority to prefix to its title the epithet of "royal."

THE two well-known painters, MM. Alfred Stevens and H. Gervex, are preparing a colossal panorama to commemorate the centenary of the French Revolution. It will deal with the whole century which has elapsed since 1789, and will contain portraits of no less than eighteen hundred persons celebrated in politics, arts, war, science, &c.

MUSIC.

MUSICAL PUBLICATIONS.

Dictionary of Music and Musicians. (Part xxii.) Edited by Sir G. Grove. (Macmillan.) This long-expected part brings us to the letter Z, and consequently to the end of the dictionary proper. But, as was fully expected, an appendix is announced; and, if due account be taken of all omissions, this extra volume will prove of considerable size. Further, we are promised a full index to the whole work, and for this students will be extremely grateful. The most interesting article in part xxii. is "Weber," from the pen of Dr. Philipp Spitta, of Berlin. It is but a few years ago that Sir J. Benedict wrote the life of his master and friend in the series of biographies entitled "Lives of the Great Musicians." Dr. Spitta touches only lightly on those parts of the composer's life, such as the production of "Der Freischütz" at Berlin, and of "Euryanthe" at Vienna; for it was hopeless to enter into rivalry with Sir Julius, who was an eye-witness of both events, and who has given graphic descriptions of them in his little volume. Dr. Spitta deals with his subject quite in his own manner; and, whether in relating the romantic life of the composer or in discussing his works, he is equally attractive. He mentions Heuschel, the famous oboist, who taught Weber at the age of nine. Sir Julius said nothing about him; yet Weber, in his autobiographical sketch written in 1818, declares that from him he had received the best possible foundation for a style of pianoforte playing. We quite agree with Dr. Spitta as to the great influence exercised by Weber over his own generation and the one succeeding it, but we do not feel able to accept the doctor's assertion that Weber's influence was greater than that of Beethoven. Again, when in speaking of "Der Freischütz" he tells us the strongly-marked religious character of the opera is the secret of the success, he scarcely gives Zamiel, the Demon Hunter, his

due. His remarks, however, about the more important part played by the Hermit in the opera as first planned are full of interest. He certainly does justice to Weber's power of characterisation, but surely goes to extremes in saying that in the power of using the orchestra dramatically Weber surpasses any composer in the world. What about "Don Giovanni," "Fidelio," "Lohengrin"? We merely notice these few points to show how full of thought are all Dr. Spitta's remarks. We are glad to find that he is enthusiastic about Weber's songs, which are certainly unduly neglected at the present day. In speaking of the Concertstück for piano and orchestra, he gives the programme as "told by Benedict." True, it is given by Benedict in his book, but that writer carefully tells us that Weber himself was the author of the programme. From Dr. Spitta's account one might imagine that it was invented by Benedict. The article "Working-out," bearing the familiar signature, C. H. H. P., is excellent, and one would willingly have had it twice as long. The notice of "Wolff"—a rival of Beethoven in pianoforte playing and improvisation, by J. H. M., is exceedingly interesting. The writer plods patiently through the many uncertainties and few certainties of the composer's career. It is difficult to ascertain how his name should be spelt, the date of his first visit to London is doubtful, a visit to Brussels is surrounded with mystery, and there are almost as many dates given for his death as there are notices of him in various dictionaries. In the article "Wohltemperirte Klavier," it is stated that Mr. Cummings showed in the *Musical Times* of March, 1885, that Kollmann never published an edition of Bach's forty-eight Preludes and Fugues. There is, however, a note in the *Musical Times* of November, 1883, showing, from information supplied by Dr. Westbrook, why Kollmann abandoned his intention.

Common Praise. By F. G. Edwards. (Curwen.) This is a practical handbook of Nonconformist Church Music. The author, having addressed a schedule of about forty questions to various organists and choirmasters, received about 223 replies; and a large portion of the book is filled with quotations from them. Mr. Edwards himself has had fifteen years' experience, so that his book naturally contains much to attract all interested in matters appertaining to the Service of Song. To the question, "Is the singing of your congregation satisfactory?" one reply says, "The singing is pretty general, but it is too loud, rough, and uncultured." And so, probably, would say nearly all intelligent organists of congregational churches. The difficulties of getting singing practice are well exemplified in the following reply:—"Out of a congregation of 1,200 about 30 came to the first practice, about 20 to the next, and 9 to the third and last." Mr. Edwards's advice to organists to go to the Popular Concerts, to take music and pencil and to mark down phrasing as the player proceeds, is, to say the least, doubtful. He might get the letter; but, with the distraction of writing, he would lose the spirit. The works of the great masters are edited by competent men, with every help in the matter of phrasing, and at reasonable prices.

J. S. SHEDLOCK.

MUSIC NOTES.

"THE DRUIDS' CHORUS," a new work for male voices, by Dr. Joseph Parry, will shortly be produced in Wales. Mr. Kinnersley Lewis, who has already published several poems on Welsh national subjects, has written the libretto. The theme is Suetonius Paulinus's attack on Mona. The Druids are represented as surprised at night at their devotions in the temple of Ceridwen.

LITERATURE.

THE HIBBERT LECTURES FOR 1887.

The Origin and Growth of Religion as illustrated by the Religion of the Ancient Babylonians. By A. H. Sayce. (Williams & Norgate.)

It is difficult to review this book in ordinary fashion, or within reasonable limits. It contains a vast amount of material hitherto practically inaccessible to students of mythology, it abounds with novel and valuable conclusions, while many important side issues are raised in the notes. Since all who are interested in the subject will study it for themselves, I will confine my comments to a few definite points which seem to invite further investigation.

Babylonian religion has no connexion with that of Egypt. For us its interest lies in its connexion with the theology of the Western Semites; on the one hand, with that of the Hebrews, and, on the other, with that of the Phoenicians by whom the mythological conceptions of the Greeks were so profoundly influenced. Hence this book opens out fresh possibilities of profitable research to students of the Hebrew literature, as well as to those who are attempting a scientific explanation of the origin and nature of the Greek mythology. The attempt of the Sanskritists in the last generation to derive Greek myths from India, and to discover in the Vedas an explanation of the Greek theology, finds fewer adherents than heretofore—if for no other reason, because it is seen that the separation of the Aryan races must have taken place at a date so remote that only the very rudiments of religion can then have been in existence; while, even if elaborate mythological legends, such as those of the Greeks, had at that time been current, they could hardly have been transmitted orally in any recognisable form through so many millenniums. It is not, however, needful to deny that there may be a holo-ethnic residuum, that the names of Dyaus, Zeus, and Tiu, or even the germs of a solar epic, may not be common to the Vedas, the Iliad, and the Nibelungen Lay. But, while the theories of the extreme Sanskritists are losing ground, there is an increasing disposition to acknowledge that a large proportion of the Greek mythological tales, especially those of a more elaborate character, were ultimately derived from Babylonia, through either an Aramean or a Phoenician channel. Thus, it has long been recognised that the Greek myth of Aphrodite and Adonis, and the corresponding Phrygian myth of Cybele and Attys, are mere Western versions of the Phoenician myth of Tammuz and Astarte—the story being that of the grief of the moon mourning over the

death of her lost spouse the sun. It was also seen that the Ephesian Artemis must be identified with Astarte, the Semitic moon-goddess; and that the legend of Semiramis was a euhemerised version of the story of Istar, the dove into which Semiramis was changed being the dove of Istar and of Venus. Smyrna was also identified with Semiramis. The Greek Amazons were seen to be the priestesses of the Asiatic goddess, and the conception of the Centaurs was traced to Babylonian sculptures. The Eastern origin of the Dionysiac cult was manifest; but its suggested derivation from India was disposed of by the identification of Dionysus with the Assyrian sun-god, who, according to Lenormant, bore the title of *dianisu*. The mother of Dionysus was Semele, daughter of Cadmus the Phoenician; and Semele has been identified by Dr. Neubauer with the Phoenician goddess Samlath, and the Edomite "Samlah of the Vineland."

These connexions, which may be considered as established, prepare us for further researches in the same direction. Of these, perhaps, the most important is Prof. Sayce's comparison of Ares with the Babylonian deity who provisionally bears the name of Adar, but whose real name is believed to have been Uras. Uras is identified with Ares, not only because he was the warrior god of the Babylonians, as Ares was of the Greeks, but because in the Greek myth Ares is said to have slain Adonis by taking the form of a wild boar. Now, Adar or Uras is called "the Lord of the pig," a title originating, in Prof. Sayce's opinion, out of a totemistic worship of that animal. Moreover, the Romans identified their war god Mars with the Greek Ares; and it would appear that Rimmon, the Syrian sun-god, was worshipped under the Accadian title of Mātu (Martu) and was also called "the pig." The prototype of Ares may thus be connected with the probable prototype of Mars, whose cult may have reached Italy through Cumae, which, according to Strabo, was a colony of the Aeolian Cyme, whose alleged foundation by the Amazons connects it with Eastern mythologies.

I have endeavoured to show, in a recent number of the ACADEMY, that Aplu, the old form of the name of Apollo, may be identified with Ablu, "the son" of heaven, which was one of the appellations of the sun-god Tammuz; and also that the story of Perseus and Andromeda, a lunar eclipse myth, is a Greek version of the combat between Bel-Merodach and the dragon Tiamat.

Some of the most obvious correspondences, which, however, are not free from difficulty, present themselves when we attempt to trace the Western extensions of the worship of the great Babylonian goddess, Istar, who seems to have absorbed the functions of several local deities. She is clearly the Athtor who was worshipped on the southern coast of Arabia; and it is commonly asserted that she became the Phoenician Ashtoreth, called Astarte by the Greeks, who was the prototype both of Artemis and of Aphrodite. Prof. Sayce takes this view. He considers that the Ephesian Artemis and the Cyprian Aphrodite are both lineal descendants of the same deity, the Babylonian Istar, who bore two characters—that of the warrior maiden,

and of the deity of love. These two conceptions, he thinks, became divorced, and arrived on the shores of Greece by separate routes. The gentler Babylonians seized rather on the softer side of the nature of Istar, while the fiercer Assyrians naturally laid hold of her warlike aspect. It may be admitted that the name of Istar, originally an Accadian word whose meaning is unknown, took the feminine suffix in Phoenician, and became Ashtoreth; but we have no evidence which will explain how the worship of Istar, the evening star, could have been transformed into the worship of Ashtoreth, who was undoubtedly the moon. And it is difficult to understand how the functions of Sin, the male Accadian moon-god, were transferred, among the western Semites, to a female deity who was originally only the planet Venus. Possibly the connexion between Istar, the evening star, and Ashtoreth, the moon, may be rather nominal than real, some such title as the "Lady of the Heavens" or the "Queen of the Night," or whatever the name may have meant, being applied in one region to the moon and in another to the planet Venus. This seems less difficult than to suppose a confusion between two planetary bodies so widely different. The Accadians conceived the moon as a male deity, which effectually prevented her from being regarded as the spouse of the sun—a function assigned to the planet Venus; whereas in Syria, where the moon was thought to be a female, she would become the Queen of Night, and the sun-god would naturally be regarded as her spouse. A further difficulty is introduced by the fact that the planet Venus was called by the Greeks Ἀφροδίτης ἑσπέρη, and that the Romans identified the Greek Aphrodite with their Venus, who is also the evening star, like the Babylonian Istar. Aphrodite, however, seems, like Artemis, to be the moon rather than the evening star, though the Babylonian and Assyrian conquests of Cyprus may have commingled some elements of the worship of Istar with the worship of the Phoenician Astarte. Artemis and Aphrodite are not, however, the only descendants of the Asiatic goddess. Thus, Greek legend described the wandering Astarte, under the name of Europa, the "broad-faced" moon, crossing the seas seated on the Bull of Anu.

It may be objected that it is improbable that so many distinct Western deities—Apollo, Ares, Mars, Dionysus, Perseus, Adonis, and Attys—should have been obtained from the Babylonian sun-god; and that it is equally unreasonable to refer Artemis, Aphrodite, Semele, Semiramis, Smyrna, Cybele, and Europa to Istar or Astarte. This objection is answered by anticipation in Prof. Sayce's volume. He shows that nearly every Babylonian city had its independent sun-god, known by different names or rather epithets, such as the son of heaven, the mighty, the exalted, the lord, the very glorious, or the beloved. These local sun-gods, who were ultimately identified by the Babylonians as forms of the same god, had their local names and their local legends, which passed independently to the Greeks, who attributed them to different deities. Thus, the same sun-god, born of Ea, who was worshipped as Merodach at Babylon, was revered by the people of Eridu under the name of Tammuz, the Acca-

dian Du-muzi, the "son of life"; and at Nipur as Uras (Ares), the "lord of light." Meri, the sun-god of Muru, became at Damascus Ramanu or Rimmon, "the exalted one"; in Assyria he was called Ablu (Apollo), the "son" of heaven; one of his Accadian names was Matu or Martu (Mars); in Tyre he was Melcarth, the "king of the city" (Melicertes); and at Gebal he was Adoni, "my lord" (Adonis).

We may, I think, divide the Hellenic deities into two classes: those who seem to be purely Aryan, and those whose names, connexions, and myths point to a Semitic or Accadian source. Now it is curious to observe that the purely Hellenic deities are ranged by Homer on the side of the Greeks, while those which seem to be of Asiatic origin espouse the cause of Troy. Thus Athena and Hera, the most purely Hellenic deities, are represented as the protagonists on the Hellenic side; while Apollo, Ares, and Aphrodite, who were ultimately of Phoenician or Babylonian origin, all fight in the Trojan camp. In the case of Zeus and Poseidon, Semitic conceptions seem to have been engrafted on Aryan names and cults; and we find they are mainly neutral, though inclining somewhat to the Trojan cause.

Many of those elements in the Greek mythology which Mr. Lang considers to be mere survivals of primitive savagery may be more reasonably explained by reference to their Babylonian or Phoenician sources. A translated mythology must inevitably have been more or less mistranslated. Thus the so-called incestuous legends of the Greek pantheon, at which prudery is shocked, are no proof that the primitive Greeks lived in habitual incest, which would be contrary to the whole spirit of Aryan civilisation. These legends can be more rationally explained by an evolution which took place in Babylonian theology. Owing to the different position occupied by women among the Accadians and the Semites, Babylonian goddesses, who in the Accadian period were revered as the mothers of certain gods, came to be regarded under Semitic influences as their wives. Hence the family relationships of the celestial bodies and the powers of nature were represented in turn as either conjugal, fraternal, or parental. When the nature-myths current in different cities came to be harmonised into a coherent system, it is obvious that some of these traditional relationships would become apparently incestuous. It is easy to see, for instance, how the moon might thus come to be regarded as at once the parent, the wife, and the sister of the sun.

The Babylonian gods resembled the local Madonnas of Italian cities rather than the organised hierarchy of Olympus. The Canaanite and Phoenician cities retained to the last their local Baalim. At some early period this was the case also in Babylonia; but when any city rose to supreme power, its local protector tended to become a national god. Thus it was that Merodach, the local sun-god of Babylon, became the national god of Nebuchadnezzar's empire, and Assur became a supreme god when Assyria rose to power. The older gods were either degraded into demons or became the ancestors of the later gods.

Another instance which seems to Mr. Lang to afford clear evidence of primitive Greek savagery—the mutilation of Uranus by his son Cronus—receives a satisfactory explanation from a cosmological legend of the Babylonians which represented Bel, originally a sky-god, as cutting asunder Tiamat, the watery abyss, whose blood fell on the earth as rain, filling the springs and rivers. Tiamat, the primordial Chaos, was afterwards represented as the parent of the cosmic sky; and we see how a revolting story is resolved into a speculation of early cosmical philosophy. This explanation of the myth is at any rate more satisfactory and more probable than to suppose that at some early period Greek sons indulged in the practice of mutilating their parents or of cutting them asunder. Not only the Greek mythology, but the philosophical systems of the early Greek thinkers of Asia Minor, such as Anaximander, were clearly derived through the Phoenicians from Babylonia—the source of the science, the cosmogony, and of much of the religion of the Western world. Our weights and measures, the sexagesimal numeration which we employ for the division of the hour, and, above all, the signs of the Zodiac, are of Babylonian origin. If Greek science and astronomy were ultimately Babylonian, it would be strange, indeed, if the teachers of Greek science had not been also teachers of Greek religion.

Prof. Sayce devotes much attention to the relation between the religion of the western Semites and that of the Babylonians. The problem as to the channel by which the communication took place cannot as yet be considered as definitely solved. The Hebrews, the Phoenicians, and the other Semitic races of Syria and Canaan may have brought with them the common elements of their belief at the time of their migration from the shores of the Persian Gulf; or, on the other hand, these beliefs may have been introduced at the time of the Western conquests of Sargon of Accad and his son Naram-Sin, which must now be placed as early as the fourth millennium B.C. As regards the Hebrews, the traditional view is that they brought back from Babylon nothing but an intense hatred of Babylonian idolatry, and an intensified Jehovistic monotheism. But we now know that they brought back a new script, the parent of the square Hebrew, as well as new names of the months; and they can hardly, as Prof. Sayce maintains, have sojourned for seventy years on the banks of the Euphrates without profound modifications and developments of their religious and philosophical ideas. In the libraries of Babylon they found the ancient literature of Chaldea open to them, and they can scarcely have failed to profit by the opportunity. Prof. Sayce is evidently inclined to regard the Babylonian captivity as the explanation of many of the common elements in the Hebrew and Babylonian literatures.

But this theory will not explain the early spread of Babylonian beliefs among the other western Semites. Probably no one solution will suffice. The worship of Athor in Arabia Felix must be due to early Babylonian commerce, while the cult of Sin, the Accadian moon-god, on Mount Sinai must be referred to the conquest of the Sinaitic peninsula by Naram-Sin, the son of Sargon. But how

shall we explain the early extension of the worship of Nebo, the local god of Borsippa, to Mount Nebo, where Moses died, or the prevalence of Babylonian beliefs in Edom, as evidenced by the names of the Dukes of Edom recorded in Genesis xxxvi.; or in Canaan as witnessed by ancient place-names? Thus, long before the Hebrew Exodus, we find, among the Palestinian conquests of Thothmes III., the name of a town called Beth-Anath, "the temple of Anath"; and another Beth-Anath is mentioned in the book of Joshua. Anathoth was the birthplace of Jeremiah, and Anat was the Hivite mother-in-law of Esau. These names show that the worship of the feminine correlative of Anu, the Accadian heaven-god, must have been transmitted to the West at some period later than the Semitic conquest of Babylonia, and cannot have been brought with them by the Semites at the time of their pristine migration from the East, unless, indeed, we assume that the earliest Semitic migration was effected by Semites who had already come in contact with the pre-Semitic civilisation of Babylonia.

The foregoing are not isolated facts. The worship of the sun-god Tammuz, who is the Accadian Du-muzi, prevailed not only in Phoenicia, but also in Jerusalem at the time of Jeremiah. The name of Savul, the Babylonian fire-god, is found in the names of the Edomite King Samlah, and of the Israelite King Saul. In the female form it is found in a Phoenician inscription, passing from the Phoenicians to the Greeks as Semele. Associated with the worship of Anu is that of Dagon, the "exalted one," a title of Mul-Ash, the lord of the Accadian ghost-world. His name is met with in Assyrian inscriptions. He became the supreme deity of the Philistines, and had temples at Gaza and Ashdod; while Beth-Dagon appears in the book of Joshua as a city of Asher. Then, again, the very ancient institutions of the Sabbath, of the rite of circumcision, of tithes, and of certain special sacrifices, are common to the Hebrews and the Babylonians; while the curious analogies between the structure and appliances of the Babylonian temples and the temple of Solomon have to be accounted for. Were these things obtained by the Hebrews from the Canaanites or the Phoenicians, and if so, how and at what time were they derived from Babylonia? Perhaps the most probable, but, at the same time, a somewhat startling solution, is the supposition that the Semitisation of Syria, Palestine, and Edom, was only effected after the Semites had come in contact with the civilisation of Babylonia. This would explain the fact that northern and central Arabia, where the Semitic race doubtless originated, is the only Semitic land unaffected by Babylonian beliefs.

Prof. Sayce's explanations, from Babylonian sources, of the names of some of the antediluvian patriarchs are interesting but not convincing. Very curious is the account of the "lady of Eden," the goddess of the tree of life; while the Babylonian narrative of the building of the Tower of Babel, and of the overthrow and confusion of the builders by the god Anu, is, in its way, as suggestive as the better-known tablets relating to the creation and the deluge. Prof. Sayce believes, though the evidence is not absolutely conclusive, that the tower was in ruins at the

time when the Accadian calendar was drawn up, which would carry us back to a period between the thirty-seventh and forty-seventh centuries B.C.

Prof. Sayce is, perhaps, too ready to see survivals of heathenism in the Hebrew Scriptures. In some cases, doubtless, he is right. Ezekiel mentions the women waiting for Tammuz at the gate of the Lord's house, and the prevalence of the same widespread Tammuz worship is probably referred to by Zachariah, Amos, and Jeremiah. It is not improbable that the name of Ammi, the national god of the Ammonites, may be discovered in such names as Bala-am, Jerobo-am and Rehobo-am. But it is not necessary to seek in the names of David and Solomon for the vestiges of a surviving heathenism, as an easier explanation presents itself. The name of David, like that of Dido, may mean "the beloved," which was also a title of the sun-god; but David, even if his original name was El-Hanan, as Prof. Sayce contends, may have received a throne-name expressing the attachment of his subjects, or the name might belong to the same class as those of St. Didier (Desiderius) or Erasmus. The names of Phoebe, Helen, Dennis, and Diana, prove the survival in the nineteenth century of Greek and Latin paganism among ourselves just as much or as little as the names of Saul and David connect them with the Babylonian sun-gods Savul and Dard.

Prof. Sayce frankly acknowledges the difficulties with which he has had to contend in reconstructing a theory of the development of Babylonian religion from the tablets stored in the library of Assurbanipal. Not the least of these difficulties lies in the fragmentary condition of the texts—the fragile clay tablets are often broken off or defective just where the interest of the documents begins, or where the solution of some difficult problem seems to be impending; but the greatest difficulty of all is that the Assyrian tablets are only copies, made mostly in the seventh century B.C., of older documents from the libraries of Babylonian temples. In tracing the evolution of Babylonian religion much depends on the dates of our materials; and, as we have no help from palaeography, the dates of the original documents have to be inferred from internal considerations.

Prof. Sayce shows that the great criterion on which Lenormant depended is fallacious, since it cannot now be maintained that texts written in Accadian are invariably older than those composed in Semitic Babylonian. Prof. Sayce shows conclusively that the Accadian was used by the priests as a literary or sacred language, long after it had ceased to be a spoken speech. The case is somewhat similar to that of the use of monkish Latin. Latin is an older language than English; and yet the writings of Erasmus are later than those of Wycliffe, and Geoffrey of Monmouth is later than the Saxon Chronicle.

The provisional method employed by Prof. Sayce is, probably, the best that could be adopted. He has formed a coherent theory as to the probable course of evolution of Babylonian religion, and arranges his documents in accordance with his theory. These documents are printed in the appendices, which are not the least valuable portion of the work. They contain translations of (1) the magical texts,

(2) the hymns, (3) the penitential psalms, (4) the litanies to the gods; an arrangement which undoubtedly conforms roughly to the course of evolution followed by Babylonian religion. He is probably right in assigning a late date to the creation tablets in their present form. They bear internal evidence that older beliefs were harmonised and combined; and, as we have them, they may not be much older than the time of Assurbanipal. The deluge tablets he considers are much earlier, dating probably from about 2,000 B.C.

Prof. Sayce would be the first to acknowledge that much of his work is tentative, and may be overthrown by the discovery of fresh texts, or modified by improved readings of those we possess. But an unusual openness to the arguments of his opponents, and a readiness to acknowledge that some of his earlier views were erroneous, inspires the reader with confidence in his final conclusions. But though his work is necessarily the work of a pioneer exploring in a new region, it must be acknowledged that in novelty, interest, and permanent value this book ranks as high as any of the volumes which the Hibbert Trust has hitherto called forth.

ISAAC TAYLOR.

Selections from the Poetical Works of Algernon Charles Swinburne. (Chatto & Windus.)

THESE selections have been made, it is understood, by Mr. Swinburne himself. They represent, therefore the deliberate preferences of one who has made poetry the study of a lifetime, and stand altogether apart from that rather irritating class of excerpts which seems to represent the whims of a little casual poetical reading at odd times. I by no means imply that a poet is an infallible judge of his own best work—literary history perhaps rebels against such a view; but he knows at any rate with what ardour of imagination his poems were respectively conceived, and with what greater or less satisfaction they took their final shape. He knows, in a word, what no one else can know about them; and if, in the long run, the judgment of the world supersede that of the poet, we shall not be the less grateful to him for giving us both the poetry and the estimate or criticism implied in the selection.

It is hardly necessary to say that Mr. Swinburne cannot really be adequately represented in some two hundred short pages, comprising some forty poems or extracts from poems. I do not care to conceal my opinion that his most evident fault is an excess of verbiage. None the less, I think he is unfairly judged, if judged from his shorter poems; and I would fain have seen more of his sustained flights of song, even if the Guernsey poems (pp. 53-7) and the rather faintly beautiful "Ballad of Dreamland" (pp. 113-4) had been displaced for them. If I may venture into a concrete criticism, I miss profoundly "The Triumph of Time" and "Siena," and the prelude poem of *Songs before Sunrise* and "Tiresias" (both parts); and, of the shorter poems, the "Lines on the Death of Edward John Trelawny," and the exquisite poem—I am ashamed to have forgotten its title, and am writing without opportunity of reference—on the dead flowers, plucked, these in Cornwall, those in Italy, and cast

away, when withered, with words that should last as long as the language. But these, perhaps, are mere personal whims. I hasten to say that the very best, if not the most peculiar and distinctive, of Mr. Swinburne's work is to be found in this little volume. It begins with "On the Verge," a poem about which I have already spoken in the ACADEMY; of which, therefore, I will only repeat my conviction that it is the author's finest work of the shorter kind. This and the following poems, down to p. 57, represent Mr. Swinburne in his favourite character of "Thalassius." There is a tone of glad self-surrender to the sea passion, which gives this part of his work a special radiance. Perhaps the North Sea poems will hardly touch the reader as deeply as they stirred the poet. "Hertha," the powerful piece of mysticism that follows, will never, probably, be a popular favourite, though it is specially characteristic of the poet. But who, whether he love Michael Angelo or not, will not be grateful that the noble sonnet "In San Lorenzo" finds a place here, and is worthily followed by "Mazzini," the grandest passage by far of the "Song of Italy"? Columbus has often been attempted in poetry; where has he been so well attempted as this (p. 81)?—

"O mother Genoa, through all years that run,
More than that other son,
Who first beyond the seals of sunset prest
Even to the unfooted West;
Whose back-blown flag scared from their
sheltering seas
The unknown Atlantides,
And as flame climbs through cloud and vapour
clomb
Through streams of storm and foam,
Till half in sight they saw land heave and
swim."

Next to "Mazzini" come naturally the verses to Aurelio Saffi, his co-triumvir. To how many Oxonians must these lines come like a voice out of the past?—

"Year after year has fallen on sleep, till change
Hath seen the fourth part of a century fade
Since you, a guest to whom the vales were
strange
Where Isis whispers to the murmuring shade
Above her face by winds and willows made,
And I, elate at heart with reverence, met,
Change must give place to death ere I forget
The pride that change of years has quenched
not yet."

No selection from Mr. Swinburne would be adequate without a specimen of his poems to Victor Hugo. The verses called "A Sunset" seem to him most worthy of insertion; and, indeed, they are stately and splendid as the sunset they commemorate. But those earlier verses to Victor Hugo, in the first series of *Poems and Ballads*, have, perhaps, a greater charm for the ordinary reader; they fall

"More soft than dew or snow by night,
Or wail, as in some flooded cave
Sobs the strong broken spirit of a wave."
Of the poems to childhood that follow, that called "Herse" is, we think, altogether the best; then "Itylus," with a music all its own, recalls the best manner of the early poems, as do the two extracts, "Anadyomene" and "The Death of Meleager," from "Atalanta in Calydon." "A Fosterling," from "Thalassius," is, perhaps, most notable for its apparently autobiographical character; but it cannot compare, for power or interest, with "Iseult at Tintagel," or "The Wife's

Vigil." Indeed, the former of these two may rank as one of the writer's most sustained efforts. It scarcely needs the recurring couplets of the crying wind and answering sea, for their sound is in the whole poem :

" Christ, if Thou hear yet or have eyes to see,
Thou that hadst pity, and hast no pity on me,
Knowest Thou no more, as in this life's sharp
span,
What pain Thou hadst on earth, what pain hath
man?
Hast Thou no care, that all we suffer yet?
What help is ours of Thee if Thou forget?
What profit have we though Thy blood were
given,
If we that sin bleed and be not forgiven?
Not love, but hate, Thou bitter God, and strange,
Whose heart as man's heart hath grown cold with
change;
Not love, but hate, Thou showest us that have
sinned?"

And like a world's cry shuddering was the wind,
And like a God's voice threatening was the sea."

This is, indeed a cry *de profundis*.

Finer work has hardly been done on the Greek model than "Oreithya." "Storm and Battle" is less Hellenic, but more resistless and, to the non-classical reader, perhaps, more attractive. The long extract that follows (pp. 191-210), from "Marino Faliero," seems to me to suffer, like the rest of that play, from a certain protraction of language that dulls the thought and weakens the dramatic force. No such criticism applies to the next dramatic excerpt, "Mary Stuart at Solway Firth." Here all is pure poetic gold, from Herries' earnest appeal to the queen not to go into banishment, down to Mary Beaton's last warning resolve. One cannot wonder that the poet wrote his "Adieux à Marie Stuart" so wistfully when he had had such a vision of her as this beside the Solway :

"Come, friends,
I think the fisher's boat hath hoised up sail
That is to bear none but one friend and me :
Here must my true men and their queen take
leave,
And each keep thought of other. My fair page,
Before the man's change darken on your chin
I may come back to ride with you at rein
To a more fortunate field : how'er that be,
Ride you right on with better hap, and live
As true to one of merrier days than mine
As on that night to Mary, once your queen.
Douglas, I have not won a word of you ;
What would you do to have me tarry?
"George Douglas. Die."

Nothing in the scene at Chartley, fine as it is, quite reaches the level of that by the Solway.

Let me end with one question, which I would sooner ask than answer. "Hesperia," doubtless, could not be properly removed from its trilogy. Is anything in this volume quite so fine or so characteristic as "Hesperia"?

E. D. A. MORSEHEAD.

Athos; or, The Mountain of the Monks. By Athelstan Riley. (Longmans.)

"THE Mountain of the Monks" is a subject which deserves a volume to itself, and this handsome book is likely to render it popular. Mr. Riley studied the life of the monks of Mount Athos under favourable circumstances. He spent six weeks among them, and brought with him an introduction from the Patriarch of Constantinople, which ensured him a favourable reception; and, besides this, he was accompanied by the Greek archbishop of

Cavalla, in Macedonia, whom, on arriving at that port, he found preparing to make a pilgrimage to the Holy Mountain. This prelate, whose well-marked personality forms the most amusing feature in the narrative, is described as a pattern Oriental—"genial, kind, and full of good nature towards his equals, while haughty and unbending towards his inferiors, indolent beyond belief, absolute idleness being his chief delight." Being possessed of a slight knowledge of French, he was of service to the author by acting as interpreter between him and the monks.

As ecclesiastical questions are brought prominently forward in this volume, it may be well to state that Mr. Riley's views are those of a strong Anglican High-Churchman. This, however, does not induce him to idealise the life of those among whom he was thrown; if he had had any disposition that way, he would have been saved from it by his strong sense of humour. The following sketch, taken during a long monastic service, may illustrate this.

"One old monk, who stood in a stall opposite to us, had a wonderfully piercing voice, and sang nearly the whole time, gazing vacantly with a stupid, fishy eye at the face of the prompter. In the short intervals of repose, he would sink down in his stall and apparently fall fast asleep, waking up again with wonderful precision when his turn came round."

This description forcibly recalls some of the figures in Doré's well-known picture of the neophyte in the convent.

The twenty monasteries, which, together with smaller associations of monks, and hermitages, constitute this remarkable community, occupy a region which is graphically called by Mr. Riley "a mountain and a garden in the sea." The following is his more detailed description of it :

"The promontory, or, rather, the peninsula, of Athos (for not far from its base, at the spot where Xerxes cut his canal, it measures but a mile and a half across) is long and narrow, having an average breadth of about four miles, while its length is forty. A ridge of hills runs down the centre of the peninsula, beginning from the narrowest part near its base, and reaching some height where the monastic establishments commence, at a distance of fifteen to twenty miles from its extremity. From this point the ridge rises gradually from 1,000 to between 3,000 and 4,000 feet, when it suddenly shoots up into a mountain nearly 7,000 feet high, and falls into the sea. There is but little level land on Athos; the sides of the central ridge slope as a rule down to the very shore, while round the end of the peninsula, especially on the western side, the mountain drops by rapid descent or breaks away in steep and rocky cliffs. Every part of the promontory is covered with vegetation, the east side being more conspicuous for luxuriance of growth; and its position in the waters keeps the forests of Mount Athos fresh and green when all the neighbouring country on the mainland is burnt up by the summer and autumnal heats. The mountain is one vast mass of white or whitish-grey marble, clothed with trees to within a thousand feet of its summit, and then rising in a bare and conical peak."

For a description of the monastic buildings we must refer the reader to Mr. Riley's volume. He will there find a full account of the numerous churches and secular edifices, together with notices of the books in the libraries, and of the relics and works of art.

The proper understanding of these is greatly facilitated by the illustrations, which are taken from the author's own photographs. These include not only general views of the monasteries, but representations of separate buildings and even interiors; and there is an excellent delineation of the silver-gilt binding and chain-work back of one of the ancient MSS. which Curzon has described. A plan of one of the churches, and numerous measurements, are a further aid towards realising the appearance of those edifices. There is also no lack of information as to the life of the monks, the legends and superstitions that exist among them, and the nature and duration of the services.

The principal subject of conversation between Mr. Riley and the monks was the possibility of the restoration of communion between the Greek and Anglican Churches. This was discussed in an amicable spirit, and the debates usually ended in expressions of a mutual desire for such a consummation. Of course, theological differences could not be ignored; but discussions of such questions when carried on through the medium of an interpreter, are usually very harmless; those who engage in them are like singlestick-players, who are separated from one another by a couple of yards—they cannot get near enough to deal very severe blows. Mr. Riley is much too straightforward to ignore the difficulties that stand in the way of reunion. He is aware that in order to become a member of the church of Constantinople he would have to be rebaptised. But in controversy much depends upon the temper with which the two parties approach one another, and nothing but goodwill could result from his visit. One ground that he mentions for anticipating a favourable issue will strike our readers as novel. On one occasion he had been illustrating the benefits of unity by the parable of the sticks—singly weak, but strong when united—and had used his own bundle of sticks and umbrellas for the purpose; when replacing the sticks he came in contact, unawares, with a servant who was bearing coffee on a tray and overturned its contents. He began to stammer out his apologies, but his entertainers hailed the catastrophe with delight. "God has sent an omen!" they said. "Spilt coffee is the luckiest thing in the world. God will give us unity."

Mr. Riley has a good deal to say about the Russian monks on Athos, and the great increase in their numbers which has occurred of late years. This nationality has never been popular on the Holy Mountain, partly because the inhabitants of the South regard them as barbarians, and partly, if we are to believe the Greek monks, because they are a difficult people to deal with. But their numbers until lately were not considerable. Five-and-twenty years ago the Russian monastery contained three hundred monks, and the majority of these were Greeks; now there are eight hundred attached to it, and with very few exceptions these are Russians. Gradually, also, other foundations for Russian monks have been established; and attempts have been made by them (it is said) to appropriate some of the other monasteries, until the Greek monks have become thoroughly frightened, and are persuaded that a political agency is at work in the background. The

state of feeling now existing is described by Mr. Riley in the following manner :

"The original inhabitants of the Holy Mountain, being fully roused, have entered into a solemn compact never again to sell a foot of ground to the intruders; and to this resolution they have adhered, so that for the last three years the Russians have not been able to buy any land whatever, although they have offered enormous prices for it—as much as 30,000 liras for a kelli worth 2,000. Thus they are obliged to make the most of what they have already, and consequently at their two great stations, Russico and St. Andrew's, they are hard at work with stones and mortar. Many are the tales told of lights seen at night on the mountain moving between these two communities, the evidence of secret communications carried on under the cover of darkness. The bitterness of feeling between the two parties may be imagined from the fact that the Greeks attribute the frequent fires which have taken place in their monasteries during the last fifty years to Russian incendiaries."

The weak point of Mr. Riley's volume is its prolixity. His enumerations of the numerous chapels in each monastery, with the names of the saints to whom they are dedicated, and his catalogues of relics, are beyond what the most ardent archaeologist could desire. These, it is true, can be skipped; but it is less easy to escape from his oft-repeated, however good-humoured, complaints of the discomforts of the journey, especially in respect of food and vermin. The latter of these evils are less numerous on Athos than in most parts of the interior of Turkey; and as to the use of rancid oil and butter for cooking in the monastic kitchens, a little tact and attention on the part of Mr. Riley's travelling servant could easily have prevented that. Anyhow, it is better that such details should not be too constantly brought under the reader's notice. It is impossible, also, not to feel that the romantic interest which attaches to these monasteries, as a unique specimen of the life of the middle ages—an interest which is found so conspicuously in the description of them in Curzon's *Monasteries in the Levant*—is here completely wanting. But, notwithstanding this, we can recommend this book as giving at once a truthful and an amusing account of a very remarkable community.

H. F. TOZER.

Memorials of the Church of SS. Peter and Wilfred, Ripon. Vols. I. and II. Edited by the Rev. J. T. Fowler for the Surtees Society. (Bernard Quaritch.)

MR. FOWLER is a most careful and accurate editor. We may safely affirm that in the long series of the publications of the Surtees Society there are no volumes on which more minute care has been bestowed. The task of editing these Ripon memorials must have been a most arduous one. In preparing a chronicle or a series of account-rolls for the press little is required beyond minute attention to one original, with collations of other ancient copies, should such be in existence. This is by no means a light labour. The case is, however, far different when the editor has to group together documents gathered from many various depositories. Neither the editor nor his readers can ever feel quite satisfied that all the wheat has been garnered. In the

present case, though we feel sure that all reasonable care has been taken, we should not be surprised if some of the lost Ripon charters were to turn up in unlikely places. It was only in the early part of last year that a charter of a Scottish abbey, hitherto quite unknown, was discovered in the evidence room of a great historic family in the west of England. The most imaginative of antiquaries would never have thought of searching in such a place for the charter of a Scottish king, though when the find was made it was not difficult to trace the line by which the document had strayed so far away from its Northern home. Should any such happy discoveries be made relating to Ripon, we may feel well assured that Mr. Fowler will incorporate them in the third volume which he has promised us.

If ever the history of the Church of England in the Middle Ages is to be written with that fullness and accuracy which so great a subject demands, it can only be done after the records of the various episcopal sees and great religious houses are open to historical enquirers. Some day or other we may hope that all the bishops' registers will be printed. We are many stages from this point yet, and are, therefore, particularly grateful to Mr. Fowler for having given us copious extracts from the York registers so far as they relate to Ripon. Some of the documents he has produced are of a high degree of interest. A controversy, sometimes attended with much bitterness, has raged for the last three centuries as to the state of the morals of the clergy before England broke away from Rome. The allegations of extreme corruption that have from time to time been made, mainly as missiles in fierce theological warfare, have been as often refuted; but we fear that little impression has been made. Those who build up that which passes with them for historical knowledge on the sandy foundations furnished to them by the fierce word-war of the sixteenth century are not to be shaken by any contemporary evidence. We know that in the Middle Ages there was an amount of coarseness of language which is rarely found, though it is not extinct, among the refined classes at present; but we really have no evidence which proves that the parish priests or the regular clergy were, as a class, men of degraded lives. Much of what we read that seems to tell so severely against the mediæval ecclesiastical system arose from the abuse of admitting men to minor orders who, as it would seem, gained thereby the protection of the ecclesiastical courts, and had never any intention of proceeding further. The liberties of the Church which Saint Thomas of Canterbury struggled for, and gained in part, were perverted in a way he could never have dreamed of, and would have been the first to denounce could he have witnessed how they were used to protect persons leading a shameless life. In 1302 we find Walter of Kirkeby Malsard "primam habens tonsuram" proceeded against for having slain one of his neighbours; another person, who seems to have been an Irishman, for robbery committed in the forest of Galtrees; and after these follows a list of persons of the same class who, it is alleged, had been guilty of murder, robbery, burglary, and horse-stealing. A few pages further on we

find five more of these clerics degraded for similar crimes. These degradations took place at the west door of the minster, we suppose in public. A list of ecclesiastics, knights, and others who were present at the ceremony is given.

The practise of burying the bodies of the dead within the interior of churches seems to have been common in England in very early days. This abuse, which has not even in these days come to an end, was very prevalent in the latter middle ages. At Ripon it is pleasant to find that the authorities tried to put some limits to it, whether their reasons were theological or whether they had some imperfect ideas on the subject which some persons call sanitary science, it is impossible to tell. The order was that no one was to be buried within the minster "nisi magnæ et honestæ personæ et quæ bene meritæ fuerint erga ecclesiam memoratam." These Ripon memorials are about the last place in which it would have occurred to us to look for anything relating to sports and pastimes, yet here we find the name of a game which is new to us. The editor states in a note that he knows nothing about it beyond what the text discloses. In 1312 a certain chaplain of Ripon, who seems not to have been leading a regular life, was charged with having invented a pestiferous game called *Dyngethryftes*, which had become very seductive to his neighbours. To "ding" in the Northern dialects means to drive down or to throw with violence. So this new game, so long forgotten, probably had some relation to quoits or pitching the bar.

Very few of the documents of which these volumes are composed are in English. There is, however, a curious petition, dated 1519, of a certain Robert Tennant who claimed sanctuary. He seems to have been some sort of under-steward to the Earl of Northumberland, and was, or professed to be, in fear of his life, or of imprisonment, by reason of alleged errors in his accounts. Mr. Fowler has printed all the known versions of the rhymed charter of Athelstan to the Church of Ripon. So much nonsense has been written about these verses that it is well to have them together in all their forms. So far from being of the time of Athelstan, every one who knows the earlier forms of English will be certain that they are, in their present forms, not earlier than the very end of the thirteenth century. We ourselves believe them to be somewhat later.

EDWARD PEACOCK.

NEW NOVELS.

- The Treasure of Thorburns.* By Frederick Boyle. In 3 vols. (Hurst & Blackett.)
- The Troubles of an Heiress.* By Cecil Lucas. In 3 vols. (White.)
- The Story of a Kiss.* By the author of "My Insect Queen." In 3 vols. (Bentley.)
- His Own Enemy.* By J. Bloundelle-Burton. In 2 vols. (Sonnenschein.)
- The Danvers Jewels.* (Bentley.)
- Sealed Lips.* By F. du Boisgobey. (Vizetelly.)

Ben D'Ymion, Muddlemarsh, and other Novelettes. By H. F. Lester. (Sonnen-schein.)

INSPIRITY is not a characteristic of Mr. Boyle's style, and *The Treasure of Thorburns* forms no exception to his now rather lengthy list of spirited and entertaining novels. There may be some who will confess to a feeling of disappointment at the nature of the treasure, after being kept on the tip-toe of expectation through three whole volumes; but this is a matter of detail not affecting the merit of the story as a whole. A few of the scenes are cast in the Diamond Fields—a region well-known to the author, and one in which he is perfectly at home. No one can delineate the adventurous life of the miners better than Mr. Boyle, and his pages reciting gallant deeds are always thoroughly enjoyable. These are not the staple of the present work, however, which is chiefly noticeable for its sketches of character. The heroine, Hilda Esking, is a bright, beautiful, and brave English girl, who finds a worthy mate in the stalwart and courageous Eldred Thorburn, whose soul had never known the shadow of fear. Hilda's father is a very rich man, and a perfect type of the fusty old antiquary. The description of his various storehouses of ancient relics and parchments, &c., is very racy. He has long had his eye upon the treasure of Thorburns, the exact whereabouts being only known to himself. Embarrassments had overtaken the proprietor of Thorburns, and Esking had advanced him so much money that he was completely in his power. When the former died, the place was to pass into Esking's possession if he were not paid off within a certain number of days. The old antiquary was terribly chagrined when, just before the expiration of the allotted time, the money mysteriously arrived from South Africa, and was speedily followed by the heir, Eldred Thorburn. By strange means, however, Esking—who is a perfect fanatic on the subject of the treasure—seizes upon it in the dead of night. The reader will follow with interest the various stages of the narrative in which all this is unfolded, until he comes to the adjustment of every difficulty by the marriage of Hilda and Eldred. The visitor at the seaside would do well to send to Mudie's for Mr. Boyle's last novel, for it is capital reading.

The first volume of *The Troubles of an Heiress* is, in one respect, at least, like Pharaoh's chariot wheels, which we are told "drove heavily." After the opening pages, we feel something like the unimpressionable traveller in Scotland, who wanted to know "when the scenery was going to begin." We are looking for the troubles, but they do not seriously commence until midway into the second volume. However, Frances Kenyon is tolerably well persecuted—when the troubles do begin—by two wretched old maids, her guardians, who are both cruel and hypocritical, while their brother, a very vulgar baronet, and one of the trustees of Frances's large fortune, makes ducks and drakes of her money. In the end, having the prison cell in view, Sir Alexander Fraser endeavours to shoot himself; but he is saved by the girl he has injured, and she and her lover, George Carmichael, consent not to put the law in

operation against him. In one portion of the work we are introduced to a bevy of clever girls, who are Admirable Crichtons in the number of subjects they essay; and there are some amusing sketches of scientific characters. The scientists, of course, are very severe upon each other's shortcomings, and it is really painful to read of one *savant* who has

"never heard of Owjammikow's paper on the limits of the vaso-motor centre in the rabbit, and does not seem to know of Lister's work on all parts of the spinal cord of the frog having a vaso-motor influence. What is even more extraordinary, he never mentions any of the newer researches tending to show that strychnia acts as a depressor."

Our author skips lightly from science to music, from music to social movements, and from social movements to theology. The name of "Cecil Lucas" is new to us; from internal evidence it apparently belongs to one of the fair sex. If this novel be her first, it evinces considerable promise; for, notwithstanding its defects, there are many excellent points about it, and sufficient ability to warrant the author's being heard from again.

The heroine of *The Story of a Kiss* reminds us somewhat of Miss Rhoda Broughton's naughty young ladies. Without being quite so naughty, perhaps, she has the same partiality for climbing trees, and for behaving generally in a very unconventional manner. Genevra Farquhar is kissed under very extraordinary circumstances by a young gentleman she has met for the first time. It is true that she has been the victim of an accident, and Keith Moray, the osculatory offender, believes she is dying; but when she recovers, unconventional as she is, she waxes very wrath. Nevertheless, a good deal follows from that first kiss; and it is the purpose of the novel to trace the relations of the two persons thus curiously thrown together, until the acquaintance culminates in marriage. As in the case of the story last noticed, there is a vulgar baronet to persecute the heroine with his attentions; but all ends happily at last, though Miss Farquhar nearly kills her true lover accidentally with a revolver. Our chief complaint is that it takes 930 pages to work out the results of a kiss. Half that number would have been ample for what story there is to tell. But, in saying this, we would also candidly acknowledge that the author's style is pleasant enough. In presenting us with "more cloth than dinner"—to use a well-known Northern phrase—she errs most against herself.

Our judges and magistrates affirm that the passion for betting on horses is sapping the foundations of commercial morality; but, before the mania reached these classes, it had wrought sad havoc among the "upper ten." The curse of betting, with all its attendant miseries, is once more ruthlessly exposed in *His Own Enemy*, which is professedly the story of a man of the world. Frank Carless, of Carless Manor, is the last survivor of an old county family. He leads a fast life in London; and his figure is a very familiar one at the Royal Comet Theatre, the home of burlesque, and a place calculated to shock the sensibilities of the Bishop of London. The Levity Bar, another London institution which will easily be recognised, is also one of Carless's haunts. He is a very handsome

fellow, with a face more common among Italians and Spaniards than Englishmen, and "eyes of a deep liquid brilliancy that equalled the eyes seen in portraits painted by Da Vinci and Murillo." He bears away from the Comet Theatre and a host of admirers Miss Montadore, a fascinating dancer, and privately marries her. The marriage is kept secret, however, for various reasons, one being that Carless is supposed to be betrothed to the rector's daughter in Southshire. He goes upon the turf, and plunges heavily, ultimately wrecking the paternal estate; and he finally sells the family portraits and paintings by the Joshua Reynolds, Rubens, Gerard Douw, Van Eyck, Wouvermans, &c. With the proceeds he loses all. The end—a sadly too frequent one—comes at last: driven to despair, and having no hope of life, he commits suicide under extraordinary circumstances. The literary merit of this work is only moderate; but the story of folly and infatuation is well told, and it will not have been written in vain if it serve to point a very old moral.

One of the most ingenious of crimes is detailed in *The Danvers Jewels*, and the secret is well kept until the end; then it is brought home in a manner that will much surprise the reader. The anonymous writer goes to the Scriptures for his motto—"As the Lord liveth, I will run after him, and take somewhat of him." The chase is from India to England, and the prize is such diamonds and jewels as are unparalleled probably by any English collection. Who it is that is run after, together with the identity of the runner, is a study of really considerable interest.

Messrs. Vizetelly have added to their series of "Boulevard Novels" Du Boisgobey's *Sealed Lips*. It is not quite so thrilling as some of this writer's stories, but it affords a vivid picture of French morals and manners, and the interest never flags from the opening to the close.

Mr. Lester's parodies of contemporary novelists are clever in their way; but the thought arises, was it worth all the trouble to elaborate them? They are carefully done, even to very slight terms of expression, but we doubt whether the public much cares for these laboriously evolved *joux d'esprit*. They like something sharp, short, and decisive, which gives a plainly recognisable tincture or burlesque of a subject or writer. The best of Mr. Lester's parodies are those on the styles of Lord Beaconsfield and Mr. Henry James; but all are amusing, and will be thoroughly enjoyed by readers familiar with the works of the several authors parodied.

G. BARNETT SMITH.

RECENT LITERATURE.

Ireland in the Days of Dean Swift. By J. Bowles Daly. (Chapman & Hall.) This is seasonable reprint of the Irish tracts written by Swift between the years 1720 and 1734. *Drapier's Letters* have enjoyed so much celebrity that they have cast into the shade other writings by the same author which are less disfigured by exaggeration and even more witty. *A Proposal for the Universal Use of Irish Manufactures* (1720) is especially worth

reading. In this pamphlet the Dean would "expostulate a little with our country landlords; who by immeasurable screwing and racking their tenants all over the kingdom have already reduced the miserable people to a worse condition than the peasants in France, or the vassals in Germany and Poland" (p. 237). In his *Two Letters relative to Ireland*, he speaks of "the exactions of landlords" as "a grievance of above twenty years' standing." (p. 202). In *A Modest Proposal*, in which he proposes that infants in Ireland should be used for food, he sets down the number of those who are able to maintain their own children at thirty thousand couples—"although I apprehend there cannot be so many under the present distresses of the kingdom." This was in 1729. Swift has often been reproached for not writing a line against the grievous disabilities under which the Roman Catholics then suffered, and Dr. Daly entirely fails to meet this charge. The fact is, as all the world knows (except, apparently, his present commentator) the Dean of St. Patrick was a zealous Churchman. He was a man of genius, endowed with many noble qualities, and a genuine patriot; but tolerant he was not. There is, however, one passage at least in his writings which shows that he could conceive of the Catholic Church being the established Church of Ireland, but no passage that shows the most glimmering conception of the modern idea of a Free Church in a Free State. The passage referred to occurs in *Two Letters, &c.*, where he speaks of "the national religion, whatever kind may then happen to be established" (p. 213). In the same pamphlet there is one of Swift's many diatribes against wives.

"Is it not the highest indignity to human nature that men should be such poltroons as to suffer the kingdom to be undone by the vanity, &c., of their wives, who seem to be a kind of animal suffered for our sins to be sent into the world for the destruction of families, &c., who, by long practice can reconcile the most pernicious foreign drugs [the Dean refers to tea] to their health and pleasure, provided they are but expensive, as starlings grow fat with henbane" (p. 205).

But we must refrain from further quotations. We regret we cannot praise the manner in which Dr. Daly has done his work. The introduction (saving its very lame conclusion) is pertinent and sensible, but the short notes which precede some of the pamphlets are very inadequate. *The Legion Club* is greatly in need of notes. The reader, not specially conversant with Irish history, requires to be told who was Waller and who was Morgan. A great deal of information could be given about the Act of William III. prohibiting the exportation of woollens manufactured in Ireland (p. 217), but Dr. Daly says nothing. It was mainly to please the members for Bristol and Tiverton that this Act was passed; and the Dean's prophecy of the fate that would overtake those envious of Ireland's prosperity has been to some extent realised. If we cannot praise Dr. Daly as a commentator, we can at least thank him for placing before us, in a handy volume, a few of the wittiest writings of Ireland's wittiest son.

Romance of the Wool-Trade. By James Bonwick. (Griffith, Farran, & Co.) Mr. Bonwick has written much and read more. His present volume contains a prodigious mass of information. There is hardly an author who alludes to sheep or the art of weaving—from Homer, Herodotus, Columella, and Varro to the most recent writers—who has not been brought into requisition and copiously quoted from. The *Wool-Trade* does not suggest romantic ideas. The poets, indeed, have striven to keep up the romance attending the care of *nibbling flocks*; but even in "As You Like It" the details of a shepherd's work are prosaic. Mr. Bonwick

has to travel back to Jason and the golden fleece to get a real romance. He admits that in Australia the death-blow has been dealt to the romance of a shepherd's life by the practice of wire-fencing the runs; and improved means of communication have destroyed what he terms "an interesting romance of the past" in Yorkshire—the transporting of woollen goods by means of pack-horses along narrow and uneven lanes. Romantic as he is, Mr. Bonwick is no opponent of improvements, although he is inclined to think that the manufacturing hands in Yorkshire are not entirely gainers by the changes which have led to better wages.

"Workers," he writes, "though so poorly paid, lived in comfortable homes, plainly, but thoroughly, well furnished, especially with a tall standing-up clock, and never suffered from lack of wholesome food, or of stout, though homely, garments. They had their festivals and amusements, enjoyed their cakes and ale, but were seldom absent from their church or chapel. In modern days, with wages so advanced, when food is both varied and dainty, when clothing is of expensive material and of fashion-make, with educational influences so convenient and abundant, mill-hands are scarcely richer, and not so independent as their ancestors, while they are the quicker thrown into the depths of poverty, and suffer more acutely by the fall when trade slackens."

Introduction to the Study of Dante. By Vincenzo Botta. (John Stark.) This is a republication of Signor Botta's contribution to the sixth centenary of Dante's birth (1865), and will be cordially welcomed by those who want a guide to the great poet's writings. We are told that the book is

"dedicated to those students who, without entering into any profound and extensive investigation of the various codices, commentaries, and writings on the subject, wish only to obtain a sufficient knowledge to appreciate in some degree the first and greatest literary monument of modern times."

This modest purpose the book seems well qualified to fulfil. We have tested it in various places; and, without binding ourselves absolutely to all the author's opinions and interpretations, we believe that this introduction will be of considerable service to the ever increasing number of Dante students.

Byron restudied in his Dramas. By William Gerard. (White.) The author of this work has the advantage of a new standpoint from which to contemplate a well-worn subject. The place of Byron among English or world-poets is a problem often discussed, but its solution will necessarily depend upon the idiosyncrasies or temperaments of those who pronounce judgment upon it. Mr. Gerard believes that a truer and higher view of the poet's work is to be obtained by a careful study of his dramas, and a comparison of those dramas with those of the greatest masters of dramatic poetry, whether ancient or modern. On this theme he expatiates with an immense amount of enthusiasm, as well as with a creditable display of poetical feeling and dramatic insight. His conclusions, on the whole, seem to us open to question; and his style, besides being naturally involved and over-laboured, is rendered needlessly obscure by redundancy of phrasing and an embarrassing profusion of rhetorical ornamentation. This, e.g., is Mr. Gerard's comparison of Byron with Victor Hugo (p. 208):

"For whereas the self-stricken Byron, continually drawn out of and beyond himself by the constraining conception of a wider human ideal, and advancing with ever clearer spiritual vision, touches and grounds ever and anon on Olympian facts, Victor Hugo, always with some beclouded intimation of those facts, and always shifting, like an *ignis fatuus*, about and athwart them with continual glare and titanic movement and reverberation of verse, never really grounds on them, but

dominating all to a colossal egotism scantily relieved by enfranchising humour, does but render us a blurred impression of the universe increasingly bewildered and brilliantly confused."

Pilocereus Senilis, and other Papers. By Walter Moxon. (Sampson Low.) This collection, which is "dedicated to the students of Guy's Hospital in memory of one of their most earnest and devoted teachers," merits the attention of the general reader. Though addressed, in the first instance, to hospital students, the papers possess a more than common share of philosophical and literary, as well as of medical, interest. The value of their matter is enhanced by their style, which is generally pithy and quaint, and occasionally irresistibly humorous.

Studies in Social Life. By George C. Lorimer. (Sampson Low.) This book professes to be a review of the principles, practices, and problems of society. No one can therefore reasonably object to its being discursive. A fairer objection is that its so-called author is not the author at all of a large proportion of its pages. Book writing is being reduced to an art by our American cousins. Scissors and paste are the symbols of this new literature. Take chapter v. for instance, and cut out of it all the extracts from newspapers, and how much is left? This chapter, which deals with "The Vices of Society," is a fair sample of the author's manner. It is stuffed with most interesting quotations, and breathes a healthy tone, but is marred by stilted language and want of continuity. This is the fault of books that are the mere nosegays of other writers' thoughts and sentiments. The quotations are pitchforked in regardless of argument and sequence. We lately noticed Dr. Knighton's *Struggles for Life*. After reading the present work we fear that we may have been too severe on Dr. Knighton, for all the faults of his book are exaggerated in the present. Still we can recommend Dr. Lorimer's "Studies" as an instructive and (with judicious skipping) an interesting book.

Social Arrows. By Lord Brabazon. Second Edition. (Longmans.) We are glad to welcome a second and enlarged edition of the Earl of Meath's well-known book. His arrows continue to possess the primary virtue of such weapons when well directed—i.e., they hit the mark. All his readers will wish him success in his arduous contest with the many inequalities and imperfections of our social system. Perhaps not the least phenomenal among those imperfections is the meagre support schemes of active philanthropy receive from members of his own order.

For Further Consideration. By Edward Butler. (Elliot Stock.) The author of *For Good Consideration* has in this volume presented us with another work, conceived and written on nearly similar lines. That many of his thoughts and fancies are worthy of further consideration we should be far from denying. But, as a whole, the book is so unequal both in style and matter that many of its readers would probably be inclined to take "further" in the sense of indefinite postponement.

Œuvres Diverses. Par Eugène Bodichon. (Paris: Leroux.) This interesting little volume will serve as a pleasant memorial of a veritable pioneer of civilisation. For nearly forty years "l'honnête Bodichon" devoted his indefatigable energies to the cause of humanity in Algeria. He gave his medical services gratuitously to all comers; and from the beginning of his residence in the colony he pressed upon the French Government various theories, all of which have since been acted upon. In particular he advocated the substitution of a civil for a military régime, tribal and not individual responsibility for insurrections, and, most strenuously of all, the "reboise-

ment" of the country. The part played by Bodichon in introducing the *Eucalyptus globulus* into Algeria would alone have entitled him to the gratitude not only of his own countrymen but also of all colonising peoples. The greater part of these *Ceuvres Diverses* consists of thoughts on morality, religions, aesthetics, and mythology—thoughts which although disconnected, and mostly of questionable originality, are yet on the whole instructive. An analysis of the character of Bonaparte "au point de vue de la physiologie et du positivisme" is really valuable. It appeared some years ago in *Temple Bar*, and is said to have caused a wholesome modification in Carlyle's opinion of the revolutionary hero. For the rest, some speculation of a general nature on the progress of the future leads Dr. Bodichon to indicate the special parts which, according to his views, England, Germany, and France respectively are called upon to play.

NOTES AND NEWS.

MRS. ROSS is about to publish the correspondence of her mother, grandmother, and great grandmother—Lady Duff Gordon, Mrs. Sarah Austin, and Mrs. John Taylor. Anyone in possession of letters from either of these ladies is requested to send them to the care of Mr. John Murray, Albemarle Street, London.

MR. ANDREW LANG has undertaken to edit for the Clarendon Press the *Contes de ma Mère l'Oye* of Charles Perrault (1697), the literary source of nearly all the most familiar fairy tales of Europe.

MISS A. MARY F. ROBINSON, author of a "Life of Margaret of Navarre," has made a selection of the best tales in the "Heptameron" of that queen, which she is able to dedicate to ladies and antiquaries. It will be published by Mr. George Redway, under the title of *The Fortunate Lovers*.

MESSRS. W. H. ALLEN & Co. have secured the right of translating Prince Napoleon's new work, entitled *Napoléon et ses Détracteurs*, which will be published in Paris in September.

The next volume in the series of "Great Writers," published by Mr. Walter Scott, will be *Keats*, by Mr. W. M. Rossetti.

MRS. BOGER'S *Myths, Scenes, and Worthies of Somerset* will be issued shortly by Mr. George Redway. The work, which extends to nearly 700 pages, treats of such diverse personalities as Bladud and Beau Nash, the Fair Rosamond, and Mrs. Hannah More.

MR. REDWAY will also publish in a few weeks *The Life, Times, and Writings of Thomas Cranmer*, the first Reforming Archbishop of Canterbury. The author is Mr. C. H. Collette.

The next volume of Mr. Elliot Stock's "Popular County Histories" will be the *History of Warwickshire*, by Mr. Samuel Timmins.

MESSRS. T. & T. CLARK, of Edinburgh, announce for publication early this month a translation of Prof. Dorner's posthumous work, *A System of Christian Ethics*, edited by his son, Dr. A. Dorner. The translation has been executed by Prof. C. M. Mead (late of Andover) and the Rev. R. T. Cunningham.

MESSRS. WHITTAKER & Co. will publish next week *John Bull's Army*, from a *French Point of View*, by Capt. H. France.

MR. F. A. BLAYDES, the editor of the *Visitations of Bedfordshire*, proposes to print by subscription several thousand extracts from the bishop's transcripts, and from parish registers of the archdeaconry of Bedford, relating to the principal families in the county. Mr. Blaydes' address is—Shenstone Lodge, Bedford.

MR. J. J. CARTWRIGHT has been appointed secretary of the Public Record Office, in the place of Mr. John Edwards, resigned.

THE Rev. Dr. Atkinson has nearly finished his edition of the Cartulary of Furness Abbey. The text and introduction are done, and the index nearly complete. He has also revised fifteen sheets out of seventeen of the new part of his "Borough Records of the North Riding of Yorkshire" from the archives at Northallerton. He will next take up his long-suspended "Charters of Rievaulx Abbey," and then probably get the second edition of his *Cleveland Glossary* to press for the English Dialect Society. His collection of North-Riding folklore will, it is hoped, be put into shape by his daughter, Miss Sybil Atkinson, and ultimately printed. Dr. Atkinson is still hale, and a hard worker, at seventy-four.

MR. R. SAVAGE, the librarian of the Shakspeare Museum, has made good way with his copy of the Stratford parish registers. He continues printing his extracts from the neighbouring parish registers in the *Stratford Herald*. The names of Sly, Hacket, &c., occur in them. Mr. Wadley has found "Walter, son of John Flewallin," baptized at Crowle in 1558; and at Great Hampton, near Evesham, John, son of Nicolas Furnyfall, born August 16, 1584, married Anne Thorn, June 24, 1613.

MR. BERTRAM DOBELL, second-hand bookseller and agent for the sale of the Shelley Society's publications—who was himself the editor of the facsimile reprint of *Alastor*—has removed his shop from Haverstock Hill to one of the new buildings in Charing Cross Road.

MESSRS. MACMILLAN have lately introduced what is, so far as we know, a novel method of indicating that certain books they publish are not new, but only new editions. The title-page is altogether silent on the matter, which is in itself rather an embarrassing circumstance, though, of course, the date is not missing. But on the verso of the title-page, where one would expect to find nothing but the imprint, the curious may discover a legend that is sometimes of no little bibliographical interest. For example, concerning Messrs. Butcher and Lang's prose translation of the *Odyssey*—concerning which we cannot refrain from remarking (from experience) that it forms an incomparable holiday present for either boy or girl—we learn that it first appeared in March, 1879; that a revised edition was called for in November of the same year; that it was reprinted four times more before 1886; and that the present issue costs only 4s. 6d. Nevertheless, we confess to a feeling of regret that the essential information should not be conveyed, in the old-fashioned manner, on the first page to which everybody turns.

ORIGINAL VERSE.

"QUEEN'S BOWER"—NEW FOREST.

Woods, ye are England's voices: Chaucer wove
A woodland measure, Spenser's heavenly maid
Moved thro' the forest, Shakspeare's sun and shade
Of soul was wood-born, Milton to the grove
Turned his deep diapason, Shelley's love
And Keats' impassioned utterance betrayed
The wood's mellifluous power, and down the
glade
The trees did Wordsworth's saddened song reprove.
But never till I saw these beach trees stand
In their bewildering leafiness, and heard
The laughing birds, and saw the startled fawn
Leap through the ferns head-high upon the
lawn,
Knew I what heart of song to bless the land
These deep suggestive wildernesses stirred.

H. D. RAWNSLEY.

OBITUARY.

Two clergymen of repute in the literary world have been taken from us recently. The Rev. Alexander Napier, vicar of Holkham and rector of Egmore with Waterden, both in Norfolk, and both in the gift of the Earl of Leicester, died at Holkham Vicarage on August 24, aged 73. He took his degree of B.A. at Trinity College, Cambridge, in 1838, and had held the incumbency of the above-mentioned living since 1847. Mr. Napier edited the theological works of Barrow and translated Neander's explanation of St. Paul's epistle to the Philippians and the general epistle of St. James, and also the study of Michaelis on the Holkham text of Thucydides. But the work by which he was best known is his edition of Boswell's *Johnson*. It was an excellent piece of work, in which Boswell's immortal composition was not crushed by exclusive annotation; and, but for the still more admirable edition which has since been produced by the care of Dr. Birkbeck Hill, it would long have remained as the standard edition. The first impression appeared in costly form at the close of 1833; but the second edition, with some more letters from Boswell and an enlarged index, was published in six cheap volumes at the end of 1884. The concluding volume in both editions consisted of a collection of "Johnsoniana" selected with remarkable judgment by Robina Napier, his wife, and a lady previously and favourably known for other works in literature.

THE Rev. James Hildyard died at Ingoldsbay, near Grantham, on August 27, aged 78. He graduated at Christ's College, Cambridge, going out as B.A. in 1833, and for several years was fellow and tutor of his college. His university career was very distinguished. He was Bate scholar in 1831, chancellor's medallist in 1833, members' prizeman in 1832 and 1833, and three times did he win Sir William Browne's gold medals. In 1846 he accepted the college living of Ingoldsbay, worth about £650 a year; and in that calm retirement he had remained ever since. He was the author of many single sermons and tracts, and of a volume of sermons preached at Whitehall in 1843-4. Many years after he had withdrawn into Lincolnshire his name became celebrated in clerical circles by his "Ingoldsbay Letters" in reply to the bishops on the vexed question of the desirability of revising the Book of Common Prayer. Several series of these letters were published between 1858 and 1863 under the pseudonym of "Ingoldsbay"; but his name was given as their author on the fourth and enlarged edition issued in 1879.

CORRESPONDENCE.

THE EVANGELISTARIUM OF ST. MARGARET OF
SCOTLAND.

Frenchay Rectory, Bristol: Aug. 29, 1887.

There is little to add to the artistic and palæographical descriptions of this MS. given in the ACADEMY of August 6 and 20 by Mr. Madan and Prof. Westwood.

In the Passion lectures, and there only, small golden capitals commence each sentence, consisting of words spoken by our Lord himself. This may be an indication of the elaborate mode of the recitation of the Passion lectures usually marked by the three symbols † c. s. or a. m. b.

Names have been written, possibly by a later, but still by a very early hand, over the genealogy of St. Matthew, occupying the first two pages of text and nine lines of the third page.

The presence of a solitary Lombardic "a" in the centre of the word Abraham in golden letters, on the first page of the text, must imply that the scribe was familiar with that form of writing.

Allow me now to say something about the liturgical import of this MS. Its discovery adds one more to the very limited list of known extant pre-Reformation Scottish service-books, increasing their number, so far as my knowledge goes, from twelve to thirteen. None of these, except the Book of Deer, are connected with the ancient Celtic Church. None of them, except the Book of Deer and the Evangelistarium of St. Margaret, are earlier than the thirteenth century.

St. Margaret imported this MS. from England. It is Scottish as to its use, but it is not the work of a Scottish scribe or artist. The Anglo-Scottish queen was an enemy of the old Celtic Church, with its services, customs, and office-books. Her biographer, Aired, tells us how she abolished the older Liturgy, and introduced the Roman or Anglo-Roman missal in its place:

"Fuere præterea in quibusdam Scotiae locis qui contra totius Ecclesiae morem missas celebrare solerent. Quod regina zelo Dei accensa ita destruxit et profligare studuit, ut postea in toto Scotorum regno qui tale aliquid attentaret nemo repertus sit."—Surius. Edit. Tom. iii. p. 379.

Therefore this MS. throws light upon what Queen Margaret introduced into Scotland, not upon what she found there.

We append a detailed list of its contents, assigning each gospel to its own day, of which assignment there is no sort of indication in the MS.:

[Proprium de Tempore.]

† Mat. xx. 17-19. Missa Votiva de Sancta Cruce.

All the above Gospels are common to the Roman and Sarum Missals, except those marked * which are found only in the Sarum; and that marked † which is found in neither the Roman nor the Sarum use. The only Evangelistarium in which I have found it is the eleventh-century Anglo-Saxon MS. once belonging to Bishop Leofric of Exeter, now in the Cambridge University Library (MS. i. 1, ii. 11), where it forms the opening part of the Gospel for the Vigil of the Nativity of St. John the Baptist, to which I have accordingly assigned it in the above list. Seven blank lines follow this Gospel in the Bodleian MS. which at first sight suggests that the scribe intended to continue the Gospel, but accidentally omitted to do so. Yet, as this phenomenon of unoccupied lines occurs at the bottom of each of the four pages facing the pictures of the evangelists some other explanation must be given of it.

From the smallness of the MS. it must be inferred that it was intended not for public church use, but for private devotion. Earlier and complete Evangelistaria are in existence. This is very incomplete. What principle guided the selection, especially the very limited selection of Saints Days? St. Andrew's Day always commences the Proprium Sanctorum, and that Apostle has also an early legendary connexion with Scotland. Festivals of the B.V.M. explain themselves. I can find nothing in the extant biographies of St. Margaret to account for the prominence given to St. John the Baptist.

I regret to have been unable to compare the contents of this MS. with the contents of the two small eleventh-century Evangelistaria mentioned by Prof. Westwood in the ACADEMY of August 20, belonging to Pembroke College, Cambridge, and Wadham College, Oxford. I visited both places last week for the purpose of doing so; but in neither case was the librarian in residence, or any other officer through whom access to the library could be obtained. It would be well if such colleges would follow the example of Jesus and University Colleges, Oxford, which have handed all their MSS. to the care of the Bodleian Library, where they can always be seen. F. E. WARREN.

THE NAME OF "OXFORD."

London: Aug. 27, 1887.

After I had read and laid aside Mr. Kerslake's letter in the ACADEMY of to-day, it suddenly occurred to me that certain words quoted and repeatedly alluded to by the writer were my own. Having made this discovery, I hasten to disclaim any intention of personal discourtesy to Mr. Kerslake, from whose ingenious writings on points of history and topography I have learned so many things that I should not think of treating their author otherwise than with respect. At the same time it is true that I would rather not argue with him on questions of philology, because when he writes on such questions he generally seems to me hopelessly to misunderstand the propositions

which he impugns, and most of his arguments appear to me not merely unsound but absolutely unmeaning, as, no doubt, mine do to him.

I had resolved not to write further on the question (which to me is no question) of the etymology of "Oxford." I will, however, refer to one or two points in Mr. Kerslake's letter—not with any hope of convincing Mr. Kerslake, but to satisfy any doubts that may be entertained by others with whom I have some common ground of agreement.

Mr. Kerslake seems to think that a reference to the names of Exeter (Exanocaster) and Cheltenham in some way supports his contention about "Oxford." Now, *Exan-* and *Celtan-* are the regular combining forms of the river names of which the nominative cases were *Exa* and *Celta*. If the name of Oxford had appeared in the earliest documents as *Oxanford*, it would have been clear that it either meant "ford of the ox" (a rather unlikely sense), or was derived from an otherwise unknown river-name *Oxa*, which must, in that case, have belonged either to the "Isis" or the Cherwell. But among the many instances in which Oxford is mentioned in the Chronicle the form *Oxanford* never occurs; it is always *Oxna-*, *Oxena-*, or some other recognised variant of the genitive plural. It is quite clear that the writers of all the earliest documents thought the name meant "ford of oxen." Is this such an unlikely origin for the name that we must needs affirm that these writers were mistaken? Will any one dispute the following propositions: (1) that there are such things as oxen-fords; (2) that there was a ford at Oxford, as is shown by the name itself; (3) that this ford may have been an oxen-ford; (4) that a hamlet that stood near to an oxen-ford would, according to many analogies, take its name from the ford, and that the name would be retained when the hamlet grew into a town? But it may be suggested that "possibly" the name in pre-historic English days may have been *Occanford* (ford of the Ock); and that when the "Isis" had ceased to be called *Occa*, the name of the town, being no longer intelligible, was corrupted into *Oxnaford* to give it a semblance of meaning. Granted the possibility; but, until some evidence is produced for them, possibilities of this sort are not worth entertaining. It is true that—not the "Isis," but one of its tributaries at a distance below Oxford—bears the name of Ock (*Occa*); and Mr. Kerslake asserts that tributary rivers often retain the names which once belonged to the main stream. It may be so; but what proof is there that it is so in this particular instance? None whatever. But what about *Oseney* and the name of *Ouse*? Well, the documentary form of *Ouse* is *Wusa* or *U'sa*; for *O'sa* as a variant there is, so far as I know, no authority. If *Oxnaford* is a corruption of *Wusanford* or *O'sanford* it cannot also be a corruption of *Occanford*; we must make our election. But those who assert that *Oxnaford* is a corruption at all are simply in the position of an advocate who should claim a verdict against the weight of the evidence, on the ground of the undeniable proposition that verdicts in accordance with the evidence are sometimes wrong after all.

Mr. Kerslake adduces the form "Escanocastre" as proving something which "some of your correspondents" have denied. He seems to mean the commonplace fact that *sc* and *x* sometimes interchange; but who are the deniers? I give them up to Mr. Kerslake, *pollice verso*.

In support of his contention that tributaries often retain the ancient name of the main stream, Mr. Kerslake refers to the case of the Yorkshire Ure. He says that it is "indisputable" that this was the ancient name of the river now called *Ouse*. Will he permit me, in my turn, to offer "a protest against infallibility"? From my point of view, it seems

indi-putable that the ancient Celtic name of York was Eburācon (Latinised as Eburacum), from which, according to the "laws" which Mr. Kerslake scorns, the later forms, Old Welsh *Ebrauc*, later Welsh *Evrauc* (sometimes written *Eurauc*), modern Welsh *Efrog*, regularly descend, and of which the Anglian *Eoferwic* is an easily explained corruption. It is likely, though not certain, that Eburacum is derived from a river-name Ebura, denoting either the Ouse or the Foss. The Gaulish Ebura has become Eure, and it is quite possible that Ure may be the modern English form of Ebura. But until documentary proof is found, this is only a plausible guess, not an "indisputable" fact.

Mr. Kerslake's argument for the antiquity of the name of Isis is that Leland uses it "without philological purpose." Now, anyone who is familiar with Leland knows that "philological purpose" is constantly present with him. Leland says explicitly that Isis is the Latin, Ise the British, and Ouse the English form of one and the same name. He is very fond of inventing Latin place-names out of his own head—his *Buccinum* for Buckingham is the first instance that occurs to me. Wherever he finds an "Ouse" he considers himself at liberty to give Ise and Isis as its equivalents. I think it could be shown how he arrived at this; but the matter is a little complicated, and I will not now enter into doubtful questions. As to the "Isis" of Oxford, Leland seems to have evolved an Ouse out of the names of Oxford and Osney, and then to have translated it according to his own rule into Isis, finding confirmation of the equivalence in the name of the Thames, which—presumably not "without philological purpose"—he spells as *Tamise*. I do not absolutely assert that "Isis" is an imaginary name, but it cannot be regarded as authentic until safer authority is found for it than Leland—whose "Itinerary" I heartily wish some competent scholar would re-edit. If the name of the Oxford river was ever really Isis, Wūsa, O'sa, or Occa, it is strange that no documentary record of any of these names exists. The early charters, so far as I have been able to discover, know the river only as "Temese."

Mr. Kerslake kindly says that he would admit the so-called phonological laws, "when duly sworn," to the witness-box. All right, if the tribunal be competent and impartial. But I fear that when Mr. Kerslake is on the bench there will be a committal for perjury whenever a witness throws doubt on the judge's foregone conclusion.

HENRY BRADLEY.

"INITIALS AND PSEUDONYMS."

Cambridge, Mass., U.S.A.: Aug. 17, 1887.

Because my *Initials and Pseudonyms* has the same initials and pseudonyms, among a great many others, as Mr. Thomas's book, it does not follow by any means that I have taken them from that book. There is not one of them that cannot be found elsewhere. All the original sources of information open to him have been open to me, and then the British Museum Catalogue gives many of them.

I propose to point out in a few cases how my entries differ from Mr. Thomas's and agree with this latter catalogue. Your readers can verify my statements if they will take the trouble to compare my book with his, and then with the British Museum Catalogue.

His first entry is "A. Matthew Arnold"; compare my entry with his and then with the British Museum Catalogue, and it will be found unlike his, and like the latter.

"A. Arthur Cleveland Coxe" is found in the British Museum Catalogue as well as in his book; what proof is there, then, that I took it from him and not from the British Museum Catalogue?

Look at "A Barrister." He has four under this pseudonym. I have twenty-nine. Many of mine are found in the British Museum Catalogue, and arranged in the same order. Why need I take his, which are in a different order, and one, at least, different from mine, which is like the British Museum Catalogue? I refer to the work by Barron Field, where he gives the title as "Hints to witnesses in a court of justice. 1815." I have the title like the British Museum Catalogue, viz.: "Hints to witnesses in courts of justice. L. 1815."

Mr. Thomas will not find in my book his absurd mistake of making "Joshua Coffin" the pseudonym for H. W. Longfellow, nor "A Haole" for "A Liholiho."

Besides the ones found in the British Museum Catalogue, Mr. Thomas's book is full of the commonest initials and pseudonyms that are met with anywhere in American and English catalogues. I am not aware that anywhere he gives credit to the sources from which he takes them.

I have made free use of the splendid works of Halkett and Laing, Boase and Courtney, and Quérard. Halkett and Laing has had a large sale in this country. All the libraries that are able to buy it do buy it, and my book will not affect the demand for it in the slightest degree. But there was need of a less expensive work for the smaller libraries, that should also be fuller than that could possibly be of American names and pseudonyms. My book will supply that want. I have taken "every little pseudonym or article under initials" from Boase and Courtney, because my book has gone, and is to go, into the largest libraries in Europe, and because it is just those little things that are the most difficult to find.

Mr. Thomas says that "the English part [of my work] is so full of errors, &c." An English critic says of it: "So far as I can judge, it is singularly free from errors." And after two years' use and a careful revision less than one hundred errors have been found in the first part; one hundred in 12,000. Mr. Frey must have spent much time and labour in collecting Voltaire's pseudonyms, as Quérard gives no collected list of them.

WILLIAM CUSHING.

THE CONTINUATION OF THE "SENTIMENTAL JOURNEY."

Sheffield: August 29, 1887.

Happening to refer to the ACADEMY for 1884, I noticed a letter from Mr. W. Roberts in the issue for August 30, of that year (No. 643), in which he states that copies of the editions containing the "Continuation" of the *Sentimental Journey* are not often to be met with. I purchased recently (for the modest sum of 4d.) a copy of the MDCCLXIX Edition, which contains the *Sentimental Journey*, in four volumes, the latter two being devoted to the "Continuation" by Eugenius, and the tome being completed by "A Political Romance." I find that the British Museum copy, which ends at p. 276, not only does not contain "A Political Romance," but also wants eight pages of the completion of the *Sentimental Journey*. This edition seems to have been overlooked by Lowndes. I may add that the "Continuation" of the *Sentimental Journey* is worthy of the reputation of the author of *Crazy Tales* for coarseness.

LEONARD C. SMITHERS.

SCIENCE.

The Origin of Mountain Ranges: considered experimentally, structurally, dynamically, and in relation to their Geological History. By T. Mellard Reade. (Taylor & Francis.)

In speculating on the causes which have given birth to mountain ranges, it should be borne

in mind that the phenomena sought to be explained are of so complex a character as to leave room for the play of a plurality of agencies. So far from any single hypothesis being accepted as an adequate explanation of the entire mechanism, it is fortunate for a given hypothesis if it be admitted to express even a partial truth. Such an admission will be readily made by most readers in favour of the views enunciated by Mr. Mellard Reade in this treatise. Whatever opposition may be offered to these views, it can hardly be said that the author has been either rash or impractical. His speculations represent years of patient thought, while they possess the rare advantage of being put forth by one who commands a practical knowledge of mechanics acquired during a long professional career as an engineer and architect. Even those geologists who may differ from his conclusions will not withhold a respectful hearing to Mr. Reade's arguments.

At the present day, most geologists who seek to explain the origin of mountain-chains base their explanation on the shrinkage of the earth's nucleus due to secular cooling. The interior of the earth slowly cools, and its cooling contracts; while the crust in seeking to accommodate itself to the diminished interior becomes thrown into puckers, resembling—to use a hackneyed phrase—the wrinkled skin of a withered apple. It is these puckers and wrinkles, worn down by subsequent denudation, that form the bolder physical features of the earth's surface.

With this "contraction hypothesis" geologists generally have expressed themselves fairly satisfied. Unable in most cases to discuss for themselves the subtle problems of terrestrial dynamics, they have accepted with becoming gratitude what others, more familiar with physical investigations, have placed before them as possible and probable. But here and there a geologist, with some mastery of physics and mathematics, has ventured to raise a dissentient voice. Such a voice was heard when the Rev. Osmond Fisher, some years ago, published his *Physics of the Earth's Crust*; such a voice is again heard in the pages of Mr. Mellard Reade's treatise.

According to Mr. Reade, the favourite hypothesis of contraction by loss of heat is utterly incompetent to account for the phenomena of mountain-building; indeed, he believes that "the cooling of our earth has not extended to such a depth that we need consider the internal contraction as a geological cause." His own view—the view which it is the prime object of this treatise to expound—regards mountain-ranges as due to sedimentation, accompanied by local changes of temperature in the earth's crust. First and foremost he holds it necessary for mountain-architecture that extensive deposits be laid down, these deposits being usually sediments, but occasionally volcanic materials. After a survey of the chief mountain-districts of the world, Mr. Reade is led to the conclusion that "no great range of mountains was ever ridged up except in areas of great previous sedimentation." So great is the thickness of these deposits that in most mountain areas it is probably to be reckoned in miles. Now one of the effects of loading any part of the earth's crust with sediment is to produce a rise of temperature—a rise felt partly in the

new deposit itself, and partly in that portion of the old crust upon which the deposit reposes. The thermal effects of sedimentation were pointed out by Babbage more than half a century ago, and Mr. Reade now follows up the subject by studying with care the consequences of such an elevation of temperature.

It is evident that the rise of temperature tends to produce expansion equally in all directions; but this tendency is resisted by the masses of rock bounding the area which is locally heated. It has been assumed that, if the horizontal extension be checked, the increase in the bulk of the strata must needs take place upwards. Mr. Reade, however, points out that this is not necessarily the case; for, instead of a direct upheaval, pressures would be set up in the mass, producing folding, contortion, crushing, and other mechanical effects incidental to mountain-making.

Under enormous pressures, the most rigid rocks will probably assume a condition of ductility similar to that which Tresca detected in his experiments on metals, and boldly called the "flow of solids." When a deep-seated plastic rock is forced to move by a tendency to dilate, it will naturally flow in the direction of least resistance, squeezing itself, for instance, along the axis of an anticline and thus contributing to the up-rearing of a mountain chain.

At any one period it is probable that the expansion of a rock, or its ridging-up, will not be great; but every recurring elevation of temperature will produce a fresh increase of bulk, tending to renewed movement, and by these successive creeps the mountain-chain may ultimately be raised. It is known to engineers that when an expanded body of low tensile strength is cooled, it does not pull itself back absolutely to its old position; and hence if it be repeatedly heated and cooled a permanent extension is produced. It thus comes about that the rocks having been puckered by expansion will remain more or less puckered after cooling. Mr. Reade draws an excellent illustration of his views from the distortion which is presented by a sheet of lead after exposure to long-continued vicissitudes of temperature. Thus the lead-lining of a sink that has been subjected for years to the alternate effects of hot and cold water becomes irregularly bulged up in ridges, closely mimicking the general form of a mountain chain.

Mr. Mellard Reade, as becomes an engineer, deals with his subject quantitatively, and herein lies one of the valuable elements of his work. Others had seen that thermal expansion must, somehow or other, be recognised as a factor in mountain-making; but to Mr. Reade is due the credit of having investigated, in a systematic manner, the peculiar effects arising from a tendency to cubic dilatation in a mass of rock subjected to constraint in the earth's interior. If he has not laid bare the whole mystery of mountain-building, he has at least done good service by forcibly calling attention to certain natural operations which the geologist in his speculations cannot afford to ignore, since they are assuredly competent to play a part, great or small, in the upheaval of a mountain-chain.

F. W. RUDLER.

CORRESPONDENCE.

THE ANTIQUITY OF THE AVESTA.

Stiegsdorf, Bavaria: Aug. 30, 1887.

I regret that I was unable to express a more favourable opinion of M. de Harlez's arguments than that stated in my notice of Geiger's *Home and Age of the Avesta*. After a careful perusal of the arguments on both sides in the essays mentioned, I was much impressed with the difference of tone adopted by the writers, and found the off-hand manner of M. de Harlez, in dealing with careful adverse arguments, anything but pleasing or convincing. Whether my impression was correct or not may now be left to the judgment of anyone who will take the trouble to read both essays attentively.

My own opinion regarding the age of the Avesta is that we have at present no certain data to go upon; but the probability is that Zarathushtra lived considerably before the time of Darius I. Of course, the greater part of the legendary history in the Avesta refers to earlier times, though handed down to us in comparatively later writings. What I protest against is the present tendency to slur over the facts formerly relied upon as indications of age. My statement of these facts had no special reference to M. de Harlez, but I wished to induce the rising generation of Avesta scholars to reconsider these indications of age carefully for themselves before finally rejecting them.

If M. de Harlez will refer to my former remarks, he will find that I have distinctly assumed the change in the meaning of *asura* not to have occurred in early times (the exact period seems to be a matter of opinion); also that I wrote of the contrast in the meanings of the words *daeva* and *deva*, which he must surely admit. No doubt some of the Vedic *devas* are still sacred beings in the Avesta; but, in that case, they are not called *daevas*, which might have been stated by him for the sake of clearness.

E. W. WEST.

THE PĀLI WORD "UBBILLĀVĪTA."*

Wood Green, N.; Aug. 11, 1887.

Under the article, "Ubbillāpita" (see *Jāt.* ii., p. 9), Childers, in his Pāli Dictionary, discusses very fully the exact meanings of *ubbillāvitatta*, *ubbillāvīta*, and *ubbillā*, without coming to any decision as to the etymology of these terms. Of these first he says, "I have little doubt that *ubbillāvitatta* is simply *ubbillāpita + tva*, 'state of being puffed up,' the *p* passing into *v*." He considers that the passive participle, *ubbillāpita*, pointed to a verb, *ubbillāpeti* or *ubbilleti*, representing an original *ud-velayati*, "to throw upwards," from a root *vil* or *pil*; and he quotes the adjective *ubbillāvī* from Buddhaghosa's commentary on the *Brahmajāla Sutta* (see *Sumangala*, p. 53, Pāli Text Society's edition, 1886), which presupposes a noun *ubbillā*, "elation," whence a denominative verb, *ubbilleti*, might be derived.

This *ubbillā*, according to Childers, would represent a possible (Sanskrit) *udvilya* or *udvella*. There is a Sanskrit *aubhilya*, "elation," in *Divyavadāna*, p. 82, l. 30, and a variant *audvilya* in *Saddharmapundarikā* (B. Lot. 308), which Childers rightly, we think, sets down as a coinage of the North Buddhists in their attempts to Sanskritise such Pāli words as they did not quite understand.

Dr. Ed. Mueller (*Pāli Gram.*, p. 12) derives *ubbillā* from "udvela in *ubbillābhāva* 'lengthiness,' *Saddhammopāyana*

* "Cetaso ubbillāvitattam" (*Milinda*, p. 183, l. 9-10), *Brahmajāla Sutta* (p. 9, ed. Grimblot), "Anandito sumano ubbillāvīto" (*Mil.*, p. 183, l. 11-12).

136." We doubt very much whether *ubbillā* has the sense of "long"; but, as the reference is wrong, we cannot verify the meaning assigned to *ubbillābhāva*. The form *ubbillā* seems to have led Childers off the track of the true source of the word *ubbillāpita*. Instead of starting with the noun *ubbillā*, I would begin with the verbal form *ubbillāvīta* and its variant *ubbillāpita*. Before going further, it must be noted that the Burmese texts occasionally furnish us with a reading less Prakritised than that of the Sinhalese versions, and, therefore, nearer to the Sanskrit than the Pāli corresponding term. The Burmese various reading in this case is *uppilāpita* for *uppilāvīta*, from *uppilāvīti*, the causal of *uppilāvati* (= *upplāvati*, "to float over or upon," "to bound," "to be buoyant," cf. Sanskrit *ut-plavate*).

Childers makes no mention of *plu* (sometimes *pilu* or *palu* in Pāli) with *ut*; but *uppilāvati* occurs with the sense of "to float" in *Milinda*, p. 80—"Khuddako pi pāsāno vinā nāvāya udake uppilaveyyāti"; "Kummo udake uppilavanto" (*ib.* p. 370). In *Jāt.* iii., p. 485, *upplavamāna* is employed in the commentary to explain *pariplavanta* (see *Sumangala*, p. 256, l. 8). We also find *uppilāvati* in the sense of "to be joyous, elated" (after drinking intoxicants).^{*} In an amusing story in the *Jātaka*, book ii., p. 97, we have an account of some asses that got intoxicated and elated through imbibing sour wine-lees, while the thorough-bred horses remained sober after drinking much stronger liquor:

"Sindhavakule jātasindhavā pana gandhapānam pītvā nissaddā sannisinnā na uppilavanti."

The Gāthā has

"Dhorayha-sīli ca kulamhi jāto na majjati aggarasam pītvāti."

Here *uppilavati* = *majjati*, "to be elated, buoyant"; the causal participle *uppilāvati* or *uppilāpita* would thus signify "elated," "buoyed up."

The form *uppilāpita* offers no difficulty, for *upplāpeti* (= *upplāvati*, *uppilāvati*) occurs in *Jāt.* iv., p. 162, in the sense of "to flow over, overwhelm":

"Uplāpayam [samuddam] dipam imam uāram" (cf. *upplāvita Mah.* 230).

We have, too, the form *opplāpeti* for *opplāvati* (= *ava + plu*), "to cause to sink," which is well established (see *Jāt.* i. pp. 212, 238; iii. 301; *Sutta Nipāta*, i. 4.7, p. 14; *Mahāv.* x. 4.5; *Sutta*, v. ii., p. 15). The passing of *v* into *p* is seen in Pāli *palāpa*, *lāpi* = Sanskrit *palāva*, *lāva*. The change from *uppilāvīta* to *ubbillāvīta* is probably due to the influence of the *v* (cf. *vanibbaka* = *vanipaka*). The doubling of the consonant *l*, though not common, receives support from such forms as *paribbasāna* = *pariva-sāna*, *um mā* = *umā*, *upakkilesa* = *upakkileṣa*.

In *Udāna* iv. 2, p. 37, we find the expression "manaso ubbillāpa" (*v.l.* *ubbillāva*, *uppilāva*), "elation of mind." Here we have a single *l* in all the MSS., which lends great support to the etymology, here proposed, of *ubbillāvīta*. On referring to the Com., consulted by the editor, a MS. of Burmese origin, though in Sinhalese writing, we find the following note:

"Manaso uppilāpā ti (sic) cetaso uppilāpā vitakkakāra cittassa uppilāpita-hetukāya manaso uppilāpetvā."

All this, however, leaves the noun *ubbillā* unexplained; but the form *ubbillāva* tends

* "Elevated" is a slang term applied to those persons whose depressed spirits are raised by the spirits they have imbibed.

NOTES ON ART AND ARCHAEOLOGY.

IN view of the recent controversy about the "Great Wall of China," Messrs. Colnaghi, of Pall Mall East, have arranged to have on view for a few days a very interesting drawing of the wall by Mr. William Simpson.

THE seventeenth autumn exhibition of pictures in the Walker Gallery at Liverpool, under the management of the corporation, will open on Monday next, September 5.

There is now on view at Exeter, in the Albert Memorial Museum, a fine art exhibition which—as we judge from the catalogue—is worthy of a visit for the sake of the large collection of engravings, most of them lent by Mr. Sidney T. Whiteford. The total number of prints exhibited is nearly 1,500, including a valuable series of proof impressions of mezzotint plates by the late Samuel Cousins, himself a native of Exeter, which have recently been presented to the museum.

AN Exhibition of Paintings in Water-colours was opened by the King and Queen of Saxony last Sunday week in the Great Hall of the Royal Polytechnicum at Dresden. After a short address by Prof. Kiessling, the King and Queen went over the collection, which comprises more than 2,000 pictures by German, Austrian, Italian, Belgian, French, Swedish, and Norwegian artists. It is much to be regretted that England, whose work in water-colour has set the fashion on the continent, is not represented. The exhibition, which is the first of its kind in Germany, attracts great numbers of visitors. It will remain open till September 25.

WE quote the following from the *Times* :

"The excavations proceeding in Piccadilly on the site of the new premises of the Junior Travellers' Club have brought to light many interesting objects. The houses which are built on that portion of the thoroughfare have for their foundations a series of well-formed arches at a depth of about sixteen feet from the surface. In piercing some of these great difficulty was experienced on account of the toughness of the substance of which they are constructed. This having been overcome a series of subterranean passages apparently connected was discovered. These were full of foul gases, and contained a vast quantity of rubbish, among which have been found numerous articles of interest. Not the least interesting is a red granite tomb dated 1509, some bronze armour, several fowling pieces, a richly embossed lamp, and a large quantity of vellum manuscripts. The vaults have been only partly explored, and further discoveries are anticipated."

THE STAGE.

SIDDONS AND RACHEL.

Mrs. Siddons. By Mrs. A. Kennard. (W. H. Allen.)

Rachel. By Mrs. A. Kennard. (W. H. Allen.)

THESE two little books—both of them contributions to the "Eminent Women" series—give in the handiest form, and with much tact and grace of treatment, all that the ordinary reader, if not quite all that the special student, needs to know about the two leading tragic actresses of England and France. With regard to both actresses the special student, has, as we have implied, something more to ask. He may ask, perhaps, for more of absolute theatrical criticism, for an analysis more elaborate of that which was accomplished in sight of the public, by the two famous artists. Yet, as regards Sarah Siddons—a tragedian removed from us now by the space of three generations—there may well have been difficulties almost insuperable in

supplying the desired detail. Rachel, of course, lived in a period of criticism more diffuse and systematic, Jules Janin filling, in her day, to some extent, the place since filled by Vitu and Sarcey; and, indeed, the published records of her performances, though scattered, are elaborate and abundant. Turning from the public achievement to the private character, little else remains to be told of Mrs. Siddons; but of Rachel there might have been produced many a scandalous chronicle. Wrong from one point of view, Mrs. Kennard, in this matter, was certainly right from another. We may hold that it is well that the whole record of the artist shall be unfolded—not at all in submission to an exacting curiosity, but in furtherance of the completeness of our study and comprehension. But then, again, there is the reader of the commonplace novel to be considered; the listener to the conventional play; the now proverbial "young lady in the dress circle," who has to be dealt with most tenderly. Hence the line Mrs. Kennard has taken; nor do we, on the whole, blame her for it. Of the "Dichtung" and the "Wahrheit," which meet in the life of the artist, she has taken, in some respects, chiefly the "Dichtung." "We have tried," she says herself, in her preface, "to extract the poetry and romance there is to be found in this life, rejecting what is base and unworthy." Nor must it, after all, be supposed that in Rachel's life—outside her art—all was unworthy or base. Always she was a dutiful daughter; always a devoted mother; sometimes a generous, and once or twice a constant, friend. But her life was a fever. And, in her maddened demand for excitement, it ran its course rapidly.

How different all this matter was with Mrs. Siddons! Rachel was a Jewess, born in an inn in Switzerland, and bred in France; a Bohemian who, after twenty-four hours of enforced respectability at Windsor, "avait besoin de s'encanailler"—thirsted to be a cad again. Mrs. Siddons was an Englishwoman; even the Irish blood, not quite absent from her veins, was without influence on her personal life—we are far from saying it did not prompt her to be an artist. And not only was she an Englishwoman; she was a Kemble besides, and rigid self-control was the very watchword of the Kembles, in art and life. We are told she had "the gift of tears." It may be. Certainly she roused in others pity and passion. But when one recognises this, one may remember, too, how the methods acceptable to one age may be ineffective in another. Mrs. Siddons's epoch was the epoch of the acceptability of Claude's and Richard Wilson's, and David's and Ingres's art. It was the age of firm contour in draughtsmanship, of composition in painting, of adroitness in manners. In mankind the age admired as ideal what Mr. Turveydrop, some time afterwards, only exaggerated or unwittingly burlesqued. The fire, and genius, and spontaneity of Rachel would speak to us to-day. Rachel gave to the most artificial of tragedy—to the tragedy which was "so Greek" to its admirers, so full of Louis XIV. to herself—that truth which Desclée, after her, bestowed upon an incident in the Avenue du Roi de Rome, or in the Rue Balzac—upon a passion of this morning.

Should we be equally sensible to the favourable effects of Mrs. Siddons? Should we—~~we~~ have passed not only through Romanticism, but into Naturalism, since her day—be impressed, genuinely or profoundly, by her *Lair* Macbeth, by her Hermione? That is a question which Mrs. Kennard's delightful little narrative does not permit us quite conclusively to answer.

As regards the outer life of the two women—Sir Joshua's "Tragic Muse" and the Phèdre whom even Sarah Bernhardt, who has so much in common with her, has not been able to surpass—it was, as may be expected, essentially different; and Mrs. Kennard's account is as careful, as accurate, and as interesting as it was possible to make it. Mrs. Kennard owes something, but cannot owe very much, to the life of Mrs. Siddons by Campbell, the inefficient friend of her later years, to whom she bequeathed her memoranda, letters, and diary. Boaden's "Life," of which Mr. Crabb Robinson spoke as "one of the most worthless books of biography in existence," cannot have helped Mrs. Kennard much more; but she acknowledges very honestly her obligations to Mr. Percy Fitzgerald, whose biography of the great actress, in his *Lives of the Kembles*, she considers to be the best yet done. About Rachel a whole literature has been written; yet much of it is hardly serviceable material. At least one biography is avowedly hostile. Arrière-Houssaye does not mean to be ill-natured, but will at all costs be amusing. Jules Janin—a man of words so much more than of thoughts—is hopelessly fluent. He betrays the essential worthlessness of the ready writer—the ready writer's superficial intelligence of the demands of his art. On the whole, perhaps, as Mrs. Kennard herself inclines to think, it is the letters of Rachel that are the truest guide. Letters to her parents, to her sister, to her friends—if not to her lovers—to her master, Samson, on the conditions and the problems of her work—letters of gratitude, letters of regret, letters making a small gift, though refusing a great loan—these things build up gradually, on a pretty sure foundation, the edifice of Rachel's character as it is fitting that we should see it. Rachel's life was in the Present. After excitement was to come, not rest, but *le néant*. She acted in bad health as in good, chiefly to satisfy one of the deepest needs of her nature, reckless what might follow. Mrs. Siddons, when youth and impulse had left her, dragged herself somewhat unwillingly from town to town, to repair the losses of her husband—the honest and somewhat incapable gentleman who sought a refuge for rheumatism at Bath—and she undertook yet another round of engagements in order that she might provide herself with a carriage on her retirement: "a carriage now become a necessity." As regards the society the two women cultivated and enjoyed, Mrs. Siddons liked the intellectual and "the great world," and liked to be of it, and visited, as the high artist is of course entitled to do, as the equal, and only as the equal, of the otherwise distinguished. But Rachel, in her loftiest social flights, was not so much an artist as a show. Exhibited to the mighty, and encouraged by them, and bound to behave herself in their presence—for the success of eccentricity had not then

BLACKIE & SON'S EDUCATIONAL LIST.

NINTH EDITION, REVISED.

DESCHANDEL'S NATURAL PHILOSOPHY: an Elementary Treatise.

Translated and Extended by J. D. EVERETT, D.C.L., F.R.S., Professor of Natural Philosophy in Queen's College, Belfast. Illustrated by 783 Wood Engravings and Three Coloured Plates. Ninth Edition, thoroughly Revised and Enlarged. Medium 8vo, cloth, 18s.

Also separately, in 4 Parts, limp cloth, 4s. 6d. each.

Part I.—Mechanics, Hydrostatics, &c.
Part II.—Heat.

Part III.—Electricity and Magnetism.
Part IV.—Sound and Light.

"Systematically arranged, clearly written, and admirably illustrated, it forms a model work for a class in experimental physics."—Saturday Review.

READING.

COMPREHENSIVE READERS. Fully Illustrated and bound in cloth.

Standard I., 7d. Standard IV., 1s. 3d.
" II., 8s. " V., 1s. 3d.
" III., 1s. " VI., 1s. 3d.
" Primer I., 2jd. Primer II., 3d. Full Primer, 4d.

GRADED READERS. Fully Illustrated and bound in cloth.

Standard I., 8s. Standard IV., 1s. 3d.
" II., 9d. " V., 1s. 3d.
" III., 1s. " VI., 1s. 3d.
" Primer I., 2jd. Primer II., 3d. Full Primer, 4d.

READINGS FROM STANDARD AUTHORS.

With Notes, &c. Bound in cloth.
ROBINSON CRUSOE, 1s. 3d. SIR WALTER SCOTT, 1s. 3d.
MARY QUEEN OF SCOTS, 1s. 3d. SPECTATOR, 1s. 3d.

POETICAL READER: Selections from Standard Authors. Cloth, 1s. 6d.

THE SHAKESPEARE READER: Extracts from Shakspeare, with Notes. Cloth, 1s.

THE BRITISH BIOGRAPHICAL READER: Sketches of Prominent Men by MACAULAY, ALISON, BROUGHAM, EMERSON, SCOTT, &c. Numerous Portraits. Cloth, 2s.

WRITING.

VERE FOSTER'S COPY-BOOKS, for Elementary Schools. Twenty-two Numbers, at 2d. each.

VERE FOSTER'S COPY-BOOKS, Palmerston Series. Adapted to the Civil Service Requirements. Eleven Numbers, at 3d. each.

VERE FOSTER'S COPY-BOOKS, Bold Writing Series. Seventeen Numbers, at 3d. each.

ARITHMETIC.

BLACKIE'S COMPLETE ARITHMETIC. Cloth, 1s.; or with Answers, 1s. 6d. The Answers separately, 6d.

A PRACTICAL ARITHMETIC on an Entirely New Method, for Schools and Candidates preparing for Examinations. By JOHN JACKSON. Second Edition. Cloth, 4s.

MENTAL ARITHMETIC: designed to give the power of ready solution. Cloth, 6d.

MATHEMATICS.

EUCLID'S ELEMENTS of GEOMETRY. Book I. With Notes, Examples, and Exercises. By A. E. LAYNG, M.A. Cloth, 1s.

MATHEMATICAL WRINKLES. For Matriculation and other Examinations. By Dr. W. T. KNIGHT. Cloth, 2s. 6d.

BLACKIE'S ELEMENTARY ALGEBRA. From Notation to Easy Quadratic Equations. With Answers. Cloth, 2s.

ALGEBRA: Up to and including Progressions and Scales of Notation. By J. O. KERR, M.A. Cloth, 2s. 6d.

ALGEBRAIC FACTORS. How to Find them and How to Use them. By Dr. W. T. KNIGHT. Cloth, 1s. 6d.

THE DIFFERENTIAL and INTEGRAL CALCULUS, An Introduction to. With Examples of Application to Mechanical Problems. By W. J. MILLAR, C.E. Cloth, 1s. 6d.

ELEMENTARY TRIGONOMETRY. By H. H. PINKERTON, B.A. Oxon. Cloth, 2s. 6d.

LATIN.

DR. BURNS' PRAXIS PRIMARIA: Progressive Exercises in Writing Latin. With Notes. Eighth Edition. Cloth, 2s.—KEY, 3s. 6d.

ELOCUTION.

SELECT READINGS and RECITATIONS. With Rules and Exercises on Pronunciation, Gesture, Tone, and Emphasis. By GEO. W. BAYNHAM, Teacher of Elocution in the Glasgow University. Cloth, 2s. 6d.

SCRIPTURE.

SCRIPTURE BIOGRAPHY and its TEACHINGS. For Bible Classes and Sunday School. By JOSEPH HASS-ELL, A.K.C. London. Author of "Common Things," &c. Cloth, 2s. 6d.

SCIENCE.

ELEMENTARY TEXT-BOOK OF PHYSICS. By Professor EVERETT. Many Woodcuts. Third Edition, Revised. Cloth, 3s. 6d.

OUTLINES OF NATURAL PHILOSOPHY, in Clear and Simple Language, for Beginners. By Professor EVERETT. Illustrated by 216 Woodcuts. Cloth, 4s.

COMMON THINGS and ELEMENTARY SCIENCE, in the form of Object Lessons. By JOSEPH HASSELL, A.K.C. Lond. Sixth Edition. Cloth, 3s. 6d.

GEOGRAPHY.

GEOGRAPHICAL READERS. By W. G. BAKER, B.A., Lecturer at Cheltenham Training College. Illustrated by Woodcuts, Maps, and Diagrams, and bound in cloth.

Standard I. Introductory, 7d.
" II. Definitions, 8s.
" III. England and Wales, 1s.
" IV. Scotland, Ireland and the Colonies, 1s. 6d.
" V. Europe, 1s. 6d.
" VI. Asia, Africa, and America, 2s.
" VII. The Ocean, Currents and Tides, Planetary System, &c. 1s. 6d.

MAP DRAWING COPIES. Adapted for School Exercise and the Government Examinations. Cloth, 1s. 3d.

A PRONOUNCING VOCABULARY of MODERN GEOGRAPHICAL NAMES. By GEO. G. CHISHOLM, M.A. Cloth, 1s. 6d.

HISTORY.

HISTORICAL READERS. By George GRILING. With numerous Woodcuts.

Standard III. From Earliest Times to End of the Plantagenet Period. Cloth, 1s.
" IV. Continuation to Latest Times. Cloth, 1s. 3d.
" V. Fuller History from Earliest Times to End of the Tudor Period. Cloth, 1s. 6d.
" VI. Continuation to Latest Times. Cloth, 1s. 6d.

A HISTORY of the BRITISH EMPIRE. With Illustrations, Genealogical Tables, Maps, and Plans. By EDGAR SANDERSON, M.A., late Schoolmaster of Clara College, Cambridge. Cloth, 2s. 6d.

OUTLINES of the WORLD'S HISTORY, Ancient, Medieval, and Modern. By EDGAR SANDERSON, M.A., Author of "A History of the British Empire," &c. With Woodcuts and Maps. Cloth, 6s. 6d.

GRAMMAR.

COMPLETE ENGLISH GRAMMAR and ANALYSIS. Cloth, 1s.

COMPENDIOUS ENGLISH GRAMMAR, with Exercises. For Intermediate Schools. Cloth, 1s. 6d.

THE ENGLISH LANGUAGE and LITERATURE: a Brief Outline of the History of, for Schools, Pupils, Teachers, and Students. Cloth, 9d.

ENGLISH COMPOSITION EXERCISES. Comprising Short Stories, Subjects and Hints for Essays, Rules and Models for Letters, &c. Cloth, 1s.

DRAWING.

POYNTER'S SOUTH KENSINGTON FRESHMAN DRAWING BOOKS.

Elementary Design, 2 books, 4d. each.
First Grade, Ornament, 6 books, 4d. each.
First Grade, Plants, 6 books, 4d. each.
Second Grade, 4 books, 1s. each.
Elementary Perspective, 4 books, 1s. each.

POYNTER'S DRAWING BOOKS for the STANDARDS.

Standards I. and II. 4 books, 2s. each.
Standard III. 4 books, 2s. each.
Standard IV. 3 books, 3s. each.
* * * Others in preparation.

DICTIONARIES.

A CONCISE DICTIONARY of the ENGLISH LANGUAGE. Literary, Scientific, Etymological, and Pronouncing. Based on the New Edition of Ogilvie's Imperial Dictionary. By CHARLES ANNANDALE, M.A., LL.D. Cloth, 10s. 6d.; half-morocco, 13s.

OGILVIE'S STUDENT'S ENGLISH DICTIONARY: Etymological, Pronouncing, and Explanatory. With about 350 Engravings on Wood. Roxburgh, 7s. 6d.; half-calf, 10s. 6d.

OGILVIE'S SMALLER DICTIONARY of the ENGLISH LANGUAGE. Abridged from the "Student's Dictionary." Cloth, 3s. 6d.; Roxburgh, 3s. 6d.

* * Fully Detailed Catalogue post-free on application.

LONDON: BLACKIE & SON, 49 AND 50, OLD BAILEY.

been established—she was really most at home with a few Bohemians, and with her kith and kin who lived on her. Mrs. Siddons cared for the stage much more than did Fanny Kemble. She had for it a respect which was wanting, it would seem, in Mr. Macready's feeling for it; yet, in a measure, she acted to live rather than lived to act. Rachel—with the capacity for unnamed odiousness, and supported in her private life by no fine example and no noble tradition—did yet, in the main, live for the practice of her art, though its practice can hardly have been furthered by her moral deterioration, and the disorder, the very chaos, of her later days.

FREDERICK WEDMORE.

MUSIC.

MUSICAL PUBLICATIONS.

Musical Art and Study. By H. C. BANISTER. (Bell.) This little book consists of three papers read before different musical societies by the author. In "Our Art and Our Profession" there are some good thoughts neatly expressed. The second paper deals with "Methods of Musical Study." "Study only the classical," says Mr. Banister. (The italics are his.) For, he adds, "it is the only music that can yield profit to the student; nay more, the only music that can be structurally studied." We are sorry to find a musician of Mr. Banister's learning and ability giving such advice. If he had said "Study first the classical" we should find no fault. A musician must study the past; but in some of the music of the present he will find the results of the past and the seeds of the future. And to deny that the music of Schumann, or of Wagner, can be structurally studied, is really extraordinary. The structure is different, and may possibly be inferior; but there it is, and a musician will prove oneself who ignores it. In the third paper, which so far as writing goes, is excellent, Mr. Banister again breaks out in praise of the classical. Classical and romantic are really shifting terms. Haydn, Mozart, and Beethoven in their day were romanticists, and hence the art of music progressed.

Music in the Land of Fogs. By Félix Rémo. (Kent.) This amusing little book, written by one belonging to the Land of Fogs, contains fact, fiction, and falsehood. The author has paid special attention to the weak points of musicians, amateur and professional, and of society in general; and, though many of his remarks are perfectly true, it must not be supposed that England is the only country in the world in which such things are to be found. It can, however, do no harm to see ourselves as others see us. We will not spoil the reader's enjoyment by quotations, excepting in one or two instances where the sharp and generally accurate writer has fallen into error. Handel was not decked with the title of Doctor of Music. It was offered to him at Oxford; but he refused it, saying:—"What the devil I throw my money away for that the blockhead wish." Dr. Stanford, and not Herr Goldschmidt, is conductor of the Bach Choir. Costa has not been replaced by three Germans—Manns, Richter, and Randegger—at Birmingham. There has been only one festival since Sir Michael Costa's death, and that was under the direction of Richter. "The Richter concerts," says our author, "play German music only." This looks like a wilful mistake. Lastly, we feel inclined to count as an error his statement that "England is not a musical nation."

TUDOR HALL LADIES' COLLEGE, FOREST HILL, S.E., LONDON.

Principals—Rev. Dr. and Mrs. TODD. Head Mistress—Miss M. TODD, Graduate in Honours, Cambridge University. Professors—Sealey, King's Coll.; Dr. Roggats, Rudolf Lowman, Louis Diehl, Signor Garcia, Professors Fontankr, Ferrero, Churton Collins, &c.

LITERATURE.

The Feeling for Nature in Scottish Poetry.
By John Veitch. In 2 vols. (Blackwood.)

PROF. VEITCH leads us through a charming country in these two volumes, prepares us before we start with a lecture on what we are to look for, and entertains us with much excellent discourse by the way. The lecture deserves attention first. The form of it never allows us to forget that Dr. Veitch, besides being a Professor of Logic, is a poet and an ardent worshipper of nature, especially of the nature of his own Southern Scottish hills and vales. But logical habit is also apparent in the lecture. In substance, it is a deductive theory of the several stages that man's interest in nature should pass through as he advances in civilisation; and it invites us to look for the verification of this deductive theory in the study of the poetic facts afterwards advanced.

According to the theory, if we rightly understand it—and it is only fair to Prof. Veitch to say that he shows himself fully aware of the difficulty of drawing strict lines of demarcation, and admits that nature-feelings different in source may be intermixed—the lowest form of nature-feeling is mere organic exhilaration and comfort, delight in sunshine, bright skies, fresh breezes, soft warm air, as immediate ministers of physical happiness. This is a stage of nature-worship within the reach of every creature that has a nervous organisation, healthy or unhealthy; and it would hardly be a paradox to maintain that the feeling is more intense in the unhealthy and uncomfortable than in their more fortunate and self-sufficing possessors of perfect health and comfort. The joy with which mediæval poets hail the return of spring and the copious enthusiasm of their celebration of its charms is often referred to their greater freshness of feeling, to their youthfulness as compared with the jaded singers of later days. It was due at least as much to the fact that they were less comfortably housed and clad, more exposed to the inclemencies of winter, and consequently more intensely relieved by the return of the sweet season of bird and bloom, and soft "attempre" air. Prof. Veitch's second stage may be called the Pastoral, when grassy uplands and meadows and running brooks commend themselves to the eye not by their intrinsic beauty, but simply as good well-watered pasture land, suggesting to the spectator a certain sense of the comfort that such possessions bring. The third stage may be called the Agricultural, when a similar sense of comfort is awakened by the spectacle of rich stretches of corn land, waving harvests, or labourers busy with plough or scythe.

These three stages of nature-interest are sufficiently well-marked, if not actually as "stages" or "epochs," in the development of nature-sentiment, definitely following one another, and definitely traceable in the history of poetry (which could hardly be maintained)—well marked, at least, as distinguishable sources of affectionate regard for outward things, the affection being utilitarian in origin, but not necessarily consciously so in exercise. Concerning Prof. Veitch's two highest stages, there is room for more difference of opinion, because they are not so distinctly marked, and because he includes in them a much greater diversity of interests. The fourth stage he describes as "free, pure nature-feeling," when the aspect and the objects of outward nature are loved for themselves, without any reference to their value as contributing to human sustenance and comfort. Theoretically this stage should not be reached, as a general national characteristic, till the severity of man's struggle with nature is abated, till he is confident of having his physical needs supplied, and has sufficient leisure from the daily warfare against want to be able to cast an untroubled eye on the landscape. And theory is so far verified that purely descriptive poetry, the expression in metrical language of purely picturesque studies, is a comparatively late experiment in literature. We may remark in parenthesis that it is a doubtfully successful experiment, the poet in this particular competing at a disadvantage with the painter, provided he confines himself, strictly and unreservedly, to the pure delight of the eye, which no poet, who knows the immense resources of his art, is likely to do. Still, the endeavour after purely sensuous effect in poetry undoubtedly increases and is more widely appreciated with the increase of civilisation and comfort. But if the question is when this "free, pure nature-feeling" begins, and to what extent it enters into early poetry, that is another affair. Prof. Veitch remarks truly that sympathy with the sterner side of nature is rare in early poetry; and he goes on to say that rugged and desolate scenery, and the fierce storms of winter seem to have impressed our early poets as being simply horrible and repulsive, and to have awakened in them no feeling that can be called æsthetic. But not to go beyond Scottish poetry, to which he confines himself for verification of his theory, we may admit the first proposition without feeling so certain about the second. For example, one of Prof. Veitch's earliest quotations is a description of the seasons by the author of *Syr Gawain and the Grene Knyght*—a poem referable to the fourteenth, or, at latest, the early fifteenth century. Here, undoubtedly, winter is described in such a way as to produce the shuddering shivering feeling which Prof. Veitch, here as in a previous work, declares to be the dominant note in mediæval Scotch references to the doleful season. The fury of a winter storm, the "snittering snaw sniping" the open country, the "warbling wind wapping" from the heights, driving the dales full of big drifts, is described with great spirit in alliterative verse; and a peasant is introduced lying in his bed, listening full well, and sleeping little, though he locks his lids. But we are not so certain that the poet's sympathy is more with the shuddering listener than

with the raging storm. And similarly with a passage quoted by Dr. Veitch from another poem of the same date, *The Avontyrs of Arthur*, where a hunting party is dispersed by a storm, and run to the rocks for shelter from "the sleet and the snow that snapped them so snell," we suspect that there was enough of the old Adam in the poet to sympathise with the "snapper" as much as with the snapped. And in so far as the poets of those days sympathised at heart with the energy of vast destructive forces, their feeling was as æsthetic, in the sense of disinterested free nature-feeling, as can be found in the most modern days. Prof. Veitch's theory is well thought out and carefully guarded, and we daresay he would not dissent from this; but, if the theory is to be taken strictly as a theory of evolution, and not merely of parallel sources, he has not in the statement of it given sufficient prominence to the fact that man is from the first so constituted as to take a delight in purely picturesque beauty, and in the stir and excitement of the wilder moods of nature. It is necessary only for the exercise of these faculties that he be relieved from the preoccupation of sordid cares; and the earliest poets may be presumed to have achieved this happy release. In which case they would pass at once into the fourth stage of nature-feeling, without necessarily travelling through the various stages of utilitarian sentiment. And this is what we find in the earliest descriptions of spring quoted by Prof. Veitch—the purest possible delight in the scenic beauties of the earth when winter is gone, not a mere rejoicing in the comfort of the change or in the prospect of prime mutton or an abundant harvest. The primitive poet, as much as his most artificial successor, could see a lamb frisking on hillside or meadow, and could admire the tender green of young corn, without any pleasing thrill of internal organic anticipation. Then, as regards the sterner side of nature, which the primitive poet used mainly for the illustration of the darker human passions, it is doubtful whether the modern delight in the silence and solitude of lonely glens and barren unpeopled wastes can fairly be classed as free, pure nature-feeling. Man brings to the enjoyment of such solitudes more than the open senses. He brings also the troubled heart, the consciousness of fret and worry and confinement within a narrow world of petty cares and checks. The relief that he experiences is not a more disinterested sentiment than the joy of the mediæval poet at the return of warmth and light after cold and darkness. Nor is this longing for the relief to be found in solitary places an entirely modern feeling. Achilles sought such relief when he paced the beach of the noisy sea; and the mourning maiden of the fifteenth century, whose lament Prof. Veitch quotes, was a nature-worshipper with similar intent when she walked

"among the holtis hair

Within the woodis wild."

Only in modern times hundreds of persons with griefs not quite so tragic have been educated into finding solace in the grandeurs of bleakness and desolation—a most excellent thing from the utilitarian point of view.

The fifth stage in Prof. Veitch's theory is reached when nature is no longer viewed as "a mere gallery of pictures, or a simple

panoramic display," but as the expression of personality akin to man's. The highest form of this interest in nature is found, of course, in Wordsworth; but Prof. Veitch has Wordsworth's own authority for treating the Greek personification of nature as analogous. Now everybody will agree that this way of looking at nature is higher, in so far as it is immeasurably more interesting, from an artistic point of view more effective, from every point of view, ethical and aesthetical, more profitable and satisfying, providing the moralist reads the right lessons out of nature. But if it is a question of evolution, of the gradual development of nature-feeling, we may well doubt the accuracy of treating the mythologic impersonation of outward objects and changes as representing the same stage of feeling with Wordsworth's conception of nature as

"a mighty sum
Of things for ever speaking."

Wordsworth's feeling towards nature was too complex to be summed up in any formula; but the breathless life that his imagination found even in the fixed lineaments of the outer world was but a part of his poetic creed, and, moreover, was different in kind both from immanent personification and from personification detached in a mythology. Personification, pure and simple, belongs to a stage as rudimentary as the barest utilitarian nature-sentiment, a stage common to children and savages and—there is every reason to believe—the lower animals. Prof. Veitch is unquestionably right, so far as Wordsworth is concerned, in describing his stage of feeling as a reaction against the conception of nature as "a mere gallery of pictures." But he is less happy in characterising it as "a pure symbolism," and in placing it in the same grade of development with Greek mythology, although the "Wanderer" in the fourth book of the *Excursion* gives some ground for so doing.

While stages were in formation, one would have liked to see a sixth constituted, in which the conflict between the utilitarian and the picturesque aspects of nature is reconciled by the energy of the imagination. This is the highest level of all, so high and of so rarified an atmosphere that even Wordsworth himself could not always sustain his flight in it. The most conspicuous example of his success in this reconciliation of sense at war with soul is seen in his sonnet on "Steamboats, Viaducts, and Railways"—a sonnet so much ignored and yet so typical of imagination's victory over the despotism of the senses and of vulgar associations that we may be excused for quoting it:

"Motions and means, on land and sea, at war
With old poetic feeling, not for this,
Shall ye, by poets even, be judged amiss!
Nor shall your presence, howso'er it mar
The loveliness of nature, prove a bar
To the mind's gaining that prophetic sense
Of future change, that point of vision whence
May be discovered what in soul ye are.
In spite of all that beauty may disown
In your harsh features, Nature doth embrace
Her lawful offspring in man's art; and Time,
Pleased with your triumphs o'er his brother
Space,
Accepts from your bold hand the proffered
crown
Of hope, and smiles on you with cheer sublime."

The poet's imagination, alas! was less robust, and succumbed ignominiously to the

"old poetic feeling" when he wrote his sonnet "On the Projected Kendal and Windermere Railway." His most devoted admirers must always regret this fall beneath the highest level of his doctrine of the beneficent supremacy of the imagination—a summit so high that exoteric disciples, who are really groveling in a lower stage, sometimes fail to see the poet where he stands, and fancy themselves to be really at a higher elevation.

We have dwelt at length that may seem disproportionate on the theory which Prof. Veitch's two volumes propose to illustrate from Scottish poetry. Readers may, if they please, enjoy the selections without troubling themselves about the theory, suggestive and interesting as it is. Prof. Veitch shows the most intimate converseance with Scottish poetry, and has produced a thoroughly representative anthology. One of the surprises of the collection is Alexander Hume's "Day Estivall"—a long descriptive poem of the sixteenth century. Prof. Veitch is, perhaps, a little more than just to James I. as a nature-poet, and certainly a little less than just to Henryson when he gives the palm to Dunbar over this exquisitely tender and imaginative word-painter. Dunbar, with all his energy and copiousness, is comparatively conventional. And we do not think that he need have gone so far afield for the source of Drummond's appreciation of mountain-scenery. It was to be found nearer home, in Drayton's *Polyolbion*. But on such points differences of opinion are inevitable; and Prof. Veitch is to be heartily congratulated on the completion of what has evidently been a task as pleasant to him as the result is profitable to his readers.

W. MINTO.

TWO LETTER WRITERS.

Letters and Recollections of Julius and Mary Mohl. By M. C. M. Simpson. (Kegan Paul, Trench & Co.)

Selections from Papers of the Twining Family. Edited by Richard Twining. (John Murray.)

THE two books, whose titles are given above, furnish examples of letter-writing which it is interesting to set side by side. Both Mdme. Mohl and Mr. Twining were what would be called excellent correspondents, using their pens with great facility, and putting upon paper a good deal more than the mere gossip of the days in which they lived. The former, as might be expected, is the more vivacious; the latter, the more instructive. Mdme. Mohl is effusive and diffusive, humorous, and satirical, fond of startling her friends with novel notions and expressions—everywhere and at all times a pleasant egoist. Mr. Twining's style is scarcely less lively, but the liveliness is of a different order. It is the outcome of a naturally cheerful disposition exercising itself upon subjects which have not merely met his eye but engaged his attention. He has reasons to give for the opinions he has formed, and does not lay claim to that agile perception which can dispense with the slow process of thought. We can quite understand that the letters of each were highly prized by those who received them; but for Mr. Twining's, which have survived for nearly a century, we predict the more enduring reputation.

As both writers have been noticed in the ACADEMY more than once it is unnecessary to give any details of their personal history; but we should like to state that Julius Mohl's other claims to consideration beside that being the husband of Mdme. Mohl, was an Orientalist of high reputation, and lived on friendly terms with most of the leading men of letters on the Continent. In his own special line of study he stood alone. With him, says M. Lyboudy, "science was a religion, of which he was ever zealous votary." But he was also an excellent letter-writer, and the account which he gives of the scenes in Paris during the siege and under the Commune are among the most interesting passages in this volume. Writing while the Commune was fighting with mad ferocity, he describes the state of things as "a cheaper and nastier edition of the Terror"; and, though taking a calmer view than most of his French neighbours, admits that

"it is not comfortable to live with a hundred thousand madmen, or fools, or scoundrels, with guns in their hands, and a Commune whose great preoccupation seems to be now to thrust peaceful people in [to] its prisons, which it has taken care to get emptied of all the rascals which were in them."

We have space for only one more extract. While others were despairing M. Mohl was hopeful:

"When this folly shall be exploded we shall find an inconceivable ruin in Paris; and what their impatient madness has cost France in money, in reputation, and in political prospects is perfectly incalculable. I find that the French who are yet here are disheartened to the same degree. They believe that France has fallen into the state of Spain or Austria—a helpless log on the sea of revolution; and I find myself to my own wonder, more French than all of them. I do believe in this nation and in its faculty of recovering itself. . . ."

Contrast with this Mdme. Mohl's somewhat flippant mode of treating serious subjects. It pervades her letters; and we may cite, as an example, her comment on Mr. Palgrave's religious experiences:

"I have no doubt it was the English Wabbees [who] made him a Catholic. Now he has taken a walk back, not into Protestantism [no, no, thank you for nothing], but into Christianity. Don't be shocked, but I think neither Catholics nor Protestants are exactly Christians."

What Mdme. Mohl's own creed was we need not inquire. Her main object in life was to seek and to afford amusement, and in the latter business she was certainly successful. Wit and wisdom, we must admit, show themselves in the following characteristic note:

"Oh, the wickedness of neglecting one's self! Suicide is nothing to it; one is buried and done with; people are very sorry, and get consoled; but sick folk are the plague of one's life. They absorb more capital than a war. Their relations are generally annihilated; and then the money, the doctors, the rubbers, the water-packers, the travelers, the lodgings at watering-places, the bottles, the gallipots, the plaisters, the blisters, the powders, the pill-boxes, the night-lamps, the saucupans, the messes, gruels, semolinias, tapiocas! I could commit suicide myself to get out of the way; wicked, cruel, extravagant, selfish, absorbing wretches!"

ewhere Mme. Mohl expresses approval of (for whom, indeed, she had quite an Egyptian fondness), because, when their time ne, they kept out of sight, and shuffled off the mortal coil unseen. "Je mourrai seule" had terrors for her.

In Mr. Twining's letters we get into quite other world—a world of larger leisure and less excitement, and one in which the ne and temper and brilliant conversation the *salon* scarcely have a place. But e writer in his travels at home and road came in contact with many men of ark; and the account he gives of Prof. eyne, whom he visited at Göttingen, is specially interesting. This portrait of Dr. arr is lifelike:

His figure was excellent. He had on a waist-coat or jacket of the rough greatcoat kind of buff of which footmen's jackets are made nowadays. The colour was the footman's colour, nothing clerical about it. But then the doctor had black stockings and breeches and wig—which, though it was reduced by age, was still a great wig—and a sort of dignified hat, the sides of which were bent back on the crown. . . . In one corner of his garden is a small summer-house with a chimney smoking, and there the doctor sits and smokes, and there he trims ministers and bishops."

Like a scholar of olden times, Mr. Twining has generally an apt quotation from Horace or Virgil wherewith to point his observations, and these are generally as shrewd as they are good-humoured.

Letters must always be, to a large extent, the best exponents of character, and from the specimens which fill these volumes it is an easy matter to get on intimate terms with Julius and Mary Mohl and with Thomas Twining. Each is a distinct acquisition to our circle of acquaintance, and an occasional intercourse with them will undoubtedly afford entertainment and pleasure.

CHARLES J. ROBINSON.

The Sonnets of Europe. A Volume of Translations, selected and arranged by Samuel Waddington. (Walter Scott.)

WHATEVER its origin—whether it be native to Italy or descended from the classical ode—the sonnet is common to almost all the languages of Europe. Here, in England, we claim to possess an original type, not derived from the Italian, though related to it. It is true that most of our sonnet writers—Shakespeare being a notable exception—adopt the Petrarchan model, but every form of English verse is an indigenous growth. English sonnets therefore rightly find no place in a European anthology.

The present selection is in all ways an admirable one. Its editor is a devotee of the sonnet, and both as poet and translator he has himself done excellent work. One of the best translations in this volume is from his own pen; but he has modestly hidden it away among the notes, where the reader may chance on it by accident. It is a rendering of Dante's sonnet on "Beauty and Duty":

"Lo, throned upon my spirit's loftiest height,
Here of true love discourse fair ladies twain;
And one, with honoured prudence in her train,
In valorous courtesy is richly dight:—
The other glistens with the golden light
Of smiles and winning grace, where beauties
reign;
And I, of each enamoured, still remain
The slave of each, as love asserts his might.

Beauty and Duty, these my spirit woo,
And urge their suit, doubting if loyal kiss
To both can e'er be given, and faithful prove:
Yet saith the fount of gentle speech and true—
Both may be thine!—Beauty, for dearest bliss;
But Duty, for good deeds, shall win thy love."

I am fain to say that this is preferable to Rossetti's rendering of the same sonnet, though I am conscious of the boldness of such a criticism. The reader will look in vain here for any of Rossetti's translations. Their absence, it is stated, is due to the refusal of the publishers to permit their reproduction. But surely, from every point of view, this is a regrettable circumstance, for no poet has so well put into English the *Vita Nuova* or the writings of Dante's immediate circle, and a series of sonnet translations which contains no specimens from Rossetti cannot be considered complete.

Yet independently of Rossetti we are rich—as Mr. Waddington's collection amply shows—in sonnet translations from the Italian. Foremost stands Cary, whose translation of the first of these sonnets—"Love's Bondman," by the earliest of sonnet writers, Fra Guittone D'Arezzo—is inimitable:

"Great joy it were to me to join the throng
That Thy celestial throne, O Lord, surround,
Where perfect peace and pardon shall be found—
Peace for good doings, pardon for the wrong;
Great joy to hear the vault of heaven prolong
That everlasting trumpet's mighty sound,
That shall to each award their final bound—
Wailing to these, to those the blissful song.
All this, dear Lord, were welcome to my soul,
For on his brow then every one shall bear
Inscribed, what late was hidden in the heart;
And round my forehead wreathed a lettered scroll
Shall in this tenor my sad fate declare:
'Love's bondman, I from him might never
part.'"

The translations from the *Vita Nuova* given here include two by Mr. Charles Eliot Norton, both very graceful compositions and good renderings. There are several by Sir Theodore Martin, who is always an apt translator, though his work is sometimes wanting in poetic quality. In these specimens he is at his best. Mr. Waddington appears to attach importance to Dr. Parsons' translation of one of the *Vita Nuova* sonnets. It contains some good lines—these for instance:

"But meekly moves, as if sent down to earth
To show another miracle to men!

"And such a pleasure from her presence grows
On him who gazeth, while she passeth by—
A sense of sweetness that no mortal knows
Who hath not felt it—that the soul's repose
Is woke to worship."

The whole sonnet however is marred by a prosaic phrase in the second line, and a four-fold rhyme in the sestet. Here again Henry Cary seems to take the first place, while Mr. Russell Lowell, true poet though he is, has almost the lowest.

The selection includes numerous translations from Petrarch—six being by Colonel Higginson, and six others by Cayley. Higginson is admittedly the best translator of Petrarch, whose grace of style suffers nothing in the transmutation—at his hands—from Italian into English. Take one example, the sonnet "Levommi il mio Pensiero":

"Dreams bore my fancy to that region where
She dwells whom here I seek, but cannot see.
'Mid those who in the loftiest heaven be
I looked on her, less haughty and more fair.

She touched my hand: she said, 'Within this sphere,
If hope deceive not, thou shalt dwell with me:
I filled thy life with war's wild agony;
Mine own day closed ere evening could appear.
My bliss no human brain can understand;
I wait for thee alone, and that fair veil
Of beauty thou dost love shall wear again.'
Why was she silent then, why dropped my hand
Ere those delicious tones could quite avail
To bid my mortal soul in heaven remain?"

Roscoe's translations from Lorenzo de Medici are familiar, as are Mr. Addington Symonds's of the sonnets of Michael Angelo. Both translators are well represented here. Mr. Waddington gives us one sonnet—his own rendering—from Leonardo da Vinci. Ariosto is also represented by one only, which in his case seems an insufficient number. Tasso, many of whose sonnets possess much dignity, is worthily exhibited, both in point of number and quality of translation. The "Love Unloved," translated by Glassford, of Dougalston, is a particularly good rendering. The same may be said of Mr. Herman Merivale's "Love"; but an imperfect rhyme is unpardonable in a sonnet, and in this there are several—"tongue" with "song," "belong" with "along," and still worse, "presents" (the verb) with "sense." Among the translations from other Italian poets is a sonnet by Salvator Rosa, translated by Mr. William Michael Rossetti; and this part of the collection closes with a single sonnet by the late Gabriele Rossetti, translated in humorous and forcible English by his son, Mr. W. M. Rossetti.

The French sonnets include a considerable number by Ronsard, the majority being translated by Mr. Andrew Lang. Of Molière there is but one example, which is translated by Mr. Austin Dobson. Of Baudelaire there are three, and of Sully Prudhomme four, all the latter being admirably rendered by Arthur O'Shaughnessy. German sonnets make only a small show, and none of the translations are remarkable. The same may be said of the Spanish sonnets, the best specimens being Longfellow's translations from Lope de Vega, and the same poet's rendering of "The Brook," from Lopez Maldonado. Portuguese sonnets—the mythical source of some of Mrs. Browning's finest work—are mainly represented by specimens from Camoens, of which a considerable number are given, all except two being translated by Mr. J. J. Aubertin. There are six Swedish and two Dutch sonnets, all translated by Mr. Edmund Gosse. These, as well as some other contributions to the volume, are published for the first time. Two Polish sonnets of the present century are translated by Dr. Garnett, and two from the modern Greek by Mrs. Edmonds.

It only remains to add that this comprehensive little volume is made complete by some highly interesting and elucidatory notes.

GEORGE COTTERELL.

Life of Giordano Bruno. By I. Frith. (Trübner).

THIS work professes to fill what everyone must admit to be a gap in English literature. While France has long possessed the very meritorious monograph of Bartholmess—a work by no means yet superseded—while Berti and Fiorentino have more recently done

honour to their illustrious countryman, and while Germany possesses numberless monographs and essays dealing with the same subject, England, with her wonted insularity and impatience of pure speculation, has only a few scattered and superficial notices of the great Italian thinker.

I wish I could add that this work was worthy of the isolated glory of being the sole English monograph on Bruno. Some essential qualities for the production of such a work the author undoubtedly possesses. The first requisite of a biographer—enthusiastic appreciation of his subject—she possesses in abundance. To this she unites a fair knowledge—unhappily not always accurate—of Bruno's writings. She is also well read in Bruno-literature, and has studied with evident industry and earnestness the philosophical systems which seem related to that sublime but heterogeneous compound which the history of thought will ever identify with the name of Bruno. In a word, she has "got up" Giordano Bruno with a zeal inspired by sympathy and admiration; but "getting up" is closely akin to "cramming," and traces of haste, imperfectly assimilated information, and other indications of "cram" are everywhere legible in her book. For obvious reasons biographical "cram" is generally manifested by a defective or erroneous presentation of the hero's environment; accordingly the author's small acquaintance with contemporary history is indicated by her making Cardinal Bembo a Pope, while her defective knowledge of Bruno's philosophical surroundings is shown by her manner of treating the well known renaissance theory of "Two-fold Truth." She evidently has not the dimmest conception of the important part which that doctrine plays in the teachings of Bruno and of his contemporaries. Although she has before her Bruno's own views on the subject (pp. 230-231), she refers (p. 21) to Voltaire for an illustration of its application, apparently ignorant of the fact that it formed the primary article in the creed of every important thinker of Bruno's time. To render the matter worse she apparently makes this very belief in dual truth a charge against Hofmann, one of Bruno's persecutors (p. 202). A more deplorable confusion in what relates to a vital point of Bruno's teaching it is scarcely possible to imagine.

Equally characteristic of the haste and amateur workmanship of the book are its style and method. The former is harsh, involved and unformed; the latter rambling and discursive. The author seems to have had no defined plan for her work, and consequently her presentation of Bruno's thought lacks all semblance of coherence and lucidity. The chronological method of considering his writings, which in appearance she adopts, is in the last degree unsuited to a thinker like Bruno. She would have done better, and made the effort of reading her book less irksome, if she had compiled a conspectus of his different opinions on the chief points of theology and philosophy. This would have cost her, of course, much more labour; but it would have been work well bestowed, which, once well done, would not need to be repeated. Nor can it be said that her translations and paraphrases

of Bruno's many writings are to be depended on. As a rule she is able to grasp the meaning of the Italian works better than that of the Latin, but in both her renderings must be accepted by readers with caution. I have taken the pains to test her translations in not a few places, with the result of an increased distrust of her accuracy. To take a single instance, in his rhetorical *Oratio Valedictoria*, addressed to the University of Wittenberg, Bruno in his peroration makes the following invocation (*Op. Lat. Ed. Fior. i, p. 24*):

"Vos quoque Nymphæ istorum fontium et Nereides fluminis istius, ad cuius ripas mihi ærem captasse licuit, adeste."

This perfectly obvious and innocent prayer becomes in our author's rendering the following extraordinary travesty (p. 187):

"Ye, too, nymphs and nereids of that stream on whose verge I could cry peace and gladly breathe my soul into the air, keep watch and ward over the land"—

a Shelleyan yearning far as the poles asunder from Bruno's courageous and life-loving temperament. Similar injury to the Nolan philosopher's personality is perpetrated by the author in the following solecism (p. 45):

"The centre which Copernicus believed to be immovable and in the sun, Bruno placed in sun after sun, even in the outermost parts of the universe and in infinity."

The outcome of the foregoing observations is briefly that, however well meant, this work is not well executed. Bruno is not a mere poet and mystic: he is a profound thinker, and hence can only be adequately treated by a biographer who is himself a scholar and philosopher. I do not, however, suggest that this book may not have its use, or that the author has not, on the whole, conferred a service on English literature by its publication. The "general public" is not apt to be fastidious on points of style or accuracy, and I quite admit that an uncritical reader will carry from its perusal a useful, working, dictionary-article view of the great Italian thinker; but, for scholars conversant with his works and times, the Life of Giordano Bruno has yet to be written. JOHN OWEN.

HAHN ON THE TEUTONIC PANTHEON.

Odin und sein Reich. Die Götterwelt der Germanen. Von Werner Hahn. (Berlin: Simion.)

THE Teutonic world of gods is slowly rising once more in the memory of the German nation. Among the cultured classes, the poetical enjoyment of that ancient faith "of mightiest power," as Southey called it, which has a dramatic grandeur not reached even in the refined heavenly circle of the Greek Olympus, is visibly growing. So is the scientific interest attaching to the deeper thoughts of our forefathers, as shown in the representative figures of their nature worship.

The names of deities worshipped of yore in woods, on summits, at bournes, rivers, and near the sea-shore, are beginning to resound again, in Germany, among men otherwise little given to lingering on the paths of a far-off historical epoch. As to the mass of the people—at least in thorpes, hamlets, and forlorn homesteads—there are even now great tracts of German land where the old gods and

goddesses, and the swarm of nixes, elves, kobolds—mostly going under the very name used in heathen times—still roam about in the fantastic regions of folklore. In the midst of the clang of arms, which now so dimly shakes the repose of Europe, the remembrance of these once mighty spirits and their identification from yet current popular belief, seems daily to gain in attention. Art, poetry, and general literature bear witness to the fact.

Dr. Werner Hahn's book is one of the latest proofs. Known as a prominent Germanist, he has an excellent record in his version of the *Nibelungen Lied*, with aesthetic and historical forewords; his *Deutsche Poesie* and other works. In the present case he has sought "to portray the mythical traditions contained in the Edda in such forms of modern cultured understanding as to make them generally accessible, without learned help." In pursuance of this task he had "to link the fragments of the Edda together, in accordance with a systematic order of thought"; and this, he owns, sometimes entailed upon him the duty of deviating from one text which was contradictory to another. Again, "sometimes had to fill up a gap" in the Icelandic Scripture. He did so, here and there, by a poetical invention of his own.

But is this, some may at once ask, a legitimate process? The only answer possible is that Dr. Hahn openly avows his work to be a popular rendering—in prose, but with a degree of poetical license—of the great mythological tragedy worked out by the mind of the Germanic race. To quote a precedent, did not Richard Wagner also freely use, for his "Ring of the Nibelung," our mediæval epic, the corresponding older Edda songs, as well as the *Völsung* in which the Siegfried tale was preserved for the masses making additions and changes of his own? True, I will at once say, wherever Wagner has kept closest to the old records, the texts of his music-drama seems to me by far more powerful than when he gives free play to his own inventive mood.

If there are any works which, among the cultured classes of Germany, have spread a more general knowledge of the Teutonic creed it is Simrock's version of the Edda, in the main very faithful, simple, and yet highly poetical, with valuable explanations added to it; and his *Deutsche Mythologie*, a one-volume book, with a wonderfully rich mass of easily readable material. These merits are beyond question. The strangely hard words used in the preface of the book before us about Simrock's translation of the Norse Scripture are, therefore, to be regretted.

By way of showing why he had sometimes to gloss over apparent contradictions in the Teutonic creed, so as to produce a readable whole, Dr. Hahn remarks:

"It is of the most important deities that the ancient record gives tales gainsaying each other in close contiguity. This is chiefly the case with Odin. Odin builds up the world and rules it; yet, in order to get a draught of knowledge, he has to turn to one of those beings which partly have their existence through him."

This refers to Odin's pilgrimage to Mimir's well. But here it must be pointed out, first, that contradictory tenets, or legends, are found in all systems of faith. This is

owing to their generally composite origin, as well as to the alterations occurring even in religious thought in the course of hundreds or thousands of years. If we only take the epoch between the appearance of the Teutons and Kimbrians, or the accounts of Caesar and Tacitus, and the final overthrow of the Odin religion in the North, we get a space of something like ten to twelve centuries. If we throw in the Thracians as a nation of Teutonic kinship, and whatever we know of their mythology, the epoch is enlarged by many centuries more. What differences and changes there must have been in the religious tenets of these widely distributed branches of the Germanic stock during nearly two thousand years! It is vain to look for absolute consistency in the mythological conceptions of any race. Not to go into the Hindu, Greek, or other Pantheons, in all of which the hand of more than one race is discernible, we need only bring to recollection the Elohist and Jehovistic doctrines of the Old Testament, or the contradictory tenets of a Doomsday resurrection, and of an immediate immortality of the dead, being held side by side within the same creed.

As to the idea of Odin having created the world, this is quite a late, and not really Germanic, view. It was brought in under Christian influence. In the old Norse, as in other ancient religious systems, chaos precedes the formation of the universe. Before the gods even, the giants arise, as typical of the yet uncouth forces of nature. Hence we can very well understand that Odin, who had learnt the first chapters of wisdom from a giant, should go to one of those primeval beings that dwelt at the immense tree of existence which symbolises the universe, in order to learn from him the wisdom of the past. Odin is great, but he lives within the space of time. Not even he is from eternity; matter is before him. No doubt the later prose Gylfaginning, which forms an exegetic catechism of the North-Germanic creed, speaks of a time "when all was not." But the earlier Völuspá, when explaining the rise of the world, the giants, and the gods, says:

"Once was the age when Ymir lived:
There was no sand; no sea; no salty wave.
No earth there was; nor Heavens above—
Only yawning abyss, and growth nowhere."

That is, nothing was formed; yet Ymir lived: and Ymir is elementary chaotic matter. The heavenly figures were later comers. As to Odin, he, at the end of things, at the twilight of gods, is to be devoured by the wolf amid the fiery downfall of the world. Out of a great flood a new universe will then arise; but Odin is no longer.

Can we, then, wonder that even this mighty ruler of Asgard should have had to give one of his eyes in pledge, at Mimir's well, so as to get a draught of wisdom? Perhaps one of those eyes meant the alternating appearance of the sun and the moon. At any rate, the great God of the Sky, with his large cloud-hat and his welkin-speckled mantle, is conceived as one-eyed. It would, therefore, have been better had he been so represented on the title-page of Dr. Hahn's work. The limner, however, has given him two eyes.

The traces of two antagonistic doctrines as to the origin of things are not wanting in the Edda. This, again, ought never to be for-

gotten when an attempt is made to expound the Germanic system of faith. That creed was a compromise—after a fierce and bloody struggle, the details of which are beyond our ken—between the Vana creed and the Asa creed, involving apparently a Neptunistic and a Plutonic theory of cosmogony. In Vedic, Iranian, Babylonian, Hebrew, Greek, Roman, Germanic, and other creation tales, water is generally mentioned as the original element—the generative fluid; or, in enumerating the things that came out of the void, water is at any rate placed first. The sea-god Niörd, and his offspring Freyr and Freyja, were of that Vanic, Neptunistic circle. In consequence of a struggle in which the Asic gods were narrowly victorious, the Vanic Niörd and his children had to be sent as hostages to Asgard. On their part, the Aesir had to give one of their own as a hostage. I believe these traces of contending doctrines of cosmogony could be made interesting even in a popular work.

At all events, we come here once more upon a stumbling block to the mistaken view of those who try to find a cast-iron unity in ancient religions. Even in so lofty a creed as the one which has arisen out of the compromise between the Asic and Vanic doctrine, an outer fringe of animal worship is yet discernible. Odin himself was still called "the Eagle-headed"; and there is more than one instance of animal transfiguration or symbolisation among Germanic deities. Remembering Indian, Egyptian, and Greek cults, as well as the clear traces of animal worship so triumphantly proved by Dr. Schliemann's discoveries, or even the adoration of the brazen serpent so long prevailing in the Jewish Temple, these lingering vestiges of an ancient prehistoric cult have nothing surprising.

Dr. Hahn's manner of giving an account of the Teutonic creed is somewhat different from many points of view I have indicated here. Thus, in an otherwise serviceable appendix in which the mythological names are explained, he says:

"Freyr and Freyja are to be looked upon as a repetition of the Odin conception, caused by the entrance of the Vanic ideas into the circle of the Asic deities. At the same time a division of the Odin idea into a male and a female deity has taken place."

Yet, in interpreting the Vanic name, Dr. Hahn holds it, rightly enough, to be a representation of the flowing element, while the Aesir name is explained by him as a personification of that which is firm and shining. And Dr. Hahn sees, in the war between these two divine circles, symbols of the violent changes created, on the one hand by storm-floods from the sea, and by natural revolutions of the earth on the other. This, though not quite tallying with, at least comes near to, the belief that contending cosmogonic doctrines were involved in the war between Aesir and Vanir.

It has, however, to be borne in mind that there is a distinct record of a Vanic custom of marriage between brother and sister, which, after the triumph of the Asic system, was abolished. In "Oegir's Banquet" (36), Loki's bitter tongue refers to the subject. Perhaps a faint remembrance of that custom may yet be found in what Tacitus says in

chap. xx. of his *Germania*. Of the Bavarian tribe, which in a considerable degree had sprung from Herulian, Rugian, Gothic races that once dwelt on the southern and northern shores of the Baltic where the Vana cult had flourished, we have historical testimony, down even to the eighth century of our era, of a very characteristic kind. Here is clear evidence of the Vanic circle of deities representing special tribal views in religion or cosmogony, with special marriage customs founded on it—customs which the Asic creed endeavoured to root out, but with which even the Church had to struggle in a particular region a great many centuries later.

As to the ethical ideas gradually symbolised by these various divine figures after their junction in Asgard, I concur with Dr. Werner Hahn that the Germanic stock of old had already a good glimpse of such higher conceptions. Still, there is danger in too much systematising, as if its Pantheon had been planned from a central thought, like a philosophical system. The truth is, it arose, like other religions, in a mixed way. And, so long as it lasted (the fact may even now be gathered from certain features of folklore tales) it bore, however slightly, some traces of those cruder origins or connexions which have been clearly made out for other religions in Mr. Andrew Lang's *Custom and Myth*.

Taking it as a whole, Dr. Hahn's work is adapted to attract a large class of readers who as yet shrink from the more historical and comparative method of treating the subject. In this way his interesting book will do good service by gradually teaching educated men that there is yet a large field of important mythological knowledge involving thoughts about nature, affording food for poetical fancy and material for art which, owing to their merely classical training, they have too long neglected.

KARL BLIND.

NEW NOVELS.

Precautions. By Lady Margaret Majendie. In 3 vols. (Bentley.)

A Cruel Enigma. By Paul Bourget. (Vizetelly.)

Alexia. By Eleanor C. Price. (Bentley.)

In Bad Hands, &c. By F. W. Robinson. In 3 vols. (Hurst & Blackett.)

A Tale of Madness. By Julian Cray. (Vizetelly.)

Who's She? By Herbert Coghlan. (Edinburgh: Paterson.)

With the Unchanged, &c. By Richard Dowling. (Sonnenschein.)

In *Precautions*, Lady Margaret Majendie shows no falling off in the special literary power she had shown in her previous works of unravelling the tangled and somewhat trivial skeins of life in "society"; and the ethical purpose it displays is more pronounced. In the life both of Marion Austen and of Kitty Bellingham there is exhibited the happiness that is attained only after traversing the painful road of self-sacrifice. In both cases, perhaps, the self-sacrificing spirit goes too far: Marion gives way too much to the caprices of a singularly unheroic and unlovable father; and Kitty need hardly have dashed into the perilous career of

a nurse, because she found that the husband whom she loved had married her out of pity—or what was interpreted as pity by his sister. Still, as all ends well, this sentimental excess does not appear so much out of place as otherwise it would have done. The chief, if not the sole, fault to be found with *Precautions*, indeed, is that the characters in it are not conventional enough, that they are types rather than human beings of the kind to be found in ordinary life. Thus, Mrs. Brown-Clifford and the Dowager Lady Bellingham are different types of selfish mamma-dom—a fact which alone can excuse Lady Bellingham's becoming a murderess in intent. The Italian Priore and the unfortunate musical genius, Ursel, are intended to place Christian self-command in contrast with artistic passion that has degenerated into a sort of mania. The literary execution of *Precautions* comes quite up to the level of its purpose, and that is not saying little. The comic element—supplied by Miss Brown-Clifford and the cats—might have been spared. It is decidedly over done.

In one sense M. Paul Bourget's *A Cruel Enigma* is the most realistic of recent French novels; in another sense it is the least realistic. In none is the passion which unites the sexes so stripped, to use the language of M. Bourget's translator, of

"all the adventitious grace, and mysticism, and sentiment with which society is wont to shroud it, and found to consist, in the last resort, of a single and simple fact—the physical fleshly desire of man for woman and of woman for man."

Theresa de Sauve not only commits adultery with four different persons, but the return of her lover to her in the end is worse than any adultery, inasmuch as it means the total debasement of his moral nature, and the total destruction even of her pseudo-ideal of love. And yet there is nothing coarse or suggestive in the story itself. The incident of "the consummation" in Folkestone of the passion between Hubert Liauran and Theresa de Sauve—with the drive by the coast road to Hythe, and the sweet reluctant amorous delay of Theresa's coquetries—is idyllic, very much as the "natural and quite Greek" amours of Haidee and Juan are idyllic. Then M. Bourget is a moralist. He is a remorseless analyst and a thorough-going pessimist because he is a moralist. *A Cruel Enigma*, therefore, leaves no unpleasant taste in the mouth. One pities Theresa; one regrets Hubert's "fall," though the sickly love of his mother and grandmother is evidently as responsible for that as Theresa's passion; and that is all. In *A Cruel Enigma*, moreover, M. Bourget's style, which is superior to that of any of his contemporaries except M. Daudet, is seen at its best. Here and there M. Bourget reminds one of Gustave Flaubert; but in *A Cruel Enigma* there are strains of a higher mood than are reached in *Madame Bovary*. Mr. Cray's translation of this story is so good that only at rare intervals does one become conscious of the fact that it is a translation.

Alexia is a thoroughly satisfactory story of a very unambitious kind. It is so satisfactory, perhaps, because it is so unambitious. Charlie Melville, the squire, should have married

Alexia Page in the first chapter; but he marries somebody else, and she very nearly marries somebody else. So a death and a conflagration and what not have to intervene between calf-love and marriage. This is altogether a boy-and-girl story; but it is very agreeably told and very gracefully written. There is not a thoroughly unpleasant character in it; even interfering and too brutally plain-spoken Mrs. Dodd mends, and is taken to Alexia's heart, and gets rid of some of her unreasoned prejudices in the last chapter. Miss (or Mrs.) Price frequently stumbles on, or rather into, happy expressions, such as "a careless refined sort of man."

Mr. Robinson's new three-volume work consists entirely of short stories. Most, if not all, of them have probably first seen the light in the columns of magazines, and it says much for their quality that probably one only should not have been republished. This is "A Stone Bouquet," a tragico-lunatic tale, and not bad of its kind; but then that kind is not Mr. Robinson's. He is most in his element when portraying the heroes and heroines of the bye-streets and lanes of life, with their genuine though gnarled goodness. These volumes are full of sketches of this kind, of which "Dick Watson's Daughter" and "A Prison Flower" may be cited as good examples. In none of Mr. Robinson's larger works does his peculiar humour, "stiffened" as it is with irony, show to a greater advantage than in such stories as "A Big Investment" and "Friends from the Clouds."

The ghastly narrative which Mr. Julian Cray has "edited" undoubtedly supplies evidence of capacity for dealing with the horrible—and in a sufficiently horrible manner. The man with madness in his blood, who nevertheless ventures on the perilous experiment of marriage, is a familiar character in fiction, and so is the woman who, in the same condition, makes a similar experiment. But for a man and a woman, both with madness in their blood, to get married is a novelty; and it is this novelty which Mr. Cray supplies us with when he brings Paul Stafford and Maud Chichester together, only to be separated by death. The "editor" of this book exhibits unquestionable skill in tracing the development of madness in Stafford, and in bringing about the complication towards the close, from which it would seem that Maud Stafford has for a lover the murderer of her own father, while, as a matter of fact, her father has committed suicide, and her seeming lover is only her twin brother. In the two last chapters there is a good deal of overloaded writing—suggestive of a lunatic foaming at the mouth—about "dead! aye, and lying in the foul ground, those grand, soft eyes, which had so often met mine in looks of passion, dropping worm-eaten from their sockets," and the like. But Mr. Cray can, of course, meet this objection by saying that the narrative he "edits" is realistic. So it is, and, on the whole, it is not too repulsive in its realism.

Who's She? reads like the result of too much indulgence in shilling sensationalism. Having read much, Mr. Coghlan has felt impelled to write; and so we have such school-boy vituperation as "I have learned your wild-schemed plot; I have discovered your

fiendish, demon lie! Stand off, you miser coward, fool; stand off." Mr. Coghlan's is of the crudest—we had almost said of the roughest—and his English is not altogether unimpeachable. What, for instance, does mean by describing the aristocracy as "sect"? With his fondness for strong language and hates, however, and his capacity for strong language of the transpontine order, Coghlan ought to be able in time to write a rattling story of rustic virtue triumphant over rustic villainy.

Mr. Dowling's little volume of stories which he has named after the most ambitious sarcastic, but least satisfactory, of all of them—was well worth publishing, if only as a demonstration that their author is a master of something more than melodramatic incident. There is humour of a kind that Mr. Dowling can hardly be said to have indicated before in "Blood is thicker than Water" in "Diamonds in Extremis" he proves his great skill in plot-construction would show to decided advantage in a detective story, and in "Served him Right" he demonstrates with equal clearness that he can treat a social problem both seriously and forcibly, and at the same time keep his powers in reserve. As has been already said, Mr. Dowling is least successful when he is most avowedly satirical. Thus "The Reward of Virtue" which treats of aldermanic weakness, is a trifle too farcical. Altogether, this is one of the best volumes of short stories that have been published during the present year. I know of none that is such a felicitous combination of literary lightness and ethico-social solidity.

WILLIAM WALLACE

SCHOOL BOOKS.

Passages for Translation into Latin Prose. By H. Nettleship. (Bell.) Numerous as books of this class have become, we yet think there was room for another, in which the selection should be made by a real scholar, to whom the study of Latin is more than a discipline for youth, and seems a worthy employment for a lifetime. This book is an advanced book: that is to say, not one of its sixty-three passages can be called easy, and some of them, e.g., xi., xxix., liv., lxiii., are extremely difficult. We can fancy even a Hertford scholar knitting his learned brows over translating Lamb's "Tartar fellow eating my friend and adding the cold malignity of mustard and vinegar." But all are interesting and forcible pieces; all, no doubt—for Prof. Nettleship has found it so—possess affinities to good Latin authors. Very few of them (though we must except xxiv.) are hackneyed or usual. But the noteworthy part of the book is the Introduction, in which, besides some useful and sorely needed cautions as to Latin orthography, the professor brings out of his treasure-house three lectures, one on the political and social ideas of the Romans, another on their range of metaphorical expression, the third on the historical development of their prose style. All of these are excellent and interesting reading—the two first especially. Everyone who has tried to write or to teach anything beyond the elements of Latin prose knows by painful experience that grammatical accuracy, and even classical form, may be attained without any real resemblance to the Roman cast of thought or phraseology being achieved. For those struggling with this difficulty, these two lectures are invaluable. The ideas of politics, law, duty, emotion, religion, and the epithets pertaining to them, are here

discriminated with neatness and clearness. In a few pages (1-27) we have a real sketch of the mind and language of a Roman in relation to these subjects. It is concise without being dry. We demur respectfully to the rendering (p. 3) of "reipublice causa aliquid facere" by "to do anything on political grounds." Is it not rather "on patriotic grounds"? The professor means that, we think; but the word "political" has now got an incurable twist—a politician may be a patriot, but we do not call a patriotic action political. The third lecture, on the historical development of Latin prose style, shows us, in interesting extracts from Cato and Gaius Gracchus, the foundation of the house in which Caesar and Cicero dwelt. Is it true to say (p. 62) that "Tacitus is a great master working with bad tools"? His tools are the Latin language. The fault, if fault there be, lies in his ideal of form. He is, for good and bad, the Browning of Latin prose.

The Catiline of Sallust. Edited by B. D. Turner. (Rivingtons.) This little edition is meant for use in the middle forms of schools, and the notes are very well adapted to the needs of boys at that stage. They are tolerably numerous, very simple, and dogmatic. There is no arguing over different interpretations—a thing totally wasted on young boys, if not injurious to them. Mr. Turner is wisely content to tell them what he believes to be the truth, and to give as much help as he can. His notes will very usefully fill up the interval between the Delectus and harder authors with harder notes. But the little Introduction needs some revision. In what sense was Pompeius a member of the senatorial order in 73 B.C.? He had never entered the senate through any office at that time. The *tribuni aerarii* should be mentioned as serving on juries along with senators and *equites* after the legislation of B.C. 70. P. Autronius Poetus is confused on p. xi. with some Antonius. Mr. Turner is not the first writer on Sallust who has fallen into this error. *Porta Salana* (p. xvii.) is probably a misprint for *Porta Salaria*.

A Second School Poetry Book. Compiled by M. A. Woods. (Macmillan.) It is just a year ago since we welcomed the "First School Poetry Book," which Miss Woods, of Clifton, had compiled for the lower forms of high schools for girls. We are not surprised that its success has induced her to publish a similar volume for middle forms, and also to promise yet a third in the future. As before, we find a sound judgment and a catholic taste, the number of selections from American authors other than Longfellow being unusually large. It is probable that not a few girls will here meet with for the first time the names of Bret Harte and (*horresco referens*) Walt Whitman. The choice of longer poems at the end seems to us particularly happy. It includes "The High Tide on the Coast of Lincolnshire," "Goblin Market," and "Poor Matthias"—none of which, for obvious reasons, is it common to find in anthologies. Indeed, we would award Miss Woods unmixed praise, if it were not for a certain inaccuracy of copying, or carelessness in proof-reading, which we noticed likewise in her former volume. Here are two unpardonable blots occurring in poems familiar as household words:

"The gods that wanton in the air
Know no such liberty" (p. 125).

And

"A voice so thrilling near was heard
In spring-time from the cuckoo bird" (p. 185).

Questions for Examination in English Literature: chiefly selected from College Papers set in Cambridge. With an Introduction on the Study of English. By Walter W. Skeat. Second and Revised Edition. (Bell.) It is almost superfluous to recommend these ques-

tions for use in schools, or by those who are preparing for public examinations; but every person who attempts to study systematically any of the earlier periods of English literature ought to procure the book. Of course, the "papers," like most others of an advanced character, contain a good many questions which few even among scholars would be able to answer without preparation; but, with rare exceptions, the questions are remarkably free from anything like pedantry, and relate to points which are really essential to the thorough appreciation of the works to be studied. About half the volume is occupied with questions on Chaucer and Shakspeare. There are several papers on Bacon and Milton; the literature of the eighteenth and nineteenth centuries receives rather scant measure. Prof. Skeat's introduction is full of valuable advice; but we wish that, in his ample list of books for study, he had in some way distinguished those which are most urgently necessary from those which may be regarded comparatively as mere desirable luxuries. We have observed several misprints, especially in the accents of Anglo-Saxon words.

First Lessons in Science. Designed for the use of Children. By the Right Rev. John William Colenso. (Ridgeway.) This volume was not originally "designed for the use of children," but for the use of a class of adult Zulus who were learning to read English. The author had, however, re-written the greater part of it in order to adapt it to the requirements of European children; and Sir George Cox, by whom the work has been edited, considers that it may be "especially useful in our national and provincial schools." We have no doubt the book was well suited for its original purpose, but considered as an ordinary school-book it must be admitted to be unskillfully planned. The first ten pages are written in words of one syllable; but before the hundredth page is reached we find the Bishop talking about "right ascension," "declination," "altitude," and "azimuth"; and before he has filled his 195 pages he has explained Kepler's laws, the methods of calculating the orbits of the planets and the distances of the stars, and the nature of precession and nutation. However, although we cannot recommend the volume for use in class, there is no doubt that teachers will be able to derive from it many useful lessons in the art of lucid and effective illustration; and it may be read with interest and profit by the large number of grown-up persons whose notions of elementary natural science are confused and uncertain. The portion in words of one syllable is a remarkable *tour-de-force*; but, under the ordinary English conditions of education, a child who is old enough to follow the reasoning is not likely to require to be addressed in "little words."

A Class-book of Physical Geography. With Examination Questions, Notes, and Index. By William Hughes. New and improved edition, revised by J. Francon Williams. (Philip.) This is, on the whole, an excellent book. The maps, which are new, deserve especial praise for the clearness with which they bring out the essential facts which they are intended to show. The chapter on the geographical distribution of the races of man is scarcely up to date, the classification of Blumenbach being retained, without any indication of its defects, or any reference to the substitutes that have been proposed for it by more recent authorities. In the first chapter we note the curious misstatement that the planet Neptune was first seen at the same time by Adams and Leverrier in 1846.

"Whittaker's Modern German Authors."—*Eine Frage.* Idyll zu einem Gemälde seines Freundes Alma-Tadema, erzählt von Georg

Ebers. Edited, with Literary Introduction and Notes, by F. Storr. (Bell.) Prof. Ebers's "idyll" of Sicilian-Greek life is not very well suited for use as a school-book, and we do not think quite so highly as Mr. Storr does of its literary merit. The author, as usual, displays more learning than imagination; and his style is even more than usually characterised by the perpetual recurrence of that "esse videtur" cadence which is said to have been Cicero's bugbear. Still the tale is worth reading, and Mr. Storr's notes supply exactly the help that is needed by a reader who has only a moderate knowledge of German. There is a frontispiece copied from the painting of Mr. Alma-Tadema by which the story was suggested.

A Conversational Grammar of the German Language. With Comprehensive Reference-Pages for use in Translation and Composition, and Notes on the History and Etymology of German. By Otto Christian Näf. (Rivingtons.) We cannot praise this book. Herr Näf may be a very good teacher of German, and the method adopted in his book may no doubt, as he says, have proved successful in his own lessons. But the arrangement is so peculiar and complicated that we fear other teachers will find it unworkable. Besides this, we have noticed many inaccuracies of detail. It is stated, for instance, that "any verb is regular: (1) if the first or third person singular imperfect ends in *-te* (no exceptions); (2) if the participle ends in *-t* (no exceptions)." At this rate *mögen*, *haben*, *denken*, *bringen*—in short all except the "strong" verbs—must be classed as regular. The rules for the gender of nouns are misleading, because the list of exceptions is, in most cases, not even approximately complete. The learner is told that "abstract terms have no plural, if used as abstract terms, as *die Liebe*, love; but some can be used concretely, as *die Lieben*, the loved ones." Does Herr Näf imagine that *der, die Liebe*, the loved one, is the same word as *die Liebe*, love? The appendix on the history and etymology of the language shows extreme ignorance of philology; the brief "etymological dictionary" mingles sound derivations taken from Kluge with some wild speculations which are probably quite original.

A Simplified Method of mastering the Genders of French Nouns. By Eugène Lesprit. (For the Author.) This is a pamphlet of twenty-seven pages, giving rules for the genders of French nouns, with what seem to be complete lists of exceptions. It is ingeniously arranged, and the student who masters its contents will have a better knowledge of French genders than is possessed by many Frenchmen.

NOTES AND NEWS.

MR. P. G. HAMERTON's book for the coming winter season will be *The Saône: a Summer Voyage*, with 148 illustrations by Mr. Joseph Pennell. It was while boating and sketching on the Saône that the author and artist suffered arrest at the hands of *gendarmes* early in the present year.

William I. and the German Empire is the title of a biographical and historical work by Mr. G. Barnett Smith, which will be published next month by Messrs. Sampson Low, Marston & Co.

MR. THOMAS KIRKUP has expanded his article on "Socialism" in the recent number of the *Encyclopaedia Britannica* into a volume, which will be published by Messrs. Longmans under the title of *An Enquiry into Socialism*.

MESSRS. LONGMANS also announce, as nearly ready for publication, *Educational Ends*; or, *The Idea of Personal Development*, by Miss Sophie Bryant, the first lady who gained the

degree of Doctor of Science from the London University.

MESSRS. SAMPSON LOW & Co. will shortly publish a volume by Mr. A. J. Little, of Shanghai, describing a voyage made up the Upper Yangtze, with a view to studying the question of its navigability by steam beyond Ichang.

The next volume in the "Badminton Library," to be published in October, will be *Football and Athletics*, written by Mr. Montagu Sherman.

A NEW writer, who is content to be known for the present as "Q," has written a romance entitled *Dead Man's Rock*, which will be published by Messrs. Cassell & Co. in a few days in their Series of popular Adventure Books.

Under Suspicion, a novel dealing with Welsh life, by Miss Edith Stowe, is announced for immediate publication by Mr. T. Fisher Unwin.

Vert de Verts, Eton Days, and other Sketches and Memories, by A. G. LeStrange, is announced by Mr. Elliot Stock for immediate publication.

UNDER the title *Amnon, Prince and Peasant*: a Romantic Idyll of Judea, Mr. Frank Jaffe, assistant master of the Chicksand Street Board School, is about to bring out an English adaptation of Mappo's famous Jewish idyllic and historical work.

MESSRS. I. PITMAN & SONS will publish at the close of September an illustrated edition of *Robinson Crusoe* in phonography, which is being prepared by Mr. J. Herbert Ford, who recently succeeded to the editorship of the *Shorthand Magazine* on the death of the late F. Pitman.

MESSRS. HODDER & STOUGHTON'S autumn list includes the following: *The Life of Samuel Morley*, by Edwin Hodder, biographer of the late Earl of Shaftesbury; *Modern Science in Bible Lands*, by Sir J. William Dawson; *The Life of W. Morley Punshon*, by Prof. F. W. Macdonald; *The Ancient World and Christianity*, by E. de Pressensé; *Unfinished Worlds*, by S. H. Parkes, with illustrative diagrams; *History of the Church*, by Prof. George P. Fisher; *The Sower and Virgin*, by Lord Robert Montagu; *Scripture Truths derived from Facts in Nature*, by Henry McCook; and *Tenants of an Old Farm*: Leaves from the Note Book of a Naturalist, by the same author; *The Key Words of the Bible*, by the Rev. A. T. Pierson; *Practical Studies in the Life and Character of St. Peter*, by the Rev. H. A. Birks; *Bible Models*, by Richard Newton; *The Books of the Bible*, by the late Dr. W. P. Mackay; *Albert, the Prince Consort*: a Biography for the People.

MESSRS. HODDER & STOUGHTON also announce the following books for young people: *Wonderful Stories of Daring, Peril and Adventure*, by Dr. Macaulay; *Harry Milvaine*; or, the Wanderings of a Wayward Boy, by Dr. Gordon Stables; *The Willoughby Captains*: a School Story, by Talbot Baines Reed; *More True than Truthful*: a Story, by C. M. Clarke; an illustrated edition of *Stepping Heavenward*, by Mrs. Prentiss, the illustrations printed in monotype; *Eunice*: a Story, by the author of "Christie Redfern"; *A Son of the Morning*, by Sarah Doune; *Sukie's Boy*, by Sarah Tytler; *The Boy without a Name*, by W. M. Thayer; *The Sunday Book of Story and Parable*, with numerous illustrations; *Candalaria*: a Heroine of the Wild West, by the author of "Our Honolulu Boys"; and *Cost What It May*, by Mrs. E. E. Hornibrook.

An edition of 50,000 of the Presidential Address of Mr. G. J. Holyoake at the Carlisle Co-operative Congress has been issued by the Manchester Co-operative Board, of which 30,000 were sold in a short time.

THE New York Nation has given two reviews

(August 18 and 25) to the third part of the *New English Dictionary*. While not sparing in criticism of details, the reviewer concludes as follows:

"There is not a page, nor even a single column, which will not correct the errors or add to the knowledge of all of us. As the work advances and covers a larger portion of the alphabet, its merits will be recognised by larger and larger numbers. But it has already gone far enough to show that it is a work upon which every member of the English race can rely with confidence, and of which he can speak with just pride; and, furthermore, it has already gone far enough to enrol the name of its editor-in-chief among the scholars whom English literature will always be delighted to honour."

Correction.—Mr. Warren's letter on "The Evangelistarium of St. Margaret," in the last number of the ACADEMY, was unfortunately printed from an unrevised proof. Among other errata, for "lectures" read "lections"; for "Names" read "Neumes"; for "Fes. passim" read "Fer."; omit the second dagger (†).

MESSRS. SONNENSCHNEIN'S ANNOUNCEMENTS.

THEOLOGY.—*Lenten Sermons*, preached at St. Agnes', Kennington, in 1887, by Canon Luclock, Canon Scott-Holland, the Rev. H. C. Shuttleworth, &c., edited by the Rev. T. Birkett Dover; *Cathedral Sermons*, by Canon Jelf; *The Teaching of the Prayer-Book for the Children of the Church*, by the Rev. E. T. Stevens; and *The Science of Religions*, by Emile Bournouf, translated by J. Liebe.

Science.—*The Microscope*, edited from the work of Profs. Naegeli and Schwendener, by Dr. Frank Crisp and J. Mayall, jun., with about 300 woodcuts; *Animal Biology*, by Adam Sedgwick, illustrated; *The Farmer's Friends and Foes*, by Theodore Wood; *Poultry*, a Manual for Breeders and Exhibitors, by Ralph O. Edwards, illustrated. In the "Young Collector" series: *British Fishes and Mammalia*, by F. A. Skuse; *Reptiles*, by Catherine Hopley; *Ants and Bees*, by W. Harcourt Bath; and *Silkworms*, by E. A. Butler. *Digestion: Perfect and Imperfect*, by Dr. A. E. Bridger; *The Theory of Harmony*, by Moritz Hauptmann, translated and edited by W. Heathcote, assisted by H. Keasley Moore; *A Catechism of Psychology*, by F. Kirchner, translated and edited by E. Drought; and *A Criticism of the Kantian Philosophy*, by Prof. Kuno Fischer, translated by Dr. W. S. Hough.

History and Biography, and Travel and Adventure.—*Russia: Political and Social*, by L. Tikhomirov, translated by Edward Aveling; *The Russian Peasantry*, by Stepniak, in 2 vols.; *Pepys and the World he Lived In*, by H. B. Wheatley; *The Life of Samuel Johnson*, together with a Journal of a Tour in the Hebrides, by Boswell, edited, with notes, by Percy Fitzgerald, in 3 vols.; *Memoirs in the Reign of Louis XIV. and the Regency*, by the Duc St. Simon, translated by Bayle St. John, in 3 vols.; *Louise de Keroualle, Duchess of Portsmouth*, compiled from State Papers by H. Forneron, with portraits, &c., translated by Mrs. Crawford; *The Solomon Islands and their Natives*, by H. B. Guppy, illustrated; *The Geology and Physical Characteristics of the Solomon Islands*, with maps, by H. B. Guppy; *Bayreuth and Franconian Switzerland*, by R. Milner Barry, illustrated; and *Life in the Cut*, by Amos Reade.

Educational Works.—*The History of Pedagogy*: a New History of Educational Theories, by Gabriel Compayré, translated, with introduction, notes, and index, by Prof. W. H. Payne; *The Principles of Philology*, edited from the German of Prof. Paul by Prof. H. A. Strong. In "The Parallel Grammar Series," edited by

Prof. E. A. Sonnenschein: *Latin*, by Prof. Sonnenschein; *French*, by Prof. Moriarty; *German*, by Prof. Kuno Meyer. *The N.-G.-A. Latin Primer*, by G. Stewart Leavack; *A School Arithmetic*, by G. H. Bateson-Wright; *A Primer of German Literature*, by Isabella H. Labin; *Health Maps for Instruction in Gymnastics*, by Anna Leffler-Arnim; *Volapuk*; or, the Universal Language, by Prof. Kirchhoff; *A Child's History of the English People*, by Amy Baker, in 4 vols.; and *Croesus Minor*: Essays on Education, by Austen Pember.

Social and Political.—*English Associations of Working Men*, by Dr. Baernreither, translated by Alice Taylor, in 2 vols.; *The Redemption of Labour*, by Cecil B. Phipson, with statistical diagrams in colours, in 2 vols.; *Liberty and Law*, by George Lacy; *Essays: Literary and Social*, by H. S. Salt; and *London Government*, by J. F. B. Firth (new volume of the "Imperial Parliament" Series).

Poetry and Fine Art.—*Through the Worth Country*, by Prof. William Knight, with fifty-six etchings of Lake Scenery by Harry Goodwin, printed on Japanese paper; *The Legend of Saint Jucundus*: twenty-nine etchings by George Hodgson, with verse by Edith Wallis Robinson; *Anecdotes of Painting in England*, with some Account of the Principal Artists, by Horace Walpole, a new edition, revised by Ralph N. Wornum, in 3 vols., with eighty engraved portraits; *Women must Weep*, a volume of ballads and occasional verse, by Prof. Harald Williams; and *Architectural Styles*, by Ernest Radford.

Novels.—*No Quarter*, by the late Capt. Mayne Reid; *Ireland's Dream*, by Capt. Lyon; *Nadia*; or, Out of the Beaten Track, translated from the Russian of Orloffsky by the Baroness Langenan; *Philip Alwyne*, by Jessie K. Sikes; *A Nest on the Hill*, by J. F. Higgins; *St. Bernards*: the Romance of a Medical Student, by Aesculapius Scalpel; *A Swallow's Wing*, by Charles Hannan; *Caught by the Tide*, by A. L. Garland; *'Twist Love and Sport*, by G. F. Underhill; *Blood!* by W. De Lisle Hay; *Lucy Carter*, by T. Cobb; *Gilbert Freethorne's Heritage*, by W. Erskine; *Queer Stories from "Truth"*, vol. v.; *Doonan*, by M. E. Granger; *Jonathan*, by M. Fraser-Tytler; *Alma*, by Emma Marshall; and *The Sport of Circumstances*, by Louis E. Armstrong.

Gift-Books.—*Indian Fables*, by P. V. Ramaswami Raju; *From Deacon to Churchwarden*, by Dr. J. W. Kirtton; *Kintael Place*, by the author of "Dorothy," illustrated edition; *Adventures of a Monkey*, by the author of "Moravian Life in the Black Forest," &c.; and *Mace's Fairy Tales*, translated by Caroline Genn.

AN UNPUBLISHED SONNET BY JUSTICE TALFOURD.

THE following sonnet has, we believe, never before been printed. The original is preserved among a large collection of autograph letters, &c., at Goodrich Court.

SONNET TO LORD DENMAN RETIRING FROM THE OFFICE OF LORD CHIEF JUSTICE OF ENGLAND.

THERE is a rapture in the great "All Hail"
With which a nation blesses thy repose
Which proves thy image deathless; that the close
Of man's extremest age whose boyhood glows
While pondering o'er thy lineaments shall fall
To delegate to cold historic tale
What Denman was; for dignity that rose
Not through the forms of "compliment extern,"
But from the generous spirit's purest urn
Sprung vital; justice shrin'd from wintry flaw
By beautiful regards, and thoughts that burn
With noblest ire, within the soul shall draw
No form but thine, when distant times would
learn
The embodied majesty of England's Law.

T. N. TALFOURD.

OBITUARY.

COUNT GOZZADINI.

THERE died at his Villa of Ronzano, in the Bolognese, on August 26, Senator Count Giovanni Gozzadini; and perhaps you may like to receive a short notice of his highly distinguished career from one of his old acquaintances, who corresponded with him almost to the last.

Count Gozzadini was born at Bologna, in 1810, of a patrician family whose name is well known in England. Having ideas of his own, he passed his earlier youth in the practice of weapons. He was a first-rate fencer, and he made a valuable collection of arms. At the age of eighteen he was almost destitute of what is called education, when certain fair cousins took him in hand and worked a complete conversion. He began to lead the ascetic and almost hermit life of a professed student. His father's fine library supplied him with all the necessaries. He passed months and years in muniment rooms and public libraries, working constantly at paleography; and he studied archaeology under the celebrated Schiassi. About this time the discoveries of M. Boucher de Perthes came, like a "thunderbolt from the blue," upon the scientific world to open that vast question, the "Antiquity of Man." Gozzadini at once ranged himself among his disciples; and thus he was, until last week, one of the first who accepted without reserve the new theories of the master. In 1844 he was lucky enough to discover upon his estate of Villa Nuova an ancient sepulchre, which he at once pronounced to be Etruscan. He excavated it with his own hands, made a careful collection of its contents; and despite adverse criticism, which lasted for some nineteen years, his views were at last universally accepted, chiefly through the favourable recognition of the well-known Prof. Conestabile.

The first book that he published was *La Vita di Armanciotto de' Ramazzotti*, a renowned condottiere of the fifteenth century. It was received with high favour; but the author soon abandoned lighter literature and betook himself exclusively to archaeology. He lost no opportunity of exploring the Emilia and in encouraging others to explore for remains of the Northern Etruscans; and he took a leading part in establishing the Museo Civico of his native city—unique of its kind, and the admiration of all savans. On the occasion of the International Congress of Anthropology and Prehistoric Archaeology held at Bologna in 1871 he was chosen president, and his opening address contained a valuable *résumé* of antiquarian study in Italy. He also directed the first national exhibition of prehistoric objects, after which Victor Emanuel conferred upon him the large gold medal inscribed, "Al Conte Senatore Giovanni Gozzadini per molte prove di peregrina erudizione." His merits were acknowledged in the most flattering way by the governments of Germany, France, and Denmark, and the illustrious Desor declared him to be "the type of his age."

Count Gozzadini's works are unfortunately scattered in a long succession of pamphlets and booklets, which are, of all things, the most troublesome to a collector. Again and again I suggested to him the advisability of reprinting them in a series of volumes, so that they might find their way into the hands of students; but he had a will of his own, and always gave the best reasons for not doing so. I am, however, in hopes that his native city (Bologna) will see the propriety of producing a *corpus* of his valuable labours. I have noticed a few of them in my work on *Etruscan Bologna*, and did my best to render homage to his talents, as I do now to the memory of this illustrious Italian.—
R. I. P.

RICHARD F. BURTON.

MAGAZINES AND REVIEWS.

THE *Expositor* for September has one charming article and nowhere fails to stimulate thought. A sound and yet popular paper on Amos leads the way, from the pen of Prof. A. B. Davidson. Mr. Page examines a crucial point in the Synoptic Gospel texts, tending to show that the hypothesis of a purely oral tradition has been too hastily acquiesced in among ourselves. Mr. G. A. Simcox gives suggestions of much freshness and individuality on the origin of the Christian ministry. "E." is severe upon Prof. Friedrich Delitzsch's *Assyrian Dictionary*; but in his catalogue of the author's drawbacks builds a little too much on Noldeke's article on the author's recent *Prolegomena*. "E.'s" statements are here and there somewhat too incisive and unqualified, however well founded they may unfortunately be, on the faultiness of Dr. Delitzsch's copies from the texts. Dr. Marcus Dods notices recent English books on the New Testament, and Dr. Maclaren and Dean Chadwick contribute good popular elucidations of New Testament passages. But the charming article is the veteran Dr. David Brown's *Reminiscences of Edward Irving*, from the years 1827-1832.

THE *Theologisch Tijdschrift* for the present month concludes Dr. van Manen's article on Marcion's Epistle of Paul to the Galatians. The author appends the text of the epistle as Marcion may have read it. Dr. de Ridder introduces, with much appreciation, vol. i. of Jülicher's valuable work on the Parables. Dr. Kuenen notices recent works—some of them English—on the Old Testament.

CORRESPONDENCE.

"ON TEACHING ENGLISH."

Aberdeen: Aug. 31, 1887.

The notice in the ACADEMY of August 27 of my two recent books, entitled *Teaching English and English Composition and Rhetoric*, Part I., is so disparaging that I must crave the liberty accorded in your columns to aggrieved authors of making some remarks in justification of my position.

If an author were at liberty to dictate to his

critic, I would say, on this occasion, that of the two books named and given at the head of the notice, the reviewer would have done better to choose the more important one; I mean the revised *Rhetoric*, on which he does not spend a single word. The labour I have bestowed on this volume is at least ten times what the other cost, and I value it accordingly. The reviewer must be assumed to deal with it vicariously, through the hasty snatches of attention bestowed on the other.

The main quarrel between Mr. Barnett and myself relates to how English should be taught. I have argued the point at some considerable length in the smaller volume; and I think that these arguments should be met, unless, indeed, they are worthless, which, however, should first be shown by some better examples than those in the article.

The chief complaint of the reviewer is that I do not take a sufficiently wide view of the province of the English teacher. In fact, I narrow it to the vulgar, grovelling, and utilitarian view to which Locke gave expression when he said that "of speaking one's own language well, and being a master of it, let a man's calling be what it will, it cannot but be worth our while taking some pains in it." Now, while interfering with no man's liberty to take a much wider view, I say this is enough for me. If I were to succeed as I wish in this narrow domain, I should be perfectly happy. But whether the narrow or the wide view is the correct one, is scarcely a matter for argument. To the reviewer, the knowledge of English "primarily means the knowledge and understanding of the great Englishmen who have recorded in our tongue the impressions made on themselves by the universe that is, feels, knows." The writer has my full permission to call my view wretched and grovelling, if he will allow me in return to suggest whether, for the teacher's purpose, his view is not somewhat vague, not to say bombastic.

But it is not my purpose to analyse (the reviewer detests analysis) the terms of his high-sounding definition. Indeed, in order to do so, I should want more specific information in detail of the machinery for working out the design. I am more concerned to reply to his criticisms upon my working out of my narrower view.

Of course, when he says that grammatical and other commentaries are helpful to "get to the heart of the writer's mystery, and to make us see the things he makes somewhat as he saw them," I should agree with him, if I considered it my duty as an English teacher to explain an author's view of the universe. There are classes where this is a proper subject, and I have had to do a good deal at it in my time. I merely say that, when I was doing this, I was not teaching English, in my view of it.

But now comes the serious charge, and the one that I feel most interested in rebutting. Your reviewer is not the first critic that has stigmatised my work for disrespect to Bacon; and, in particular, for saying that Arthur Helps's essay on "Business" is an improvement on Bacon's handling of the subject. Now it would take a greater reputation than mine to survive, unscathed, the allegation of slighting Bacon: the English public is, I am aware, peculiarly sensitive on the point. I must, therefore, ask a little space to give my whole case. The reader would not infer from the article, that I guard myself with the following observation as to the Essays:

"The quantity of strong sense compressed into a narrow compass, the pith and brilliancy of the language, and the fame of the author, have made these essays an English classic of the first rank. But the question before us is—How far is the work fitted to be a text-book in the instruction of youth?"

Accordingly, I submit the Essays to a minute examination, with a view of settling the point; and I would simply have referred the reader to the chapter where this is done, but that the apparent drift of the reviewer is to prevent people from looking into the book for themselves. I will, therefore, trespass still farther on your indulgence, and briefly state the two most formidable objections to the use of the Essays as a school-book. The one is their desultory character. Let us suppose in the programme of a school, the teaching of the Essays was announced thus: Monday, "Truth"; Tuesday, "Death"; Wednesday, "Unity in Religion"; Thursday, "Revenge"; Friday, "Adversity"; and so on. The reviewer would call this good teaching. I differ from him. There is an age when being desultory is no great objection; but I contend that when pupils reach fourteen or fifteen, whatever knowledge is given them should be consecutive and sustained. In this view, comment on the above programme is needless.

But even more serious is the other objection—namely, the gross unsuitability of many of the subjects for teaching in any form, at the age supposed. I cannot afford to spend many illustrations on this point. I will take one or two of the extreme cases. I have cited the essay on "Judicature," as, to my mind, the most masterly of the whole, both in substance and in expression. Well, but what does it treat of? Why this: the behaviour of a judge on the bench in all the relationships of his high office—towards the litigants, the counsel, the officials of the court, and so on. Now, is there any conceivable propriety in preparing a class of young boys or girls, for becoming judges?

Another case. It has pleased the Civil Service Commissioners to include the Essays among competitive subjects for the service. For reasons that I have given, this is a worse abuse than taking them up at school, where the teacher has a free hand. My only remark on this choice is, let the Commissioners dread the day when a satirist finds in their papers this question from the essay on "Gardens"—namely, how to lay out thirty acres of pleasure grounds!

I cannot help feeling some surprise that, after eight generations have perused these Essays, and, we might suppose, appropriated the matter, there should still be something left for the ninth to extract from them. Surely Bacon must have expressed himself very badly if his meaning has not been fully taken up and embodied by others before now. However, it is only the Essays that possess the character of the magician's bottle. The Inductive Logic and the Natural History are, by general admission, superseded. Why, then, I ask, may not Helps, founding upon Bacon, and adopting subsequent suggestions and experience, be allowed to have superseded the essay on "Business," without disparagement to Bacon's genius?

It is more to my purpose to deal with the reviewer's correction of my handling of the opening sentence of the essay on "Truth." Protesting that I do not consider the Elizabethan writers the best suited for instruction in style, I still endeavour to point out ways of employing them for this end. One such way is to illustrate delicacy in the use of synonyms, in which they were apt to be careless. Thus, on the opening of the essay on "Truth"—"What is truth, said jesting Pilate. And would not stay for an answer." I remark that "said" should be "asked" when putting a question, and "and" should be "but." Here the reviewer pretends to know Bacon's own mind when he wrote, and declares confidently that he avoided "asked" and preferred "said," because there was only the *form* of a question, and not the reality. Now, if we had to deal

with a careful writer of the present day, we might give him credit for such delicacy; but I would not do the same for any Elizabethan. Moreover, the point is still a debatable one—namely, when we use a question merely as a figure of speech, is not the word "ask" still admissible, nay, even preferable? Would it then be an error to employ it? I do not think so; but, whether or not, the raising of the doubt, only adds to the use to be made of the instance as a lesson. Remember that what we have in view is not to be dogmatic ourselves, but to call into play the judgment of our pupils; and this can be still farther effected by opening up as a new point, whether a question in *form* is or is not supposed to be asked. One presumption against the reviewer's decision is found in the phrase—"would not stay for an answer"; which looks as if an answer would have followed but for Pilate's impatience. Proceeding, however, upon the doubt, we should bring up for discussion—What is the end of putting a question that did not mean a question? This carries us to Interrogation as a figure of speech, and to its uses in that capacity. These uses are various. The one applicable to this case is rousing the attention on first naming a subject for discussion. We then enquire—Has it that effect here, or would anything have been lost by stating the subject without the figure? Does Bacon employ the same device in any other essay? If not, what is there special in Truth as a subject to render it proper?

I now pass to still more serious matters. The reviewer charges me with passing beyond my own scheme of "teaching English," by pronouncing literary judgments, where my authority can have no special weight, and where most people will differ from me. In other words, I am setting up my own judgments on literary works against the general current of the best critics. The allegation is utterly unfounded. I have had in view, in carrying on my work, the critical opinions of all the men that have obtained authority as critics; and, unless I could reconcile my conclusions in the main to those that have received the stamp of ages, I would abandon the whole enterprise. My position is simply this: that I take up the thread of rhetorical teaching, as begun among the Greeks, and continued, with occasional intermission, to our time. I explain the principles that have been worked out on the subject, and show their application to cases. As all literary productions have been subjected to the intuitive non-reasoning criticism, upon which, indeed, most of our current judgments are founded, it is interesting to compare the results of the two methods; for, unless they support one another, something must be wrong. The difference between judgments founded on the carrying out of principles and judgments by the unassisted ear, so to speak, ought not to be greater than the allowed difference between one intuitive critic and another. Now, this is the whole amount of peculiarity in my literary judgments. It is the full length that I would ever venture to go, however knowing I might become in rhetorical science.

Your critic, however, has his own views as to my presumption; and he exposes them by a couple of extracts from the detailed examination of Shelley's "Skylark." He gives no reasons, but trusts to self-evident absurdity; and follows up by saying "the further criticisms are equally unhappy," that is, in his opinion.

It puzzles me to know what my reviewer actually expects to settle by these two quotations, referring to two stanzas of the poem. He should have told me whether these were good representative specimens of the work, or whether he considered them to be the best or the worst examples. I have no doubt he

selected what appeared to him, at a rapid glance, most vulnerable; and he says, or else insinuates, that all the rest are equally bad. I do not quite appreciate the justice of this mode of dealing. The work before him is principally occupied with lessons on the qualities of style, upon a series of passages selected from many writers, including Macaulay, Carlyle, Byron, Gray, Coleridge, Milton, Dryden, Pope, Campbell. They occupy 156 pages. How is a fair-minded critic to grapple with this? Is the production of half a page from any one lesson decisive of all the rest? There may very reasonably be a great variety in the merits of the treatment, without the whole being utterly worthless. What a critic might do, would be to remark on the method, as propounded and explained by the author, and then, on his own responsibility, to give a general opinion upon it. I defy him, in the limits of a short article, to back up this judgment with quotations sufficient to establish such an opinion, or to give it even a decent amount of probability.

I wish I could here quote at length a most valuable extract from Coleridge's *Biographia Literaria*, in which he describes the method of teaching followed by his master at Christ's Hospital, James Bowyer, and the good effect it had on his subsequent work. I may say, however, that it was the carrying out, with remorseless vigour, the line-by-line, and word-by-word criticism, which I exemplify in those lessons. The following sentence is merely one part of his method:—"He showed no mercy to phrase, metaphor, or image, unsupported by sound sense, or where the same sense might have been conveyed with equal force and dignity in plainer words." I could also quote Coleridge himself to the same effect. For example,

"The line—

'And reddening, Phoebus lifts his golden fire,' has indeed, almost as many faults as words. But then, it is a bad line, not because the language is distinct from that of prose, but because it conveys incongruous images, because it confounds the cause and the effect, the real thing with the personified representation," &c.

Our great critics occasionally remit their grand style of sweeping criticism by condescending to analyse single lines; and it is felt by us as most refreshing. It is through word-by-word criticism that every writer corrects, polishes, refines his composition. The rhetorical master has nothing to do with the stream of invention. He comes in at the "blotting" stage.

In a somewhat confused paragraph at the close, the reviewer continues his disparagement by a series of mis-statements. What can he mean by this—every lesson in my books can be learned from the daily newspapers? That is to say, because the errors that I comment upon may be found in the daily newspapers, therefore, any one can find them there; in short, there is no need of a teacher in the case.

More remarkable still is the use made of Macaulay's name to spin out a few more damaging insinuations. Macaulay, it seems, "was made by such a knowledge of, and memory for, a large range of English classics as few men can hope to have." So far, good. But what follows? He was not taught English on Dr. Bain's method. "He was not starved on a diet of elegant extracts." The inuendo here is such a gross perversion of facts that I must claim one other paragraph in self-justification. The meaning must be (or there is no meaning) that I set up the analysis of extracts as a rival method to copious reading of classical authors. I can meet this at once by referring to the opening paragraph of my *Rhetoric*, published in 1866. The substance is repeated in a more quotable form in the work on *Education as a Science*:

"The whole gist of rhetorical teaching, as thus

viewed, is to awaken the minds of the pupils to the sense of good and evil in composition. This I take to be the prime requisite. For, although in order to write well, a command of expression is even more necessary than the power to judge of good writing; yet, the teacher can do but little for the one, and can do a great deal for the other. A fluence of language is the fruit of years; very many of the niceties and delicacies of composition may be made apparent in a six months' course."

Of course, it was no part of the reviewer's duty to be acquainted with either of those books. His eye might, however, have caught, in the present work, a title in small capitals—WHAT THINGS TO OMIT—where the utility of an English teacher is reduced to its lowest terms; certain circumstances, of quite possible occurrence, being mentioned where he could be wholly dispensed with.

In regard to Macaulay, in particular, I will risk the farther remark that if he had been under Bowyer for two years, while the genius and affluence of his language would have suffered no diminution, much less would have now been heard of his mannerisms.

The reviewer candidly deplores the uninspiring character of most of the recent school editions of the English Classics, but commends to my notice Mr. Beeching's *Julius Caesar* as an exception. I happen to be already acquainted with the work. It appears to be an excellent commentary on all matters needing explanation. Its chief characteristic lies in propounding, as an educational discipline, the dramatic proprieties of the play. Now, this is a department of English standing quite apart; it neither supersedes, nor interferes with, my writings. On the contrary, I should say that all that I have done and propose to do would be a needful introduction to such an attempt. How far the language and demeanour dramatically suited to Julius Caesar, on the eve of his assassination, is fitting to be submitted as an exercise of judgment to boys and girls of fifteen is a point whereon opinions will differ.

Finally, I commend to our profession the following words of Coleridge:

"From causes which this is not the place to investigate, no model of past times, however perfect, can have the same vivid effect on the youthful mind as the productions of contemporary genius."

To this the universal chorus of pupils will shout, "Amen."

A. BAIN.

THE NAME OF "OXFORD."

Clevedon: Sept. 5, 1887.

Mr. Henry Bradley says (ACADEMY, September 3, 1887, p. 151) that "on questions of philology," most of my arguments appear to him absolutely unmeaning, as, he continues, no doubt, his do to me. This being the case, we had each better limit our ambition to our several chances of having been understood by the remaining majority of your readers, an allotment in which I readily accept my part.

Another of Mr. Bradley's propositions, however, I do not accept: that Oxford, already containing three churches of Celtic dedication, started again, as "a hamlet," with—as Mr. Bradley considers—a Teutonic name. Any "documentary evidence" of this would be self-convicted, even though it should include a paradigm of an Anglo-Saxon grammar. Indeed, we seem here to have another example of the conflicts of philological certainties with actual facts, which I dwelt upon in my former letter.

I presume to revert, from Mr. Bradley's speculations about "Eburna," &c., to what I had said already (ACADEMY, August 27, p. 135). Mr. Bradley might have told us whence he got his Celtic "Eburáoon"; but he need not now take the trouble to do so.

I hope the next editor of Leland may be as literally exact as Thomas Hearne.

THOMAS KERSLAKE.

Sheffield: Sept. 1, 1887.

I have noticed lately that doubts have been thrown upon the generally accepted derivation of Oxford from "ford of oxen," and I see that Mr. Kerslake has returned to the subject in the ACADEMY of August 27.

I have just met with a similar local name in a survey of the estates of the Earl of Arundel in and near Sheffield, made in the year 1637. The name occurs in the following sentence:

"Item another intacke called *Cowforthe holms* (wood and arrable) lying between Loxley water north-east and Stanington wood south and west."

Now *holm* is a meadow by the side of a river, a level meadow, a river meadow, or, according to the *Prompt. Parvulorum*, a "place beyond a watur"; and apart from this the context renders it clear that this is "Cow-ford," ford for cows. Exactly in the same way Oxford is "ford for oxen"; and this derivation, I need hardly say, is fully supported by ancient spellings of the name.

It seems to me that the Latinised form *Oxonía* is a barbarism from the word "oxen," and ought rather to have been *Oxenía* or *Oznia*. I can never forgive Anthony Wood for writing *Oxon* for Oxford, as he persistently does. His *Oxon* cannot have been undergraduate slang for *Oxna-ford* or *Oxen-ford*.

S. O. ADDY.

London: Sept. 2, 1887.

Permit me to appear in support of the Celtic contention for the place-name "Oxford."

It is stated by Mr. Bradley (ACADEMY, September 3) that it is always written "Oxna," or "Oxena," in the earliest documents. I do not find this statement correct. We have, for instance, on Alfred's coinage, "Orsnaforda," with numerous variants in the Anglo-Saxon Chronicle, and in charters; e.g., "Oxana," "Oxone." Comparing these with the later "Oxna," "Oxena," I deduce a form like "Uxona," well known in river names. Compare "Uxa-conium," somewhere near Wellington, Salop; "Axona," now the Aisne, in France. All these forms will support Ock, Welsh *uch*, for the upper river; that is one that flows into another—a tributary.

Then, as to the hypothetical "Isis," compare the Isara, or Oise, which receives the Aisne, Welsh is "low," our English Ouse; this is substantially Leland's view. We have in Merionethshire such forms as Isafon, Uwchafon; and we do not know from what point of view the Britons regarded Oxford, with reference to a topographical aspect.

A. HALL.

"COLLATION OF FOUR IMPORTANT MANUSCRIPTS."

Boisort, près Luzech (Lot): Sept. 4, 1887.

I accept with pleasure the explanation given by Dr. Ceriani in the ACADEMY of August 20, p. 121.

Printed texts frequently disagree with the MSS. in many peculiarities, as everyone who has acquired some experience knows. The edition of the *Four Important Manuscripts* is not an exception to the rule, at least in the niceties constituting punctuation and orthography. For this reason I paid great attention to what I was told by Dr. Ceriani, or to what I read in his copy of Scrivener's *Introduction*. My mind was so struck by that declaration that, in writing my essay, I did not probably attend to, or even remember, what I had read in the work of Farrar and Abbott on the same subject.

Assuredly I had no intention of accusing Dr. Abbott of falsehood or of shameful negligence, and I am sorry that my words have been, or may be, construed in that sense.

ABBÉ MARTIN.

"INITIALS AND PSEUDONYMS."

New York: August 26, 1887.

Mr. Ralph Thomas seems to be under the impression that if a person compiles a dictionary he must give credit to all his predecessors for every word contained in that dictionary. Mr. Thomas's book is now difficult to obtain—at least in the United States—and, instead of being a *Handbook of Fictitious Names*, it is to a great extent a compilation of literary plagiarisms. Had Mr. Cushing inserted my list of pseudonyms employed by Voltaire as I handed it to him, then Mr. Thomas would have discovered that I had included many names which are not in Quérard. But the whole thing seems to amount to just this: Mr. Thomas was evidently preparing a new edition of his *Handbook*, and because two Americans "got ahead of him," as the phrase goes, he stops the sale of a valuable book of reference.

As regards the work issued by Messrs. Halkett and Laing, Mr. Thomas knows very well that he has misrepresented the facts. This book is arranged by titles; and nobody can find anything in it unless he happens to know precisely how the title of the book is worded.

ALBERT R. FREY.

SCIENCE.

THE LANGUAGE OF THE SLOVAK GYPSIES.

Die Mundart der slovakischen Zigeuner. Von Dr. Rudolf von Sowa. (Göttingen: Vandenhoeck.)

SINCE William Marsden published his *Observations on the Language of the Gypsies*, in 1784, not one English philologist of mark has paid any attention to the Romani language except Mr. Beames, and his work is a sealed one to all but orientalists. The field has been left clear to a few linguists like Borrow and Prof. Palmer, and such dilettanti as Col. Harriot, Mr. Leland, Messrs. Bath-Smart and Crofton, and myself.

Prof. Max Müller, the head of our English school of comparative philology, dismisses Romani in a sentence as "most degraded in its grammar, and with a dictionary stolen from all the countries through which the Zingali passed;" and no one has ventured to challenge his dictum. Indeed, theories as to the Gypsies rank in Great Britain with pyramid, theosophic, and Anglo-Israel crazes. On the Continent, however, Profs. Pott, Benfey, Ascoli, Friedrich Müller, Miklosich, and De Goeje have, between 1844 and 1880, published hundreds on hundreds of pages regarding the language and the wanderings of the Gypsies; and their investigations go far to show that Romani is the most purely inflectional language surviving in Europe, while its borrowings have been relatively few, compared with those of (say) English. And that the subject is not deemed wholly exhausted may be inferred from the publication of the present work at the cost of the Vienna Academy of Sciences. It is founded on nineteen Romani *Märchen* collected by Dr. Von Sowa, at Tepliez, in 1884-85; and of its 194 pages 160 are devoted to a grammar of the Slovak-Romani dialect, sixteen to the text of nine of those *Märchen*. It is a pity that more

space was not given to the latter, and less to the grammar; for some of this is a mere repetition of what has been given better by others, and Dr. von Sowa has failed in several important points to grasp the genius of the Romani language. Thus, his statement is utterly misleading as to the perfect—that it is formed by adding *-jom*, *-jal*, *-jas*, &c., to the past participle. This explains nothing; whereas it is perfectly certain that *gilóm* "I went," the perfect of *jáva* "I go," is a compound of *giló* "gone," and *hom* "I am," thus equalling "gone am I." In the same way the plural perfect is a compound of the past participle and *homás* "I was." But what one really wants now, in future works on any of the Romani dialects, is not a complete grammar or vocabulary, but an indication of the inflections and words that distinguish it from the other dialects.

Perhaps the most valuable portion of Dr. von Sowa's grammar is his analysis of the vocabulary of his nineteen *Märchen*, according to which three per cent. of the words are of Magyar, nineteen of Slovak, and one of German origin. These *Märchen* themselves are of considerable value to folklorists generally; and the pity is he has published but nine of them, that, too, without a translation. Among these nine I recognise variants of "The Valiant Little Tailor," "The Shoes that were danced to Pieces," "The Master Thief," and "Gambling Hansel." Five others—"The Two Children," "The Four-and-twenty Thieves," "The Smith's Daughter," "The Ring," and "The Dragon"—I have failed to identify, though they offer many analogies to various European folk-tales. Gypsy *Märchen*, of which we now possess more than a hundred, have, like the Gypsy language, been almost universally neglected. There is not a hint of them in Mr. Clouston's recent *Popular Tales and Fictions*—a valuable work which indicates the late Asiatic origin of a host of our common folk-tales. I ask, as I asked nine years since with barely a fourth then of my present materials: May not our fairy-tales owe their Asiatic type, in part at least, to the Gypsies, many of whom in South-eastern Europe are professional story-tellers at the present day?

FRANCIS HINDES GROOME.

CORRESPONDENCE.

THE GREEK SAMPI ON INDO-SCYTHIAN COINS.

London: Aug. 29, 1887.

Will you allow me to supplement my notes on "Zoroastrian Deities on Indo-Scythian Coins," published in the August number of the *Babylonian and Oriental Record* (David Nutt), with a few remarks on the epigraphic puzzle, for which I had found but a partial solution when that article was concluded?

The question is how to account for the letter P, which apparently represents in the legends of the Indo-Scythian coins (written in Greek characters) the native sound *sh*. The identity of KANHPKI and OOHPKI of our coins with the kings Kanishka and Huvishka of Indian tradition was a brilliant discovery of Prinsep; and equally happy was the identification of KOPANO with the ethnic title *Kushan*, suggested long ago by Gen. Sir A. Cunningham. But neither of these great pioneers in Indian numismatics nor later observers have been able to give any explanation of such a phonetic change.

To the list of forms with P = *sh* we can now

add from the obverses the titles PAO and PAONANOPAO, and from the reverse of some Huvishka coins the name of the god PAOPHOPO. In the paper referred to above I have identified the former titles (which, although known to correspond to BACIAETC and BACIAETC BACIAEONN of the Greek legends, had hitherto baffled all attempts at etymological interpretation) with the Iranian titles *Sháh* and *Sháhan-sháh*; and I was similarly enabled to recognise in PAOPHOPO the Zoroastrian archangel *Shahrévar*. A close examination of the coins had also shown me that the letter representing *sh* in these and other legends, hitherto read as P, bears in fact a shape clearly different from the ordinary P, and rather resembling *p*; but I was not yet able, when writing that article, to suggest any explanation of the origin of this remarkable character.

I now think that I have found its prototype in the Greek *San* or *Sampi*, Ϻ. This ancient sibilant, which survived in the later Greek alphabet only as the *εσσηνωρ* for 900, was, in fact, the only Greek character available for the expression of the sound *sh* of the Indo-Scythian legends. *San*, which we know from Herodotus (i. 139) to have been a letter peculiar to the Dorians, denoted in their dialect apparently a softer pronunciation of *s*, perhaps approaching that of *sh* (see Athenæus xi. § 30). The very name *San*, evidently derived from the Semitic *shin*, suggests for Ϻ a phonetic value similar to *sh* (compare the correspondence between name and sound in *στυα* = *samekh*.)

Our identification of the Indo-Scythian *sh* with the character *San* rests, however, in the main on clear palaeographic evidence (compare for the latter Dr. I. Taylor's *Alphabet*, ii. p. 95). The earliest form of *San* is M, found in Dorian inscriptions (Thera, Melos, Corinth); coins of Mesembria and an inscription of Halicarnassus present us with a later form of *San* in the shape of T. As a numeral it appears in Greek papyri of Ptolemaic times in the form of ω or T, from which the oldest minuscule form of *Sampi*, Ϻ, and the almost identical form of the Indo-Scythian *sh* can be derived with equal ease. The latter character may be seen with special clearness on the coins represented on p. 165 of the *Babylonian and Oriental Record*.

The Indo-Scythian coinage generally exhibits very cursive characters, which, in the absence of historical evidence (inscriptions of Kanishka and his successors date from A.D. 87-176), we should be inclined to assign to a much later period; the almost perfect identity of the Indo-Scythian *sh* with the early minuscule form of *San* is, therefore, easily accounted for.

In the Indo-Scythian legends we had always ample proof of the fact that Greek writing remained in current use in India long after the destruction of the Greek kingdoms but the vitality of Greek writing in the far East was, perhaps, never brought more forcibly before us than by the observation that the obsolete *San* was revived to denote the *sh* of the foreign conquerors.

M. AUREL STEIN.

PROF. JEBB'S "INTRODUCTION TO HOMER."

London: Aug. 31, 1887.

I have just read an able paper by the Rev. Sir George W. Cox, on Dr. F. A. Paley's *The Truth about Homer*, in the *Cambridge Chronicle*; and I am surprised to find that a scholar like Prof. Jebb, in his recent work, *Homer*; an Introduction to the Iliad and the Odyssey, ignores the labours of one who has done more than any living man to throw light on the Homeric question. Dr. Paley, in his various works, has adduced overwhelming proof that our Homer cannot have been the Homer from which the Greek dramatists and

lyric poets derived the materials of their works; and that, in fact, the Homer we read was not known among the Greeks before the age of Plato. Now, it is quite possible that some critics may not be fully satisfied with the evidence produced by Dr. Paley; but they, bound by common honesty and by the love of truth, which ought to be the first quality of every true scholar, not to repeat the old traditions as if they had never been assailed, and if they were universally acknowledged facts.

Whatever may be the value of my opinion, do not hesitate to enter my protest against such a method of dealing with so important a literary question; and I confess that I am in common with many others, entirely agree, as a whole, with the results to which Dr. Paley's investigations have led, and feel grateful to Sir George W. Cox for the admirable way in which he has dealt with the subject in the *Cambridge Chronicle*. L. SCHMITZ.

THE ANTIQUITY OF THE AVESTA.

Herent (Belgium): Sept. 7, 1887.

I regret sincerely that my answer to Dr. West's and M. Geiger's attacks seems unpleasant to our great Pahlavi scholar, although the was not a single word in it which need be disagreeable to anybody. I could not forbear writing it. Therefore, I will terminate the discussion, observing merely that Dr. West once more pays attention only to a short occasional paper, without noticing other more important writings on the same subject; and that M. Geiger has wholly misrepresented my opinions and ascribed to me assertions which I never thought of. I have demonstrated this long ago. C. DE HARLE.

SCIENCE NOTES.

Two new works on the microscope are announced for early publication by Messrs. Roper & Drowley. One is by Mr. T. Charter White, and will treat of the mounting of objects; the other is a practical guide to the working, and manipulation of the instrument and its accessories, and is by the author of *My Microscope*, who writes under the pseudonym of "The Quekett Club-man." This volume will be profusely illustrated.

PHILOLOGY NOTES.

The forthcoming number of the *Babylonian and Oriental Record* (David Nutt) will contain the following articles: "Yemen Inscriptions—the Glaser Collection in the British Museum—Texts, and Translations," by Prof. Hartwig Derenbourg; "The Land of Sinim," by Prof. T. K. Cheyne; "The Land of Sinim, not China," by Prof. T. de Lacouperie; "Sumero-logical Notes," by Prof. Fritz Hommel; "A Royal Tithe of Nabonidus," by Mr. W. St. Chad Boscawen.

FINE ART.

NAVILLE'S EDITION OF "THE BOOK OF THE DEAD."

Das Aegyptische Tottenbuch der XVIII. bis XX. Dynastie. Von Edouard Naville. (Berlin: Asher.)

M. NAVILLE knows now how Agamemnon felt when Troy was taken. Unlike the king of men, however, he needs no Homer to rescue him from oblivion. His ten years' task is its own indelible record; and although that task while in progress may have seemed tedious and even ungrateful, he is promptly rewarded with the unanimous gratitude of

he learned, and by the knowledge that he has erected a colossal monument to his own enduring renown. To over-estimate the earning, the patience, the perseverance which have gone to the making of this great work is indeed impossible. The labour has been not only mental but bodily. It has involved long and frequent journeys, much self-denial, some hardships, and an amount of mere manual task-work which fairly staggers the imagination. It is not enough to say that M. Naville, in order to collect his thousands of variants, has given us the cream of seventy-one papyri contained in the museums of London, Paris, Berlin, Turin, Leyden, Florence, Bologna, Parma, Rome, Naples, Hanover, Marseilles, Liverpool, Dublin and Boulaq, besides others in private collections in various parts of Europe; and this without counting the sculptured texts of six Egyptian sepulchres, and the inscribed winding-sheet of Thothmes III. We have also to remember the mass of documents which yielded no variants, and so cost labour in vain. The disappointments, the long trials of patience, and even the difficult circumstances under which many texts were deciphered, should also be taken into account when we sum up our debt of gratitude to M. Naville. Of such details he himself says nothing; but they are the inseparable drawbacks to Egyptological research, as every Egyptologist knows. Nor must it be forgotten that the author of a work of this description addresses not even the learned world in general, but only a very limited circle of specialists. To all but Egyptologists *pur et simple*, M. Naville's new edition of the *Todtenbuch* is absolutely a dead letter. The savants who shall translate it into modern languages, the commentators who shall interpret it by the light of comparative mythology, folklore, and philology, will achieve that popularity which M. Naville has prepared for them, and which in his own person he has been content to forego.

For readers who, not being Egyptologists *pur et simple*, are nevertheless interested in all that promotes the progress of science, it may be as well to explain what it is that M. Naville has actually done. In the first place, *The Book of the Dead* is a collection of prayers and exorcisms composed at various periods for the benefit of the pilgrim-soul in his journey through Amenti (the Egyptian Hades); and it was in order to provide him with a safe-conduct through the perils of that terrible valley, that copies of this work, or portions of it, were buried with the mummy in his tomb. Of the many thousands of papyri which have been preserved to this day, it is perhaps scarcely too much to say that one half, if not two-thirds, are copies more or less complete of the *Book of the Dead*. As documents, their variety is infinite; as texts, the majority are corrupt and faulty. In fact, no such thing as a really complete and correct copy has yet been found; and it is to the compilation of this ideal copy that M. Naville has devoted ten of the best years of his life. Confining himself to a central period when the sense of the book was yet fairly understood by the scribes, he has so collated, sifted, and selected his materials that a pure text is, for the first time, placed in the hands of scholars. Side by side with this pure text, M. Naville, in his second volume, gives us the various

readings of all his reference papyri, so that we not only have a standard copy for current use, but the means of constructing other copies. Scholars, in short, find their work done for them. Each can now select the variants he prefers, and a critical edition of *The Book of the Dead* at last becomes possible. Pending the critical edition, it is however to be hoped that competent Egyptologists will hasten to translate M. Naville's standard text into the principal European languages. An intelligible rendering is urgently needed; and without disrespect to the versions of Birch and Pierret, it must be conceded that no such rendering has yet been practicable. The Turin text edited by Lepsius is of a late epoch, and consequently corrupt; yet translators have been fain to follow that or none. That Dr. Birch should fail to make reasonable sense of so misleading an original was inevitable; and, notwithstanding the fact that he had De Rouge's admirable rendering of the famous seventeenth chapter to steer by, M. Pierret, on the whole, fared but little better. Even De Rouge, it is to be remembered, could not make sense of that chapter without a very free use of paraphrase.

The sources of error in funerary papyri were many and fruitful. These documents were the staple of an extensive trade, and the numbers engaged in every branch of this special industry were necessarily considerable. As in all other trades, the skill of the craftsman varied. Some scribes wrote well and others ill. Some were educated men, who understood what they transcribed; others were ignorant, and copied ignorantly. As a rule, there would seem to have been a division of labour, the hand that executed the vignettes being evidently not the same hand that penned the text. Some first-class penmen, however, were also admirable artists, and illustrated their own texts. Taking them in the mass, funerary papyri may be divided broadly into two classes; namely, documents made to order, and documents made for sale. The documents made to order were executed by artist-scribes of repute. They may be recognised by the general uniformity of the style, and by the accuracy with which the text and vignettes correspond. The space is carefully calculated; the writing is done to scale; the name of the deceased is in the same hand and in the same ink as the rest; and every illustration falls into its proper place. In papyri made for sale, the vignettes are by one hand, and the text by another. The object being in this case to produce an attractive article, the illustrations were made of more importance than the text, and the artist's share of the work was done first. Hence we find a marked inequality of style between the vignettes and the writing; the former being abundant, and often beautifully executed, whereas the latter is generally indifferent, and almost always faulty. Forced to accommodate his text to the space left by the artist, the scribe filled it in as best he could. The illustrations consequently come in wrong places; and, if the chapter to which they belong is too lengthy, another chapter with which they have no connexion is substituted. A careless scribe not infrequently filled in his blanks with fragments of texts and senseless repetitions. The place for the name of the deceased was,

of course, left vacant till the document was sold. This important lacuna was, however, occasionally overlooked; and the dead man's passport to Amenti, though duly buried with him, was useless, because nameless. In cases where the name has been added, there is generally a perceptible difference in the character of the script and the colour of the ink. M. Naville gives a curious instance of a papyrus at Liverpool, in which the name had been entered and then erased. Here, evidently, the document had been returned after purchase, and the scribe had done his best to put it once again into saleable condition. By noting the above-named points, it becomes easy to classify papyri as (1) made to order, or (2) made for sale. The former may be said to rank as works of art, and the latter as manufactured articles. As, however, the work of art is sober in style and sparingly illustrated, the manufactured article is by far the more attractive to an unlearned eye. Whether the scribes, as a rule, did or did not understand what they copied is an interesting question. M. Naville is of opinion that during the classic period—that is, throughout the XVIIIth and XIXth Dynasties—the majority of scribes did undoubtedly read and understand the sense of *The Book of the Dead*; but that their successors of the XXth and XXIst Dynasties were for the most part as ignorant as the public for which they catered. By the way in which they divided their columns and blundered the text, writing sometimes backwards and sometimes forwards in the same papyrus, he can tell whether they worked from a hieroglyphic or hieratic original, and even in what way the copy was arranged before the eyes of the copyists. Hieroglyphic documents, as a rule, were written vertically, and hieratic documents horizontally. Also, some hieroglyphic papyri are written from right to left, and others from left to right. Now, in a Berlin papyrus—clearly one of those got up for sale—the vignettes are made for a text reading from right to left, whereas the scribe has filled it in from left to right. The illustrations therefore come in inverse order, so proving that the scribe must have been entirely ignorant of the meaning of the characters traced by his pen. It is interesting to note that papyri in which the hieroglyphs read from left to right were thus written in conformity with a religious idea, life being regarded as a journey westward to Amenti, and the west, according to the Egyptian system of orientation, lying to the right hand of the observer.

The Book of the Dead, as already stated, is a compilation of texts written at various times and in various places. To assign an initial date to any one chapter, or group of chapters, is impossible. That it was regarded by the Egyptians themselves as a work of extreme antiquity may be inferred from the remote origin attributed to certain portions. Thus, in the great Turin papyrus, the 130th chapter is attributed to Usaphaidos (Hesepti) of the 1st Dynasty, and the 64th Chapter to Menkara, of the 1Vth Dynasty; while the engraved texts of the sarcophagus of Queen Mentuhotep (XIth Dynasty) and two papyri of the XXIst Dynasty concur in ascribing the 64th chapter, not to Menkara, but to Usaphaidos. Again, in the famous papyrus of Nebsemi, a remarkable chapter, elsewhere

unknown, is said to have been discovered by Prince Hortata-f, son of Menkara. Without accepting these traditions *au pied de la lettre*, it must be admitted that they represent a belief which possibly had some approximate foundation in fact, and which was at all events handed on from dynasty to dynasty throughout a period of more than 2000 years. The majority of the chapters are of Heliopolitan origin, the next largest number being due to Hermopolis. One chapter only—the 171st—can with certainty be attributed to Thebes; and this chapter is found in but two documents, namely, the Brocklehurst papyrus No. 2, and the twenty-first Boulak papyrus. Strange to say, this is the only chapter in the whole *Book of the Dead* which mentions the name of either Thebes or Amen, whence M. Naville concludes that it is a Theban interpolation, and consequently of more recent date than the rest. The total absence (with this one exception) of the name of the great god of the capital of the Thebaid from a work of such supreme authority—and not only the absence of his name, but of all mention of his cult, and of the localities in which he was especially worshipped—constitutes in M. Naville's opinion a chronological factor of the first importance in any attempt to determine the age of the work.

"The part played by Amen in the Egyptian Pantheon," he says, "was assuredly very great; and Thebes, his place of residence, was a city incontestably of more importance than many others which are mentioned in *The Book of the Dead*. If the god and his temples are passed over in silence, it is, therefore, undoubtedly because the composition of the book dated back to an epoch anterior to the worship of Amen; while the care with which it was avoided to introduce what would have changed the character of the work must be attributed to the desire of preserving its archaic colouring" (Einleitung, chap. ii.).

If, however, *The Book of the Dead* should prove to be less ancient than is reported by native tradition, the recently discovered Pyramid Texts may be said to have constituted a Book of the Dead for the Egyptians of the Ancient Empire. Also, in addition to the Pyramid Texts, new chapters of the actual *Todtenbuch* have quite lately been found; as, for instance, in the tomb of Horhotep.* These facts, as M. Naville justly observes, point to the existence of some older funerary book, or books, of which a part is lost, or has been superseded by *The Book of the Dead*. It will be remembered that Mariette, in one of his vivid flashes of intuitive perception, hazarded this very opinion only a few months before his death. His premises, as it happens, were erroneous; but his conclusions have been borne out by discoveries made since he passed away.

One important and clearly proved fact in the history of *The Book of the Dead* is the transformation which it underwent at the time of the Saïte Renaissance. Then it was that one of the Psammetici did for this venerable religious collection what Pisistratus did for the Homeric poems. The chapters were for the first time arranged in a definite and intelligible sequence; some were omitted; the rest were revised; four new ones were

introduced; and a codex was added. Thus the text became fixed; and from this "Revised Version" of the oldest Bible in the world the copyists worked from that time forth.

The script varied from age to age. With but one exception, the most ancient examples of *The Book of the Dead* are executed in hieroglyphic characters, or in a writing which is an abridgement of the hieroglyphic. This abridged form, though it occasionally resembles the hieratic, was concurrent with, yet distinct from, the actual hieratic, which did not come into use for *The Book of the Dead* earlier than the XXth and XXIst Dynasties. Thenceforth—that is to say, from the XXIst to the XXVIth Dynasty—hieratic prevailed, and copies executed in hieroglyphs are very rarely met with. With the Saïte revival, however, the taste for hieroglyphic writing was reawakened; and the codified texts of the Saïte scribes (and later still of the Ptolemaic scribes) are as often written in the hieroglyphic script as in the hieratic. Thus, four distinct phases of the text are recognisable: (1) the text of the Ancient and Middle Empire, which has yet to be collated, is imperfectly known, and is hieroglyphic; (2) the Theban text, from the XVIth to the XXth Dynasty, also hieroglyphic; (3) the hieratic text, of which the order of the chapters is not yet determined, and which commanded the market from the XXth to the XXVIth Dynasty; (4) the Saïte and Ptolemaic text, which I have ventured to describe as the "Revised Version," and which is written indifferently in either the hieroglyphic or hieratic script. Of the abridged form of hieroglyphic writing above-named, M. Naville remarks that it better deserves the name of "hieratic" than the actual hieratic, which is really cursive, and should be so called.

For the unanswerable reasons which decided M. Naville to confine his text to the great Theban period, I can only refer readers of the ACADEMY to the first chapter of his Einleitung. Enough that the undertaking as at first outlined by the Orientalist Congress of 1874 was impracticable, and that it would have consumed a lifetime—or, perhaps, have demanded more than a single lifetime—to do for the texts of the four periods of *The Book of the Dead* what it has cost ten years to do for one. It fortunately happened that M. Naville's researches brought to light an unexpected wealth of documents belonging to that one special era. Some of these had long lain disregarded in public museums, while others were among the hidden treasures of private collections. Many contained important variants of the text; some yielded new names, titles, and offices; and in some were discovered chapters hitherto unknown. One chapter, the 154th, long sought and well-nigh despaired of, was found by M. Naville on the inscribed winding-sheet of Thothmes III., then just rescued, with the mummy and mummy-case of its owner, from the depths of the famous *câche* at Dayr-el-Baharee. Now, it so happens that the winding-sheet is the proper place of this text; and as the winding-sheet of Thothmes III. is unique, we may assume that the 154th chapter might never have turned up if the secret of the *câche* had not been revealed. The whole of the very im-

portant 17th chapter, which contains a summary of the Egyptian cosmogony as taught at Heliopolis, is also written on this sheet, as well as the 18th chapter, part of the 68th, and some portions of the Litany of Ra. The whole document is, in fact, of great philological value. It is dated, it is written with extreme care, it is admirably correct, and it is regarded by M. Naville as of authority of the utmost importance for the determination of linguistic forms at the time of the XVIIIth Dynasty. It has also given us the name of Queen Isi, or Isit, the mother of Thothmes III., who is thus first made known to history. Nor is this the only royal name which has been rescued from oblivion by *The Book of the Dead*. A papyrus of the XXth Dynasty (Brit. Mus. No. 9953) reports to have been written for "the Chief Librarian of King Khai," a sovereign not elsewhere known; and a Leyden Papyrus of the XXIInd Dynasty commemorates one "Pakrer," a Memphite priest of Ptah, who, strangely enough, is twice described as "Lord of the Two Lands." The name of Pakrer is also noteworthy as being identical with that of a tributary prince of Sopt of the XXVIth Dynasty, who conspired against Esarhaddon, and was sent to Nineveh in chains. Nor must it be forgotten that the Brocklehurst papyrus No. 1, first described by myself in the ACADEMY (No. 496, November 5, 1881), yields the name of Prince Aha-tat-f Ptah-au-f-Ank, styled "the royal son of Rameses," who was probably a grandson or great grandson of Rameses III.

Besides the 154th chapter from the ceremonies of Thothmes III., M. Naville has added twenty other chapters, beginning with the 166th. Of these, three are "Amulet Chapters": one is a discourse of Horus to Osiris; one contains a curious dialogue between Thoth, Tum, and the deceased; and two are hymns to Osiris, supposed to be recited by Thoth. Another, the 172nd, has already been published by M. Naville in the *Zeitschrift*, 1883.

It is impossible, within the compass of a single article, to note a tithe of the interesting facts and suggestions which enrich M. Naville's introductory volume. Here, however, are a few taken almost at random. He thinks the common determinative of the palette and pen is often used as the equivalent of "official," and is not strictly limited to the sense of "scribe," having undergone the same process of expansion as our term "clerk." He also conceives that the word *ka* has a wider significance than that of "ghost" or "double." Touching the multitude of funerary inscriptions in which the wife is described as the "sister of her husband, M. Naville is of opinion that the relationship is not always to be taken in a literal sense, but that it included other and more distant degrees of consanguinity. I may be, in fact, but a survival of ancient endogamous tradition. Now and then, as was to be expected, M. Naville has come across some interesting proper names; as, for instance, in a papyrus at Avignon made for chief equerry called "Nes-ahiu," literally "superintendent of cattle." Here we have proper name derived from an occupation, like our "Shepherd." As for topographical names, *The Book of the Dead* abounds in such; but M. Naville shows that they must

* See *A Theban Tomb of the Eleventh Dynasty*: the ACADEMY, No. 612, January 26, 1884.

be accepted in a mythological sense. Amenti had its own topography; and the famous places of this world were represented in duplicate in the next. Thus, when we read of Memphis, or Heliopolis, or Hermopolis, we may be assured that it is the Memphis, Heliopolis, or Hermopolis of Kherneter that is intended. As regards the Egyptian name of the *Todtenbuch*, for which so many different readings have been suggested, M. Naville stands by the definition proposed in his paper read before the Orientalist Congress of Berlin. He translates *Per-em-Hru* by "To Go Forth from Day"—not in the sense of going forth from the daylight of this world into the gloom of Hades, but in a sense far more subtle, which is best explained in his own words.

"It is certain," he says, "according to various texts, that a man's 'day' is the duration of his life upon earth. To go forth from his day is not actually quitting life, in the sense of definitively ceasing to exist; for life is prolonged beyond the grave. It is simply to be delivered from the fatal and limited duration of all terrestrial life—to have done with all beginning and ending—to enter upon an existence which is limited neither by time nor space. Hence the frequent complement of the expression 'To go forth from day' is—'in all forms which the deceased may wish': briefly, to become a being enfranchised from the conditions of time and space."

M. Naville defends this interpretation against the objections of Prof. Lieblein, who conceives that too many ideas are here attributed to a very simple phrase; and he maintains that his translation errs, in fact, on the side of inadequately expressing all the ideas which the words *Per-em-Hru* conveyed to the mind of the ancient Egyptian. It is difficult, however, not to be of Prof. Lieblein's opinion. M. Naville's reading of this much-debated title is pre-eminently lofty and philosophical; but I venture to think that it belongs to an order of ideas quite foreign to "the wisdom of the Egyptians." Unscathed to tread the perilous ways of Amenti, to pass approved from before the judgment-seat of Osiris, to rest and feast in the Fields of Aalu, and, above all, to attain to the power of self-transformation, and thus, "in whatever shape he pleases," to be free to revisit the world of men in the daytime is, according to the testimony of *The Book of the Dead*, the supreme aim of the pilgrim soul after death. The work contains, in fact, a collection of spells and prayers framed for the express purpose of enabling him to do so. "To go forth by day" is as correct a translation of *Per-em-Hru* as "To go forth from day"; and it has the signal advantage of precisely expressing the sense and object of the book. This, or very nearly this, was the reading advocated as long ago as 1873 by M. Lefébure; and Prof. Maspero, in one of his recent lectures delivered at the Collège de France, accepts it absolutely. The ambiguity of the Egyptian phrase does not so much depend on the sense of the word *Hru*, whether taken as "day," or "life," or "light," as on the various meanings of the preposition *em*, which stands equally for "to," "from," "in," "for," "during," and "among"; and in which, naturally enough, each savant recognises that shade of meaning which harmonises with his own convictions. M. Pierret has compared *The Book of the Dead* to a passport; and this

it actually is, for it enables the soul to pass the seven gates of Amenti. But it is also, *con rispetto*, a ticket of leave; and it is in this sense that "To go forth by day," or "during day," seems most closely to express the meaning of *Per-em-Hru*.

It is perhaps too early to begin to speculate upon the scientific gains which may be expected to result from the publication of M. Naville's standard edition. It will probably throw much light upon the religion of ancient Egypt; but the chief value of the work will of course be philological. It gives us, in the first place, a large and correct vocabulary; and, in the second place, a storehouse of accurate grammatical forms. It furnishes us, moreover, with an invaluable example of what the writers of new Egyptian regarded as classical Egyptian; and it enables us to compare classical Egyptian with both the new and the archaic Egyptian, thus opening the way to a thorough definition of every phase of the language.

It remains to say something of M^{de}. Naville's share in this great work—one folio volume containing 212 plates of texts, vignettes, and variants of vignettes, being entirely from her hand. In evidence of her complete mastery of the script, it is enough that she has reproduced the 186 chapters upon a scale as nearly uniform as their varying length would permit—*i. e.*, the originals being written large and in various hands, she has so skilfully recast the whole that her columns have the regularity and clearness of a work printed in hieroglyphic types. This in itself is no small achievement; but the execution of the vignettes surpasses even the execution of the text. With the sympathy of a true artist, M^{de}. Naville has seized upon all that is best in the work of the old Egyptian draughtsman—his faultless purity of line, his delicate rendering of detail, his naturalistic treatment of all forms of animal life. Whether it be a procession to the tomb, a fight with malevolent genii, a scene of propitiation, of adoration, of sacrifice, of judgment, M^{de}. Naville is equally successful. Her pencil never exaggerates, never deviates into grotesqueness; but is always serious, elegant, and faithful.

The amount of labour involved in the preparation of these 212 plates, many of which contain six or seven subjects, must have been prodigious; but the result is a partnership of fame as well as of labour. One would have liked to see M^{de}. Naville's name upon the title-page.

AMELIA B. EDWARDS.

NOTES ON ART AND ARCHAEOLOGY.

THE Herkomer Art School at Bushey, which was founded in 1883, and has this year received a charter of incorporation, will open for its new session on Monday, October 3. Applicants for admission must send examples of their work before September 17. There are two classes: (1) a life class, for painting and drawing from the living model, nude or draped, under the personal supervision of Prof. Herkomer; and (2) a preliminary class, under Mr. D. A. Wehrschmidt, for drawing from the antique, and painting the head from life. A pamphlet may be obtained from the secretary, containing an address by the president, Prof. Herkomer, with some introductory remarks by the treasurer of

the school, Mr. Thomas Eccleston Gibbs. It appears that a total sum of £12,000 has already been expended upon land and buildings.

VOL. I., Part II., of Comm. J. B. de Rossi's monumental work—*Inscriptiones Christianae Urbis Romae Septimo Saeculo Antiquiores*—will be ready for issue in November. The publishing price is 80 lire (£3 3s.); and the London agents are Messrs. Dulau & Co.

AN article by Signor Alfredo Melani in *Le Conversazioni della Domenica* describes with some enthusiasm a newly discovered early work by Correggio. It is a Nativity, with a highly dramatic effect of stormy dawn. The "stable" is represented among ruins of pagan architecture; and the principal group comprises St. Anne and St. John the Baptist, as well as the Holy Family. Behind a hedge are seen the shepherds, directed to the Madonna by angels floating in the air. Signor Melani is of opinion that the composition could only have been conceived by the painter of the famous "Notte" at Dresden, and that it confirms the views of Morelli and other modern critics that Correggio derived his art from the Ferrara-Bologna school. The picture was purchased by Dr. J. P. Richter at a sale in England, and is now in the possession of Signor Cristoforo Crespi, of Milan.

A TREASURE-TROVE of some importance is announced from San Paulo in Brazil. It consists of church plate, money, &c., buried by the Jesuits when they left San Paulo in 1777.

A MAGNIFICENT work, based on the collection made by M. Thiers of copies of masterpieces of Italian art, is in course of publication. The first section deals with the Florentine masters of the fifteenth century, and contains thirty plates engraved by M. W. Hassoullier after drawings by himself and the Viscount Henri Delaborde, with an introduction by the latter. Among the works of art reproduced are the fresco of "Poetry and Music," by Filippino Lippi in Santa Maria Novella; the well-known tombs of Leonardo Bruni and Bishop Salutati, by Rossellino and Mino da Fiesole; and Fra Filippo Lippi's fresco of the "Burial of St. Etienne," in the cathedral at Prato.

MUSIC.

NAUMANN'S HISTORY OF MUSIC.

The History of Music. By Emil Naumann. In 2 vols. (Cassell.)

THIS work has been translated by Mr. F. Praeger, and edited by the Rev. Sir F. A. Gore Ouseley. We suppose the translator must be held responsible for the bold title, which, quite in Podsnap fashion, seems to put all other histories "nowhere."

The two volumes contain over 1300 pages, and the author therefore treats some subjects at considerable length—as, for example, Folk-Music, The Old French and Netherland Schools, and Luther and the Music of the Reformation. Herr Naumann seems most at home in the period of the Middle Ages; at other times he is fanciful or prejudiced. Take, as an example of fancy, his statement that, by reason of their profound religious belief, the Israelites must have possessed a knowledge of harmony. Nay, more, he even ventures to describe that harmony as consisting largely of unusual and diminished chords. "The author seems here to have been somewhat led away by his desire to establish his position" quietly remarks the editor in a foot-note. Later on he affirms that the introduction of harmony was due to the influence of Christianity; but his editor reminds him that "harmony seems to have arisen in the first instance among the northern tribes of Europe." It may possibly, one day, be traced

to our Aryan ancestors, whose influence, mediate or immediate, on our civilisation Herr Naumann ignores. That "polythematic development, reached with Beethoven, will, during the coming five hundred years, gradually deteriorate" is another statement to which we would apply the epithet "fanciful." "It is not," says our author, "the haphazard statement of a jaundiced individual, but a logical deduction from well-accredited facts in the growth of the arts." The Fugue form, slowly built up during five hundred years, apparently reached its climax in Sebastian Bach. The Sonata form, quickly built up in about a hundred years, apparently reached its climax in Beethoven. The history of the arts teaches us that a form, when it has attained its climax, deteriorates; but we maintain that no rash assertions can be made respecting the particular forms of music—the youngest of the arts. If at all disposed to speculate as to the duration of the Sonata or Symphony form, we should be inclined to think that, having sprung up quickly, it might speedily wither away. But the very fact of its having reached a climax is disputed by men of authority.

But fancy gets complete mastery over Herr Naumann when he comes to the musicians of the eighteenth and nineteenth centuries. Some he finds possessed of style—they are geniuses; some of a grand manner—they are great talents. The words "style" and "manner" are somewhat loosely employed by writers on music, so that we will not quarrel with his definitions. But let us give the names of those who form his "grand manner" class: Schubert, Weber, Spohr, Meyerbeer, Mendelssohn and Schumann. His geniuses were six in number, and perhaps, for the sake of symmetry, he wished for six "talents." How else can we explain the presence of some of the names? We say nothing about Spohr, Meyerbeer, or even Mendelssohn; but we cannot allow Weber, Schubert—of whom Beethoven, after perusing some of his songs, said, "Truly he has the divine fire"—and Schumann to be placed merely among the talents. Mr. Rockstro's division of famous composers in his *History of Music* into seven Lamps and seven Lesser Lights, if not satisfactory, was less objectionable. The very difference between the two writers, in respect of representatives for the highest class, shows how difficult it is in some cases to draw the line between genius and talent. But coming down to later times, what does our author do with Wagner. Seeing that on page 1179 he speaks of his "immense genius" he surely might have put him in the "genius" class. But no: he is only discussed as the "perfection" of the New Romantic School. We shall single out one or two of our historian's remarks about Wagner and his works, to show the sad results of prejudice. Herr Naumann was perfectly at liberty to set up Wagner as a hero, or to run him down as a man of unsound views, but he has only given us a distorted image of the great reformer. What does he mean by the *leit-motif* "precluding freedom and variety"? One might as well complain of the fetters of Sonata form. Again *leit-motiv* are not "stereotyped phrases," *fixed formulae*; but as free and capable of development as the themes of a symphony. But really Herr Naumann seems as if he had taken statements on trust, accepting them as suitable to his argument. Wagner, he tells us, found out that the style which he had adopted in "Tristan" would not do, and so abandoned it in his latest work, "Parsifal." Such foolish assertions merely stir up anger. They do not help to give a correct idea of Wagner's music-dramas. Starting from false premises, how can correct conclusions be got at? In the account of Handel, not a word is said about his borrowings. Herr Naumann might have mentioned the disputed

"Magnificat" of Erba, from which Handel, according to some, took many movements for his "Israel in Egypt," or the Urio "Te Deum," which is so like the Dettingen "Te Deum." At any rate, in noticing the composers, he might have reminded his readers that Handel was indebted to Kerl, Carissimi, and Stradella for some of the music in "Israel" and "Samson." In the chapter on music of the present, there are many remarks on which we should feel disposed to comment, space permitting. But we can only glance at one or two. In the notice of Grieg no mention is made of his beautiful songs. The admirers of Brahms will scarcely agree with the statement that "the only man worthy to be placed by his side is Rubinstein." Among the works of Raff most deserving of notice is given the "Frühlingsklänge"—one of his weakest symphonies. The account of Dvorák is very unsatisfactory.

In some parts of his book the author appears to contradict himself. For example, he tells us, p. 761, that Beethoven's first period is "universally referred to as Beethoven's 'Mozart' and not 'Haydn' period." On p. 942 he writes: "Beethoven's first period may aptly be described as the Haydn-Mozart period." The student must be on his guard in reading these volumes, for though they have passed through the hands of author, translator, and editor, the mistakes are not, as were said to be the plums in Jack's pudding, few and far between. Many are the result of carelessness, but others cannot be so easily accounted for. As examples of wrong dates we may mention those of the production of Monteverde's operas "Ariadne" and "Orpheo," given as 1608 and 1607, instead of 1607 and 1608. Again, the success of Handel's "Messiah" in London in 1741 is spoken of, whereas the oratorio was first produced at Dublin in April 1742, and even in noticing that performance our author fails to give the correct day. The statement that the "Messiah" was produced in London was certainly made by the Rev. J. Mainwaring and other writers; but Schoelcher, in his life of Handel, has fully shown that there is no truth in it. Then there are many confusing mistakes in the descriptions of works. Take, for example, Chopin. He wrote two pianoforte Concertos in E and F minor, which are given as F minor and F sharp minor. He is further stated to have written two Sonatas for piano and violoncello, whereas he only wrote one. But in speaking about Beethoven's great Mass in D, our author is very careless. This work was commenced in 1818 and concluded in 1822. On p. 940, Herr Naumann tells us that it was composed in 1823; on p. 942 the date 1822 is given. P. 1009 contains several bad blunders. Among Schumann's Symphonies is included one in C minor. The same composer's "Carneval: Scènes mignonnes," is set out thus, "Carnival: Scènes mignonnes," as if there were two separate works. Spohr wrote nine Symphonies: on p. 989 ten are mentioned, while here (p. 1009) he is said to have only composed one. And Schubert on this page is only credited with one, for, remarks our author naively, the B minor Symphony was left unfinished. What would Sir George Grove say to this? On the question of comic opera our author is decidedly confusing. The difference between grand and comic opera is pretty clear: in the one everything is sung, in the latter spoken dialogue is introduced. He seems to lose sight of this distinction on pp. 1083 and 1084, where he speaks of two of Grétry's operas as "not belonging to the comic opera, not being exclusively comic." Even Méhul's "Joseph," in spite of its Biblical subject, is, owing to the form in which it is cast, a comic opera.

The constant antagonism between author and editor is, to say the least, amusing. We have already mentioned one or two instances in which the latter, no mean authority, ex-

presses a difference of opinion. Sir F. A. G. Ouseley is zealous for his country, and special chapters on English music are from his pen. However interesting and valuable they may be there is no doubt that they interfere with the unity of the work. At the same time, without them, the account of English music would be very incomplete. For, be it noted, although the editor undertook to write special chapters the author was obliged from time to time to touch upon the subject of English music, as then we find ourselves between two fires. "Poetry and song were introduced in England from Northern France," says the author. "This statement is hardly correct," adds the editor, in a footnote. Again, imagining that Herr Naumann had forgotten the remarkable canon "Sumer is iumen," the editor gives the music, and an account of the Harleian MS. Later on in the book the author notices it, and his remarks on the question of date do not exactly tally with those of Sir F. A. Ouseley. And once more, on p. 1249, the author says that Sir Sterndale Bennett "entirely followed the principles of Mendelssohn"; but on another page the editor, speaking of the same composer, says:

"His style is emphatically his own. It has been said by many writers that he was an imitator of Mendelssohn; but it is hardly credible that any competent critic could form such a judgment if he had taken the trouble to examine Bennett's works at all minutely."

The wonderful discoveries of Coussemacher in the library at Montpellier, which are fully described in his *L'Art Harmonique au 13^e Siècle*, are not overlooked by Herr Naumann, who devotes a whole chapter to the French masters who invented counterpoint, and prepared the way for the Netherlands school. This chapter brings before the student names and facts which will be new to most readers, and the musical extracts add greatly to its interest. Then, again, there is a long and well-written chapter on "Luther and the Music of the Protestant Church." The interest which the reformer took in music generally, and in church-music in particular, helped to bring about a form of art which reached its climax in the Bach Passions. In discussing Luther's right of authorship to the melody of "Ein feste Burg," he might have quoted the testimony of Sleidan, almost a contemporary, who says of the hymn "that Luther made for it a tune singularly suited to the words, and adapted to stir the heart." Two other chapters which seem to us worthy of special mention are those on "The Rise of Opera in Italy" and on "Gluck."

Whatever, indeed, may be the faults or shortcomings of these volumes, they contain a large amount of valuable information and thoughtful remarks. The student, though he must not take all as gospel, may learn much from them. There are a number of interesting illustrations, portraits, and facsimiles. The translation by Mr. F. Praeger, himself a German, is, on the whole, exceedingly well done.

J. S. SHEDLOCK.

MUSIC NOTES.

THE admirers of Browning's "Abt Vogler" should take note that an excellent monograph on the famous old extemporising musician has just been published in Germany—"Abt George Joseph Vogler: sein Leben, Charakter, &c. By Dr. Karl Emil von Schafhäütl. (Augsburg: Huttler)." Chancellor Mee, the writer of the article on Vogler in Grove's *Musical Dictionary*, states that this book "quite eclipses anything else done hitherto" on Vogler.

SATURDAY, SEPTEMBER 17, 1887.

No. 802, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

The Works of John Marston. Edited by A. H. Bullen. (Nimmo.)

It is something for which the literary student may be thankful that the writings of Marston should at last have found an editor who unites the scholarship of Dyce with the forbearance and fine appreciation of Lamb. It is not, perhaps, many times in the year that the humour will seize a man to take up the plays of this Gargantuan satirist; but it is a great satisfaction to have the way cleared for such a mood when it comes—the valleys filled and the mountains levelled—by so indefatigable and accomplished a pioneer as Mr. Bullen. The edition of Mr. Halliwell-Phillips, which this will supersede, was not so much an edition—if an edition requires an editor—a reprint.

Marston seems to have been a satirist by nature—one of those gloomy tempers whose attention is riveted upon the sins and follies of mankind, and who, seeing little else, have little else to show to others, and at last come to persuade themselves they may be doing good service to the world by talking about all the evil that they see or can imagine, although "to draw the core forth of imposition'd sin." Not only in his professed satires, but throughout his plays, Marston seems most at home when he is denouncing something—the follies of the court, the weaknesses of women, the pride of power. He can never let his audience draw their own moral from his exhibitions; but must have in some more reputable personage, like Feliche in "Antonio and Mellida," or the Malcontent himself, who acts as chorus, and protests against the seven deadly sins in the choicest Billingsgate.

Marston ceased to write plays and took orders when he was about thirty. "It is hard," says Mr. Bullen, "to picture Marston as a preacher of the Gospel of Glad Tidings." It certainly is, so far as this world is concerned, for he seems to have had little experience of men of good will, or women either; but it is not hard to picture him as a popular London preacher, railing against usury and luxury to an admiring congregation of usurious merchants, with their luxurious wives. In a passage at the end of "Antonio's Revenge" we seem to get his creed:

"We know the world, and did we know no more
We would not live to know; but since constraint
Of holy bands forceth us keep this lodge
Of dirt's corruption, till dread power calls
Our soul's appearance, we will live enclosed
In holy verge of some religious order."

As might be expected, therefore, the finest passages in the plays are those where the poet is bewailing some common woe of the

world. Lamb has called attention to the scene between Andrugio and Lucio in the first part of "Antonio and Mellida," as resembling "that between Lear and Kent in that king's distresses." The resemblance is a distant one indeed, but it is there. In such passages, it is true, his verse is often turgid and ranting, like some third-rate Marlowe, and his terms so odd that they offended even Ben Jonson; but by no means unfrequently it rises to nobleness, and now and then lightens with an image or an epithet that would attract attention even in Shakspeare. Take, for example, the famous opening,

"Is that yon gleam the shuddering morn that flakes

With silver tincture the east verge of heaven?"

or Pietro's description of his cave in the "Malcontent":

"My cell 'tis, lady; where, instead of masks,
Music, tilts, tourneys, and such court-like shows,
The hollow murmur of the checkless winds
Shall groan again; whilst the uquiet sea
Shakes the whole rock with foamy battery,
There usherless the air comes in and out."

Marston is a considerable master of plot. Both the "Malcontent" and the "Dutch Courtezan," not to mention "Eastward Ho!" to which three poets have a claim, run without dragging. And the characters in the plays show considerable freedom and variety. "They are drawn," says Mr. Bullen, "with skill and spirit." What they principally lack is manners. In the case of Franceschina Mr. Bullen, perhaps, a little over-estimates the merits of the drawing.

"The character," he says, "of the passionate and implacable courtezan is conceived with masterly ability. Few figures in the Elizabethan drama are more striking than this fair vengeful fiend, who is as playful and pitiless as a tigress; whose caresses are sweet as honey and poisonous as aconite."

How Franceschina differs from any other handsome, angry, low-bred woman of picturesque vocabulary, except in the fact that she has the courage of her convictions, I entirely fail to see. No one living knows the Elizabethan drama so well as Mr. Bullen; but it must be confessed that such a judgment as the above, if it be true, is but poor encouragement to a lay brother to enlarge his acquaintance with it. I notice this little piece of criticism, because it is the only sentence in Mr. Bullen's long and learned introduction, which, so far as I can judge, seems to be over-strained. He points out the merits and defects of each play, and of Marston's work generally, with eminent skill and with exemplary fairness.

The illustrative notes throughout deserve commendation. They are neither trivial nor hackneyed. Mr. Bullen's acquaintance with the highways and byways of Elizabethan literature has enabled him to track many quotations to their source. Notably, two couplets which Marston has long had the credit of he traces to their original:

"Life is a frost of cold felicity
And death the thaw of all our vanity"

(Malcontent, v. 3) is from an epigram in Thomas Bastard's "Chrestoleros"; and the fine close of the "Insatiate Countess"

"Night, like a masque, is enter'd heaven's great hall

With thousand torches ushering the way,"

is found in "Myrrha," a poem by Barksteed,

the actor. Mr. Bullen, from this and other evidence, such as the unusually large number of Shakspearean echoes, and the smoother run of much of the verse, is inclined to think that Marston, when he took orders, left this tragedy in a fragmentary state, and that it was completed by Barksteed.

In his previous editions, except those privately printed, Mr. Bullen has been gleaning behind Dyce, and Dyce was a scholar who did not leave more work than he could help to his successor. Still, even in the text of Marlowe, it will be remembered, Mr. Bullen made one brilliant and certain emendation which had escaped Dyce, *On cavi me on* for *Economy* in the line

"Economy farewell, and Galen come."

In the text of Marston Mr. Bullen has had the unrequited field to himself. And he has worked hard in it, though much he confesses he has been obliged to leave. But here, as if in revenge, his best emendation he has since discovered in one of Dyce's copies at South Kensington, though not made by Dyce himself, but in a seventeenth-century hand.

The lines in question occur at the end of the "Insatiate Countess," after the couplet quoted above. They are printed in the old editions:

"To Risus will we consecrate this evening;
Like Missermis cheating of the brack,
We'll make this night the day."

"The editor of 1820," says Mr. Bullen, reads "Like Missermis cheating of the brack," and to the word *brack* appends a note—"i.e., the bitch"; but who was Missermis, and what the bitch? Mr. Bullen reads, "Like Mycerinus cheating th' oracle." "Every reader of Herodotus," he says, and every reader of Matthew Arnold, "will remember how Mycerinus cheated the oracle by turning the day into the night."

Two further points in Mr. Bullen's edition deserve a grateful acknowledgment—the arguments which he has prefixed to each play and the index to the notes and curious expressions. H. C. BRECHING.

THE FRANCO-GERMAN WAR.

The Campaign of Sedan. By George Hooper. (Bell.)

The Great Battles of 1870 and Blockade of Metz. By H. B. Franklyn. (Trübner.)

THE strained relations between France and Germany may have caused the appearance of these volumes. Mr. Hooper is already favourably known as the author of an account of the campaign of 1815, which, though it proceeds on the absurd theory that Wellington's conduct is above criticism—his delays at Brussels are even justified—is, nevertheless, of undoubted value. *Sedan*, in a certain sense, may be deemed the complement of Mr. Hooper's *Waterloo*, for each battle destroyed a Napoleonic empire; but nothing, perhaps, can be more unlike than the last efforts of Napoleon I. to defeat Europe on the plains of Belgium, and the miserable attempts of Napoleon III. to play the part of a general in 1870.

Mr. Hooper's work is a succinct narrative of the first part of the war of 1870; and though we think it might have been better done, and defects and omissions may

be seen in it, it certainly is the best history of the great contest in the English language. It is, indeed, so good, that the author, we hope, will extend his studies to the close of the war, and bring his book down to the fall of Paris. The German official account of the war is avowedly the foundation of Mr. Hooper's text; but he has not loaded his pages with the minute details of that honest, but clumsy and pedantic, work; he has placed prominent events in clearer relief; and his volume is not only, in the main, impartial and usually correct like its admitted prototype, but is really interesting and even attractive. The book, however, has some shortcomings; the great passages in the struggle might have been better described. Mr. Hooper is so bewildered by the glare of success that he makes too much of the German strategy, and scarcely notices where it was in error; and, though he tries to do justice to the French soldier, and truly points out that bad generalship was the main cause of the disasters of 1870, he does not indicate with sufficient clearness how the French army more than once proved that it had not lost its high martial qualities. As for Mr. Franklyn's work, it cannot be called even an abridgment of the history of the war, for it is almost confined to the operations round Metz, but its comments on these are useful and true; and the criticisms of the author sometimes display intelligence and real knowledge and judgment.

Mr. Hooper has dealt at some length on the differences between the military systems of Germany and France at the beginning of the war. Like most commentators, he makes far too much of the mere mechanism of these arrangements: a local system, if ill-managed, will break down and lead to disasters; a centralised system, when well-directed, will now, as heretofore, produce great results. *Cæteris paribus*, however, the local system will send an army into the field more quickly—an incalculable advantage in modern war; and, for the present at least, the centralised system is out of favour in all war offices. It is doubtful, too, spite of recent experience, if a national army, on the German model, can be made as good as a professional army, though in mere numbers it will usually prevail; but we entirely agree with Mr. Hooper that, apart from its immense superiority in force, the national German army of 1870 was a far more perfect instrument of war than the professional army it encountered and crushed. Mr. Hooper has not indicated what is, however, true, that Napoleon III.'s plan of campaign in 1870 was based on that of his uncle in 1815; but the military organisation of France failed, and the pitiable delays at Metz and Strasburg, caused by mismanagement of every kind, stand in marked contrast with the marvellous skill with which the French army that succumbed at Waterloo was concentrated on the Belgian frontier. Napoleon III. should have fallen back to the Meuse when he found himself unable to take the offensive; but political considerations, which, from first to last, had a decisive effect in this memorable strife, prevented an obviously prudent movement; and the French army, unprepared and weak, lay along the verge of a defenceless frontier, awaiting a far more powerful foe, just like the Prussians

before Jena. Mr. Hooper extols the strategy of Von Moltke in his advance upon the Sarre and the Lauter; but it was really a very commonplace march, though the excellence of the organisation of the Germans is fully proved by the rapid assemblage and concentration of their armies on the Rhine. The two battles of Spicheren and Worth reflect little credit on the German chiefs. Kameke, indeed, ought to have been well beaten; and 125,000 Germans were, at Worth, held for many hours at bay by not more than 45,000 Frenchmen—a fact Mr. Hooper keeps out of sight. But the enormous superiority of the German forces told at once after the first defeats, and there was nothing to arrest the invaders' progress. The German advance was slow, whatever may be said. Had Napoleon III. been a real chief, he would have had time to retreat to the Meuse, and call in Macmahon's shattered army; and a great commander in that case, especially with Paris fortified in his rear, might have renewed the wonders of the campaign of 1814. But the ill-fated emperor lost five days, and allowed his enemies to gather all round while he lingered, ill and irresolute, at Metz; and it was not until the situation of affairs had become critical in a high degree that he handed over his command to Bazaine.

The conduct of this unfortunate marshal contributed as much as anything else to the catastrophes of the first part of the war; and both Mr. Hooper and Mr. Franklyn have described it with an impartial hand. It is ridiculous to say that Bazaine was playing the part of a traitor from the first moment; and, indeed, questionable as were his later acts, and miserable his operations after the investment of Metz, we believe he was always rather incapable than false. But, placed in a position of extreme difficulty, he showed none of the genius of a great captain. He proved himself to be the slave of a theory of military tactics very far from true; and he is certainly to blame for making reports inaccurate, misleading, and fatal in the result. A brief survey of events shows that these faults must be laid to his charge; and to these, far more than to Von Moltke's strategy, should be ascribed the marvels of war that followed, though we would do full justice to the daring and skill conspicuously exhibited by the German chiefs, and to the energy and worth of the German army. Bazaine was in command on August 13; and he ought, without the delay of a moment, to have hastened the march of his troops to the Meuse, though, in existing circumstances, we can scarcely blame him for pausing to see how affairs stood. His inaction, however, enabled Steinmetz to fall on the French on the east bank of the Moselle; and though Borny was an indecisive battle, it gained for Von Moltke what he required—time to gather on the line of his enemy's retreat. On August 15 Bazaine began to stir; and the French columns defiled slowly and heavily encumbered along the roads that lead from Metz to the course of the Meuse. Von Moltke, however, had, by this time, sent part of his forces across the Moselle to intercept the retreat of his foe, or at least to menace the flank of the French; and this operation shows true insight and audacity of no ordinary kind, though, whatever may be said, it

was far from perfect. On August 16 two German corps attacked Bazaine and his five corps on the line of the march of the French on Verdun. The desperate battle of Mars-la-Tour followed; and by nightfall the advance of Bazaine had been checked, and time won to enable the whole German army to approach in strength. The conduct of the Germans at Mars-la-Tour, both officers and men, deserves the highest praise; but the strategy that opposed 70,000 men to 150,000 is not to be admired, and had Bazaine been a great soldier he would certainly have gained a brilliant victory. Even on the 17th, as has been often pointed out, he could, perhaps, have pushed aside his enemy and made good his retreat on Verdun; but he fell back with his whole force to Metz, and allowed the Germans to close from all sides of his path. The reason of this is well known. Like weak commanders, he clung to a fortress, and he had a firm faith in the enormous force of arms of precision in defensive tactics. He occupied the strong position of Gravelotte, with an assured conviction that, resting on Metz, he would defeat the Germans should they venture to attack. The tremendous battle of August 18 is described fairly enough in these pages, though Mr. Hooper, we think, underrates the immense superiority of the Germans in force. On that memorable day the French army showed itself worthy of its old renown. It fought, as it fought at Malplaquet and Leipsic, against almost overwhelming odds; and the battle would certainly have been drawn had Bazaine made a proper use of the Guard. On the other hand, the attack of the Germans was ill-directed in the first instance; and the veteran Steinmetz imperilled the whole army in his frantic effort against the French left. But the heroism of the assailants was of the highest order; and Von Moltke at last achieved success partly through his persistent and stubborn daring, but chiefly owing to the slackness of his foe. By the morning of the 19th the position was lost; the French army had retired under the guns of Metz, and it was doomed never to leave the fortress save as a confused mass of prisoners of war, the victims of an incapable chief.

After the investment of Metz by Prince Frederick Charles—an operation which an able adversary ought with little difficulty to have made impossible—the remaining corps of the German armies, formed into the third army and the army of the Meuse, moved westwards upon a broad front of invasion. Meanwhile a French army had assembled at Châlons; and on August 20, about 140,000 strong, it stood on the plains immortalised by the defeat of Attila, and by the first scenes of the campaign of 1814. The Duke of Magenta was in supreme command; and his first movements were those of a chief who appreciated the true position of affairs. The marshal directed his troops on Rheims, in order to menace the flank of the enemy known to be advancing on the capital of France; and his purpose was to retreat on Paris and to make the city the centre of a national defence. As is well known, however, political needs, and an inaccurate message despatched by Bazaine, turned Macmahon away from the designs of prudence; and, in a moment fatal to France and to himself, he weakly consented

to advance on Metz by a long flank march near the Belgian frontier—a movement which he well knew was false, and which, in existing circumstances, was mere reckless folly. Mr. Hooper bestows exaggerated praise on the combinations by which Von Moltke prepared to baffle and defeat his foe. To throw back the army of the Meuse some marches, to order divisions to aid it from Metz, and to move the Germans on the flank of the French, were operations dictated by plain common-sense, and do not reveal peculiar genius. We shall not comment on the march of the French to the Meuse. Mr. Hooper ought to have described it better. It was characterised by indecision, weakness, and negligence; and Macmahon threw away the last hope of his country when, on the 27th, at Palikao's instance, and through fear of "the Revolution in Paris," he continued his advance against his own judgment. The Germans, directed with great ability, had soon gathered on the flank of their enemy; and, after the crushing defeats of August 30, the whole French army, a part of which had been pushed forward as far as Carignan, was drawn together round the fortress of Sedan in a pitiable plight and already beaten. The German commanders had, meanwhile, advanced as far as the Meuse and the Chiers; but Mr. Hooper does not point out that their enemy was not yet in their toils. Macmahon probably could have effected his escape on the 31st by a retreat on Mézières, had he been a chief of a high order. The marshal, however, took his stand at Sedan, apparently ignorant of the strength of his foes—200,000 victorious troops against a demoralised force of 120,000, for 20,000 had been already lost—and Von Moltke, with characteristic daring and energy, seized the occasion offered by propitious fortune and a weak antagonist.

Mr. Hooper scarcely does full justice to the night march of the German armies which placed the French in their power on September 1; and his account of the memorable battle of Sedan is not so complete as we could have wished. Whether Macmahon's fall in the early morning had any effect on the result of the day; whether the French army could have in part escaped had Ducrot's advice been promptly followed; and what were the consequences of De Wimpffen's recklessness, are questions that should have been fully discussed. But, in our judgment, no skill could have saved the army of Châlons from an immense disaster. Opposed as it was by foes in irresistible strength, its fate was sealed when the German masses had closed round it at Givonne and Illy; and it was simply crushed to atoms by the German guns when it was driven in under the ramparts of Sedan. The capitulation was the inevitable result of military errors scarcely ever equalled, and turned to the best account by the German chiefs, though it is fair to add that even on this terrible day part of the French army fought with heroic courage.

WILLIAM O'CONNOR MORRIS.

England's Ideal, and other Papers on Social Subjects. By Edward Carpenter. (Son-nenschein.)

THERE is something in these papers to remind the reader of Ruskin, something to remind

him of Walt Whitman, and more to remind him of Thoreau; but they are far from being echoes of the thoughts of any of these men, or of anyone else. Mr. Carpenter is at least an original enquirer and thinker, and as such he stimulates thought in others. This service of making them think is the highest service a writer can do for his fellow men and women.

Mr. Carpenter is a man who chafes somewhat under restraint of any kind. The ceremonies and customs of society trouble him. He is by no means satisfied that the mansions of the rich are such desirable mansions as some people think who view them from the outside. "I have been there," he tells us, but does not add:

" . . . and still would go
'Tis like a little heaven below";

for, as a guest, he found it irksome to be waited on when, with much more ease and comfort, he could have waited on himself. He did not like a place where it was legitimate to "do anything except what was useful." In another essay he approaches the same subject from a different side, and preaches the simplification of life. He dwelt among cottagers, and was surprised to find "how little, both in labour and expense, their food cost them, who were doing far more work than I, or, indeed, the generality of people among whom I had been living." This discovery and, doubtless, a study of *Walden* set him considering. He saw that

"the rich dinners and expensive mode of living I had been accustomed to were a mere waste as far as adaptation to any useful end was concerned; and afterwards I decided that they had been a positive hindrance, for, when I became habituated to a more simple diet, I found that a marked improvement took place in my powers both of mind and body. At a later time, when keeping house myself (still on the same scale, though with a little more latitude, owing to visitors), and having, during a short time, to buy every article of food, I found that the expenses for a family of four persons, were well under 8d. per head per diem, not including firing or labour of cooking. And now I am inclined to consider this needlessly large."

He proceeds to give details which, if we do not adopt them wholly, may still give us some useful hints. His views on floor-covering, wall-papers, ornaments, curtains, &c., in relation to the simple life cannot be reproduced here. They would break the heart of the old-fashioned housekeeper, who believed in "elbow grease," and thought nothing out of place or superfluous if it gave opportunity for the use of that. Mr. Carpenter abhors the idler; but he is no preacher of work for its own sake. It is good simply for service. Domestic labour, as usually performed, he regards—I think rightly—as out of all proportion to the benefit that results from it. He is convinced that there is "a most abominable and idiotic waste of time" in connexion with the cooking department "in all our well-to-do establishments":

"If the pleasure given bore any proportion to the expenditure of time and labour there might be some sense in the matter, but it doesn't. Fancy a small household of five or six persons requiring a cook—i.e., a person engaged all day long in preparing food for them. Is it not out of all reason? But the mistress of the

house descends as it were from the skies, 'orders dinner' and returns again to her celestial abode. Whether it was worth while that the scullery-maid should be sent scouring round the town, that she should return hot and tired and quarrel with the cook—that saucepans should be soiled, much time consumed in peeling, and some money wasted—all in order that unseasonable shrimps should be made into indigestible sauce and served up with the fish, is a question which does not enter into her (the mistress's) head as she takes an infinitesimal portion of the said sauce upon her plate."

Nevertheless, Mr. Carpenter is no ascetic. He is, rather, a kind of utilitarian. His doctrine is, if the game is worth the candle, play the game; but always consider well the cost, and by no means play merely because of custom and usage. While he advocates plain living, he is

"inclined to think that, as in other matters, though moderation is the best general rule, this has to be varied by an occasional orgy. For pleasure in the long run, health, economy of force, &c., a certain springiness is to be recommended; but the orgy should not be omitted. Among other things it restores the moral tone and prevents—a most important point—all danger of lapse into pharisaism."

As a rule Mr. Carpenter is not a crochets-monger, but interest on money and property in land trouble him sometimes. Apparently an individualist by nature, he has not quite escaped the prevailing socialist epidemic. On the whole, however, it seems likely his constitution is strong enough to withstand the attack. He defines legal ownership as "the power to prevent others from using"; the real ownership pertains to him who uses. Yet, being an optimist—though, perhaps, he does not know it—he perceives that even "this vast fungus growth" of private property has its use:

"I take it that it is part of the development of man. I take it that it is necessary that the individual should be excluded from the tribe (as the child is excluded from its mother's womb) that he may learn the lessons of individuality; that he may learn his powers and the mastery over things; that he may learn his right relations to others and the misery of mere self-seeking and individual greed."

Mr. Carpenter's style is racy and idiomatic, sometimes, perhaps, slangy. His tone throughout is pleasant, and earnest to a degree but not made solemn by lack of humour. He writes from personal experience, as well as from ideas of his own. He is a whimsical man, and likes to test things for himself. He has visited fine houses as a guest in the drawing-room and also as a guest in the kitchen. He is a graduate of Cambridge, and was, I believe, at one time a lecturer under the University Extension Scheme. Now he farms a few acres of ground, and one of the most interesting chapters in his book—that on "Trade"—gives an account of his views of life in the market place from behind his vegetable baskets.

As a critic of society Mr. Carpenter has done good work. It is to be hoped he will continue to do so. But in his case the critic is perilously near to being lost in the reformer. Of such critics we have too few, of reformers too many. "If thinking were not so hard!" said Meyer to Goethe. But to declaim is easy; and Mr. Carpenter, who truly has the good of his fellow men and women at heart,

will serve them best by thinking, testing his ideas where needful by experiment, and from time to time announcing the result—and by always strenuously avoiding the abyss of the "isms."

WALTER LEWIN.

AMERICAN ETHNOLOGY.

Fourth Annual Report of the Bureau of Ethnology. Smithsonian Institution, 1882-3. (Washington: Government Printing Office.)

ALTHOUGH submitted to the secretary so far back as October, 1883, and bearing the date 1886 on the title-page, this fourth volume of the annual ethnological reports does not appear to have been put through the press and distributed till the early part of the present year. But the delay will scarcely seem unreasonable, when due allowance is made for the time necessarily required to prepare for publication materials filling 600 large quarto pages profusely illustrated with eighty-four plain and coloured plates, besides 564 woodcuts inserted in the body of the text. Nevertheless the reports, which began to be issued in 1880 after the ethnological branch had been united with the general work of the Smithsonian Institution, are so eagerly awaited by the scientific public that a certain feeling of impatience is naturally felt at the slow progress being made in bringing them up to date. Such a feeling, however, may be accepted by the authorities as the best proof of the high estimation in which their labours are held by specialists; and as the fruits of their labours are distributed with splendid liberality to all interested in ethnological studies, there is, after all, much more room for thanks than for fault-finding.

The present volume appeals even to a wider circle of readers than its predecessors, and will be received with satisfaction by all those who take an intelligent interest in the progressive history of human culture, taken in its widest sense. Apart from the general introduction on the ethnological work accomplished by the officers of the Bureau during the fiscal year ending June 1883, written with his wonted clearness and vigour by the director, Mr. J. W. Powell, the *pièces de résistance* are decidedly the elaborate memoir by Col. Garrick Mallery on the "Pictographs of the North American Indians," and the valuable series of papers by Mr. W. J. Holmes on the "Ancient Pottery of the Mississippi Valley, and on the Evolution of Form and Ornament in Ceramic Art generally."

Col. Mallery's treatise, occupying considerably more than half the whole volume, stands in the same relation to written language that his previous essay on sign language does to articulate speech. Although professing to be only of a preliminary character, both form solid and sure bases for the further study of graphic and spoken language in their subsequent development, and both are thus the natural complements one of the other. But, as the author is himself fully conscious, they are even more intimately associated than this statement would imply. Pictographs, or say pictorial writing generally, is here treated mainly in reference to its significance, as one form of thought-writing directly addressed to the sight, gesture-language being the other and probably earlier form. The one is the permanent, direct, visible expression of ideas,

of which the other gives the transient, but also visible, expression. Hence the general proposition, believed to have been first announced by Rafinesque, is here accepted—that "the graphic signs of the Indians correspond to their manual signs." The best proof of this proposition is the fact, abundantly demonstrated by the author, that the only key yet discovered for many of the signs or characters representing abstract ideas is the study of the gesture-sign actually figured in many of them. A striking illustration is the rock-painting on the Tule River Agency, California, discovered in 1882 by Dr. W. J. Hoffman. Here grief is characteristically delineated by reproducing the attitude commonly adopted to express that sentiment, with additions suggested by the pictorial art itself.

"No. 1 represents a person weeping. The eyes have lines running down to the breast, below the ends of which are three short lines on either side. The arms and hands are in the exact position for making the gesture for rain. It was evidently the intention of the artist to show that the hands in this gesture should be passed downward over the face, as probably suggested by the short lines upon the lower end of the tears. This is a noticeable illustration of the general term used by the Indians when making the gesture for weeping—i.e., 'eye-rain.' It is evident that sorrow is portrayed in this illustration, grief based on the sufferings of others who are shown in connection therewith" (p. 236).

An obvious interpretation is given of the whole of this inscription, as well as of numerous other documents, some of which may be described as genuine pictorial "MSS." Of the latter, perhaps the most typical is the so-called "Winter Counts," or Annual Register of the Dakota Nation, which was originally written by Lone-dog, a member of the Yanktonai clan, on a buffalo skin, here beautifully reproduced by photographic process from a copy on linen cloth. This document, first seen in 1876 by Col. Mallery at Fort Rice, on the Upper Missouri, and published by him in 1877 as "A Calendar of the Dakota Nation," is not a history in the strict sense of the term, but rather an attempt to determine a series of seventy-one "winters," or years (1800-71), by a pictorial representation of the most striking event occurring in each. Its genuine character has been fully verified; and a special interest attaches to it as the first known instance of a conscious design to record events, not because of their intrinsic importance, but because occurring in regular succession, hence arranged in an orderly form for use as a calendar. When the copy now in the author's possession was shown to another member of the Dakota tribe, he at once recognised it as "the same thing Lone-dog had," adding that it showed "something put down for every year about their nation."

"He knew how to use it as a calendar, beginning from the centre and counting from right to left, and was familiar with the meaning of many of the later characters and the events they commemorated . . . , but explained that he had forgotten the interpretation of some of the earlier signs, which were about those things done before his birth" (p. 91).

This last remark reveals the true character of pictorial writing as practised by the North

American tribes. It is seldom conventional or symbolical, and never phonetic, no sign having been discovered clearly indicative of sound. It thus resolves itself into a pure system of mnemonics, the clue to which is handed down orally, and when lost cannot easily be recovered, especially where few representations occur of recognised gesture-language. Yet, such as it is, it undoubtedly deserves the most careful study, as presenting the first distinct stage in the progressive development of writing through the Mexican, Egyptian, and other hieroglyphs up to the syllabic and purely alphabetical systems, which must always constitute the most powerful instrument in perpetuating and advancing human culture.

By archaeologists Mr. Holmes's papers on the ceramic art will be heartily welcomed. They deal separately with the pottery of the ancient Pueblo Indians, the pottery of the Mississippi Valley, and the origin and development of form and ornament in ceramic art generally, the whole described as preliminary studies, which are intended to be absorbed in a final work of comprehensive character. There is also a supplementary, but highly suggestive, paper on "The Study of Pueblo Pottery as illustrative of Zuñi Culture Growth," by Mr. Frank Hamilton Cushing, who has here turned to excellent account his extensive knowledge of the industries, languages, and traditions of the Pueblo Indians.

Mr. Holmes's essays are all alike characterised by remarkable clearness of exposition, great wealth of apt illustration, and comprehensive grasp of the subject. There is certainly no exaggeration in the eloquent tribute paid to him by the director, Mr. Powell, who observes, in the general introduction to this report, that

"Mr. Holmes, by his artistic and philosophic classification, has set forth the laws of this branch of research more clearly and more completely than any other student of the subject. Though some of his propositions are not presented by him as entirely original, even those are enforced by example and made intelligible by illustration, so as to be substantially novel to most readers. Indeed, the general result of his studies, as expressed, differs widely from the current conservative theories" (lx.).

Mr. Holmes arrives, by a sound inductive process, at the general result that the Mississippi ware (the pottery of the "mound-builders") was not, as a rule, sun-burnt, but fired without being intentionally glazed; that it was good in form and design, bad in finish, in both respects inferior to the Pueblo, though superior to the European pottery of the stone age; that the use of lathe or wheel was unknown, moulds of various kinds being employed instead; that the art was of considerable antiquity and homogeneous character, being uniformly developed in this region by groups of allied tribes possessing little knowledge of the textile art, and probably of "hyperborean origin."

This last suggestion is not supported by any very cogent reasoning, being apparently mainly based on the striking coincidence between certain Alaskan and Mississippi forms, which are of too singular a character to be regarded as accidental resemblances. But the Alaskan vessel in question, representing a beaver grasping a stick in its paws

and teeth, is carved in wood, and may well have found its way in course of ages from one region to the other, supplying a fresh design to the potters of the Middle Mississippi Valley, notoriously fond of, and skilful in imitating, grotesque or eccentric models. Hence it does not follow that "this remarkable coincidence is suggestive of ethnic relationships," though it may serve to illustrate the possibilities of "modification by simple contact" (p. 451).

On this point of indigenus and independent development the present writer is pleased to find his own views strongly supported by the concluding words of Mr. Powell's already quoted introductory chapter :

"The results of all the studies made by the writers in this volume and their co-labourers in the Bureau favour the view of a continuity of the pre-Columbian population of North America, subject to known evolutionary laws, as against cataclysmic theories postulating intrusive or extinct races, such as the supposititious 'Mound Builders' or 'Cliff Dwellers.'"

A. H. KEANE.

The Growth of Church Institutions. By the Rev. Edwin Hatch. (Hodder & Stoughton.)

THE value of this book is out of all proportion to its size. The preface informs us that it is

"an endeavour to give an answer to questions which are frequently asked in regard to the apparently wide differences between the primitive and the modern forms of some Christian institutions"; and also that it

"is designed less for scholars than for general readers who are interested in theological subjects; its aim is to be not controversial, but historical."

Speaking very roughly, the volume deals with the period lying between the fall of the Roman Empire and the Reformation, and, therefore, forms a continuation in outline of the author's Bampton Lectures on the "Organisation of the Early Christian Churches," which work it resembles in making free use of conclusions already stated by Dr. Hatch in various articles contributed to the *Dictionary of Christian Antiquities* (see Parish, Patron, Priest, Holy Orders, and others). The volume contains 12 chapters: 1 and 2 deal with the diocese and its bishop; 3, 4, and 5 with the priest and his parish; 6 with tithes; 7 with the metropolitan bishop; 8 with national churches; 9 with the canonical rule; 10 and 11 with the cathedral and the chapter; and 12 with the chancel. Altogether, there are 227 pages of rather large print.

These particulars will show that the book is necessarily only a "summary of results." It is, in fact, the author informs us, to be "supplemented by a more elaborate work at present in preparation"; but till this larger work appears the summary before us is the only consecutive statement we possess of results at present hidden away in the pages of the *Dictionary of Christian Antiquities*, where they are necessarily incomplete, and, moreover, encumbered with details which render them entirely inaccessible to the general reader. These results, again, are unusually important, not only to the scholar, but also to the citizen, and have a direct bearing on many modern problems. And,

thirdly, Dr. Hatch's summary is a marvel of clear and concise statement. Only occasionally at the end of a chapter are we allowed half a page of close-knit and weighty comment, intended to aid us in applying the facts of the chapter to the modern questions which they illustrate. The book is therefore drier reading than the Bampton Lectures. Its interest depends more entirely upon the facts it sets forth; but all these facts are so many proofs of Dr. Hatch's principle—

"That God works with an economy of power, and the phenomena of the Christian societies are the result of the operation of forces which He has planted for wide and varied purposes in the hearts of men."

Dr. Hatch's book, in consequence of this principle, has the same sort of charm that attaches to Sir H. S. Maine's *Ancient Law*. A subject usually treated technically and from a *priori* premises is expounded historically. The intricacies and mysteries of ecclesiastical institutions are shown to have come into being from quite natural and human causes, and the exposition is as profoundly interesting as is the similar treatment of legal institutions. Moreover, the history of the Middle Ages is very largely the history of the Church of the Middle Ages. The civil history is hopelessly confused until its connexion with ecclesiastical history is clearly and rationally explained. Such a connexion it is the aim of Dr. Hatch's sketch to prove and to state.

We have said enough to explain our opening remark—that this volume's value is out of all proportion to its size. It is only a summary, and the scholarship and erudition which have gone to its making will probably be unnoticed by general readers; but all must be struck by the power it exhibits of perceiving the significance of facts, and of connecting and grouping them so that they become intelligible. This is its point of resemblance to Sir H. S. Maine's works. The student of mediæval history will find Dr. Hatch's outline an indispensable aid.

RONALD BAYNE.

Herefordshire Words and Phrases. By Prebendary Havergal. (Walsall: Robinson.)

THIS volume, which has been printed for subscribers, is well-timed. In a few more years most of the characteristic folk-speech of Herefordshire will have disappeared, routed by the literary diction of readers and primers. Even now children do not understand many words which are used by their elders. It is just the same in Lincolnshire, where I never found a child who knew the meaning of the fine old Norse word *latho* (a barn), although the old people were well acquainted with it. The flood of book-English is rapidly sweeping away these relics of a pre-scholastic era. Mr. Havergal was told by a learned friend that his attempt to rescue some, at all events, of these old words was forty years too late. Philologists will rejoice that he was not daunted, but determined that at least he would gather what he could before it should be a vain quest. The result lies before us in this well-printed volume, which contains some 1,300 words and phrases, colloquial and archaic, which still linger on the lips of old people in Herefordshire.

When we have so much it is ungrateful to long for more; and yet we could have wished that some attempt at philosophic arrangement and etymological review had been made with regard to this sweeping of words current in Herefordshire. Mr. Havergal has not attempted to do more than collect them. Sadly imperfect as the late Sir G. Cornwall Lewis's etymologies were in his "Glossary" of words used in this and the neighbouring counties, they were suggestive; and in the half century which has since passed away, philology has made immense strides. Mr. Havergal has contented himself with arranging the words which he has collected in alphabetical order, occasionally indicating the parish or district in which they are used. A short appendix contains some noteworthy proverbs and a few specimens from the wealth of folklore which yet awaits the arrival of some equally enthusiastic a student as is Miss Burne with regard to the folklore of the adjoining county of Salop. But it is much that a tolerable conspectus of the Herefordshire dialect may at least be procured at a very low price. All country clergymen, and others brought much into contact with the villagers and rustics of this county, should possess themselves of this book, which must often be wanted, and which may suggest many pleasant lines of investigation. The tincture of book-learning which Herefordshire children have already obtained has at all events softened their manners from those which the boy possessed who (as the author tells the story), on opening a gate for a lady on horseback and being thanked by her with the addition, "I am sure you are not a Herefordshire boy," promptly replied, "Thee'rt a liard, I be." School-children in this county may be dull, but they are invariably civil.

The bulk of the county's dialectal words is, as might be expected, Mercian, shared with the other counties which comprised that division of the country. From its situation and connexion with Wales it might have been suspected that a large proportion of the Herefordshire dialect would have sprung from the language of the principality. Cambrian nomenclature is found until the Wye, beyond it Saxon prevails. Names of farms and hamlets show the influence of Welsh more largely than do villages or towns. Thus, in a parish adjoining Monmouthshire, from which I write, at least six of the farms possess pure Keltic names. Yet there is but a small element of Keltic among the folk-speech of Herefordshire. When the Keltic tongue was disused it was entirely dismissed, save those river and place-names which (as in Lincolnshire and Cleveland) survive the language itself in this country. A few words common throughout the west from Devonshire northwards may be found in Herefordshire—e.g., *tallatt* = a loft in a hovel; *sorawl* = to crawl; *ordain* = to order. Some, from whatever derivation, are amusingly expressive. Thus, *marketpeert* = somewhat tipsy, as if he had come from the market; *cambottle* = the long-tailed tit (from its nest); *poppy*, used of a man who pretended to be a gentleman. Others, again, are ludicrous inversions or perversions of words—a habit which forms a common feature in the ordinary tongue of Devonshire. Thus, *bronnkites*, for bronchitis; *ill-convenient* for inconvenient; and, above all, the verb to *intercode*, which appears to be used

by Herefordshire folk whenever a long word is wanted. "She intercedes herself in the garden" means with them "she interests herself" in it. If a basket be lost a servant will say, "I will *intercede* for it," meaning "I will make enquiries for it." Mr. Havergal prints *arc*, "a peculiar cloud seen across the sky from north to south at morn or evening," and connected by the common people with a change of weather; but it should be *ark*, as we have often heard the cloud called "Noah's ark" in Lincolnshire. *Mommet*, again, "an effigy to frighten birds," should be *mammot*, from Mahomet.

A few curious expressions and scraps of folklore from the county have been appended to this book. *Mowwend* for "month's end," the day when poor families in the country think it right to go to church in a body after a funeral, has no indistinct connexion with the pre-reformation "trentals." "The earliest crow sometimes gets the latest breakfast" is not a bad proverb for a lazy man's comfort. The mental confusion, too, in the mother who was asked how her daughter was going on is delicious. She replied, "I think she's on the mend, for the doctor's drugs are beginning to embrace her." Mr. Havergal's book must only be regarded as the first skimming of a subject which is wonderfully rich. Much remains to be done. Since the book was in my hands I have noted several words which are not included in it. Few of the common Herefordshire names for plants and flowers have as yet been collected; such as "old man," "gillies," "snow on the mountain," and the like, for boy's love, wall-flowers, and alyssum respectively. Nor has the wide field of popular superstition been more than glanced at. Yet the Baal fires, the sacred cake, the maypole that stands by the farm stables, and other interesting relics of fast disappearing beliefs, demand immediate attention, as they have all but died out already.

Mr. Havergal has completed a labour of love, and will earn the gratitude of every observer of Herefordshire words and ways. The wide margins of his glossary offer a strong inducement to every thoughtful dweller in the county of apples and mistletoe to use it as a commonplace book, jotting down on them day by day any uncommon word or saying which has been noted. These gleanings would then be ready for the next edition of this valuable little book. M. G. WATKINS.

SOME BOOKS ON ENGLISH HISTORY.

"English History from Contemporary Writers."—*The Mirrour of Henry III., 1236-1248.* Edited by the Rev. W. H. Hutton. *Edward III. and his Wars, 1327-1360.* Edited by W. J. Ashley. (David Nutt.) These two little volumes form part of a series, under the general editorship of Mr. York Powell, the design of which is to illustrate English history by a continuous succession of extracts from contemporary chronicles and documents, the passages in foreign languages being translated, and those in English modernised in spelling. The plan is excellent, and the name of the editor is a ground for confidence that it will be efficiently carried out—so far, at least, as his supervision extends. It strikes us, however, that the size of the volumes is rather too small, and that if uniformity in this respect is adhered to some of the writers will have to choose between two evils—that of defining their "periods" arbi-

trarily, and that of leaving on the reader's mind a confused or inadequate impression. Mr. Ashley has managed to avoid both these faults; but we are not so sure that Mr. Hutton has been well advised in his selection of a terminal date. We should have preferred a volume of double the size, bringing down the story to the end of the Barons' War. The history of the years from 1236 to 1267 forms a closely connected whole; and to make a break at 1248 (the date printed on the cover of the book), or at 1251 (the date to which the extracts actually extend), is something like stopping short in the middle of a drama. If a division had to be made, it seems to us that the date of the death of Grosseteste would have been a better point at which to make it than that which has been adopted. On turning to the preface to discover the reason assigned for ending the volume "nowhere in particular," we were for a moment completely puzzled, for the first paragraph intimates that the work deals with the history of the period from 1235 to 1266. We can only suppose either that when Mr. Hutton's material had been printed off it was discovered to be more voluminous than had been anticipated, or that the editor or the publisher of the series suddenly altered his original intention with regard to the size of the volumes. We cannot but regard the result as unfortunate. However in other respects Mr. Hutton's work is satisfactory. The extracts (of course chiefly taken from Matthew Paris) are well selected, and the few passages which we have compared with the original appear to be accurately translated, though Mr. Hutton misses a point when he renders *moneta sterlingorum* by "the sterling money." The style is, on the whole, fairly readable. Appended to the volume are genealogical tables of the family of Henry III., and of the house of Montfort (the latter, by the way, will need to be repeated in the volume dealing with the Barons' War), and a very good notice of the writers from whom the extracts are taken. Mr. Ashley's volume is much more skilfully put together than Mr. Hutton's. The majority of the extracts are from Lord Berners's translation of Froissart; but Murimuth, Avesbury, and Knighton have also been used, and there are several passages from the so-called *Chronicle of Lanercost*, which are hardly less picturesque than those taken from Froissart himself. Quotations are also given from popular songs, from statutes, and from municipal documents. Although the professed subject of the book is Edward III.'s wars, it contains a good deal of illustration of the condition of the people, and the manners and sentiments of the time. Altogether this is a singularly clever piece of work, and if the future volumes are nearly as good the series is certain to have a great success. Both the volumes contain a good many woodcuts, which are unpretending in style, but have the merit of being really illustrative of the text. It would be an improvement if, in the tables of contents, the names of the writers were given, as well as the subjects to which the extracts relate.

THE conclusions of Mr. Percy M. Thornton, in his volume on *The Brunswick Accession* (Ridgway), are based on the inedited "Hanover papers"—a collection to which he and some other students of English history after the revolution of 1688 have already called attention in the columns of the *English Historical Review*. He has two objects in view: the first is to show the illustrious character of the ancestors of the present royal family; the second, and more important, is to bring out the disposition of the leading politicians of Queen Anne's reign and of the nation at large on the succession to the throne after her death. The first is successfully established; for, after an

exhaustive inquiry into the lives of the ruler of Brunswick, he brings in the verdict that "through the veins of the British royal family courses the finest Stuart blood," and that "the loves, woes, and deaths of their ancestors are as worthy the wizard pen of a Scott as are those of the exiled branch of the Stuarts. Over the latter question greater uncertainty hangs. But Mr. Thornton arrives at the opinion that the Tory ministers who ruled over England after the fall of Godolphin and Marlborough aimed, as a body, rather at the supremacy of their political party than at any alteration in the succession to the throne of England; and that even Bolingbroke, whatever promises he may have deluded the Jacobites with at an earlier period in his career, resolved after Oxford's fall "to bring George the First to St. James's." If this treatise of Mr. Thornton should again undergo enlargement it would be well for him to explain how "unbeneficed clergymen" can be "turned out of their cures" (p. 175); to correct the sentence on p. 216, which refers to the "Bangorian controversy," so as to show that the phrase arose from the bishopric of Hoadley, rather than from the writings of Atterbury and Snape; and to eliminate the title conferred, on p. 231, on Mr. Pelham, but never enjoyed by him, as well as the words Pelham "of that ilk" to which he could lay no claim. In this, as in all his previous works, Mr. Thornton writes with moderation and with courtesy towards those who differ from him.

"Winchester Cathedral Records."—No. 2. *Charter of Edward the Third for the St. Giles Fair.* Dean Kitchin has not been content with merely editing the text of this charter with scrupulous care. He has added notes, elucidating obscure points and expressions, and has prefixed an introduction which will interest many besides antiquaries and local historians. He shows the important position held by fairs in the early history of commerce, and their connexion with the Church and the Church Calendar. In Winchester, the bishop had, from the time of William Rufus, the privilege of holding a fair "on the eastern hill" for three days, and this period was extended by subsequent kings to sixteen days—the term confirmed in Edward the Third's charter. Under the Norman kings the fair was in high repute. Winchester, which rivalled London in importance before the Conquest, yielded very slowly its prominent position. It had a large trade in wines of both native and foreign production, and was noted throughout the country for its cloth manufacture. But foreign trade found a more convenient depot at Southampton; and, as the woollen manufactures became developed in East Anglia and wherever the Fleming colonists settled, they naturally declined elsewhere. Edward III., indeed, took special interest in Winchester, and, besides granting the bishop a new charter for the fair, made the place one of his ten great staple-towns. But the lost ground could not be regained, and in the fourteenth century Winchester sank into the comparatively unimportant position it has ever since occupied. Still, the fair on St. Giles' Down was a great gathering, and a source of large revenue to the bishop. The booths seem to have covered the whole open space on the hill-top, and to have descended the steep slope towards the east gate of the city. They were enclosed by a palisade, erected not merely to protect the goods, but to defeat attempts at smuggling, and were arranged in streets, which bore the names of the commodities sold in them. Among the traders "were those mysterious merchants from foreign parts called "Dynamitters," who sold brazen vessels and pots, and were bound by ancient custom yearly to present to the Justiciaries of the

Pavilion and to the Treasurer of Wolvesey four brazen basins and ewers."

Great precautions were taken to preserve order and prevent the occurrence of fire, and special officers and magistrates were appointed to carry out the bishop's instructions. Of course, as shops increased and multiplied, and shopkeepers grew stronger, the fair grew weaker. Trade gradually came to be conducted by other and more regular means. And so the fair

"slid down St. Giles' Hill towards the gates, until at last it entered into the town, and abandoning the old site altogether, camped for a day or two in the broad High Street, where still its noisy ghost holds revel once a year."

We think Winchester is fortunate in having as its dean so pleasant and popular an archaeologist as Dr. Kitchin, and we congratulate him upon having found such suitable and useful occupation for the "learned leisure" which deans are supposed to enjoy.

The History of Streatham. By Frederick Arnold, jun. (Elliot Stock). It is well that the history of this suburban parish should be written before its features are destroyed and its boundaries obliterated by the extension of southern London. Already it has lost too many of its fields and woodlands; and the nightingale—a frequent visitor twenty years ago—has been driven away by the screeching trains and the Sunday bird-catchers. Within the parish of Streatham are included the manors of Balham, Leigham, and Tooting; but none of these names recall any historical associations. Dr. Johnson and the Thrales have done more to make Streatham famous than all the lords of all the manors, though it ought to be remembered that Defoe lived at Tooting for many years, and that among the rectors of Streatham was Dr. Benjamin Hoadley, greater as a controversialist than as a bishop. The parish register contains a notice of an eccentric character who died in 1772 at the age of at least 100, and was then discovered to be a man, though he was "always known under the guise or habit of a woman, and answered to the name of Elizabeth." Mr. Arnold begins his history as early as he can, for his first chapter contains a sketch of the geology of the county of Surrey, and an attempt to epitomise its annals from the Deluge downwards. The more valuable as well as more interesting chapters in the book are those which relate to comparatively modern times, and especially to the Thrales and Dr. Johnson. All anecdotes about the latter are more or less in place; but we do not need a recapitulation of the doctor's biography, including some account of his father. As a whole, however, the book is a good one, and the typography is particularly clear.

A History of the Parish of Mortlake. By J. Eustace Anderson. (Laurie.) We notice that this little book is "printed for private circulation," and, therefore, public criticism may seem superfluous. But there is nothing in the work of which its youthful author need be ashamed, and we are glad to welcome all fresh contributions to suburban topography. Mortlake has not much history of which to boast. The manor passed from episcopal to royal hands in the reign of Henry VIII. by one of those numerous Diomedean exchanges then made by the Head of the Church. The manor house was at the west end of the village, and, according to Bray, was standing as late as 1663. Mr. Anderson would have added greatly to the value of his history, if he had given references to the authorities whom he seems to have consulted; and he need not have disappointed us by confining his "Extracts from the Parish Registers" to quotations from the vestry minute books. We would suggest a careful revision of these extracts, and

a suppression of such absurdities as Stowe's derivation of Domesday.

Chapters from Family Chests. By Edward Walford. In 2 vols. (Hurst & Blackett.) Mr. Walford has hit upon a happy title for his book, but his researches have not brought to light anything very remarkable. The truth is, these chests have been already thoroughly ransacked, and their contents are accessible enough elsewhere. The scrappy treatment of family history is about as unsatisfactory a thing as can well be imagined. We can appreciate a good historical romance, and value very highly a plain statement of genealogical facts, with evidences for their truth adduced from unimpeachable documents. But Mr. Walford's method is neither one thing nor the other. His stories—most of them threadbare by this time—have apparently formed "padding" for a magazine. For such a purpose they may have been suitable; but their re-publication will not increase their author's reputation nor advance the interests of true antiquarianism, if such a word may be employed.

Montrose. By Lady Violet Greville. (Chapman & Hall.) Lady Violet Greville disarms criticism by her statement that "this little book has no pretensions to novelty or high things." She has put into an agreeable form Mr. Napier's view of his hero's character and actions; but she does not in any way realise the horror of the civilised Lowlander at the storm of barbarism which was being let loose upon him. Of course it is only in consequence of a misprint that Lady Violet asserts that one of the articles of Perth allowed "the private administration of the sacrament to the rich" (p. 23.)

A Short History of England, from the Earliest Times to the Present Day. By Cyril Ransome. (Rivingtons.) As a school text-book this is the most satisfactory history of England of the same size that we have seen. The chapter on the ethnology of early Britain is open to some objection, chiefly on the ground that it states too dogmatically certain conclusions which are not universally accepted, and are incapable of absolute proof. The volume is furnished with many useful plans of battle fields, and chronological and genealogical tables are given where necessary. Mr. Ransome has adopted the useful plan of treating the account of each reign with a note containing the dates of the sovereign's birth, accession, and death, and lists of the "chief characters of the reign" and of the contemporary princes of Europe. The style of the book, though condensed, is much more readable than that of similar works usually is.

NOTES AND NEWS.

We hear that Prof. Dicey's letters on "Unionist Delusions," which have been appearing in the *Spectator*, are to be republished in a little volume by Messrs. Macmillan & Co.

LORD SELBORNE has a new book in the press. It will be published by Messrs. Macmillan & Co., under the title of *Ancient Facts and Fictions as to Churches and Tithes*.

AN addition to Baedeker's series of European Guidebooks will be issued very shortly in the shape of a *Handbook to Great Britain*. The volume, which takes in England, Wales, and most of Scotland (but not Ireland), is prefaced by a "Historical Sketch of Architecture in England," from the pen of Prof. Freeman.

THE work on which the Rev. Dr. Cunningham Geikie has been engaged for several years past will be issued by Messrs. Cassell & Company, in two volumes, early next month, under the title of *The Holy Land and the Bible: a Book of Scripture Illustrations gathered in Palestine*.

MESSRS. LONGMANS will publish, in November, *Picturesque New Guinea*, by Mr. J. W. Lindt, with fifty full-page illustrations, reproduced in autotype from photographs.

MESSRS. GEORGE PHILIP & SON will publish, almost immediately, an enlarged edition of Dr. John Yeats's *Manuals of Commerce*, in four volumes, illustrated with numerous original maps and diagrams. Volume I., entitled "The Natural History of the Raw Materials of Commerce," contains a list of commercial products and their synonyms in the principal European and Oriental languages; volume II. treats of the progress of the useful arts, with tables of alloys, &c.; volume III. is entitled "The Growth and Vicissitudes of Commerce"; while volume IV., which is entirely new, gives statistical tables, maps of trade areas, and lists of places important in business.

THE three sermons preached in the Manchester Cathedral, during the recent meeting of the British Association, by the Bishops of Carlisle, Bedford, and Manchester, will be published, next week, in a single volume, under the title of *The Advance of Science*, by Mr. John Heywood.

THE course of Lectures on the "History of Preaching," delivered to the students at the Theological Hall, Edinburgh, by the late Prof. John Ker, will be published by Messrs. Hodder & Stoughton.

TOWARDS the end of the month Messrs. Ward & Downey will publish a romance, by Mr. Fitzgerald Molloy, called *A Modern Magician*.

UNDER the title of *Literary Epochs: Chapters on Noted Periods of Intellectual Activity*, Mr. Elliot Stock announces a new volume of essays by G. F. Underhill, for immediate publication.

MESSRS. FREDERICK W. WILSON & BROTHER, of Glasgow, have in preparation a new work by Mr. John Davidson, whose drama of "Brnoe" was recently noticed in the ACADEMY. It is entitled *Smith: a Tragedy*; and it deals with rebellion against modern society.

A POPULAR edition of *Manners Makyth Man*, by the author of "How to be Happy though Married," will be issued, immediately, by Mr. T. Fisher Unwin.

AT the tenth annual meeting of the Library Association, to be held in the Council House, Birmingham, from Tuesday to Friday of next week, the papers will include: "The Present Aspect of the Question, Who was the Inventor of Printing?" by Mr. W. Blades; "Remarkable Private Libraries of the Town and Neighbourhood," by Mr. Sam Timmins; "What to aim at in Local Bibliography," by Mr. F. Madan; "Library Bylaws and Regulations," by Mr. J. D. Mullins; "The Free Libraries of the Town and Neighbourhood," by Mr. R. K. Dent; "The Connexion between Free Libraries and Art Galleries and Museums," by Mr. Whitworth Wallis; "Wanted a Librarian," by Mr. J. G. W. MacAlister; "Some Experiments on the influence of Gas on Bindings," by Mr. C. J. Woodward; "Books before Printing," by Mr. J. W. Bradley; "Subscription and Proprietary Libraries of the Town and Neighbourhood," by Mr. C. E. Scarse; "Town Libraries and Surrounding Districts," by Mr. F. Paoy; "Birmingham in Literature," by Mr. W. Downing; "Thomas Hall and his old Library at King's Norton," by Mr. W. Salt Brassington; and "An Open Reference Library at Cambridge," by Mr. T. E. Foster. The excursions include visits to Oscott, Stratford-on-Avon, and Althorp (by permission of Earl Spencer). The president for the year is Mr. Alderman Johnson. Communications may be addressed to Mr. E. C. Thomas, 2 South Square, Gray's Inn; or Mr. C. E. Scarse, the Library, Union Street, Birmingham.

A COMMITTEE has been appointed at Newcastle, with Dr. Thomas Hodgkin for treasurer, to collect subscriptions for the restoration of the tombstone of John Cunningham, the pastoral poet of the last century.

IN 1860, Prince L.-L. Bonaparte and others had a stone placed in Mousehole churchyard to the memory of Dolly Pentreath, traditionally reported to be the last woman who spoke Cornish, and to have died in 1778 at the age of 102. Subsequent investigation has proved, however, (1) that the stone was not on the site of her grave; (2) that the true year of her death, as given in the parish register, is 1777, not 1778; and (3) that she was probably not 102 years of age, for there is an entry in the register—"Dorothy, the daughter of Nicholas Pentreath, of this parish, baptised May 17, 1714." Accordingly, on Wednesday, August 24, the stone was moved to the true site of the grave, and the date of death was altered.

THE COLLEGE HALL, for the residence of Women Students of University College and of the London School of Medicine for Women, is once more extending its bounds. The Hall was first opened in 1, Byng Place, in October, 1882. In the following year the adjoining house was taken, and opened in January, 1884; and in March, 1886, the Hall was incorporated. Finding that there is still a constant demand for residence beyond what these two houses can supply, the Council have taken the third house, which completes the entire block known as Byng Place, and hope to be ready by October with rooms for additional students, an enlarged dining-hall, a library, and other improvements.

THE committee of the City Liberal Club have exercised a wise discretion in laying down the rule that their club library shall be mainly composed of works relating to politics and commerce. The latter subject appeals to the members as City men, the former attracts them as Liberals. In forming their collection they were aided by a generous donation of £1,000 from the widow of one of the members, and by the gift from Mrs. William Newmarch of a large portion of the volumes which her late husband had accumulated. The club pamphlets comprise a considerable collection bearing on the political career of Mr. Gladstone, and six volumes of pamphlets on bimetallicism, tithes, the Eastern question, and other features of political life, acquired and presented by Mr. Thomson Hankey. The library is as yet far from complete, but this is no more than might be expected from the short time which has elapsed since the first volumes were purchased; and the catalogue, which has just been printed, will, no doubt, bring the wants of the collection within the knowledge of many able to remedy its defects. The catalogue, which is based on that of the Reform Club, has been carefully compiled, and contains a useful classified index.

THE FORTHCOMING MAGAZINES.

THE October number of the *English Illustrated Magazine* will be the first of the fifth volume of this periodical. Among the contents will be an article on "Somerset in June," by the late Richard Jefferies, with numerous illustrations by Mr. J. W. North; and the first of a series of papers on "Coaching Days and Coaching Ways," which is to be jointly illustrated by Messrs. Hugh Thomson and Herbert Railton. The number will also contain a poem by Mr. Swinburne, and the Hymn by Mr. F. Marion Crawford sung at the centenary celebration of the Signature of the Constitution of the United States at Philadelphia. The first chapters of two new serial stories, by the author of

"Mehalah," and Prof. W. Minto; and the first of a series of articles on "Things in General," by Mr. Traill, which is to be a monthly feature of the *English Illustrated Magazine*, complete the number.

THE October number of the *Century Guild Hobby Horse* will contain William Blake's "Marriage of Heaven and Hell," now first printed from the engraved original; a photogravure of the drawing by Andrea Mantegna, entitled "Diana, Mars, and Venus"; and a selection of passages from the letters and papers of James Smetham.

THE October number of *Scribner's* will give the last instalment of the Thackeray letters—those written from America during two visits—together with a brief closing notice by Mrs. Brookfield. There will also be two portraits of Thackeray, from photographs now in the possession of Mrs. J. T. Fields.

MESSRS. MACMILLAN & CO.'S ANNOUNCEMENTS.

In General Literature.—"The Life of Archibald Campbell Tait, Archbishop of Canterbury," by the Dean of Windsor and the Rev. W. Benham, in 2 vols.; "The Personal Remembrances of Sir W. Frederick Pollock, Bart., sometime Queen's Remembrancer," in 2 vols.; "The Life of Ralph Waldo Emerson," by J. L. Cabot, his literary executor, in 2 vols.; "The Makers of Venice," by Mrs. Oliphant, with numerous illustrations; "Greek Life and Thought from the Age of Alexander to the Roman Conquest," by Prof. Mahaffy; "Ulysses of the Foreign Office—Scenes of Sojourn," by William Gifford Palgrave; "Life in Corea," by W. R. Carles, with numerous illustrations; "Montelius' Civilisation in Sweden in Heathen Times," translated from the German edition, by the Rev. F. H. Woods, with illustrations; "Greenland," by Baron A. E. von Nordenskiöld, translated into English, with numerous illustrations; "The Life of William Barnes, Poet and Philologist," by his Daughter, "Leader Scott"; "Letters of Thomas Carlyle," Second Series, 1826—1835, edited by Charles Eliot Norton, in 2 vols.; "The Life of Elizabeth Gilbert," by Frances Martin, with portrait; "Charles Lamb's Letters," edited by Canon Ainger, in 2 vols., completing his edition of Lamb's works; "Essays on Recent English Guides in Matters of Faith," by R. H. Hutten; "Spenser, Wordsworth, and other Studies: a Volume of Collected Essays," by Aubrey de Vere, in 2 vols.; "The Art of Conversation," by Prof. Mahaffy; "Collected Edition of Dean Church's Miscellaneous Writings," uniform with the collected works of Emerson, &c., to be published in monthly volumes: vol. i., Miscellaneous Essays; vol. ii., Dante; vol. iii., St. Anselm; vol. iv., Spenser; vol. v., Bacon; "Burke," by John Morley, uniform with the collected edition of his works; and "The Privy Council," by Prof. Dicey.

In Art.—"A History of Miniature Art," by J. Lumsden Probert, with illustrations; "The Life of Peter De Wint," by Walter Armstrong, illustrated with twenty photogravures from the artist's pictures; "The Pre-Raphaelite Brotherhood," by W. Holman Hunt, illustrated by reproductions from some of Mr. Holman Hunt's drawings and paintings; and "Roman Literature in Relation to Roman Art," by the Rev. Robert Burn, author of "Rome and the Campagna," with illustrations.

In Poetry.—"Prince Lucifer: a Poem," by Alfred Austin; Poems by the late Principal Shairp, of St. Andrews; a Volume of Poems by the Rev. Stopford A. Brooke; and "The Brook," by Alfred, Lord Tennyson,

with twenty illustrations in colour, by A. Woodruff.

Novels, &c.—"Marzio's Crucifix," by F. Marion Crawford, in 2 vols.; "The New Antigone: a Romance," in 3 vols.; "Hithers Mere," by Lady Augusta Noel, in 3 vols.; "Ismay's Children," by Mrs. Noel Hartley, in 3 vols.; "The Second Son," by Mrs. Oliphant, in 3 vols.; "Harmonia," by the author; "Estelle Russell"; "For God and Gold," by Julian Corbett; "Peggy," by Mrs. Moleworth, with illustrations by Walter Crane; and cheap editions of Lewis Carroll's "Alice in Wonderland" and "Through the Looking-Glass," with all the original illustrations by Tenniel.

Theology.—"The Bampton Lectures for 1887," by the Bishop of Ripon; "Gnosticism and Agnosticism, and other Sermons," by Prof. George Salmon; "Sermons," by the late Bishop Fraser, in 2 vols.: I. University and other Sermons; II. Parochial and other Sermons, edited by the Rev. John W. Diggie; "Sermons," by the late Rev. Dr. Maturin, of Dublin, edited by Canon Smith; "A Volume of Sermons," by the Rev. J. E. C. Wellton; "Wallington College Sermons," by the Rev. E. C. Wickham; "From Within," by George Harwood; and "Faith and Conduct."

In Mathematics and Science.—"A Practical Text-book of Pathology," by Prof. D. J. Hamilton; "The Nervous System and the Mind," by Charles Mercier; "The Growth of the Recruit and Young Soldier," with a view to a judicious selection of growing lads for the army, and a regulated system of training for recruits, by Sir William Aitken, Professor of Pathology in the Army Medical School; "A Treatise on Chemistry," by Sir H. E. Roscoe and Prof. C. Schorlemmer, vol. iii., part iv., with illustrations; "Electricity and Magnetism: a Popular Treatise," by Amédée Guillemin, translated and edited, with additions and notes, by Prof. Silvanus P. Thompson, with numerous illustrations; "Popular Lectures and Addresses on Various Subjects in Physical Science," by Sir William Thomson, with illustrations (Nature Series); "Radiant Light and Heat," by Prof. Balfour Stewart, with illustrations (Nature Series); "Absolute Measurements in Electricity and Magnetism," by Prof. Andrew Gray, second edition, in 2 vols.; "A Course of Quantitative Mineral Analysis for Students," by Prof. W. Noel Hartley; "School Course of Practical Physics," by Prof. Balfour Stewart and W. W. Haldane Gee, part i., Electricity and Magnetism; "Examples in Physics," by D. E. Jones; "The Elements of Chemistry: a Text-book for Beginners," by Prof. Ira Remsen; "Kinematics and Dynamics: an Elementary Treatise," by Prof. J. G. MacGregor, with illustrations; "Geometrical Conics: an Elementary Treatise, drawn up in accordance with the Syllabus issued by the Society for the Improvement of Geometrical Teaching," by A. Cockshott and the Rev. F. B. Walters, with diagrams; "A Treatise on Analytical Statics," by I. Todhunter, a new edition, revised by Prof. J. D. Everett; "Algebra for Schools and Colleges," by Charles Smith; and "A Companion to 'Weekly Problem Papers,'" by the Rev. John J. Milne.

Classics.—"Plato—Timæus," edited, with introduction and notes, by R. D. Archer-Hind (Classical Library); "The Fragments of Ctesias," edited, with introduction and notes, by J. E. Gilmore (Classical Library); "The Works of Xenophon," translated into English, with introduction and notes, by H. G. Dakyns, in 4 vols.; "Cicero—Life and Select Letters," after the edition of A. Watson, translated by G. E. Jeans, second edition, revised; "Short Prefaces to School Classics," by James Gow; "Plato—The Republic, I.—V.," edited by T. H. Warren (Classical Series); "Polybius—

The Achaean League, parts of books ii. and iv., edited, with introduction and notes, by the Rev. W. W. Capes (Classical Series); "Arrian—The Expedition of Alexander," selected and arranged for the use of beginners, with notes, vocabulary, and exercises, by the Rev. John Bond and A. S. Walpole (Elementary Classics); "Caesar—The Helvetian War," selected and arranged for the use of beginners, with notes, vocabulary, and exercises, by W. Welch, and C. G. Duffield (Elementary Classics); and "A First Greek Reader: Stories and Legends from Greek Writers," selected and edited, with notes, vocabulary, and exercises, by F. H. Colson.

MESSRS. BLACKIE & SON'S ANNOUNCEMENTS.

Gift Books.—"For the Temple: a Tale of the Fall of Jerusalem," by G. A. Henty, with ten full-page illustrations by Solomon J. Solomon, and a coloured map; "Bonnie Prince Charlie: a Tale of Fontenoy and Culloden," by G. A. Henty, with twelve full-page illustrations by Gordon Browne; "Dick o' the Fens: a Romance of the Great East Swamp," by G. Manville Fenn, with twelve full-page illustrations by Frank Dadd; "In the Reign of Terror: the Adventures of a Westminster Boy," by G. A. Henty, with eight full-page illustrations by J. Schönberg; "Orange and Green: a Tale of the Boyne and Limerick," by G. A. Henty, with eight full-page illustrations by Gordon Browne; "Mother Carey's Chicken: her Voyage to the Unknown Isle," by G. Manville Fenn, with eight full-page illustrations; "The Rover's Secret: a Tale of the Pirate Cays and Lagoons of Cuba," by Harry Collingwood, with eight full-page illustrations by W. C. Symons; "The Seven Wise Scholars," by Ascott R. Hope, with nearly one hundred illustrations by Gordon Browne; "Girl Neighbours; or, The Old Fashion and the New," by Sarah Tytler, with eight full-page illustrations by C. T. Garland; "Margery Merton's Girlhood," by Alice Corkran, with six full-page illustrations by Gordon Browne; "Sir Walter's Ward: a Tale of the Crusades," by William Everard, with six full-page illustrations by Walter Paget; new editions of "The Princess and the Goblin" (with thirty illustrations by Arthur Hughes), "The Princess and Curdie" (with eight illustrations in tints by James Allen), and "Gutta-Percha Willie, the Working Genius" (with eight illustrations by Arthur Hughes), by Dr. George MacDonald; "Chivalric Days: Stories of Courtesy and Courage in the Olden Times," by E. S. Brooks, with illustrations by Gordon Browne, R. B. Birch, and other artists; "The Bubbling Teapot: a Wonder Story," by Mrs. Lizzie W. Champney, with twelve full-page illustrations by Walter Satterlee; a new edition of "Stories of Old Renown: Tales of Knights and Heroes," by Ascott R. Hope, with one hundred illustrations by Gordon Browne; "Miss Willowburn's Offer," by Sarah Doudney, with four full-page illustrations by Robert Fowler; "Sturdy and Strong; or, How George Andrews made his Way," by G. A. Henty, with four full-page illustrations by Robert Fowler; "The Stories of Wasa and Menzikoff: the Deliverer of Sweden, and the Favourite of Czar Peter," with four full-page illustrations by John Schönberg; "The War of the Axe: Adventures in South Africa," by J. Percy Groves, with four full-page illustrations by John Schönberg; "Insect Ways on Summer Days: in Garden, Forest, Field, and Stream," by Jennett Humphreys, with seventy illustrations printed in the text.

MESSRS. CROSBY LOCKWOOD & SON'S ANNOUNCEMENTS.

"**FLOUR MANUFACTURE: a Treatise on Milling Science and Practice**," by Friedrich Kick, translated from the second edition, with supplement, by H. H. P. Powles, illustrated with 24 folding plates and 113 woodcuts; "A Dictionary of Terms used in the Practice of Mechanical Engineering," comprising upwards of 6,000 definitions, compiled and edited by the author of "Pattern Making"; "Practical Surveying: a Textbook for Students preparing for Examinations or the Colonies," by George W. Usill; "The Mechanical Engineer's Office Book," by Nelson Foley, second edition, much enlarged; "British Mining: a Treatise on the History, Discovery, Practical Development and Future Prospects of Metalliferous Mines in the United Kingdom," by Robert Hunt, second edition revised, with upwards of 230 illustrations; "The Watchmaker's Handbook: a Workshop Companion for those who are engaged in Watch-making and the allied Mechanical Arts," from the French of Claudius Saunier, translated by Julien Trippin and Edward Rigg, second edition revised, with an appendix by Edward Rigg, numerous woodcuts and twelve copper plates; "Our Granite Industries," by G. F. Harris; "Tables, Memoranda and Calculated Results for Mechanics, Engineers, Architects, Builders, Surveyors," &c., selected and arranged by Francis Smith, fourth edition; "Lockwood's Builder's and Contractor's Price Book for 1888," containing the latest prices of materials and labour in all trades connected with building, edited by F. T. W. Miller; "The Boy's Own Book: a Complete Encyclopaedia of Sports and Pastimes, Athletic, Scientific, and Recreative," a new edition; "Merry Tales for Little Folks," illustrated with more than 200 pictures, edited by M^{de}me. de Chatelaine, new edition.

The following new volumes in Lockwood's series of "Handybooks for Handicrafts": "The Mechanic's Workshop Handybook," a practical manual on mechanical manipulation, embracing information on various handicraft processes, useful notes, and miscellaneous memoranda, by Paul N. Hasluck, comprising about two hundred subjects; "The Model Engineer's Handybook," a practical manual embracing information on the tools, materials, appliances, and processes employed in constructing model steam engines, by Paul N. Hasluck, with about one hundred illustrations; "The Cabinet Worker's Handybook," a practical manual, embracing information on the tools, materials, appliances, and processes employed in cabinet work, by Paul N. Hasluck, with about one hundred illustrations; "The Clock Jobber's Handybook," a practical manual, embracing information on the tools, materials, appliances, and processes employed in cleaning, adjusting, and repairing clocks, by Paul N. Hasluck, with about one hundred illustrations.

Also the following new editions in Weale's "Rudimentary Scientific Series": "A Treatise on Mathematical Instruments, their Construction, Adjustment, Testing, and Use concisely explained," by J. F. Heather, new edition, with appendix, by A. T. Walmisley; "The Mineral Surveyor's and Valuer's Complete Guide," by W. Lintern, second edition with an appendix on magnetic and angular surveying, with records of the peculiarities of needle disturbances; "House Painting, Graining, Marbling, and Sign Writing," with a course of elementary drawing and a collection of useful receipts, by Ellis A. Davidson, fifth edition, with coloured plates.

MAGAZINES AND REVIEWS.

In the last number of *Mind* Prof. W. James continues his discussion of the space problem, by dealing with the special case of visual space.

He is concerned to show here that according to his general theory the visual perception of space in all its dimensions is immediate, being based on sensations. But, unfortunately, he is unable, in the limits of his article, even to indicate the nature of these sensations. He succeeds, however, in putting forth a strong case against Helmholtz's dictum that true sensations can never be overpowered and suppressed by intellectual and inferential processes. Next to this article comes a characteristic paper on "Association and Thought," by Mr. F. H. Bradley. The current psychological assumptions are too complicated for the essayist, and he seeks to simplify the science by reducing all its laws to one comprehensive principle. The attempt is ingenious and instructive, though it may be that the author, in reaching this principle, runs the risk of slipping into that territory of metaphysical hypotheses which he thinks it is the main business of the psychologist to shun. The remaining papers are—one on "Knowledge and Idealisation," by Prof. J. Dewey, and a second instalment of "Further Problems of Hypnotism," by Mr. E. Gurney.

ORIGINAL VERSE.

THE OLD EDDYSTONE LIGHTHOUSE, NOW
ERECTED ON THE HOE AT PLYMOUTH.

STRONG guardian of the light, that hath withstood
Thro' myriad gruesome hours of curdling fear,
Blaspheming winds, while horrible death drew
near,

'Mid ravening ocean in her deadliest mood;
Till the pale Christ seemed heedless on the rood,
And vain the desperate prayers poured forth
from dear

Despairing lips ashore: thou standest here,
Thy battles o'er, with sightless eyes that brood.

Oh mighty one, set calm in all men's sight,
For symbol and sign of what brave souls dare
do,

When our hearts fail us, lo! we turn to you,
That held undaunted God's best gift of light,
Defying death, and terror's loathsome crew,
To aid lost souls in their despairing plight!

EVELYN PYNE.

CORRESPONDENCE.

THE ANTIQUITY OF THE NAME "ISIS."

Oxford: Sept. 7, 1887.

I am surprised to see from Mr. Bradley's letter, in the ACADEMY of September 3, that it is still considered possible that Leland invented the name Isis for the Thames at Oxford, and the derivation of Tamesis from Thame and Isis. I thought at first that this might be only an oversight of Mr. Bradley's; but on referring to Phillips's *Geology of Oxford, and the Valley of the Thames* (p. 24), where the subject is discussed at some length, I find the same view set forth in these words:

"It is probable that Isis is a scholarly invention, a fancy of Leland, who, in his poem, entitled KYKNEION AZMA, or Swan Song, has very freely latinised many names of places on the banks of the river."

Mr. Bradley may be right or wrong in thinking that "philological purpose is always present with Leland"; but in this case it is certain that Leland was only using a time-honoured name and quoting an already venerable "derivation," the existence of which goes back to a date at least 300 years earlier—to a time indeed anterior to the earliest date associated with academic Oxford.

It is strange that, when so much has been written upon the history of Oxford and the Thames, and the names of both, that the information to be obtained from early maps has apparently not been exhausted. To one map of special importance I would call attention.

The *Abbreuiatio Chronicorum* of Matthew Paris is known to exist in a single MS. (Brit. Mus. Cott. MSS. Jul. D. VII.), which, according to Sir Frederick Madden, is undoubtedly the author's autograph. This MS. contains (fol. 50b.) a map of Great Britain, which upon the same high authority is the handiwork of Matthew Paris, and must have been constructed about or before the middle of the thirteenth century. This map, which has been reproduced in facsimile in the National MSS. of Scotland, Part ii., Plate v. a., presents many interesting and some curious features, one of the latter being that the Naze, at the south-east of Essex, is erroneously taken as the south-east angle of England, with the necessary result that the estuary of the Thames and the whole of Kent are pushed round into the south coast, and the Thames consequently is made to run south-east instead of east, as if it had flowed from Gloucestershire to a point which would coincide with the coast of Sussex. Making allowance, however, for this initial error, the general course of the river is delineated with much accuracy. There is the great southern bend from Oxford by Reading to Henley, and the lesser bow from Maidenhead to Brentford and London.

To the south-west of the mouth of the river, *i.e.*, making allowance for the initial error, to the south, lies the island of *Thanet*; the next name is *Septhe*, marked as a kind of semi-island between the Thames and the Medway; and then *London*, with *Walthe* to the north-east, and *cenobiū sci albanī*, the author's own monastery, occupying as large a space as London itself, to the north-west. About as far above London as this is above the mouth of the river, we see *Windlesho/res*, and about as far again, we come to *Oxon*. But a little below Oxford the river is represented as branching, the two branches flowing nearly in the same line with each other, but in opposite directions, which, when the general error is eliminated, are from west by south and east by

north. The eastern branch, which rises near *Dunestap* and *Sci Albani*, is named on the map *yse* (with dotted *y*); and the western one, which rises not far from *Bristol dū*, and the *Auene*, and has *ferendū* on its banks, is named *tame*. In other words, the upper Thames or Isis is named *tame*, and the Thame (for from its position, rising near Dunstable and St. Albans to the north of the Chilterns, its general course, and its confluence, it can be no other) is called *yse*. In a lined-in space opposite the junction of the two branches is included the following sentence:

"tame &
yse fa
ciunt tamisa
sicut Jor &
dan fluuium Jordanō."

It is possible that this is the actual source whence Leland obtained his information. An examination of maps subsequent to this, but earlier than Leland's time, would show whether any connecting links can be found. Whence Matthew obtained the name *yse* and whether, as Leland says, it really was the British name of one of the tributaries of the river, we do not know; nor do we know whether he himself first excogitated the etymology, or was merely reciting an explanation old even in his day. Dr. Murray has suggested to me that as one of the sources of the Thame is near Tring, at no great distance from St. Albans, the monks of that monastery may have known the name of this stream, and the fact that, though flowing in the opposite direction, it really becomes part of the Thames at length, and may have speculated on the connexion of the two named *Tame* and *Tamyse* or *Tamise*, and on the possibility of the other part of the river bearing another part of the name. This is, of course, quite possible; but it is, I think, evident that if the name *yse* was an invented one, the inventor was not the maker of the map, since he knew so little of the actual facts as to affix the name *tame* to the upper Thames, and *yse* to the Buckinghamshire stream—a strong proof that he at least did not associate the name *tame* with the river having its sources at Tring. It certainly looks as if he were merely recording, as something commonly known in his day, that two rivers, the *tame* and the *yse*, by their confluence formed the *Tamise* or Thames, and were reputed to give it its name, though he himself had no personal knowledge which was the *tame* and which the *yse*.

I must leave to those competent to discuss the derivation of *yse* the question whether it is, as Leland believed, a British name, or whether it can possibly be identified with an Old-English *Use*, "Ouse." But I confess to a strong disposition to think that this was a real name of the upper Thames. In opposition to the notion of Mr. Kerlake—that one and the same name was originally given to a river and all its branches—I find as a fact that the natural man usually gives a distinct name, not only to every branch, but to every distinct part, of a large river, which is clearly the natural and convenient way for the primary purpose of names. Instances will occur at once in the case of the Danube, Nile, Missouri, Orinoco, Niger, and Amazon. Even in our own country this is common, and a good instance was known to me at Mill Hill. There the various head-streams of the Brent have each a different name, *Dollis' Brook*, *Dean's Brook*, *Silk Brook*, &c.; not one is called the Brent. All the boys at Mill Hill School indeed knew from ordnance maps, &c., that the stream which rises between Moat Mount and Barnet Gate, sweeps round between Barnet and Totteridge, and crosses or rather takes possession of a bit of the road from Mill Hill to Finchley, was really the Brent; but to the natives it was merely "Dollis' Brook." And we know that several brooks with

distinct names actually claim to be the real Thames Head. That the river was called *Temese* as far up as Cricklade in the time of Cnut only exemplifies what always happens. It is foreigners—new-comers with more general views and wider knowledge—that extend the main name to what they consider the very head. It was Mill Hill scholars, not natives, that called *Dollis' Brook* the Brent. It is Europeans, not natives, that call the *Joliba* and *Quarra* the Niger, and carry the name of Nile up to the *Victoria Nyanza*. So, if the name *Tamesis*, *Tamesa*, *Tamisa*, or *Temese*, originally belonged only to the lower part of the river, below Oxford, or below Teddington even, new-comers and strangers would be sure to extend the name up as far as they could follow the stream. But the original distinct name of the upper part would also survive in local use, just as it does at the present day. We all know that the *Isis* is only part of the Thames, but we find it convenient to call it the *Isis* notwithstanding.

Be this as it may, it is something to have shown that the name *Yse* or *Ise*, the vernacular form of our "Isis," is no scholarly invention of the Renaissance or fancy of the Elizabethan antiquaries, but was used *bona fide*, as the name of a part of the Thames 300 years earlier; and that Leland was not etymologising or inventing names, but only quoting a name and a derivation that had been current at least since the times of the Angevin kings.

HAROLD J. R. MURRAY.

P.S.—I have referred to the name of the Thames above as *Tamesis*, *Tamesa*, *Tamisa*, *Tamise*, and *Temese*. Caesar has *Tamesis*, and Tacitus has *Tamesa*, which is also the form in the ancient map commonly called Ptolemy's. Latin dictionaries mark the *e* as short; but Prof. Rhys tells me that the Welsh form, *Tafwys*, can be got only from Latin *Tamēsis* or *Tamēsa*; a still later form, *Tamisa*, is the source of the French *Tamise*. The Old-English *Temese*, according to Dr. Murray, also comes immediately from *Tamisa*, but tells nothing as to the length of the *i*. Is it not the fact that our spoken name, *Tems*, is the Old-English *Temese*, *Temse*, while our written name is from French *Tamise*, with *Th* for *T* as frequent in names from French? Robert of Gloucester, about 1300, has *Temese*, and Wyntoun, about 1430, has *Tamyse*, *Tamys*. It would be interesting to see a catena of the historical forms of the word. Has anybody collected them?

H. J. R. M.

THE CELTIC NAME OF "OXFORD."

Oxford: Sept. 11, 1887.

It may interest some of your correspondents to know that three Welsh MSS., belonging to the earlier half of the thirteenth century, speak of Oxford as *Rhydychain*, *i.e.*, "ford of oxen." If the name of Oxford had been Celtic, is it likely that it should have been forgotten as early as 1220 by the Welsh themselves?

J. GWENOGVRYN EVANS.

"ON TEACHING ENGLISH."

Firth College, Sheffield: Sept. 12, 1887.

It is not indeed without great trepidation that a critic with small claim to be heard would venture to give unblushing publicity to views at variance with Dr. Bain's; and I should not have placed myself in the way of so powerful an opponent if I had not some confidence in my cause. My whole quarrel with Dr. Bain's method of teaching English is that, instead of doing what it professes to do, it is likely to discourage students and destroy whatever enthusiasm for a great author may be roused by the reading of him and the endeavour to understand him. For this reason Dr. Bain's *Teaching*

English seems to me a far more notable book than his revised *English Composition and Rhetoric*, though I am not surprised to learn that the labour spent on the former was less by ten times than that bestowed on the latter.

If Dr. Bain is really content with what he calls a "vulgar, grovelling, and utilitarian" view, and thinks that teaching English means merely teaching people how to speak their own language well, &c., why on earth does he take what are admittedly among the very greatest works of their kind and use them as shocking examples? Is it wonderful that he should provoke protests against such a base use of masterpieces? Is this the method likely to make English youth understand what great English writers have written? If Dr. Bain's work had merely been another "Every man his own Poet and Essayist," I should not have placed my skin in jeopardy of his beating.

How could a reviewer examine any but a very few of the pronouncements of his author? One could not do better to back one's opinion of the professor's method than by showing to what dreary absurdities of criticism that method seemed to lead; and appeal must necessarily be made to such parts of the 156 pages of criticism as best show what right by insight and sympathy the critic has to be the guide of English youths to a knowledge of their own tongue, or what is written in it. If the critic's critic finds that Dr. Bain has very little insight and sympathy, he must say so. I have at least as much fellow-feeling with the student as Dr. Bain; and I am very thankful that I read the authors he anatomises in his frigid way before their *dissecta membra* were tossed hither and thither by such critical tools. Dr. Bain is quite mistaken in supposing that I "detest analysis"; only analysis is not anatomy. Certainly it is not in the dissecting room or butcher's shop that men's eyes are taught to rest with pleasure on beauty of animal form. The power to break a thing up is notoriously not the power to combine its parts. Macaulay has a remark to make on this point which is very pertinent to the present discussion.

"In all the branches of physical or moral science," says he in his essay on Dryden, "which admit of perfect analysis, he who can resolve will be able to combine. But the analysis which criticism can effect of poetry is necessarily imperfect. One element must for ever elude its researches; and that is the very element by which poetry is poetry."

What that is I cannot well say; but I am sure that Dr. Bain's critical method turns the finest poetry into the most jejune prose.

Dr. Bain complains that I, in common with others, have objected to his treatment of Bacon. Now if, as he says, the sole question before us in regard to the Essays is "How far is the work fitted to be a textbook in the instruction of youth?" may I point out that his own book is entitled "On Teaching English," and that Dr. Bain's view of the ethics of Bacon's Essays has nothing at all to do with a proper understanding and enjoyment of them. Who cares for the consistency or inconsistency of Milton's theology when he reads *Paradise Lost*? Why, if anything is of importance outside an understanding of the Essays themselves, no lesson could be more informing than the contrast between the moral ideals of our own day and those which Bacon's treatment of his subject shows to have been common in the society in which he lived and was honoured. And surely that itself should make the Essays valuable in Dr. Bain's eyes. But no; Bacon was careless in his use of synonyms; and he has been superseded.

Whether Bacon meant *said* and *and* I leave to be decided by Bacon and those who take his essay as it stands. Whatever carelessness Elizabethan writers may betray in their use of

Latin-derived synonyms, they are not likely to have written *said* when they meant *asked* or *and* when they really meant *but*. To set a student to "correct" such things as these is to bid him put his eyes in his pocket and to transfer his brains, as Mr. Swinburne might say, to the ends of his fingers. Anyhow, one may prefer to be wrong in Bacon's company rather than right with his critic.

I must leave it to the readers of Dr. Bain, and I hope they will be many, to decide between us as to whether every one of his lessons might not be as well illustrated from current literature as from the great men whom Dr. Bain would amend for his class. I venture to hold that the greatest sin a teacher of English can commit (and he commits it too often) is to disgust his students with their author, making him a task-master in their eyes. If Dr. Bain does not condemn in general the use of un mutilated works of some of our greatest writers, the impression made by his book on myself and many others was very different from his intentions. In any case, his method seems to limit us to the class use of a very few, and those not the greatest, and to give us, for example, Sir Arthur Helps, whose writings I greatly respect, instead of Bacon, whose writings I respect much more.

P. A. BARNETT.

THE STOWE MISSAL.

Mitchelstown: Sept. 2, 1887.

As my critic, in his letters in the ACADEMY of July 9 and July 16, has not essayed to substantiate his statement that Maelruain of Tallaght was a bishop, his contention respecting the date of the Stowe Missal is proved to be baseless. I was, accordingly, prepared to find that his "share in this controversy" was brought to a conclusion. It was quite in keeping to leave Mr. Warren, who followed him so blindly, in the lurch.

"He fled full soon on the first of June,
But he bade the rest keep fighting."

His valedictory "views" shall, therefore, be dealt with summarily.

1. *Lelachit*. No attempt has been made to meet the fatal objection to this reading, namely, that it involves a fact unknown in Irish palaeography—a capital placed between small letters in the same word. What is here taken to be the cross stroke of a *t* is the contraction mark attached to *h*.

A root *luc* was unknown to Zeuss (*G. G.*, p. 869) and Nigra (*Gloss. Hib.*, p. 33). The following forms point to a root *lach*, rather than to Nigra's *luch*: *todlaigera*, *MI.* 38 c; *duntlaichersa*, *ib.* 44 c; *dorothlaigh*, *Trip.*, *Eg.* p. 5; *durothlaigestar*, *ib.* p. 18; *todlaigthe*, *MI.* 21 b; *atlaichthe*, *ib.* 49 a; *atlaigthe*, *ib.* 36 b; *atlaigthe*, *Trip.*, *Eg.* p. 32; *atligid*, *Wb.* 27 b; *atligthe*, *ib.* 14 c.

2. *Inturtur*. The impossibility of this reading is shown by the fact that the *t*'s are joined, signifying that the contraction is formed by syncope. The portion represented by the cypher overhead must accordingly be placed between both *t*'s in writing the full form. Now the contraction for *ra*, it is well known, consists of two curved strokes. As there are but two, not four, of such marks here, it is hard to see how anyone with the facsimile before him could conclude from my account, as this critic does, that the MS. has "the compendium for *ra* over each of the *t*'s." The lection, therefore, must be *intra*. The meaning is quite clear; the eucharistic bread was brought in processionally.

3. *Immabred*. The objections to this lection are the lengthening of the contraction, the absence of *n*, and the elision of *e*. Here are the respective solutions. "A line," O'Donovan writes, "drawn across the letters *b*, *l*, *h*, or *n*, denotes that the syllable is contracted, which

must be determined by the grammar or the sense" (*Ir. Gram.*, p. 431). Elided: *erbrath*, *Sg.* 220 a; *asobrad*, *MI.* 45 a; *adropred*, *Wb.* 15 d; *atamroipred*, *MI.* 44 c. *N* omitted: *araber biuth*, *MI.* 46 b, *araberat biuth*, *ib.* 50 d.

"The corresponding passage in the *Lebar Brecc*" is notoriously corrupt and unmeaning. The section following in the Stowe copy explains on whom the persecution was inflicted, namely, *on the prophets and others*. Now, who ever, until this critic arose, heard of such a prolepsis as the pronoun expressed in one sentence, and what it stands for placed in the next? And, admitting this, is it not a brilliant feat of scholarship to restrict the application of the pronoun by half? *Immabred*, of course, is the only possible reading—the persecution that was inflicted; a general statement, which immediately after is explained in detail.

4. *Occo*, "by them." *Occu*, I am told, is not *occo*. No doubt; nor is *etarro*, *etarru*; nor *leo*, *leu*; nor *treo*, *treu*. But, for all that, the *o*-forms can signify the same thing as the *u*-forms. "And, if it were, it could not possibly mean *by them*, using *by* to express the agent." But Mr. Whitley Stokes does not agree with this. "Adhanntar tenid occa, fire is kindled *by* him; dernad recles acesium, a cell was built *by* him" (*Three Homilies*, pp. 21, 111).

'Tis the sport to have the engineer
Hoist with his own petar.

5. *Psalm digrad*, I am informed, could only signify "a psalm of two steps"; and not a psalm chanted antiphonally, as I explained in a note. By the same rule, *fer graith*, in the Tract, can only mean "man of step"; *noe ngraith cealsi*, "nine steps of the church"; and Communion was administered "to all understeps," *do huilib fogradaib*!

This liturgist now thinks *psalm digrad* means "psalm of degrees," one of the fifteen gradual psalms, *cxix.-cxxxiii.* (*Vulg.*). But, in his haste "to revert to his former version," he has overlooked the pertinent fact that the excerpts prescribed in the Missal are (taking them in the order given) *civ.* 4, *civ.* 1-3, *cxviii.* 14, *ciiii.* 32! He has been led, he tells us, to this precious result by the expression *xii. psalmi graduum*, in the Book of Armagh, 21 b 2, which he has lately noticed. "Ex uno disce." There is no such expression. The writer in the Book of Armagh, I am happy to say, was not such a Biblical blunderer. The reading is *xii. [quindecim] psalmi graduum*, as I verified with my own eyes three years ago.

But see how happy the illustration is; for the fifteen gradual psalms are mentioned in that place not in connexion with the Mass, but to be chanted after the 140th, 73rd, and 118th (*Vulg.*), in going to and returning from the reliquary (*Sargifagum*) of the martyrs every Sunday in Armagh.

6. I am asked where I find *nn* in *trinitas* to correspond with the *nn* (*nd*) of the Irish *trindoit*. I answer: nowhere. The *nn* in *trinnoit* arises from gemination of the liquid. My critic's Low-Latin *trintas* may fitly pair with his *gradum*, *grado*. For me, I am tied down to deal with actual, not hypothetical, vocables.

7. *Atnopuir*. "Grammar and the context" now, it appears, show that *it* stands, not for *calicem*, but for *panem*. But, mark the alternative conclusion—the consecration formula was not pronounced over the chalice!

"In Old-Irish *n* never means *them*." Here, again, Mr. Whitley Stokes says the contrary. "The author [of the Homilies] has obviously often drawn from older and purer sources [than Middle-Irish]. This is clear from his frequent use of the infixed pronouns" (*ubi sup.*, p. viii.). Of these infixed pronouns we have on the next page, under Pl. 3: "ro-n-bait, p. 32." At the reference the translation is "he baptized

them." It is unnecessary after this to give examples from Old-Irish MSS.

Obliæ (nom. gen.) and *obli* (dat. accus.) are the Irish for *panis*; (*de pane, panem* in the Tract. The forms are feminine. It is novel doctrine that the gender of pronouns is to be determined not by the native words which they stand for, but by the foreign equivalents.

Finally, as one living word is worth a thousand theoretical forms, had the writer intended to express the masc. sg., he would have employed *adidnopuir*, just as his countrymen, who glossed the commentary of St. Columbanus, wrote *adidnopair* (Ml. 66 b).

8. *Stellas*. With regard to this word, I think it necessary to reiterate my conclusion from data that have not been disputed. "*Stiall*, gen. *steill* (cf. *Niall*, gen. *Neill*), accordingly, not alone holds its ground, but, it may be added, is capable of application to *Nollaic Steill* (L. B., 10 a, 261 b)." The logic that evolves the conclusion that O'Donovan did not render *steill* by *fragment* is worthy of the cause. That great scholar translated the Irish original for Dr. Reeves, whom this critic would fain belittle. In the text, however, *notlaic steill* was not turned word for word into English, but expressed by "Epiphany." Thereupon, a note was appended, explaining the substitution of "Epiphany" for "Christmas of the fragment." What is this, let me ask, but a justification on O'Donovan's part for replacing the literal rendering by the conventional equivalent?

9. *Mails*. The necessity for the quotations from the Book of Armagh will be appreciated when it is borne in mind that (as this critic admits is possible) I did not say the Bishop of Ardagh was mentioned in that MS. The aptness of the extract from Whately will be fully realised when I state, what I assumed was well-known to Mr. Warren, that the Patrician Documents (Lib. Ar., fol. 2-20) were published, part in 1882 and part in 1884.

Of the two authorities adduced to prove that the name of the first Bishop of Ardagh was indeclinable, the "Four Masters" have been abandoned. The scribe of the second, Rawl. B. 512, was, however, we are now assured, a "careful and learned person."

Well, there is lying before me a transcript of the four opening pages of that MS., executed by a scholar whose competence this disputant will not attempt to gainsay. The following exhibit the "careful and learned person" as a Latinist: *eclesie aque* (*ecclesiaeque*), *populis Israel captus*, in *hoc mundum*, *litteriam* (*litteram*). His fidelity as copyist is shown in *peccaid* (as gen. sg.), *le* (corrupted to *re*), *dar* and *tre* governing the dative in place of the accusative.

Laeth a *taebi*, however, caps the climax. Mr. Whitley Stokes, I know, thinks it is correct. It is, he says, "literally *half of its side*, seems to mean parallel passage" (*ubi sup.*, p. 135). *Toibe*, as genitive of *toib*, will prove a novelty to Irish scholars. If, as I learn, my late opponent is the editor of the "Rolls edition of this work," I shall, at the risk of carrying a second *owl* to Athens, furnish him with the correct reading and rendering of the phrase. The lection is *leth atóibthe* (Sg. 29 b), and it signifies the *page* (lit. *half*) of adherence: the place from which the text that heads the homily is taken.

Once again, we are presented with nom. gen. dat. Mel: this time from the Liber Hymnorum. Had the examples been taken from the Hymus, they had, perhaps, been something to the purpose. But they occur in the Glosses! Let us take an instance from Trinity College, the older copy. The gloss on *Mac Caille* (l. 15, Brogan's Hymn) opens thus: *idon, mac mathair side do epscop Mel*. The scribe or glossarist, whichever you will, was, namely, such a "careful and learned person" as not to know that the gen. sg. of *mathair*, mother, was *mathar*, not

mathair. What a decisive authority to determine declensional forms of the seventh or eighth century!

I am challenged to produce an instance of *Mael* for *Mel*. To show the reality of these heroics, why has not the same demand been formulated with regard to *Moel* for *Mel*, and *Mail* for *Mel*; and, to go to the root, where has this disputant found me alleging that *Mel* is an Old-Irish form?

The assertion that the name of the first bishop of Ardagh was foreign I had to put aside as a mere dictum. In reply, I am told he was a "Strathclyde Briton—a son of one of St. Patrick's sisters." These particulars, however, are as well authenticated as the episcopacy of Abbot Maelruain of Tallaght.

10. *Ruen*. The founder of Lothra, I said, was called Ruan, the gen. being Ruain = Ruen. Whereupon I am challenged to produce a single instance of Ruen from an Irish MS. older than the fifteenth century. The reliquary containing the very MS. we are dealing with was redecorated and reinscribed in the fourteenth century. The author of the inscriptions, I suppose it will be admitted, knew the pronunciation of the patron's name. Well, he employs the genitive Ruain. (For the insertion of *i*, cf. *griain*, Lib. Ar. 18 a 2.) Now, is not this a formidable antagonist!

11. *Aedocht*, Lib. Ar. 17 a 2. "*A* is the poss. pronoun, 3 sg. written, as usual, as a proclitic before *edocht*." Here are the places containing the word. *Coibse Fetha Fio ocus aedocht*, 17 a 2; *birt (Aed) edocht*; *adopart Aed aidacht ocus achenel ocus a eclis*; *faccab Aed aidacht*, 18 b 1. Now, in the first place, the grammatical sequence of No. 1 is *coibse ocus aedocht F. F.*, where the absence of the pronoun before *coibse* proves the same with respect to *edocht*. Secondly, the proclitic is wanting in Nos. 2, 3, 4, though they require it quite as much as No. 1. Thirdly, if the author intended the *a* of *edocht* for a pronoun, he would not have written it as a proclitic, but placed the word apart, as in *a eclis*, to avoid misconception.

B. MACCARTHY.

P.S.—I omitted to note, at p. 198, that *Deus, qui nos*, placed by Moelcaich on the lower margin of fol. 14 b, is the first *Collectio* of a *Missa Dominicalis* (lxxix.) in the Gothic Missal. The sole variant is *et* before *a*. B. M. O.

SCIENCE.

SOME BOOKS ON ASSYRIOLOGY.

An Assyrian Manual. By D. G. Lyon. (Chicago: The American Publication Society of Hebrew.) Prof. Lyon's book is an encouraging proof that the study of Assyrian, however languishing may be its present condition in England, is beginning to be actively pursued in America. The establishment of a Chair of Assyriology at Harvard, and the lectures of Prof. Haupt at the Johns Hopkins University, have already begun to bear fruit. Those who are learning Assyrian can no longer complain of the want of a text-book, which shall not only supplement the instruction of a teacher, but also, if need be, take his place. A manual, or reading-book of the kind was much required. The reading-lessons at the end of my *Elementary Assyrian Grammar*, and in Mr. Budge's *Assyrian Texts*, carried the learner only a little way. I have learnt from experience that they were not numerous enough to do more than indicate the mode in which the inscriptions must be read, while the absence of a vocabulary was a serious drawback to their usefulness. This want of a vocabulary was naturally all the more felt in the case of a language which still remains without a dictionary. Prof. Lyon has consequently performed a useful piece of work in publishing his *Manual*,

and he has performed it in a thoroughly efficient manner. The texts are well selected, and graduated in difficulty; the notes upon them are just what are wanted; and the vocabulary, the compilation of which must have involved much labour, is worthy of all praise. The main and essential portion of the book can be heartily recommended. I cannot say as much for the introductory pages, which had been better away. The sketch of Assyrian grammar which they contain is meagre, and not always very clear, and the attempt to introduce a new system of nomenclature for the tenses of the verb is unfortunate. Nothing is gained by it, and that sense of distinctness is lost which is all-important to the learner. In a practical grammar, clear and intelligible terms are absolutely necessary, even though they may fall short of scientific exactitude. Generally, however, Prof. Lyon shows too little originality in his grammatical ideas. He writes as if the decipherment of the Assyrian texts had been the discovery of the Leipzig school, and as if outside that school there were no salvation. Thus he adopts the thoroughly erroneous transcription of the Assyrian *s*, which implies a strange ignorance of phonetic facts, and is founded on the use of diacritical marks, supposed to give a more scientific appearance to the system of transliteration, even though the precise phonetic value of them is unknown. Equally questionable is the endeavour to distinguish the long from the short vowels in the transliteration of Assyrian words. As M. Halévy has remarked, it is dangerous to try to be more exact than the Assyrians themselves; and where they have not indicated the length of the vowels, it is better for us also not to do so, at all events in the present stage of our knowledge. Moreover, what is imagined to be a long vowel is frequently only an accented one. But accentuation is a subject which does not seem to be in favour at Leipzig. I doubt whether the syllabary prefixed to the grammar will be of much use to the student. As soon as he has learnt the elementary characters it would be better for him to face the whole syllabary so far as it is known, rather than mere fragments of it. My own syllabary still remains the most complete yet published; but the twelve years that have elapsed since its compilation imperatively demand its revision and enlargement. If Prof. Lyon will undertake the task and find a publisher the materials I have collected for the work are at his disposal. In what I have said, I hope I shall not be considered to have spoken with undeserved asperity. But, in justice to my predecessors and contemporaries, I cannot but protest against the introduction into America of that besetting sin of many German scholars—the inability or refusal to read or take note of anything beyond their own school or clique. That the contrary practice is not inconsistent with the highest independence and originality is shown by the example of Prof. Haupt. Apart from the few introductory pages, however, I can warmly recommend Prof. Lyon's *Manual*. In a progressive study like Assyrian, it is, of course, inevitable that his vocabulary may here and there need correction and addition; *giparu*, for example, means "a corn-field," *gisallatu* is "a ravine," *kamānu* "to keep oneself," while the note of interrogation may be removed after "exalt" as the signification of *dalu*, Zimmern having made a curious mistake in his explanation of this word. But such corrections only prove that the study of Assyrian is in a healthy condition, those who pursue it having each a little store of knowledge of his own which he is ready to add to the common stock. The larger the number of students the greater will be the progress of our knowledge, and the publication of this *Manual* has removed one of the chief obstacles to their increase.

Les Inscriptions Babyloniennes du Wadi-Brissa. By H. Pognon. (Paris: Vieweg.) M. Pognon's contributions to Assyriology are rare, but always acceptable. He is a good Semitic scholar, and brings an independent judgment to bear on the interpretation of the inscriptions. In the present instance his contribution is exceptionally interesting. Four years ago he had the good fortune to discover inscriptions of Nebuchadnezzar carved on the rocks of the Wadi Brissa, on the eastern slopes of the Lebanon, not far from the village of Hermel and the banks of the Orontes, and about two days' journey from Tripoli of Syria. The inscription on the right of the road is in what M. Pognon calls archaic cuneiform characters, that on the left in cursive characters. Close to the first is a basrelief, now destroyed, representing a man standing like the hero Gishdubar and seizing an animal by the leg. The second inscription is also accompanied by a basrelief in which a man is standing before a tree. The man wears a tiara "of a very curious form, which differs entirely from the Assyrian tiara." The inscriptions have been wantonly mutilated; but a second visit to the spot enabled M. Pognon to take squeezes and copies of what is left. These he has edited with a translation and a commentary. Those who may expect to find in them an account of Nebuchadnezzar's campaign against Judah will be disappointed. It is only in the ninth column of the cursive text that any reference is made to civil affairs; and here, unfortunately, only the commencement of the lines is preserved. Elsewhere, the king confines himself to pious invocations of the gods, and an account of the temples he built to them in Babylon with the help of the cedar-wood of Lebanon, together with a list of their festivals and the food and drink he offered to them. Among the wines is mentioned that of Helbon. In fact the inscriptions are little more than a duplicate of that engraved by Nebuchadnezzar on the northern bank of the Nahr-el-Kelb, near Beyrout, of which portions only are preserved. M. Pognon's translations are usually full of scholarly and acute observations. But his absence from Europe on consular business and his intermittent studies of the cuneiform inscriptions have prevented him from following closely the course of recent Assyriological literature or acquiring that intimate acquaintance with the inscriptions which only a long and continuous experience of them can produce. Hence it is that he makes such slips as the translation of *passuru* by "table" instead of "dish" and of *partsu* by "habitation" instead of "command," that he asks why *erinu* is rendered "cedar" in forgetfulness of the fact that the *erinu* is described as the tree of Lebanon, or that he confounds together ideographs and Accadian words, with the result of denying the existence of the latter altogether. What is still more curious is that he further confounds the use of ideographs and of those rarer values of characters which the scribes of the later period delighted to employ. Thus he tells us, first of all, that the representation of the word *sa-duk* or "daily sacrifice" by the two characters the more ordinary values of which are *di* and *ka* is an ideographic mode of writing, and secondly, that being an ideographic mode of writing, it is an "intentional disfigurement" of the Assyrian word! Why it should be a "disfigurement" at all, even supposing that it had been an ideographic mode of writing; is not easy to see. An Assyriologist who can speak thus has still much to learn. But we may hope that the interesting and well-arranged volume M. Pognon has just given us is an earnest that he will devote a larger portion of his scholarship and ability than he has hitherto done to the study of the Assyrian texts. In that case he will at all

events find that the representative of *saduk* in the way mentioned above is neither "Accadian," nor "ideographic," nor even "the intentional disfigurement" of an Assyrian word.

Tableau comparé des Ecritures Babylonnienne et Assyrienne. By A. Amiaud and L. Méchineau. (Paris: Leroux.) Messrs. Amiaud and Méchineau have accomplished a work for which Assyrian scholars will be grateful. One of the difficulties connected with the study of the Assyrian inscriptions is that the forms of the characters employed in them vary according to locality and age. The forms used in modern printed books are those of the official script of Assyria, which was practically confined to a single class—that of the scribes—and consequently changed but little from the fourteenth century before our era down to the date of the destruction of Nineveh. In Babylonia, however, where education was more widely spread, such a stereotyped official script did not exist. Handwritings were almost as numerous as they would be in our modern days, and add greatly to the difficulty of deciphering the texts which they embody. From time to time one of these handwritings became for a while an official script, and antiquarian zeal not unfrequently revived the obsolete and complicated forms of the archaic period. As might have been expected, such "archaistic" forms are often far more complicated than the real forms they proposed to imitate; the forms found, for example, on a cylinder of Antiochus Soter would have proved as puzzling to the Babylonians of the early epoch as they did to the readers to whom they were addressed. Such "Black-letter" forms of cuneiform script were used now and then in Assyria as well as in Babylonia, more especially after the conquest of the southern kingdom by the Assyrians. It was only in Babylonia, however, that a really accurate knowledge of the older forms of writing was retained; at all events we find the scribes of Nineveh sometimes confounding two Babylonian characters together when copying a Babylonian text, or frankly confessing that they do not understand the character before them. From this it will be seen that in many cases, if not in the majority, the greatest possible differences existed between the older and later forms of the characters as well as between the forms employed in Babylonia and those used in the royal library of Nineveh. It is only very gradually that Assyrian scholars have been able to identify the more unusual forms; indeed, there are still certain archaic characters which defy identification. More than one attempt has been made to give a list of the archaic and Babylonian varieties of the cuneiform signs. Lenormant published a list in autotype, and M. Ménant has printed another in his *Manuel de la Langue Assyrienne*. Useful as those lists have been, in the absence of anything more complete, they have not aimed at representing more than five varieties of each character, while they have necessarily been distanced by the progress of Assyriological research. The monuments of Tel-loh, which have been brought to Europe since the publication of the last edition of M. Ménant's work, have alone increased very largely our knowledge of the archaic forms of cuneiform writing. Mr. Amiaud has taken a prominent part in the decipherment of these monuments, and it is to his acumen that the identification of many of the characters found upon them is due. The volume, therefore, which we owe to him and his collaborator may be trusted to contain as many variant forms of a character as are known to-day. In looking through the book I have been struck by one unexpected fact. In most instances the oldest form of a character which we know is as widely different from the original picture represented by it as are the latest forms met with in Babylonian and

Assyrian texts. Not only is the character already cuneiform, the primitive curves and connected lines having become angular and broken, but it is generally quite impossible to tell any longer what is the object intended to be depicted. The hieratic characters of Egypt have departed less widely from their primitive pictorial forms than have the earliest specimens of cuneiform writing with which we are acquainted. And yet the monuments of Tel-loh, upon which these degenerated hieroglyphs occur, go back to the fourth millennium before our era, and still preserve a reminiscence of the vertical direction in which Chaldean writing, like that of China, originally ran. It is true that in some cases we can still trace the lineaments of the primitive hieroglyphs, and can thus learn, for instance, that the inventors of the writing were a circumcised race who worshipped the stars, regarded destiny as a flying bird, and symbolised the act of walking by the human leg; but as a general rule the almost entire obliteration of the original picture is complete. Can anything show more clearly the vast antiquity of the origin of writing and culture in the alluvial valley of the Euphrates? A. H. SAYOR.

THE FINNIC ORIGIN OF THE ARYANS.

At the meeting of the British Association at Manchester on Friday, September 2, Canon Isaac Taylor read a paper on "The Primitive Seat of the Aryans," in which he discussed recent theories as to the region in which the Aryan race originated, and advanced a new theory as to the relation of the Aryan and pre-Aryan races of Europe. A few years ago the theory advocated by Pott, Lassen, and Max Müller, which made the highlands of Central Asia the cradle of the Aryans, was received with general acquiescence, the only protest of note coming from Dr. Latham, who urged that the Asiatic hypothesis was mere assumption based on no shadow of proof. The recent investigations of Fick, Geiger, Cuno, Penka, and Schrader, have brought about an increasing conviction that the origin of the Aryan race must be sought not in Central Asia but in Northern Europe. These writers have urged that the evidence of language shows that the primitive Aryans must have inhabited a forest-clad country in the neighbourhood of the sea, covered during a prolonged winter with snow, the vegetation consisting largely of the fir, the birch, the beech, the oak, the willow, and the hazel, while the fauna comprised the beaver, the wolf, the fox, the hare, the elk, the deer, the eel, the lobster, the seal, and the salmon—conditions which restrict us to a region north of the Alps and west of a line drawn from Dantzic to the Black Sea. The primitive Aryan type seems to have been that of the Scandinavian and North German peoples—dolichocephalic, tall, with white skin, fair hair, and blue eyes; and those darker and shorter races of Eastern and Southern Europe who speak Aryan languages are mainly of Iberian or Turanian blood, having acquired their Aryan speech from Aryan conquerors. The tendency in historic times has been to migration from north to south: the inhabitants of the fertile and sunny regions of Southern Europe, where the conditions of life are easy, having no inducements to migrate to the inhospitable North. Moreover in central Asia we find no vestiges of any people of the pure Aryan type, while the primitive Aryan vocabulary points to the fauna and flora of Northern Europe rather than to that of Central Asia. Fair races have a greater tendency to become dark in a southern climate than dark races to become fair in northern regions, as is proved by the fact that the dark complexion of the polar peoples, such as the Eskimo, the Lapps, and the Samoeds, has been unaffected by their sojourn for uncounted centuries in the North, while the noble classes in the Mediterranean lands were formerly lighter in colour than at present. A vast body of evidence, of which the foregoing is a brief summary, has been adduced to show that Northern Europe rather than Central Asia was the home of the undivided Aryan race. But the Aryans must have had forefathers from whom they were developed, and the inquiry

suggests itself—What could this race have been? A Semitic, an Iberian, an Egyptian, a Chinese, a Turkic, or a Mongolic parentage is out of the question; and Oahon Taylor proceeded to show that both from the anthropological and the linguistic point of view the Finnic people come closest to the Aryans, and are the only existing family of mankind from which the Aryans could have been evolved. The Tchudic branch of the Finnic family approaches very nearly to what we must assume to have been the primitive Aryan type. The Tchuds are either mesocephalic or dolichocephalic. They are a tall race, the hair yellow, reddish, or light brown, the skin white, while blue or grey eyes are usual. As we go eastward from the Baltic we find that the Ugro-Finnic tribes approximate more and more to the Turko-Tatar ethnic type, just as when we go southward the southern Aryans conform increasingly to the Iberian type. Hence in the Baltic provinces of Russia we discover what seems to be the centre of dispersion—a region where the ethnic characteristics of Finns and Aryans do not greatly differ. Of this fact only two explanations are possible. Either the Baltic Finns have been Aryanised in blood, while retaining their Finnic speech—a hypothesis supported by no evidence, and in itself improbable—or else we have here in their original seats a survival of the people from whom the Aryans were evolved. Anthropological considerations tend therefore to show that the Aryans are an improved race of Finns, while on the other hand the Finnic speech approaches more nearly than any other to the Aryan, and is the only family of speech from which the Aryan languages can have been evolved. The only argument for deriving the proto-Aryans from Central Asia was the belief that Sanskrit comes the nearest to the primitive Aryan speech. It is now believed that the Lithuanian, a Baltic language, represents a more primitive form of Aryan speech than Sanskrit, and hence the argument formerly adduced in support of the hypothesis that the Aryans originated in Central Asia becomes an argument in favour of Northern Europe. The separation of the Aryan from the Finnic races must have taken place at a period so remote that we cannot expect to find any marked identity in their vocabulary. The words common to the Aryan and Finnic tongues are, for the most part, loan words. But the words denoting the primary relations of life, the names for father, mother, son, daughter, brother and sister, can hardly be loan words; and these are substantially identical in the Finnic and Aryan languages. The same is the case with a few of the numerals, the pronouns, and the names for some of the primary necessities of life, such as the words denoting salt, shelter, food, and the rudest implements. But when we go back to the verbal roots which constitute the very basis of language, we find a remarkable identity between the Aryan and Finnic tongues. For example, the eighteen trilateral roots beginning with *k*, given in Skeat's Etymological Dictionary, are all found in Finnic with the same fundamental significations. It is quite incredible that this identity in the ultimate roots can be accidental. Both in Aryan and Finnic these verbal roots are combined with formative suffixes to form nominal stems. We have the same formatives with the same significations. The conjugation of the verb is also effected in the same way by the addition of identical pronominal suffixes to the verbal roots. The accusative, the ablative, and the genitive, which appear to be the three original cases, are formed in similar fashion by the addition of identical postpositions. The only fundamental differences between Aryan and Finnic grammar lie in the absence of gender in the Finnic languages, and in the wholly different formation of the plural. But Prof. Sayce has shown reasons for believing that the proto-Aryan speech possessed no gender, thus agreeing with its Finnic prototype; and he also believes that it possessed only the dual, the plural being a later development. But the dual is formed in precisely the same manner in the Aryan and Finnic languages, while the comparatively recent origin of the Finnic plural is proved by the fact that in the Finnic and the allied Turkic languages the plural is diversely formed. Hence the proto-Finnic speech agrees in every respect, both as to the grammar and the roots, with the proto-Aryan speech, and there is therefore no difficulty in the supposition that the one represents an archaic

stage out of which the other was developed. These considerations modify considerably our conceptions as to the way in which we may conjecture that the Aryan race originated. Instead of supposing a single Aryan tribe in Central Asia, which sent off successive swarms to the West and South, we may rather conceive of the whole of Northern Europe from the Rhine to the Vistula as occupied by a Finnic race, whose southern and western members gradually developed ethnic and linguistic peculiarities of that higher type which we associate with the Aryan name. The Baltic Finns are survivals of this race. The Celts, owing to their remoteness, diverged at an early time from the eastern type, while the Lithuanians and the Hindus preserved many archaic features both of grammar and vocabulary. The Slavs must be regarded mainly as Ugrians, and the South Europeans as Iberians, who acquired an Aryan speech from Aryan conquerors. The time of the separation of the Aryan from the Finnic stock must be placed at the least 5,000 or 6,000 years ago. At that time the linguistic evidence shows that the united peoples possessed only the rudiments of civilisation. Of the metals they possibly knew gold and copper, but their tools were mainly of stone or horn. They sheltered themselves in rude huts, they knew how to kindle fire, they could count up to ten, and family relations and marriage were recognised. The sea was known to them, they used salt, and they caught salmon; but it is doubtful whether they were acquainted with the rudiments of agriculture, though they gathered herbs for food and collected honey. They possessed herds of domesticated animals, consisting probably of oxen and swine, and perhaps of reindeer, but the dog and the sheep seem to have been unknown. If this hypothesis as to the primitive identity of the Aryan and Finnic races be established, a world of light is thrown upon many difficulties as to the primitive significances of many Aryan roots and the nature of the primitive Aryan grammar. We are furnished, in fact, with a new and powerful instrument of philological investigation, which can hardly fail to yield important results. Comparative Aryan philology must henceforward take account of the Finnic languages as affording the oldest materials which are available for comparison.

The paper, of which the foregoing is a condensed abstract, will shortly be published in full.

CORRESPONDENCE.

THE HYKSOS.

Settlington: Sept. 8, 1887.

At the meeting of the British Association at Manchester, Mr. Petrie exhibited his casts and photographs of the ethnic types depicted on the Egyptian monuments. These wonderful reproductions have, I think, solved one, if not two, important problems which have hitherto perplexed scholars.

Included in the collection were several representations of Hyksos chieftains, evidently faithful portraits. These "shepherd kings" are commonly believed to have been Semitic nomads from the neighbouring deserts. But their portraits prove beyond dispute that they were not Semites, but Mongols or Tatars. The high cheek bones and the broad, flat, dumpy noses unmistakably proclaim their origin.

History repeats itself. The story of the conquest of Egypt by the Hyksos is the story of the conquests of the Huns under Attila, and of the Moghuls under Genghiz Khan.

But this is not all. The casts afford a curious confirmation of Mariette's conjecture—that one of the Hyksos dynasties was Hittite. In Mr. Petrie's collection we have several portraits of Hittites, including both chiefs and soldiers. The royal race of the Kheta belonged to the Mongolic Hyksos type, somewhat softened by intermarriage, while the race over whom they ruled presents an ethnic type of quite another order. It would seem that, in their career of conquest, the Mongolic invaders subdued Syria as well as Egypt; and that their dominion, after it had

been overthrown in Egypt by the Ramesides, endured yet awhile in Northern Syria.

ISAAC TAYLOR.

RAYMUNDUS MARTINI AND THE REV.
DR. SCHILLER-SZINESSY.

Oxford: Sept. 12, 1887.

The last number of the *Journal of Philology* (Cambridge) contains an unphilological article by Dr. Schiller-Szinessy, on Raymundus Martini's *Pugio Fidei*. I propose to give a short abstract of it, the ACADEMY not having space for a thorough criticism, which must be reserved for another place.

Martini (Martin) is usually believed to have written (about 1270) a controversial book against the Jews, in order to persuade them to believe in the Messiahship of Christ. In this work, which bears the title of *Pugio Fidei*, he gives extracts from the Talmud, the Targum, the Midrashim, and chiefly from a later Midrash, by Rabbi Moses had-Darshan, of Narbonne (lived towards the end of the eleventh century). Of course, Martini (or his coadjutor) gave a Latin translation of the Hebrew, Aramaic, and Rabbinical passages which he quotes. The late Dr. Zunz, when speaking in his famous book, *Die Gottesdienstlichen Vorträge der Juden*, of Moses had-Darshan's Midrash, naturally made good use of Martini, whom he styled "ein tüchtiger Gelehrter," and believed in the genuineness of his quotations. The same did the late Dr. Pusey, in his introduction to *The Fifty-third Chapter of Isaiah according to Jewish Interpreters* (edited and translated by Dr. Driver and myself), where "he does not doubt of Martini's ability."

Dr. Schiller-Szinessy, in the introductory piece to his article (which is rather a part of a sermon against missionaries than a literary notice), uses the following sentences:

"Now this *Pugio Fidei* contains, by the side of genuine matter [this is a late concession which the learned doctor makes], numerous and most shameless forgeries; a fact observed by others before us [only by his own pupils] and brought home to the English-reading public by two of the present writer's hearers, Messrs. Jennings and Lowe, in their *Commentary on the Psalms*. [In a note they are reprimanded for not having quoted the *ipsissima verba* of their teacher.] For this they were taken to task by the late Dr. Pusey. Now, Dr. Pusey, if he ever read the *Pugio Fidei*, certainly did not closely examine in the original the Hebrew and Rabbinical passages to be found therein. Nor could the late Dr. Zunz, who defends Raymundus Martini, have read the *Pugio* even in Latin (and, of course, much less in Hebrew), as we shall presently show. The others, both in England and abroad, who declare the contents of the *Pugio* to be genuine deserve no separate consideration, since their assertions rest on a second-hand foundation."

Who the German second-hand writer is, I do not know; by the English one is meant myself, who had the audacity to show (in my introduction to *The Book of Tobit*, Oxford 1878) that Dr. Schiller-Szinessy's pupils did not even know that Martini quotes the Midrash Rabbah of Moses Darshan, and not the well-known printed one. (The learned doctor, with his boasted accuracy, does not even quote the right title of Moses Darshan's Midrash.) I have proved that their suspected passages in quotations of Martini are to be found in MSS. That I write second-hand, if preceded by others, is perfectly true; but I quote the first-hand writers, while the author of the Rabbinical articles in the *Encyclopaedia Britannica* coincides strangely with Dr. Graetz, in the article "Saadiah" for instance—indeed, where the information of Graetz ends in the second edition of his *History of the Jews*, which appeared in 1871, that of the writer in the *Encyclopaedia* ends also—and in "Raban" (where Eliezer ben Nathan of Cologne only exists by Graetz's conjecture) but

Graetz is nowhere quoted. I dare say the coincidence is a mere accident, for "les beaux esprits se rencontrent."

Now, I am not going to defend the late Drs. Zunz and Pusey: only a conceited pigmy in Rabbinical literature can ever think of charging them with not having read the Hebrew of Martini. Of course Zunz would not read the Latin translation for his purposes; and Martini may be called by him an able man from the material he gives, even if he makes blunders now and then in translation.

Let me come now to Dr. Schiller's charges, which are divided into classes. (1) "Six proofs of forgeries pure and simple." Now four of these passages are to be found in the Midrash MS., which is believed to be that of Moses Darshan, and I dare say that the others will also be found at the time when a detailed criticism of this article is given. What can one say about the following passage, which occurs in No. IV. of the forgeries, "If the Jews had a right to apply the term *haq-goel* to their Messiah, the Christians would have had an equal right to apply it to Jesus of Nazareth, their Messiah." (I confess not to understand this passage, nor could many of my friends understand it.) But the Jews apply the word *Goel* to their Messiah. Let the doctor be second-hand for once, and look at Levy's Dictionary of the Talmud *sub voc.* (2) The second heading is "Six proofs of the ignorance of the translator, pure and simple." The first one is indeed a grave mistake, if taken literally. Raymundus translates the word *be-Nahardea* (the name of a place in Babylonia) by "in Nahardea, id est in flumine conscientiae." But where is it proved that Martini did not know that it is a proper name, which he, as is the case in *Onomastica*, translates simply as a kind of play of words? Why, the learned doctor translates in No. 12 of the first and last part of his Catalogue the words *eber nahra*, by the Euphrates, while it means, as Dr. Steinschneider has rightly pointed out, the famous *Sambation*, the supposed dwelling of the ten tribes! For the other mistranslations, the doctor admits that eminent Jewish scholars (except himself) make similar blunders; then why should Martini not be excused on that ground? But for the strength of Dr. Schiller's argument, I need only quote his sneer at Martini, because he renders the word *Karu* (Ps. xxii. 17), by "piercing," while it means "digging." As a matter of fact, Martini gives *foderunt*. Does this word mean digging or piercing? That a Hebrew text read *Karu* for our Massoretic *Kaari* is clear from Field's *Hexapla*, but the learned doctor does not seek for such solutions. As to Martini quoting *Rashi* by the erroneous name of *Yizhagi*, it was mentioned by me on Mr. Schechter's information some years ago in the *Jewish Chronicle*, which the learned doctor reads, and even writes; but he does not quote second-hand. His conjecture that Paulus Christianus is the forger of the Rabbinical texts in the *Pugio* is a prophetic inspiration, for there is not the least proof of it. The same may be said of his solution of the enigmatical name of Rahman, which represents most likely an abridged name of a Midrashic author. The MS. at Vienna (*resp.* Prague) of which Dr. Schiller-Szinessy had a transcript, is, as Herr A. Epstein writes to me, an abridged composition of the great Midrash Rabbah of Moses had-Darshan; and almost all the passages quoted by Martini, and from him by Joshua Lorca (Hieronymus Santa-Fé), are to be found there. This will be proved in the long-expected edition of it, and, perhaps, ere long in another English periodical specially devoted to this kind of research.

To sum up, Martini is not a forger, but, perhaps, not such a great Rabbinical scholar as Dr. Schiller. The late Drs. Zunz

and Pusey did read Martini, and so has the second-hand English writer; but Dr. Schiller-Szinessy has read too much of him, so that his imagination takes the place of the reality. Martini made blunders, and so do others, except the learned doctor. From a few passages (they are not more than ten, even according to Dr. Schiller, with all his minute researches and his torturing of words), not yet found in lost Midrashim, no proof can be given that they are forgeries. Why should it be impossible to believe that a Jewish writer of a Midrash could deduce from a biblical passage that the Messiah was born of a virgin (which in reality the passage does not say, except in Dr. Schiller's mind), if the learned doctor himself says, in his Midrash on Isaiah liii., that there are two Messiahs—the one for the Gentiles and the other for the Jews—and that the passage (liii. 9), "and with the rich in his death," refers to Joseph of Arimathea. If this Midrash had been written in Hebrew, instead of in English, surely a future Dr. Schiller would find his namesake a forger. The same would be the case with another Midrash on St. Paul written in English (*Expositor*, 1886), in which it is said that the Jews believe (this Midrash is headed "St. Paul from a Jewish point of view") that St. Paul bent his head forward Molkte-like (*sic*), and that St. Paul knew the Kabbalistic measurement of the Almighty (an idea which sprung up in the eighth century), and that Moses was washed or baptized in the cloud. Such are the Midrashim composed by Dr. Schiller-Szinessy, which are certainly not less Christian than the above-mentioned passage of Moses had-Darshan. Is the passage on Ps. lxxx. 16, quoted by Martini from the Midrash of Moses Darshan, less offensive to Jewish doctrine than the above-mentioned passage, which the learned doctor does not consider a forgery, since he has not enumerated it in his list of forgeries, for the simple reason that it is to be found with slight variations in the Prague MS. (see the quotation from the MS. in Dr. Driver's article in the *Expositor*, 1887, p. 267, note 1). In general, I must caution theologians against Dr. Schiller's prophetic inspirations concerning Rabbinical matter. Where did he find, for instance, that Isaiah liii. was originally a prophetic lesson in the synagogue, except in his own imagination? And this fact is quoted by commentators on the New Testament as certain. Dr. Schiller believes still in the authenticity of the fraudfull books—the *Bahir* and the *Zohar*. This alone is sufficient to prove that all his other statements must be used with great caution.

Dr. Schiller says at the end that his article on the *Pugio* was intended for the twentieth volume of the *Encyclopaedia Britannica*, but was withdrawn in deference to Zunz. Why was it written then at all? Indeed, I congratulate the *Encyclopaedia* on its withdrawal, and I condole with the *Journal of Philology* for being victimised. I beg Dr. Schiller's pardon if I venture to advise him, in the interest of Rabbinical literature, to make haste with his Catalogue of 400–500 MS., for he will never be able to finish the eight or ten works (among which is the gigantic labour of a critical edition of the Jerusalem Talmud) which he has promised, besides his expected additions to his Hebrew catalogue, without examining the MSS.

A. NEUBAUER.

SCIENCE NOTES.

PROF. RUTLEY, having studied the structure of the Malvern Hills, contributed to the Geological Society in the course of last session two papers on this subject, which have recently been reprinted. The author concludes that the Malverns represent part of an ancient district consisting of igneous and volcanic rocks, asso-

ciated with tuffs and sedimentary deposits. He regards the gneissic rocks of this area as probably formed from the detritus of eruptive rocks. The pamphlet is illustrated by numerous figures, from the author's skilful pencil, showing the microscopic structure of the rocks of the Malvern Hills.

PROF. DITTMAR, of the Glasgow and West of Scotland Technical College, is about to publish a series of exercises in quantitative chemical analysis, with a treatise on gas analysis. The publishers are Hodge & Co., Glasgow.

PHILOLOGY NOTES.

THE forthcoming number of the *Classical Review* (David Nutt) will contain an appeal by Prof. John E. B. Mayor on behalf of the *Archiv für Lateinische Lexicographie*; a proposed scheme for a classified catalogue of MSS. of classical authors in English libraries, by Mr. E. Maunde Thompson; a second letter on "Classical Education in France," by a French University Professor; and reviews of Weil's *Demosthenes* by Prof. Butcher, of Causeret's *Rhetoric of Cicero* by Dr. Sandys, and of Knoell's *Eugippus* by Prof. Sanday.

THE latest addition to the "Bibliothèque Orientale Elzévirienne" (Paris: Leroux)—a series as elegant in form as it is scholarly in substance—is *Les Origines de la Poésie Persane*, by Prof. James Darmesteter, of the Collège de France. As befits a series of papers which originally appeared in a daily journal, it is a popular summary of the title that can be recovered concerning the early poets who wrote in Persian before the classical epoch of Firdusi. Among these it is interesting to find the well-known name of Avicenna—the father of scholastic medicine. While drawing his materials from the exhaustive collections of Dr. Hermann Ethé, the French professor has illuminated them with his wide reading and fine literary taste.

M. HENRI CORDIER, professor at the Ecole des Langues Orientales Vivantes, whose memoir of the late Alexander Wylie appears in the current part of the *Journal* of the Royal Asiatic Society, has also published recently a little paper in the *Bulletin du Bibliophile et du Collectionneur* (Paris: Maisonneuve) upon the Chinese Grammar of the Dominican Father Francisco Varo (Canton, 1702), together with a photographic reproduction of the title-page of one of the few copies known to exist. This particular copy was sold in Paris in 1882 for 1,500 frs. (£60); another copy, from the Sunderland library, is offered by Mr. Quaritch for £36.

FINE ART.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Oeographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—Geo. Ross, 115, Strand, near Waterloo-bridge.

A *Dictionary of Miniaturists, Illuminators, Calligraphers, and Copyists*: with References to their Works and Notices of their Patrons, from the Establishment of Christianity to the Eighteenth Century. By John W. Bradley. Vol. I. A to F. (Bernard Quaritch.)

CONSIDERING the immense numbers of illuminated and finely written MSS. in collections, both public and private, it is surprising how few of them contain any indication of the name of the illuminator or calligrapher by whom they were executed. Works containing notices of the chief painters, with references to and descriptions of their principal

productions, are numerous; but, with the exception of Dr. Vogel's "Nachweisungen" in the *Scraps*, we have no comprehensive work on the artists and scribes of fine MSS., except such as are scattered in the catalogues of the libraries in which they occur, or in works which give copies of their productions. Such a work has been undertaken by Mr. J. W. Bradley; and, when completed, it is intended to form three thick octavo volumes, which might well have been confined to two volumes by closer printing. As it is, one inch is left between two names throughout the volume, as, e.g., in p. 44 there are seven names with only eleven lines of text, and consequently so many intervening spaces are left blank.

The first volume only of the work is at present published. It contains notices, shorter or longer, of nearly eight hundred (1) calligraphers (ornamental writers, chiefly in the MSS. of the seventh to the tenth centuries); (2) illuminators, where the finely written MS. has the initials decorated with paintings (eleventh to fifteenth centuries); (3) miniaturists, where the text is illustrated by miniatures or pictures (fifteenth and sixteenth centuries); and (4) copyists (simple transcribers of MSS.). To these have been added the patrons of these different classes of book decorators, which has enabled the author to introduce notices of many MSS. which had belonged to these distinguished persons but of which the origin is unknown. The author has been at great pains in examining the various catalogues and other works containing descriptions of fine MSS.; and, further, by personal research has brought together, for the first time, a number* of artistic names. Thus, under the letter A we find as many as 166 entries, and 275 under the letter B. The list is, however, far from complete, since we find, e.g., in Fleury's work on the MSS. of Laon, among others, a scribe *Bovinis*, "scribit iste liber satis utilis arte Bovinis sub genesis titulo"; (MS. of Rhaban Maur, twelfth century); and a second, *Ericus*, writer of the treatise of St. Ambrose on the Epistle of St. Paul to the Romans (Fleury, p. 34).

Many of these notices are, it is true, very short, and confined to a few lines; but the articles on the more famous artists—such as Attavante, Julio Clovio, Fouquet, &c.—are extended to several pages, a list being given of most of the known works in which their productions are contained. Thus, under Attavante there is a list of thirty-one such works, among which it would seem that there is not one in England, since the Prayer-Book in the Soane Museum is rejected by Mr. Bradley. We are enabled, however, to refer to a volume in the possession of Mr. Arthur Evans, the title-page of which is elaborately painted by Attavante. Of Julio Clovio we possess in England the commentary on St. Paul's Epistle to the Romans, by Cardinal Grimani, in the Soane Museum; a missal dated 1537, in the collection of Mr. Holford; the Stuart de Rothsay MS. Book of Offices, British Museum, Add. MSS. 20,927; "The Adoration of the Magi," a drawing in the royal collection; a deposition

* We have taken the trouble to count the number of the notices which appear in this first volume, extending to 788 (exclusive of names which are referred to their synonyms, which will appear in the remaining volumes).

from the Cross in red chalk, in the Print Room of the British Museum; and an entombment in the possession of John Rutson, Esq., Newby Wiske, Yorkshire. Of Fouquet's drawings no specimen exists in England. Of the copy of Livy, with paintings by this artist, in the library of Tours we have an instructive as well as truthful appreciative criticism by Mrs. Pattison (Lady Dilke) (*The Renaissance of Art in France*, i., pp. 274-296). Of St. Dunstan there is a good account; but we must correct the inscription in the volume which the Saviour holds in his full-length portrait, which is to be read—"Venite filii, audite me, timore dñi docebo vos" (Strutt's *Horda*, pl. xviii.). Mr. Bradley gives us the reading of Dunstan's signature to one of the charters of King Eadred, dated 949, "Ego Dunstan indignus abbas rege Eadredo imperante," &c.; but neither he nor any other writer has noticed the very characteristic peculiarity of the inscription, which shows that Dunstan in commencing his signature had forgotten the ordinary formula "indignus abbas," and had written "abb" immediately after his name, then recollecting that he had omitted the "indignus," he rubbed out the "abb," still partially visible, and wrote "indignus," &c., over it. We may further notice that on p. 8 the date "saec. 11," is given instead of xi., as that of the calligrapher Ælfwine; and that the fragment of the great Bible of St. Denis (Bibl. Nat. Paris, MS. Lat. No. 2) is no longer in the British Museum (Harl. MS. 7551), as it was honorably restored to the Paris Library some twenty years ago by the proper authorities. We may also add that a full-length portrait of the Monk Eadwine (the writer of the tripartite Psalter in Trinity College, Cambridge), more than a foot in height, is published in the *Vetusta Monumenta*, the figure of the monk being surrounded in the original with the following Latin verses:

"*Scriptor.*

Scriptorum princeps ego nec obitura deinceps
Laus mea nec fama, qui sine mea littera clama.

Litera.

Te tua Scriptura quem signat picta figura
Praedicat Eadwinum fama per secula vivum
Ingenium cujus libri decus indicat huius."

I. O. WESTWOOD.

CORRESPONDENCE.

THE AGE OF THE WALLS OF CHESTER.

London: Sept. 12, 1887.

Mr. Thompson Watkin having referred to me by name in his communication in the ACADEMY of September 3, I am bound to reply to the statement he has made.

It is true that I have expressed my belief that the walls of Chester are of Roman date; but it is scarcely exact to say that the tablet referred to, having the representation of two figures—one "an ecclesiastic in canonicals," is "circa the fourteenth century." If your correspondent will compare the technical details of the execution with those of the other sculptures found, which he has not yet denied to be Roman, he will have abundant evidence before him that this tablet is Roman also. The mode of execution in low relief is identical, and so are the peculiar tool marks. In addition, the sculpture, like so many other Roman works, is sunk into the stone with a frame as a margin to the composition. It is difficult to see how the face of a small basrelief can very much

resemble any figure found on mediæval corbels, especially since about one half is broken away. In any case, although I cannot explain the figures, I can see no such resemblance. In addition, the characteristics of mediæval sculpture, so familiar to us all, are wholly wanting. Writing of these figures, Mr. Roach Smith says:

"They are most decidedly Romano-British, and the costume is quite in accordance with the many examples we have of Roman provincial costume. I see in this figure [the ecclesiastic of your correspondent] a female with a mirror. I will not cite a *ditum* of my own, but I refer to the *Bulletin Monumental*."

This basrelief can, therefore, hardly "dispose," as your correspondent says, "of the assertion that the wall is Roman, as asserted by Mr. Brock." He goes on, however, to say "there being much other evidence to the same effect."

Since the recent discoveries at Chester are not a little remarkable, and since they afford so much new information, it may be of interest to your readers briefly to refer to their nature, while the above statement will be tested.

The walls have been found to be constructed of massive blocks of sandstone, put together so neatly, without mortar, that I failed in one place to insert a penknife blade between the joints. The thickness is about eight feet at the base. The blocks are fairly well squared and are of enormous size, some being more than five feet long. This construction has been revealed by excavation on three sides of the city, while it has been always visible at other points. Uniformity of design and execution has, therefore, been shown to exist generally in the construction of the wall, indicating that it was the work of one people. I say the Romans; but your correspondent, elsewhere than in the ACADEMY, has said: some Puritan builders of the seventeenth century for one portion, and during the Edwardian period for another. I understand, however, that he allows the stones to be Roman, but shifted in position from elsewhere at the periods named. Of such shifting I can find no structural traces whatever, while there are some which render any such belief untenable. We have found the original tool marks and the face remaining on the Roman portions of the wall which forms the base of the superstructure, the latter being of mediæval date and later. This disproves of the assertion that no part of the present walls can be earlier than the time of James I. owing to the actually supposed impossibility of the stone to endure much longer. We have also found that the wall at the Roodeye, stated to be only a few large stones laid on a quicksand to keep up a bank (as if any such construction could possibly do so!), is in reality a massive wall of unknown thickness and depth. Our excavation has been carried down on the face of the wall for thirteen feet below the modern level, when it had to be abandoned owing to the rise of water, but the base of the wall has not been reached.

Such is, in brief outline, the nature of the evidence now available to bear on the age of the walls of Chester, and I venture to think that it can hardly be said to tell against the Roman origin. At the close of the inspection by the members of the British Archaeological Association, to which your correspondent refers, our president, Sir J. A. Picton, summed up the evidences, and he expressed the opinion of everyone present that the walls were of Roman date. No contrary opinion was expressed either then or during the long period occupied by the visits to each of the excavations and some others.

Your correspondent reports the discovery of an inscription and suggests a reading. With

out referring to some different readings, it may be of interest to say that, instead of a single inscription, no less than seven have already been found, which are given in full by Mr. Frank H. Williams in the *Chester Courant* of September 7.

While I write, notice of another has reached me. In addition, there are six or seven portions of bas-reliefs, either with processions of figures, or single figures, one bearing traces of colour. There are also twenty moulded stones, portions of architectural members, such as cornices, copings, a keystone of an arch, a length of an architrave, &c. These have formed parts, originally, of various buildings, evidently of moderate size, and no mortar has been used in their beds any more than when applied to their second use as walling in the city rampart. The whole of this remarkable mass of inscriptions, sculptures, and moulded work, has been found entirely within the moderate area of the wall operated upon by Mr. Jones, the city surveyor, in showing the thickness of the wall for effecting some much-needed repairs to a portion of its extent. They tell, as has been pointed out by Mr. A. Rimmer, in favour of the Roman date; for where could any Puritan builder have found any such mass of Roman stones ready to his hand, even if he could build such a wall as this?

I hope that the notice of the discovery of so enormous a quantity of vestiges of Roman times will help to render the length of this communication not unacceptable to your readers.

E. P. LOFTUS BROCK.

ROMAN INSCRIPTIONS, ETC., AT CHESTER.

Liverpool: Sept. 12, 1887.

Shortly after the discovery of the tombstone of the *Praefectus Castrorum* at Chester, several other tombstones were found, built into the walls; and further "finds" of the same nature are every day taking place. At present I propose only to take four, of which the copies reached me at the same time. They are, first, a large sculptured stone, which, though much shattered, bears, like many others of its class, a representation of the defunct resting in a semi-recumbent position upon a couch, in front of which is a tripod table, and holding, as frequently is the case, a cup in his right hand. Below is the inscription:

D M
FVRI . MAXI
MI
MIL . LEG . XX . V . V .
ST ***** XXII
H . F . C .

i.e., D(ii)s M(anibus) Furi(i) Maximi Mil(itis) Legionis XX . V . V . St(ipend[io]rum) XXII. H(eres) F(aciendum) C(uravit). The abbreviation ANN. after Stipendiorum is frequently omitted. The upper portion of a very similar tombstone is the next. The defunct, as in the other, is lying on a couch, with the addition of the figure of a child at the feet. The inscription, however, has been on the lost portion, with the exception of D . M . for Diis Manibus at the commencement.

The third is of a different nature. It is somewhat like one found at Wroxeter in the last century, which had an ornamental head (a pediment containing the face of Medusa within a parallelogram, with dolphins at the angles) and three panels below, two of which were inscribed, and the third left blank. The Chester example has the head broken off, though there are traces of ornamentation; and below are two panels, only one of which has

been inscribed, and even the inscription in that is imperfect, thus:

•	•	•	•
•	•	•	•
•	•	•	•
•	•	•	•
•	•	•	•
•	•	•	•

It has probably been (expanded): (D)omit(ii) (Sat)urn(in)i Vix(it) (An)n(os) XII. The v and R are ligulate.

As yet I have not seen any of these inscriptions, and, therefore, can only rely upon the evidence of copies forwarded by friends. It is especially necessary to say this in the case of the remaining inscription, which is somewhat worn, and of which, though four copies have been sent to me, all vary in some particular. The most probable version of the extant letters would seem to be as follows:

D .
CINCIN * *
VETERANV
VIX . AN . LXXX
CVR * * AEL
CANDI

Of the second line, I have had the readings CINCINIV(s), CINCIN . F . , and CINCINEV . sent to me, while, as regards the fifth line, I have had CVRA . AEL . , CVRAV . AEL . , and CVRVA . AEL . It is evident that the inscription opens with the usual phrase, D(ii)s M(anibus), and that it commemorates a veteran of eighty years of age, while the monument was erected by a person whose cognomen was apparently Candidus. But as to the name of the deceased, there is doubt; CINCINIVS, for various reasons, I think it cannot be. In the fifth line, also, it is doubtful whether we have Cura, Curavit, Curam agente or Curante. The ends of the lines are broken off for apparently some distance. I hope to return to the study of this stone again, after inspecting it.

Among the latest discoveries is a stone which apparently names the second legion, LEG . II . AVG ; but, until I hear more, or inspect it, I refrain from putting either it or the remaining inscriptions in print.

W. THOMPSON WATKIN.

NOTES ON ART AND ARCHAEOLOGY.

THE Royal Institute of Painters in Water-Colours propose to hold an art union, the profits of which will be devoted to the advancement of water-colour art in this country. Pictures to be distributed in prizes have been promised from members not only of the Institute but also of the Royal Academy, numbering more than one thousand, and of the aggregate value of about £15,000, which is largely in excess of the amount ever offered in any previous art union. In addition to his chance in the drawing for prizes, every subscriber of one guinea will receive a reproduction in photogravure of Sir James Linton's picture, "The Declaration of War." A public exhibition of the prize pictures will be held in the galleries of the Institute during the month of October next; and the ballot for prizes will take place some time in June, 1888. Messrs. Cassell & Company have been appointed agents for the sale of tickets, and also for the distribution of the presentation prints.

M. NAVILLE is engaged in the preparation of a third edition of his memoir, *The Store City of Pithom and the Route of the Exodus*.

THE recent death of Sir Samuel Ferguson was a great loss to Irish archaeology and especially to the study of Oghams. In the year 1884 he delivered in Edinburgh the Rhind Lectures on Archaeology, the subject selected

by him being that of Ogham Inscriptions; but before the lectures were completely through the press he went to his rest, deeply lamented by a wide circle of friends whom his geniality and devotion to research had attached to him. The lectures are now before us, consisting of an octavo volume of 164 pages, published in Edinburgh by David Douglas. Not the least interesting portion of the work is that in which Sir Samuel gives a short sketch of the history of previous Oghamists, such as Windele, Horgan and Brash, all belonging to what he calls the Munster School, whose enthusiasm and energy he duly appreciates without accepting their conclusions as to the pre-Christian origin of the monuments for which they did so much; but in his generosity he makes too much of the more pretentious and more sterile method of studying Oghams inaugurated by the Bishop of Limerick. Sir Samuel is very sparing in his interpretation of the inscriptions, and, on the whole, a good deal more correct in his readings than Brash; but we cannot help thinking that he put too much trust in paper casts and photographs of them, if they are as liable to mislead in the matter of Oghams as in that of other kinds of lettering. We think that the value of the book is seriously lessened by extracting, from an illegible Ogham in Wales, a legend involving the history of Merlin's birth as "the mis-born son of the nun." We cannot readily believe that a people who wrote as little as those who used the Ogham character would commit that sort of thing to writing. Lady Ferguson's account, in the preface, of the varying fortunes of a hunt for Oghams is highly readable, though we gather from a map that there is something wrong in her account of her visit with Sir Samuel to Dunmore Head, and the untoward accident that carried the paper cast into the maw of the wild Atlantic.

MUSIC.

ROWBOTHAM'S HISTORY OF MUSIC.

History of Music. Vol. 3. By J. F. Rowbotham. (Trübner.)

THIS third volume commences with the decline of Greek art, and the Sophists are named as the chief cause of that decline. It began, however, with Euripides, who introduced into his plays "Monodies"—songs or *scenas* sung by a single actor; for, however beautiful and melodious, they were generally not essential to the action of the drama. Lucian, indeed, tells us of Hercules "warbling away, with a calm disregard of his lionskin and his club." Then the chromatic style, introduced by Agatho, is regarded by Mr. Rowbotham as another nail driven into the coffin of Greek art. It is curious to note that the chromatic element favoured by Cypriano di Rore, and the Monodies of Galilei in the sixteenth century, were the foundation of modern musical art; but we must distinguish between the use and abuse of a thing, not to mention the different surroundings amid which Greek art declined and Christian art flourished.

After noticing in the second chapter the labours of the grammarian Aristophanes in the matter of prosody, the speculations of Ptolemy, and the "Monochord" theorems of Euclid, our author turns to Rome, and describes the pantomime, "the last stage of the Pagan drama," and also the musical manias of the Emperor Nero. But a new art was springing up among the persecuted Christians. At first they "muttered and mumbled," says the historian. In speaking of the absence of rhythm in the earliest Christian music he reminds us that the ancient Hebrew scriptures, and, still more, the rude translations, had nothing metrical about them. But we may note, in passing, that a

paper read by the Rev. C. J. Ball, at Vienna, at the seventh Congress of Orientalists in September, 1886, seems to show clearly that prosody "was not unknown to the singers of Israel." Of course, Mr. Rowbotham is perfectly correct so far as the translations are concerned. He traces Christian music step by step from the catacombs upwards. The early Christians set themselves against singing, which Jerome calls "the vanity of the theatres." At Constantinople, where "the people slipped into Christianity without well seeing how the change came," Pagan art undoubtedly influenced Christian song; and the Pagan elements of rhythm, of syllabic treatment of words, and of the fourth of the scale as the principal note, caused Augustine, while pleased with its effect, to speak of its danger in that it was opposed to genuine Christian music. Gregory may have adopted some of the Byzantine graces; but beyond this Mr. Rowbotham thinks there was little in common between Pagan song and Christian psalm.

Chap. v. deals with musical notation, and Mr. Rowbotham traces its history from the earliest times. The singularly clear manner in which he describes primitive signs and their developments shows how thoroughly he has mastered his subject. The upstroke / and downstroke \ of Aristophanes formed the basis of the Armenian notation; from this were evolved the Gregorian Neumes, and the "Spirits and Bodies" of the Byzantines. Our author does not pretend to explain every shape, for many changes may be accounted for simply by the carelessness or the caprice of penmen; but he traces generally the evolution of a later system of notation from an earlier one.

Chap. vi. is concerned with the introduction of Gregorian music into Spain, France, and Britain. Charlemagne, we are told, used frequently to attend the practices in his own private chapel, and conduct the singers with his staff. This reminds one of Frederick the Great, who used to attend the opera rehearsals with full score in hand, and call attention to any mistakes.

Mr. Rowbotham has naturally much to say about the famous Monastery of St. Gall, and about the Antiphony, supposed to be a genuine copy of the one written by Gregory for St. Peter's at Rome. The importance of the school of St. Gall justifies the long descriptions which are given of the services, and of the famous men who lived there. There was the Abbot Salomon, under whom music began to be copied in great quantities; the celebrated monk Notker, skilled in hymn-writing; and the bold and dashing Tutilo. Hymns, with their rhythmic movement, influenced Gregorian song; and the free proses became syllabic sequences.

Soon after the death of Notker came the one-thousandth year, but not the long-predicted Judgment Day; and "the world, disabused of its terrors, began to laugh." "Kyrrie Eleisons" begun to pass into carols, and hymns and sequences into popular tunes." We now read about the Feast of Asses, the Pope of Fools, and "other such travesties of religious rites." Then, with the dances of the peasants, triple time was born into the mediæval world. But more important than the birth of triple time was that of harmony. Or new birth, shall we call it? For Mr. Rowbotham who fully believes harmony to have been known to the ancients, says: "This style [accompanying the voice in fifths and fourths] we may either imagine to have sustained itself from classical times, or to have developed naturally in the growth of so many new things during the Dark Ages." And now he has to speak about Hucbald, and Guido, and Franco. A clear and detailed account is given of the notation and the crude harmonies of Hucbald. Mr. Row-

botham seems to have studied the Musica Enchiriadis to better advantage than any of his predecessors. There seems very little doubt—in spite of the assertions of Sir G. A. Macfarren—that consecutive fourths and fifths were really sung. Mr. Rowbotham speaks of the organ played with two hands as helping to develop harmony. But before and during Hucbald's time there was no keyboard at all. Still there might have been harmony, for we read of the slides being managed by the organist with the help of two assistants. In speaking about Guido and his inventions, our historian is fully aware that some critics have denied that the Benedictine invented anything at all; but he reminds us, and fairly too, that to controvert the statements of tradition is of inconsiderable importance to the due conception of history. He tells the story of Guido's life by the aid of monkish chronicles; and though much of it be fiction, the musical history of the period is impressed on the mind in not unpleasant fashion.

Just as Mr. Rowbotham had shown the various phases of notation in the earliest times, so now he patiently describes all the efforts made previous to Guido's time to simplify the signs and render them more precise; for in the *Neumæ*, it is justly observed, there was "a wide margin of laxity." And again, with fullness of detail, he discusses Franco, who did for values of notes what Guido had done for pitch.

Our historian is ever bent on showing the relation of things; hence, when he comes to speak about the popular songs of the wandering minstrels, he reminds us that they were modelled on hymns, as, in fact, had been the case a century or two earlier. Mr. Rowbotham has such a graphic pen that one readily excuses the space devoted to these wandering minstrels. He bids us follow one as he enters a village. The women are knitting before their doors, the men lounging about; the fellow sings, attracts attention, gets food and shelter in a cottage in return for his music, and afterwards joins in the evening sports, helping the dancing with a roundelay or jig. So the past is brought vividly before us. But the minstrels could do more than play or sing. "I," says the minstrel Robert le Mains, after narrating his musical and poetical accomplishments,

"can throw knives into the air, and catch them without cutting my fingers. I can do dodges with string, most extraordinary and amusing. I can balance chairs, and make tables dance. I can throw a somersault, and walk on my head."

The Guild Day of the Alsatian Lodge of Minstrels, as given by Mattheson in his *Critica Musica*, is told at length.

The chapter on the violin is extremely interesting. The ancestors of the modern violin, the Rehab, the Marabba, came from Arabia; but the Arabs borrowed from the Persians, and the latter probably from the Indians. Or, as our historian puts it, "Alexander the Great may have heard it [i.e., an instrument of the violin kind] from the Indian hamlets as he sailed down the Indus to the sea." Yet he speaks of the claim of the Saxons to an independent invention of a violin. But, even if he cannot trace any resemblance between the names of the instruments, ought he not to admit some connexion between Teuton and Persian? Mr. Rowbotham is in his element in discussing the glories of Bagdad, Cordova, and Granada. But when he has told his tales of Arabian magnificence and luxury, he comes to the Arabian scales, which have, he maintains, exercised so marked an influence on European music. The Greeks placed the semitone first in the tetrachord; but in the scale of the Middle Ages it occupies the second place, and in the diatonic system of the Arabians the third place. This

tetrachord and the hexachord of Guido Mr. Rowbotham considers to be the parents of the modern major scale.

And then we pass on to the troubadours. In their music our writer discovers the forms of the Rondo and the Fugue. And he touches, too, on the first rude elements of harmony outside the church. But he says nothing about the early Britons, and the glee-men of Saxon times whom Sir A. G. Ouseley describes "as the forerunners of the minstrels and troubadours of a succeeding age."

Has Mr. Rowbotham finished his *History of Music*? At the close of this third volume is written for the first time "finis." We hope he has more to tell us. J. S. SHEDLOCK.

MUSIC NOTES.

THE prospectus of the thirty-second series of the Crystal Palace Concerts has just been issued. They will commence on Saturday, October 8, when Master Josef Hofmann will play a Beethoven Concerto. The hundredth anniversary of the production of Mozart's "Don Giovanni" will be commemorated on October 29 by a performance of all its principal solo and ensemble pieces. English music will not be neglected. Mr. F. H. Cowen's new oratorio "Ruth" will be given on December 17. Besides this work, we notice a Concert Overture by Mr. G. J. Bennett and a New Suite of Ballet Airs by Mr. A. G. Thomas. Mr. Manns will, as usual, be the conductor.

THE Borough of Hackney Choral Association, of which Mr. E. Prout is conductor, will again give four public concerts during the coming winter in the Shoreditch Town Hall. The first of these, on Monday, October 31, will appropriately be devoted to Mr. Prout's new cantata, "The Red Cross Knight," which has been specially composed for the Huddersfield Choral Society, and is to be first produced by them a few weeks earlier. The other piece by an English composer is Mr. F. Corder's "The Bridal of Triermain," which was written for the last Wolverhampton festival. The prospectus further comprises Mendelssohn's "Elijah" and "114th Psalm," Hadyn's Symphony in E flat, and Schumann's cantata "Paradise and the Peri"—which last has not been heard in London since its performance by this association in 1883.

AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

"Œuvres Inédites de Victor Hugo."—*Choses Vues*. (Paris: Hetzel.)

Things Seen. By Victor Hugo. In 2 vols. (Routledge.)

It is very seldom that the researches of the most pious executors among the unpublished MSS. of the most eminent authors result in the production of works which add materially to our literary wealth. It is almost unheard of for such publications to possess at the same time independent value of their own, while they also increase at once our knowledge of a well-known writer and our admiration for his genius. The present volume, descriptive of "things seen" by Victor Hugo, is of this exceptional character. Its contents have either been selected with rare judgment and felicity by the editor, or they have been drawn from notebooks or memoranda of a special class, deliberately kept by the writer when in the prime of his faculties, for mixed autobiographical, historical, and literary purposes.

The most remarkable characteristic of these papers, and especially of the earliest in date (1838-45), is their extreme sobriety of style. There is, if anything, a laboured directness and simplicity of statement, an even exaggerated reserve, an over-scrupulous avoidance of comment or colouring, which, on the part of the author of *Notre Dame*, gives the impression of their having been written as a deliberate exercise or study in another genre than the one which was habitual or natural to him. In so far as the effort after a Defoe-like realism is over-strained or over-apparent, of course the literary value of the studies themselves is impaired; but, on the other hand, it is interesting to find that in the prime of his powers and reputation Victor Hugo was so far conscious of the "defects of his qualities" as to prescribe this sort of discipline for himself, and in most cases the effect appropriate to the style is after all fairly produced. Thus in the "Journal d'un Passant," describing the *émeutes* of May 12, 1839, the description of the things to be seen in the streets, just as they come—comic, tragic, or insignificant—succeeds in a dozen pages in giving one of the clearest pictures in French literature of the incoherence and aimlessness of most Parisian street-fighting, and how entirely the result of such outbreaks depends upon the chapter of accidents, altogether beyond the control of individuals or even parties.

Sometimes, as in the "Funérailles de Napoléon," the subject-matter is of itself interesting. The ceremony resolved on when Thiers was in power, and carried out grudgingly, with much display of gilt, tinsel, and plaster

statues, by his successor, was, perhaps, not in itself inappropriate to the memory of a hero, himself such a mixture of iron and clay. The poet naturally wished that such magnificence as there was should be real; and, when invited to a "private view" of the coffin, he urged the maker to apply for permission to use gold instead of copper gilt for the one word, "Napoleon," inscribed upon it, and easily prevailed upon M. Thiers to view the matter in the same light; but the additional cost was to be 20,000 francs, and Thiers' fall followed within three days. So Hugo remained in doubt whether the letters were after all solid gold or no. He could only affirm positively that the saddle used by Napoleon at Marengo was borne in the procession by the sober old property horse that had figured for the last ten years in all the military funerals of the capital; and that the minister of the interior was much grieved over the £16 a day which the state had to spend on candles for the chapel, while the coffin was lying in state at the Invalides.

The three reminiscences bearing date between 1843 and 1845 refer to things heard rather than seen. The first reports a conversation between Royer-Collard and Balanche, with Victor Hugo for audience, while the three were waiting for the Academy to begin a sitting. The talk is of Charles X., and the single-minded persistency with which he upset his own throne: "C'est Charles X. qui a renversé Charles X.," they all agree. "C'était toujours le Comte d'Artois, il n'avait pas changé." He prided himself upon this unchangeable character; and, with rather surprising openmindedness, he esteemed the only other Frenchman who had changed as little as himself since '89. He and La Fayette were the only men of the age; and Victor Hugo, who plays the part of chorus, agrees that their brains were made in much the same fashion, only they happened to have a different idea lodged in them. Royer-Collard then described a scene between Charles and his ministers in February 1830, which might have precipitated the events of July, but for the sobering effect of a remark of M. de Pourtalès, that if these were the orders for to-morrow, the king had better tell them at once his intentions *pour après-demain*. Royer-Collard concludes: "Au reste, tous ces détails là ne seront pas recueillis et ne seront jamais de l'histoire"; to which Hugo, mindful of the note-book now opened to the world, discreetly replies, "Peut-être."

Louis-Philippe's confidences respecting Mme. de Genlis are very curious. He and his sister, the future Mme. Adelaide, liked and admired her, in spite of the somewhat Spartan and very theoretical education which they received from her hands. When the accounts of governess and pupils are compared, it can scarcely be doubted that she deserves credit for having made the best of the somewhat middling material committed to her, while she discerned more clearly than anyone else the limits of her own success. Out of a naturally dull, tiresome, and cowardly prince she claimed to have made a clever, amusing, and brave man; but he was born *mean*, and she had failed to make him generous: "Libéral, tant qu'on voudra; généreux, non"—a verdict which is entirely confirmed by the poet's account of

his attitude towards his crazy, would-be assassins. The astuteness attributed in his day to Louis-Philippe was not much more profound than that of his successor. But it is amusing to find him imploring Hugo to believe that he is only an honest man, not half as clever as his enemies wish to make out; and we are indebted to him also for preserving Talleyrand's verdict upon Thiers, that it was his great misfortune to have been born in an age when he could not be made a cardinal. One of the touches which helps to give a sort of artistic unity to this volume of jottings is that, on almost the last page, we meet this cardinal *manqué* installed as Chef du Pouvoir Exécutif, and receiving the author, who comes to intercede for Rochefort and the *Communards*, though his wounded patriotism prevents his enjoyment of the eminence from being unalloyed.

The greater part of the volume in bulk is taken up by the entries between 1846 and 1850. These show the poet in the rather unfamiliar character of a criminal judge, associated with his dignity as *Pair de France*. Thus he has to sit in judgment on Lecomte and Joseph Henri, both what may be called three-quarter-witted criminals, who had fired on Louis Philippe. The former was of the surly, brutal type, more or less crazed with anger at dismissal from the royal forest service; the other, a shopkeeper, apparently actuated by the same sort of crazy vanity as Guiteau. In the case of Lecomte there were 232 peers voting, of whom 196 found the accused guilty of "parricide," 33 voted simply for death, and three followed Victor Hugo in voting for perpetual detention on the ground of insanity. The majority, it was said, wished to leave the *beau rôle* of clemency to Louis Philippe, whose native meanness showed itself in refusing to commute the sentence unless his responsible ministers advised him to do so, which they could scarcely be expected to do in the face of his own evident bias. The effect produced was evidently unfavourable; for at the next trial only 14 voted for death, 133 for penal servitude for life, while Victor Hugo's following rose to 13. On both occasions his short speeches, as reported by himself, were temperate and judicious. He refrained from dwelling on his abstract objections to capital punishment, and argued the case for holding both offenders to be irresponsible in such a way as to offend no prejudices and to rally round himself the nucleus of a respectable minority.

A visit to the Conciergerie in the same year supplies matter for an article which somehow pleases one better, published forty years afterwards, than if it had been written, as it easily might have been, to please an able editor of the day. His interest in the prison is manifold—historical, archaeological, social, and administrative. He finds the prison bread detestable, while the governor is delighted with the specimen sent every day for his own consumption by the fortunate baker who has the contract. Hugo suggested that it was possible one kind of bread might be delivered to the officials and another to the prisoners. The idea was new; but he had the satisfaction of learning that the bread was in consequence *vérifié et amélioré*. He talked to the juvenile offenders, who then, as now,

objected strongly to be sent for years to a reformatory for offences which would only entail a few weeks' imprisonment upon adults; and he found his benevolence rather thwarted by a lad who would tell him nothing but lies, and that he was going to appeal against his sentence. Still more distressing was the havoc wrought by ignorant architects and improvers in a famous thirteenth-century hall, with four vast chimneys in the corners, of which only one was left unmutilated. Victor Hugo revenged himself by writing on a central pillar the following commemoration of the three architects who had left their traces on the Palais de Justice, Saint-Germain des Prés, and Saint-Denis:

“Un sixaine vaut une longue ode
Pour chanter Debret, Peyre et Godde;
L'oisson gloussant, l'âne qui braie,
Fêtent Godde, Peyre et Debret;
Et le dindon, digne compère,
Admire Debret, Godde et Peyre.”

The society for the protection of ancient monuments might do worse than take a hint from this impromptu, and call upon some of its poet members to see if they could not make the way of transgressors hard to them with a few epigrams.

In these pages we find the Revolution of 1848 casting its shadows before in ways plainly recognisable by any impartial looker-on. In 1847 a more than usually magnificent fête is given by the Duc de Montpensier; and Victor Hugo notes, not without surprise, that the people, instead of accepting the luxury of the rich as “good for trade,” watch such manifestations of it with an angry envy, aggravating their own misery. Then followed a fatal series of scandals in high life: suicides, murders, and peculation among the highest civil and military functionaries and representatives of the old *noblesse* combine, with the utter silliness and brutality of fashionable amusements, to disgust the populace with their ruling classes; and Victor Hugo, who was brought judicially in contact with some of the criminals, was unfeignedly ashamed and alarmed for the country, even while still able to believe that the offenders were sufficiently sensitive to find the punishment of dishonour by itself a sufficient deterrent. In the trial of President Teste and General Cubières, however, we see that the poet still succeeded in keeping himself “head uppermost”; for, in spite of a strong impression at starting in favour of the innocence of the accused, he was convinced by the evidence as produced, and only thought the chief offender might be let off with the loss of civil rights, because he assumed that the torture of the trial must have been as great to him as to the honest men among the judges.

Between the Revolution of 1848 and the *coup d'état* Victor Hugo was to some extent *désorienté*, and the fact is reflected in his reminiscences. Personally and socially he was at his ease with all the leading statesmen and men of letters of the Restoration. Politically and socially his views were more advanced than those of any other man moving in the same circles; but he had too many other points in common with them to isolate himself, and he was never nearer to practical wisdom and practical influence than during this period, when the expression of all his sentiments was tempered by respect for the audience, which

he knew to be only partially sympathetic. As regards everything except first principles, he had less in common with the men of '48 than with the professional politicians they displaced; and it was worse still when exile threw him into the company of the least eminent of the survivors of these men. It is hardly too much to say that in 1853, the date of a curious story of a Bonapartist spy, the isolation of exile had already begun to tell upon the author's style and judgment in the way which caused his later works to be left too exclusively to the mercy of his imagination. It ought to be noted, to the credit of the exiles, that the spy gained their confidence by his poverty and dependence on their generosity, so that, when Victor Hugo refused to let him be executed, any more than Le Comte, they were able to protect themselves against further betrayals by getting him locked up for debt in the Guernsey gaol.

Among other miscellaneous passages of interest may be mentioned a visit to Villemain while suffering from insanity; and two “choses vues,” one of which the editors name as the origin of *Fantine* in *Les Misérables*, while the other may serve to excuse one of the impossible characters in *L'Homme qui Rit*. Nothing written in the earlier years is open to the kind of criticism invited by a phrase on almost the last page, where a young woman in the train from Versailles, who turns out to be an admirer, is described as “une âme charmante qui a de bien beaux yeux.”

EDITH SIMCOX.

The History of Newbury. By Walter Money. (Parkers.)

MR. MONEY is already well known as an authority upon the subject of the antiquities of Berkshire. The county has until recently been very much neglected by the writers of local history; and the author of the imposing volume before us is probably right in saying that the ground covered by his labours is unoccupied by any existing book. The revision of the texts of our ancient chronicles and the publication and rearrangement of public records have made it possible to compile a minute and accurate account of separate towns and districts which it would have been hopeless for the great antiquaries of the last century, with all their learning and energy, to attempt with any hope of success. The difficulties of the modern author arise from the copiousness of his materials. An exhaustive survey of all that his known or can be reasonably inferred as to the history of an ancient manor or borough would have to be drawn on so large a scale as to make it impossible for the general public to give its time or attention to the subject; and the interest even of the local reader might be painfully strained by a too perfect elaboration of the annals of his particular neighbourhood. The author of the *History of Newbury* has suffered to some extent from the overabundance of information. He has been compelled, as he states, to omit numerous extracts from the parochial register and corporation records which exist at Newbury in a very perfect state of preservation; and, on the other hand, he has been led by considerations of local interest to compile somewhat too minute a chronicle of the events which have

taken place in his neighbourhood during the last three generations.

The borough has been the scene of many interesting events, from the time when the famous Jack of Newbury kept a hundred looms going in his house, and marched to Flodden Field with a hundred white-coated retainers, to the day when Sir John Throckmorton won his bet that a coat should be made between sunrise and sunset out of wool which should have been growing that morning on the backs of two Southdown sheep. The coat was exhibited to the world in 1851, and the details of the strange feat are commemorated in a popular print. Perhaps the town is now best known for the part which it took in the Civil War. The battle of 1643, in which Falkland died, and the indecisive struggle of the following year, have been described by the author in a separate work, which met with a very favourable reception. The reader of this volume has the advantage of the author's experience, and will find all that he requires to know about this part of the war described with conciseness, but with full mastery of every detail. An interesting account is added of the visit of Charles II. to the battlefield where he had been present as Prince of Wales twenty years before, and of a somewhat later visit of Mr. Secretary Pepys, who came to Newbury

“and there dined; and musick; a song of the old Cavalier of Queen Elizabeth's, and how he was changed upon coming in of the King, did please me mightily, and I did cause W. Hewer to write it out.”

A century after his time Newbury was known to all the world as one of the busiest points on the old Bath road. Before the age of railways began, every traveller who used a mail-coach or had heard of a flying stage-chaise, was quite familiar with the “Globe” at Newbury and the “George and Pelican” at Speenhamland. It is to be hoped that the new line of railway, from which great things are expected, will restore to the ancient town some of that commercial importance which it retained for so many generations.

Mr. Money has devoted a great deal of attention to the ancient history of the locality. He begins, as in duty bound, with a description of the supposed site of the Roman station of “Spinae,” which is not unreasonably identified with the small village of Speen. Two of the military routes described in the Antonine Itinerary appear to have passed through this station on the way from the junction at Silchester to the fortress of Caerleon, passing by Bath and Gloucester. An excellent map of the remains of these Roman roads is accompanied by a summary of all that is really known on this difficult subject, but it is unlikely that any certain conclusion can ever be attained as to the exact facts of the case. After the English occupation was complete the Roman station seems to have disappeared, if we may judge by a charter cited from Kemble (but not quite correctly explained in the text), in which a King of Mercia granted to the Abbey of Abingdon, “Wickham, with all that undivided wood which is called Spene, Wohanlech, and Trinlech.” The “new burg,” which grew into the borough of Newbury, is not separately described in Domesday Book; Mr. Money, however, shows by record evi-

dence that it existed in 1079, and has good reason for believing that it was, at least in part, included in the description of the manor of Ulvritone. This manor belonged to "Ulward the White" before the Conquest, and was then granted to that Ernulf de Heding who afterwards, on a quarrel with William Rufus, threw up his great English estates and died crusading in the Holy Land. The devolution of the title to the Berkshire portion of these estates till they became the property of William Marshal, Earl of Pembroke, is worked out with great care and ingenuity. This part of the subject is followed by an interesting account of a MS. poem of the thirteenth century, which gives a full description of the siege of Newbury Castle in the year 1152. This document contains a number of facts about the life of the great earl which were not previously known. It seems to have been drawn up by order of his son under the direction of an eye-witness of the siege. It was purchased for £380 by the late Sir Thomas Phillips at the sale of the Savile collection in 1861.

The history of the borough of Newbury is carefully traced down through various noble and royal owners to the time of James I., when it was finally granted on a fee-farm tenure to the mayor and corporation. A great number of other incidents are interwoven with the story, all described in an interesting way. Particular attention has been given to the story of the martyrdoms under Queen Mary; but the author has omitted the details of the earlier persecution in the reign of Henry VIII., which used to be described by Dr. Twisse, of Newbury, as the beginning of the Reformation. One or two other omissions may be noted, with a view to the requirements of another edition. It would be well to insert some notice of the natural history of the locality, especially with regard to the rare plants described by Ray, and the celebrated trout and crawfish mentioned by Coxe in his *Magna Britannia*. The tradition of the "Beaver Island" should be supplemented by a reference to the account in the *Philosophical Transactions* for 1757 of the beaver-remains which were found in a peatmoss near Newbury.

CHARLES ELTON.

After Paradise, with other Poems. By Robert, Earl of Lytton. (David Stott.)

THERE is much in this book that recalls the author's striking and beautiful *Fables in Song*. It does not, I think, on the whole, maintain so high a level; but it has the same special merit, the same mixture of romantic thought with piercing *aperçus* from life and experience, reminding one of the finer work of the elder Lord Lytton—the same defect, as I venture to think it, of mingling real poetry with a hard and gritty humour, a crackling of thorns under a pot. No doubt this sort of thing can be done, and done successfully; but it requires a Byron or a Browning to do it; the wit and satire require to be more radiant, more spiritual and imaginative, than Lord Lytton's. There is poetry in epigrams, at times; but the working-up to an epigrammatic point is not in itself a poetical process; the machinery inevitably creaks a little, and the result is something which we do not readily forget, which yet we find it hard to love as poetry.

Let me give an example of what has been said. The poem from which the book takes its name is a series of legends of the life of Adam and Eve after their expulsion from Paradise. The first series consists of the legends of poetry, music, love, and the ideal. These are the reminiscences of past perfection, granted to man as consolations after "eternity has been cloven in twain," the infinite past from the infinite future, by the archangel's sword (pp. 23-4). Adam's last glimpse of Paradise melts into a dream. When he wakes to his life of exile, his dream is all but forgotten:

"Yet did its unremember'd secret claim
Release from dull oblivion's daily yoke
In moments rare. He knew not whence they came,
Nor was it in his power to reinvokè
Their coming: but at times thro' all his frame
He felt them, like an inward voice that spokè
Of things which have on earth no utter'd name;
And sometimes like a sudden light they brokè
Upon his darkest hours, and put to shame
His dull dependency, his fierce unrest,
His sordid toil, and miserable strife.
These rare brief moments Adam deemèd his best,
And callèd them all THE POETRY OF LIFE."
